## THE POULTRY YARD IN SEPTEMBER

BY E. I. FARRINGTON

A practical hopper for the poultry yard

IT will be a mistake this fall to carry over any hens which are not likely to pay their way. Amateurs often keep along a few hens which they know are not laying to supply the table during the winter. But in times like these, when every ounce of food must be conserved, and when grain is expensive, it is much better to put these old hens into cans now. They will taste just as good when the time comes to eat them and a material saving in grain will be effected. The same argument applies to cockerels. It is well to let these birds get fairly well matured before they are killed, as they put on flesh rapidly, but they should be put into cans or into the market before the time to house them for winter arrives. It is legitimate, of course, to save one or two roosters for breeding purposes, but apart from them there should be no male birds in the winter pens.

Leghorns and other small breeds lay well for two years and sometimes three years. It may pay to carry them over. The heavier breeds almost invariably fall off in egg production the second year. If pullets are lacking, tho, it probably will be worth while wintering some of them, unless they are very fat.

The hens which molt early are the ones to dispose of first. Eat them, sell them or put them into cans as soon as they stop laying. Early molting hens are usually the least profitable. Hens to carry over are those which molt late. As a rule they are the heavy layers and will give you an abundance of eggs during the latter part of the winter and in the spring.

If possible keep the pullets and the old hens in separate pens. You will get better results than if you confine them together. This is also true of large and small breeds. They are best kept apart. If you can buy well matured pullets for \$2 or less at this season, you will be wise to take them. There is every likelihood that eggs will be expensive thruout the winter, and a flock of good layers will produce eggs considerably cheaper than they can be obtained at the stores.

Of course the feeding problem has not been solved. Grain remains abnormally high and some kinds are hard to get at any price. In most sections the amateur must depend largely upon cracked corn and bran or mixt feed. Fortunately this combination, with the addition of beef scraps, and supplemented by vegetables and table scraps, makes a fairly good laying ration. The writer has been getting good results by feeding a crumbly mash in the morning,

**IMPERIAL FLOOR COMPANY**  
986 Cutler Building, Rochester, New York  
On the market to years

consisting of bran with ten per cent beef scraps, green feed at noon and cracked corn at night. This combination has been used for chickens after the second week as well as for laying hens. It is a relatively cheap ration, but the birds keep in good condition on it. Most of the time a dry mash consisting simply of bran and beef scraps is also kept before the laying hens, while oyster shells and grit are kept always at hand.

Of course conditions are different in different sections, so that no hard and fast feeding rules can be laid down. The poultry keeper must use the grains which are available, whether they suit him best or not. All poultry keepers should make free use of vegetables, thus cutting their grain bills and helping to keep the flocks in good condition. Often it is possible to obtain a liberal supply of carrots, mangel wurzel beets, red beets or cabbages in the fall. All but the cabbages can be stored in boxes of moist sand, where they will keep well. Cabbages are best placed head down in a trench in some protected place. The cabbages are least satisfactory because the most likely to spoil.

There is still time to collect a considerable amount of grass clippings which can be dried and stored in barrels or bags. When soaked out the fowls will eat them readily.

There is time also to sow the garden to rye, which will remain green all winter and on which the chickens can be turned at any time when the ground is bare of snow. The rye will start to grow quickly in the spring, and can be plowed under, enriching the ground and putting the garden into good condition for vegetable crops.

## HARVEST HOME

(Continued from page 329)

put into the cellar. Remember that potatoes turn green in bright sunlight. This change of color is coincident with a material change in their food value. The moral is to keep them covered.

There is no better way to keep beets, carrots, turnips, parsnips and kohlrabi than in boxes of sand, the sand being occasionally moistened. When this plan is followed, the vegetables do not shrivel and often keep well until spring. In lieu of sand, which is hard to get in some places, you can use leaves raked from the lawn. Indeed, some gardeners claim that leaves are better than sand. Put a layer of leaves in the bottom of each box, sprinkling them among the vegetables, and put another thick layer on the top.

If you have onions to store, remember that dry conditions are absolutely essential. They will sprout in a moist place. At the same time they must be kept cool, all the above freezing. Onions are best stored in crates with slatted sides placed on shelves where there will be ample ventilation.

Celery can be kept well into the new year if dug up and set close together on the cellar bottom or in shallow boxes, a little earth being packed around the roots. It may be buried in pits in the garden, but then it is hard to get at. An inside or outside storage cellar is the best place.

Of course this is a hasty consideration of a very important subject. Perhaps, too, it will lead to the taking of extra precautions in some cases to prevent the loss of stored vegetables this winter. Any loss of this kind is to be deplored. The country needs every ounce of food stuff that can be provided and the Government is looking to the home gardeners of the land to help relieve a serious crisis.

# Everyone's Reference Library

A reference work to be **right** must be carefully conceived and wisely worked out from start to finish.

It must cover **every subject** in such a way as to meet the needs of **all classes** of people who may turn to it for aid—the youthful student, the scientists, the professional man, the business man and woman, the housewife, the university graduate, the man who never went to college, the city man, the country gentleman, the financier, and the farmer. Such a work is

The Great Question-Answerer

Made in America;  
it covers the world

**24 Volumes**  
**80,000 Articles**

### STRONG POINTS

1. **Accuracy:** all important articles written by specialists.
2. **Authority:** can be quoted on any subject without fear of successful contradiction.
3. **Comprehensiveness:** covers a wider field than any other general reference work. It contains 80,000 articles—30,000 more than any other encyclopedia.
4. **Lucidity:** written in language so plain that even the young folks can understand.
5. **Illustrations and Maps:** carefully prepared to illuminate and explain the text.
6. **Convenience:** printed on thin paper—not too thin but easy to handle and to leaf.
7. **Arrangement:** all subjects alphabetically arranged and easy to find.
8. **Pronunciation:** all except the most common words made clear by a simple phonetic system. Derivations also indicated.
9. **Bibliography:** every important subject supplemented by a full list of books that may be consulted.
10. **Courses of Reading and Study:** afford specialized help toward self instruction in leading branches of knowledge.
11. **Attractiveness:** monthly prizes stimulate use of volumes thus increasing their interest and value.

## THE NEW INTERNATIONAL ENCYCLOPÆDIA

Second Edition; Just Completed

Revised, Rewritten and Reset from A to Z  
Printed Throughout from New Plates  
Number of Volumes Increased  
Size of Page Enlarged

Editors:

FRANK MOORE COLBY, A.M.

## COMPIÈGNE, PLÉMONT AND LASSIGNY

(Continued from page 315)

winding tunnels were chicken wire beds, with all the soldiers' clothes hanging on the walls behind and the guns stacked up in front. Many soldiers were sleeping here as we passed along, and others were writing on improvised tables in the dim flare of candle light. It was damp and dark, but life in these caves was said to be quite healthy. When we came out of the mouth of the cave crowds of soldiers were stationed about the surrounding wooded cliffs in picturesque attitudes, just like the chorus of brigands in Gilbert and Sullivan's "Pirates of Penzance." The cave, I was told, serves as a resting place for 3000 troops and goes a quarter of a mile underground. The Germans on their great thrust toward Paris last spring took Plémont Hill and the surrounding forests, but in General Mangin's superb counter-attack the last week of August we regained the whole region.

That evening the dining room of our hotel at Compiègne was full of American physicians and nurses from the neighboring hospitals who had come to town for a real dinner and to be present afterward at the opening of the Club des Alliés. The Club des Alliés was an innovation in France and was started by the American Red Cross for the Allied officers in and near Compiègne. Major Davis had asked Judge Lindsay, Judge Wadhams and myself to "make a few remarks" at the house warming that evening. The English and American Red Cross nurses had been spending the afternoon getting the furniture into place, filling the vases with flowers, putting curtains at the windows and in general making the club room tidy and attractive. At dusk the two judges and myself walked across the street and found the little room completely packed with officers and nurses, mostly from our country. The curtains were drawn and in order to give a special touch of luxury to the occasion *three* candles were lit. The ceremonies were begun when Major Davis called upon Judge Lindsay to start the speechmaking. After the Judge had concluded a very neat little oration Major Davis called upon me. I had not been on my feet more than two minutes and was just warming up to a panegyric of the French and English armies when bang! bang! bang! the anti-aircraft guns began to bark. Some one instantly blew out two of the candles and placed the third in the back of the fireplace. Another ran to draw the curtains tighter. Major Davis was on his feet begging to us to adjourn to the basement. I naturally stopped talking. Major Davis again called to us to go to the cellar. But no one started to move and finally some one in the rear said, "Go on with the speech." I thought if any one cared to stay, it was "up to me" to do my part. So I started in again. I don't know what I said nor do I believe any one else did, but in a short time the reports of the anti-aircraft guns and dropping bombs grew fainter and in a minute all was quiet.

That was my first experience in an airplane raid. I subsequently participated in four others. I finished my speech and after Judge Wadhams had made his usual eloquent peroration we shook hands all around and retired across the street to our hotel where Major Davis showed us some of his Boche relics given to him by the French soldiers. We then stumbled up to our fourth story bedroom, undrest in total darkness, and tumbled into bed keeping one ear open for these German airplanes on their trip back from Paris.

# The Same Heat

**From Less Coal  
We Can  
Prove It**

**FIRST** we will prove it by what others have themselves proven.

Then, we will further prove it by an appeal to your common sense.

After which, we will, if you wish it, arrange for calls and interviews with nearby Kelsey Health Heat users.

Following which, we will *agree* to save enough coal for you in five years to pay for the extra cost of a Kelsey Warm Air Generator that makes the Kelsey Health Heat.

Isn't that fair enough?

Send for Saving Sense Booklet. Demand economy proofs.

## What is News?

News can only be that which is true—confirmed fact, evil exposed, and constructive good made known. Not rumors of the worst. Nor accidents, scandals and crimes of the day, with gruesome details.

The gossip of a community does not constitute news, but a statement of the substantial progress of a world does.

**The Christian Science Monitor**  
*An International Daily Newspaper*  
looks first for fact.

Constructive fact it enlarges upon.

And it is entertaining as well as true, thorough and fearless.

This motive and method has given it a universal news service, a world-wide circulation, an international advertising patronage.

The Christian Science Monitor is \$9.00 a year by mail, or may be obtained at news stands, hotels and Christian Science reading-rooms. A monthly trial subscription by mail anywhere in the world for 75c; a single copy for 3c stamp.

## THE MASTER OF MOBILIZATION

(Continued from page 316)

thirty days' continuously in transit to supply depletion.

Indeed, everything that the army uses here and abroad is, some time, likely to be put in storage—everything except men.

The transportation of men from San Francisco, and literally everywhere, in America, to somewhere else, and at last overseas, means the sure passing to and fro all over the land of thousands of men, as well as thousands of tons of supplies. This vast and intricate business is also in the province of the General.

And likewise the shipment of these men and their supplies overseas, to the very ports where General Pershing's great organization assumes charge of them.

Let us consider that the United States is not only such a source of man-power as the Germans never believed it could be, but it is also the granary of the western world, the principal ore and coal field of the Allies, the source of very much of the total quantity of materials used in the war. Nearly all its many hundreds of thousands of square miles are covered over with a huge net of railroads. And tho, in a sense, these roads are now, in far the greater part, under Mr. McAdoo, actually Mr. McAdoo is subject, in these years of war, to the wishes of General Goethals.

Ostensibly, too, Mr. Hurley and Mr. Schwab are building ships and operating them and the Navy is convoying them and many more, but actually the master shipper whom these men and the Navy convoy system are in a sense serving these days is General Goethals.

In a word, General Goethals has somewhat the same jurisdiction over the entire railroad and steamship facilities of all the lines, rail and steamship, supplying and carrying our men and supplies over land and sea that the United States Steel Corporation, say, has over the lines that bring ore down from the Mesabi ranges, down to the Great Lakes and via them to the strategic points where ore is combined with coke and limestone and steel is made. In America there are 250,000 miles of railroad—enough to reach around the world ten times. The aggregate amount of traffic over these lines moved at the command of General Goethals is, even for a month, probably past credulity. There is no way to approximate it—no permissible way—except by remembering that the primary duty of these lines these days is to contribute to the progress of the war. If we remember that and consider that in a typical peacetime year the railroads of America carried about 400,000,000,000 ton-miles, perhaps we can get some random approximation of the enormity of General Goethals's task. Then if we add to that imaginary total the vast number of ton-miles carried in the hundreds of vessels ceaselessly plying to France and back, many of which carry men, many more supplies, we may guess what kind of a record the General and his assistants have made. For not only are troops being sent over at the rate of approximately 90,000 a week but each man over there requires the continuous use of four tons of shipping, it is estimated, tho of course the estimate depends upon the rapidity of turn.

Certainly it seems clear, thus, that General Goethals is such a shipper as the world has never seen or imagined before.

There is no man in our national life who so personifies that powerful bull-dog type to whom an obstacle is merely something to go over, around or thru. He is Persistence. He is Determination. He is Drive.

## STRENGTHEN YOUR EYES!

Preserve Your Most Precious Possession

Your sight is your most precious gift. Weak eyesight means *weak power of observation*, eye strain, eye disease, and untold inconvenience. Take no chances with your eyes—you cannot get along without them. Make them stronger every day instead of weaker. Let us send you Bernarr Macfadden's wonderful new Course in "Strengthening the Eyes." Send no money—just mail coupon.

### Throw Away Your Glasses

Glasses do not remove the cause of eye troubles. Instead, the eyes come to depend on them more every day. Glasses are eye crutches! They simply bolster up the eyes—they do not strengthen them. It has been definitely proven that practically all defects of the eyes can be cured without glasses. Most people now wearing glasses can be freed from the inconvenience, expense of constant breakages, by strengthening and correcting their vision through the simple, yet effective eye educational exercises recommended by Mr. Macfadden.

### Eye Defects Removed

This remarkable new Course teaches you how to use your eyes without strain at all distances—how to do without glasses—how to remedy cross eyes or squint eyes—how to restore the normal sight—how to restore perfect control to eye nerves and muscles.

### Beneficial Results at Once

No drugs, medicines or operations. The Course includes a simple, yet thoroughly scientific system of eye educational exercises which strengthen the eyes exactly as the muscles of the body can be strengthened through body exercises. Results are immediate, and improvement continues daily. One woman writes: "I notice a great improvement in my eyes since learning to use them right." Another user says, "Your Eye Strengthening Course is fine. My eyes are already improving." Still another writes, "Words cannot express my great gratitude for these excellent books." (Names on request.)

### Send No Money

Let us send you this new Course "Strengthening the Eyes" on 5 days' approval. There are 28 simple little lessons which will show you the way to strengthen and preserve your sight—the gift of the gods! Try the exercises, then return the Course if not satisfied and you will owe nothing. If, however, you feel that the Course will help your eyes wonderfully, send only \$1 and then \$1 a month for four months, making \$5 in all. This price includes a year's subscription to *Physical Culture Magazine* which alone is \$2.

### Mail Coupon

If you value your eyes, if you wear glasses and want to get rid of them, if your eyes are weak or strained, or if you want to insure freedom from eye troubles, mail coupon now and investigate this New Course "Strengthening the Eyes." Send no money—but mail coupon now as this offer may never appear again.

Shelltex-rimmed and rimless Shur-on eyeglasses and spectacles. Established 1864.

## THRU THE LOOKING-GLASS

(Continued from page 322)

dimensions, mirrors afford so practical and simple a means of making a small room appear larger, that it seems strange they are so seldom employed for this purpose in private residences. Restaurateurs were clever enough to perceive their value long ago, and probably there are few persons who have not had the experience of walking into the mirror-covered wall of a restaurant, under the delusion that the room was twice its actual length; yet in few homes is this perfectly legitimate means to a desirable end ever utilized. Not, of course, that it is desirable to have visitors walk into the drawing room wall, but this can readily be prevented by letting the mirrors end at the baseboard. In the city home of the decorative expert whose hobby has elsewhere been mentioned, an ingenious use of looking glass for producing an appearance of spaciousness where spaciousness emphatically is not, has earned the appellation "The House of Mirrors" from admiring friends. In the narrow stair hall, for example, two of the walls are completely covered with squares of looking glass fastened in place in the French fashion with tiny gilt metal rosettes, and the effect is to make the cramped little box of a place appear roomy and of generous proportions. Thruout the house large and small wall mirrors and mirrored doors have been lavishly introduced with the twofold intention of producing an illusion of enlarged dimensions, and of imparting life and brilliancy to the rooms.

For those whose limited means prohibit the ownership of genuine antiques, there are excellent reproductions of old mirror frames to be had at a much lower cost; and if even these are beyond reach, it still may be possible to invoke the gracious aid of mirrors in the decorative scheme. Excellent results are achieved thru the use of frames made of simple wood moldings stained or painted to match the finish of the woodwork or the furniture. For instance, in a mahogany furnished room with white painted woodwork and mahogany doors, a nearly flat, mahogany stained frame of a width commensurate with the size of the glass will be dignified and in harmony with the surroundings.

Wherever there is a dark corner that needs brightening, a wall space where to no picture seems to lend itself, or a tiny hall or room in desperate need of enlargement, the home decorator may safely turn to looking glass for a solution of the problem.

It is quite true that the German retreat was "according to plan." Only the plans were Foch's.—*London Opinion*.

According to Count Hertling, "Belgium is merely a pawn for future negotiations." Have the Pan-Germans become Pawn-Germans, then?—*The Passing Show*.

More than 186,000 negro troops are already enrolled in the American army, and 900,000 more are available. Another black outlook for Germany.—*London Opinion*.

"How the Coal Goes" was the heading of a recent article in a Sunday paper. But we hardly needed any one to remind us how fast it scuttles away.—*The Passing Show*.

Hairdressing classes for disabled soldiers are to be started at Brighton. The lads should not need much instruction, however, having already given so many Herrs a dressing.—*London Opinion*.

**MORE** harmonizing colors to choose from when you decide on Liquid Velvet for your walls and ceilings.

Liquid Velvet shades were worked out with careful discrimination by a great color artist. Harmony in interior decoration—the fact that the walls and ceilings must furnish the background—was the controlling motive in choosing Liquid Velvet colors.

Therefore, you are sure of finding just the tint needed to perfect your color scheme.

Liquid Velvet combines the beauty of water colors with the durability of enamel. It is a flat enamel and can be washed repeatedly with soap and water. The finish can be kept fresh and new for years.

FLAGS FOR THE GARDEN

(Continued from page 320)

to be as common. In recent years I have bought the little bulbs as low as one dollar and a half a thousand.

Spanish irises are chiefly propagated in the nurseries of Holland and exported to this country along with tulips, hyacinths and narcissi in the fall. I prefer to get them in September and plant them thickly in a special bed in a sunny corner. I set the bulbs six inches apart and three inches under the soil.

The English iris is a fine flower, much like its Spanish congener, but larger and less delicate, both in form and coloring.

One of the favorite curiosities in this field is the Swiss iris. It is rare everywhere, tho as easy to grow as white potatoes. It is a noble big flower very richly colored. The markings look like very heavy and very dark purple lace over a silvery silk.

We should not forget either the Siberian nor the American species. They are both neat and tidy garden flowers. The American iris versicolor is the best for pond shores where the soil is really wet and soggy.

Blue is, of course, the native and characteristic color. The common blue flag is typical.

Purple follows blue quite naturally and combines with it in all sorts of ways. Here again the German varieties lead, tho the Siberian and English irises also produce many rich and royal purples.

Yellows seem less natural to the fleur-de-lis, yet there are several aboriginal species and endless garden varieties in which this color predominates. A few kinds have almost pure yellow flowers. Some of the best yellows are Iris aurea, Foster's Yellow, Tom Cook and other members of the "variegata section." Yellow is often found in this group combined with pale lilac, soft purples and madder browns.

Red is a color still less associated with the common notion of the iris, yet there are many varieties of remarkable beauty which give the red note. Usually, however, it is a dull coppery red, tho often rich and glowing.

The best white flowers or iris are to be found among the Japanese sorts. Next to them come the nearly white varieties in the Germanica group. There are special white or albino varieties in almost every group, but outside the Japanese iris I do not find the white varieties satisfactory.

My advice to the novice would be to begin with plain old-fashioned blue flags, which are pretty hard to beat anywhere, even with the longest names. Then I would suggest the purchase of a dozen or two good named German sorts, not less than six plants of any one name. To mention one or two which I have grown or seen and know to be good, I would suggest Pallida Dalmatica, a fine rich lavender shade; Mrs. H. Darwin, nearly white; Princess of Heck, yellow and purple; William Wallace, blue; Jacquesiana, rich coppery red.

After making a small start among the typical fleurs-de-lis the novice should, in my opinion, next try the Spanish irises.

The next step is to the Japanese irises. I have put the Spanish varieties ahead of them because they are cheaper and easier for the beginner to get and are even more certain than other irises to succeed.

After one really gets under way the path is as easy as sin. Anybody can follow it—as far as his money goes. And by that I do not mean to suggest that irises are an expensive hobby. They are instead about the cheapest of all good hardy garden plants which an intelligent man or woman of some taste would care to collect.

Salt Mackerel

CODFISH, FRESH LOBSTER

RIGHT FROM THE FISHING BOATS TO YOU

FAMILIES who are fond of FISH can be supplied DIRECT from GLOUCESTER, MASS. by the FRANK E. DAVIS COMPANY, with newly caught, KEEPABLE OCEAN FISH, choicer than any inland dealer could possibly furnish.

We sell ONLY TO THE CONSUMER DIRECT, sending by EXPRESS RIGHT TO YOUR HOME. We PREPAY express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want YOU to try some, payment subject to your approval.

SALT MACKEREL, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in PARCHMENT LINED CANS. They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying, SHRIMP to cream on toast, CRABMEAT for Newburg or deviled, SALMON ready to serve, SARDINES of all kinds, TUNNY for salad, SANDWICH FILLINGS and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send BOOK OF RECIPES for preparing all our products. Write for it. Our list tells how each kind of fish is put up, with the delivered price so you can choose just what you will enjoy most. Send the coupon for it now.

HODGSON Portable HOUSES

The Hodgson way eliminates all the bother and trouble that usually come with the building of a small house because the house is built, finished and painted in our factory and shipped to you in sections. It can be assembled easily and quickly by inexperienced men. No figuring over blue prints. No ruined lawn. No dirt or noise.

Send for a Hodgson catalog. You will find it jammed full of photographs of cottages, bungalows, garages, clubhouses and most any kind of a house you can think of. After selecting the one that strikes your fancy send in your order early and it will be shipped to you when you want it.

By paying 25% of the cost now we will hold the house until you need it. At the same time you save money and insure prompt delivery.

Your first move is to send for a catalog. Do it today!

E. F. HODGSON CO.  
Room 230, 71-73 Federal street, Boston, Mass.  
6 East 39th street, New York City

## Another idea that men once laughed at

**F**ORTY years ago the job of transporting beef from the fertile plains of the West to the vast consuming market of the East, was one of America's biggest meat supply problems.

In those days Western cattle were shipped alive over the long haul East. They were frequently injured; many even died; they all shrunk in weight and the quality of the beef was impaired. Watering and feeding en route was expensive and uncertain.

It was the idea of a number of Chicago meat men that the Western steer should, and some day would, be shipped as *fresh dressed beef*. They were laughed at on every hand as visionaries, their idea branded as absurd.

Among these "visionaries" was Gustavus F. Swift, the founder of Swift & Company. He gave the idea real impetus by trying it.

The refrigerator car had not then been perfected, so he rigged up a crude affair after his own ideas, loaded it with dressed beef and shipped it eastward.

After overcoming many difficulties, he succeeded in getting regular shipments of fresh beef through to the East in perfect condition.

But here he struck a snag. The railroads came out strongly against his idea: it meant supplanting cattle cars, which

they had, with refrigerator cars, which they didn't have. They flatly refused to build.

\* \* \*

Mr. Swift finally saw that only by building refrigerator cars himself could he put his idea into operation. During the following year he built and put into service seventy cars.

Today those first seventy cars have grown to a fleet of nearly seven thousand.

Millions of people depend on this huge fleet to keep them regularly supplied with fresh meats. It delivers to them three billion pounds annually, traveling approximately one hundred and sixty millions of miles.

\* \* \*

Thanks to the "idea that men once laughed at," no longer is the consumer dependent upon the uncertainties of open cattle car shipping and small local meat dressing methods.

Today the meat of the scientifically-bred Western steer—the finest beef producing animal in the world—is regularly available at all times, in the quantities and quantities needed, *everywhere* in this country.

The distributing machinery of the packer, in which the refrigerator car plays so vital a part, operates—even in the present war emergency—with un-failing efficiency.

## ***Don't Miss Your Last Chance to Get Today's Housewife Two Years for Only \$1***

The increased cost of magazine postage, of paper, ink, labor, etc. has made it necessary for most magazines to add 50c or more to their yearly subscription price within the past few weeks. Today's Housewife is almost the only good magazine left at 75c per year.

Magazines like Pictorial Review and Woman's Home Companion, that you could buy for a dollar per year a few years ago, have been compelled to raise their yearly price to \$2.00 and their single copy price to 20c. McCall's which sold for 50c per year only 18 months ago, will go to \$1.00 per year October 1st.

### ***Your Opportunity Expires in Twenty Days***

*Before raising our price on our popular "Two Years for a Dollar" offer we want to give all readers of "The Independent" one last opportunity* to have their names entered on our books for two years at a cost of only about 4c per copy. Newsstand price 10c. The many valuable recipes and practical homemaking ideas in each issue will be worth ten times 4c to every real housewife.

The world's best writers and artists will contribute each month to the inspiration, pleasure, and instruction you and your family will obtain from each coming issue of Today's Housewife. If you are fond of Crochet and Knitting, you will appreciate also the many increased pages we are devoting to these popular subjects. At the same time high class fiction that thrills and amuses is not omitted.

*There is no way you can spend \$1.00 that will bring you richer returns from your investment than \$1.00 sent at once for your two year subscription for Today's Housewife.*

Remember This Is Your Last Chance, so order before the 20 days have passed, taking with them our Last Chance \$1.00 Offer.

**MAIL YOUR ORDER WITHIN TWENTY DAYS—ADDRESS**

***Today's Housewife, 463 Fourth Ave., New York, N. Y.***

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra, to Canada, \$1 extra. ## REMARKABLE REMARKS

**GUSTAV HERVÉ**—The French republic is on trial.

**BONAR LAW**—We all loathe war and long for peace.

**GENERAL PERSHING**—We cannot tolerate alcohol among our soldiers.

**ADMIRAL VON HINTZE**—Our cause is an exalted one but it is in great danger.

**HERBERT C. HOOVER**—Brewers now use 4,500,000 bushels of grain per month.

**H. G. WELLS**—God has not made Americans clean shaven and firm featured for nothing.

**CONGRESSMAN MEYER LONDON**—I am working as hard as any member of Congress ever did.

**PAUL M. WARBURG**—The Federal Reserve System has become our chief line of financial defense.

**CHARLES MARRIOTT**—The aim of the reformer is to make the state always more and more like man.

**SIR HORACE PLUNKETT**—If any people is unfit for self-government, self-government is the one thing it most needs.

**GENERAL VON LUDENDORFF**—"Gain of ground" and "Marne" are only catchwords, without importance for the issue of war.

**HERR SCHEIDEMANN**—There is hardly anything more abominable than the air attacks upon open cities outside of the war zone.

**JOHN MITCHELL**—Almost every disturbance in the ranks of organized labor can be traced back to some connection with the saloon.

**SIEGFRIED HECKSCHER**—The English news propaganda is mightier than the English fleet and more dangerous than the English army.

**SECRETARY DANIELS**—The output of ships increased at the Mare Island Navy Yard and Newport Torpedo Station after the sale of liquor was prohibited.

**PAUL ROHRBACH**—The Bolsheviks are ruining Great Russia; they are destroying absolutely the very roots of any possible danger from Russia in the future.

**NICHOLAS MURRAY BUTLER**—Out of the present alliance of free democratic people it will not be difficult to build the structure of a league or society of nations.

**GENERAL SMUTS**—I don't think that an out-and-out victory is possible any more for any group of nations in this war because it will mean an interminable campaign.

**LORD BUCKMASTER**—It is said that the only way to end the war is to end Germany, but our experience of Ireland shows how utterly impossible it is to end even a small nation at our very doors.

**FRANCIS X. DERCUM, M.D.**—The modern world is not quite sane, and that new sects should arise in medicine, presenting this or that mystic cult, no matter how absurd, is only in keeping with the times.

**T. P. O'CONNER**—There never has been in my time so bitter, I would almost say frenzied, an anti-English feeling among

men of the Irish race in America as at present.

**HIS CADDY**—President Wilson pulls too fast. He would play better if his swing was a little fuller. He didn't lose any balls during the whole eighteen holes. He keeps his eye on the ball.

**LORD ROBERT CECIL**—There may be a great deal of doubt as to the practicability of the League of Nations idea among what are termed practical men, but practical men have never done anything.

**AUSTRIAN PREMIER VON HUSSAREK**—We are ready at any time to make an honorable peace as soon as our opponents renounce their hostile plans aiming at our destruction or our repression.

**GENERAL VON HINDENBURG**—We shall ultimately stand, not as used-up machines, but as a powerful, unenfeebled people, which today lays down its arms and tomorrow works at building up.

## THE NEW PLAYS

**A Very Good Young Man**, by Martin Brown. Cheap farce, cheap characters, cheap furniture, cheap humor. For cheap people. (Plymouth Theater.)

**Allegiance**. A real play dealing with a real problem—German-American loyalty—and acted with real emotion. (Maxine Elliott's Theater.)

**Where Poppies Bloom**. A thrilling triangle tragedy straight from the front adapted from the French by R. C. Megrue. Admirable French Poilu, English Tommy and American Sammy. Villainous German officer. (Republic Theater.)

**Penrod**, by Booth Tarkington. As wholesome and delicious a comedy of real American life for old and young as Mr. Tarkington's great success of last year, "Seventeen." An extraordinarily good group of children in the cast. (Globe Theater.)

## JUST A WORD

Mr. Val Fisher, a London publisher and a member of the London Chamber of Commerce, who is visiting this country, brings to American business men suggestions relating to the development of "good will" thru the medium of advertising, and gives figures to prove the gains accrued to those English firms which during the war period have maintained their publicity continuously.

Mr. Fisher, in one of his New York addresses, says:

British manufacturers who have not a dollar's worth of merchandise to sell, whose entire plants are employed on Government work, are keeping their advertising continuously before the public, because while they are perfectly willing to turn their profits over to the Government, while they are perfectly willing for the sake of winning the war to have their factories commandeered and their normal business completely stopped, yet they are not willing to sacrifice their good-will; they are not willing to have their names or their products forgotten.

And so they continue their advertising, continue building their good-will, so that when the war shall be won there will be an immediate demand for the billions of dollars' worth of merchandise that their greatly enlarged factories will then turn out.

There have been several items in the German press, in which ridicule is directed toward American manufacturers for discontinuing their advertising, adding that German manufacturers are wise enough to know that markets once controlled can be easily lost thru the cessation of publicity, and that they are continuing their advertising and will continue it because it is the best business insurance they can buy.

England, too, is evidencing a far better vision than America.

It behooves our manufacturers to strive to keep the public's faith rather than to let the disease of forgetting undermine the foundation which may have been built only after years of effort and advertising.

# B&B Adhesive Plaster Tape

## Has a Thousand Uses

Mends Rubber

### A Rubber-Coated Tape

Strong and enduring. It sticks to anything that's dry and stays stuck. It mends anything, and mends it firmly, whatever the material.

## Saves Countless Dollars

Think of the things you throw away when a bit of tape could mend them.

**Lawn hose**, for instance. You can double its life if you mend the breaks with B&B Adhesive.

**Any rubber article** can be mended instantly.

**Leaks are stopped** in metal pipes, and in automobile inner tubes.

**Clothing tears** are mended so you cannot see them, by attaching B&B Adhesive on the under side.

**Grips are made** for golf clubs and for tennis rackets. Simply wrap them with the tape—no wetting. And it sticks like glued-on canvas.

**Broken handles** are repaired in a moment, and for good.

Anything broken, anything torn—whatever it is made of—can be lastingly repaired.

Electric wire connections can be insulated with it, for the tape is rubber-coated.

Prevents Chafing

Fruit jars can be sealed.

Chafing and blistering of hands and heels can be pleasantly and easily prevented.

Insulates Wire

Stops Leaks

### Ever-Sticky Rubber

This is fabric tape, one side of which is ever-sticky rubber. Surgeons use it for attaching bandages, for holding splints and strapping sprains. Millions of yards are yearly used for every day repairs.

Be sure to get the right kind—B&B Adhesive Plaster Tape. Made by experts in a special way, to fit this all-round service.

It comes on spools in various widths and lengths. But the larger spools, five or ten yards, are most economical.

Get it today, and always keep it handy. Carry a spool in your car and in your traveling bag.

Our Adhesive Book pictures 80 uses. Ask your druggist for it free—when you buy B&B Adhesive.

## OPEN WARFARE

THE western front has broken up like a frozen river in the spring freshets. The lines that solidified in the fall of 1914 melted away in the spring of 1918. During all the intervening years there were no movements so extensive as those of last week. A single daily paper reports more operations than a month's news before. The capture of such important points as Chaulnes and Mount Kemmel receive mere mention.

Beginning March 21 the Germans delivered three successive offensives, on the Somme, the Lys and the Aisne respectively, and all made unprecedented gains. Beginning July 18 the Allies delivered three successive offensives on three fronts and in each case wiped out the greater part of the German salient. Both sides have done this year what neither could do before. It is difficult to account for this complete change in the character of the conflict. It cannot be ascribed to a sudden collapse of *morale* on the one side or accession of courage on the other, for both parties have been affected. It is not to be credited altogether to the Americans, for French, English, British Colonials and Germans have independently gained similar successes. It is not due to tanks, or gas, or airplanes or other new invention, altho these have contributed to the various victories. It is not the discovery of some new tactics, for all tactics seem to work now. It is not merely a question of numbers or munitions, for both parties have at times had all the men and guns they could use on a particular front and yet could not break thru. It is not to be explained on the ground of harder fighting or greater sacrifices, for in the present operations there have been no losses like those of the Germans at Verdun, the British at Loos or the French at Chemin des Dames, all of which were failures. It is not merely the element of surprise, for surprise attacks were tried by both sides before with only transient success. Nor can it be referred to the apparition of some new military genius, for the names of the men now in command have long been familiar to us. We can in fact find no single and simple cause for the series of brilliant achievements that has distinguished the season's campaign, and so we must regard it as due to varying combinations of the former factors and there seems no reason to anticipate another such cessation of open warfare.

But if we cannot explain the break up of the western front we can certainly rejoice in it, not merely because things are now going our way but because it promises to bring the war to a more speedy and advantageous conclusion than formerly seemed possible. For victory can only be won in the open field, never in the trenches. In football it is only the side which has the ball that can make a score. The general who has the offensive dictates the enemy's strategy as well as his own. He decides when and where the battle shall be. He does not have to depend upon spies and airplanes to find out the plans of the enemy. It does not matter

what the enemy's plans are if he can carry out his own. We have left the initiative to the Germans quite too long. It is a great relief to get free at last from dispiriting speculation as to "Where will Hindenburg strike next?" Now we've got the Germans guessing "Where will Foch strike next?" This change is not merely a chance of victory, it is a victory in itself. Its effect is not confined to the front but extends to the remotest parts of the enemy's empire. We can see evidence of it in the style of the German news. When the German armies were advancing the German official reports were for the most part frank and tolerably correct. Now they are vague, evasive and prevaricative. Formerly the German Government did not dare deviate too far from the truth about the situation because the people could check its statements by reading the foreign press. But now the German Government has suddenly changed its policy and made it as hard to get Allied journals in Germany as it to get German journals in America. A London despatch says:

Previously English, French and American newspapers could be bought easily at shops and bookstalls and were allowed to circulate freely, but now they are obtainable only by special permits, which are issued to privileged persons, such as members of the Reichstag.

This is one of many signs of Germany's internal stress and strain. Germany is in the state of the patient to whom the doctor dare not tell the truth about his condition for fear it would prove fatal. We have then good reason to be elated over the news. Instead of being content if we can hold the line against the German attacks we have them on the run. They hope to halt at the Hindenburg line, but the success of the Canadians in breaking thru the Drocourt-Queant extension of this line against which last year they battered in vain indicates that this defense cannot be relied upon. Victories are reported all the way from Ypres to Reims, not casual and local successes, but coördinated and successive blows whose meaning is only apparent to the observer as it is to the enemy after they have accomplished their designed result.

Foch's triumphant advance and the weakness betrayed by the Germans gives ground for hoping that the enemy may be brought to bay and forced to capitulate where he stands. Until the trench system of warfare was broken up it seemed that the only way to win was to drive the Germans back step by step to their own frontier and beyond, a direful prospect for it meant not only a terrible sacrifice of men but also the devastation of the richest region of Europe. If we were dealing with a merciful and chivalrous enemy we should expect that in his retreat the cities and towns would suffer no more than was inevitable thru the conflict. But an unscrupulous enemy like Germany would largely nullify such a victory by wholesale and systematic destruction, such as was inflicted on the strip of territory evacuated by Hindenburg last year. But the territory now being evacuated

has not been so thoroly laid waste, for the Germans have been compelled to retreat too rapidly. If, then, the Germans are not willing to accept the Allied terms on the Hindenburg line they may be forced to their own frontier so quickly that they will not have time to ruin the cities, mines and factories of northern France, Belgium and Alsace-Lorraine as they are doubtless planning to do.

## AN ARITHMETICAL PROBLEM

THE debt of Great Britain will amount next March to \$40,000,000,000 and this, according to the Chancellor of the Exchequer, is as much as a million men could earn in four hundred years. After Waterloo the British debt was \$4,150,000,000. By the time the Great War began, a hundred years later, this had been reduced to \$3,250,000,000. Those of our readers who are quick at figures can calculate the date when the present debt will be paid off.

## STRANGE BED FELLOWS

SURELY the strangest chapter of this strange war is the virtual alliance of the Russian Bolsheviks with the Central Powers in a common hostility to ourselves and the other democracies of the world. That the people who regard a Kaiser as a dog does his master should work in harmony with those who regard a Czar as a dog does a cat; that caste-proud Junkers who will hardly admit an ordinary peasant or laboring man to be a human being should find ready tools in men who think it a capital offense to possess a bank account; that men who have no ideal in earth or Heaven but the glory of their nation should come to an understanding with men whose boast it is to ignore all national distinctions; that persons who claim to represent a despoiled and invaded country should league themselves with the despoilers and invaders—all this seems as incredible as it is true. The Divine Right of Kings and the Dictatorship of the Proletariat: it is indeed a partnership!

And yet at second thought there is some kinship between the disciples of Lenine and the disciples of Hindenburg. Both believe in class rule; they differ only on a point of detail, whether the palaces shall rule the slums or the slums the palaces. Neither has any use for a polity which provides a common ballot box for the votes of millionaire and day laborer. Both believe in government by frightfulness: they differ only as to whether officers should shoot their soldiers at will or soldiers should shoot their officers at will. Both have a profound contempt for moralities, legalities and scruples. It is impossible that they should love each other, but it is also impossible that either should love us. Shall we leave Russia to be crushed between these upper and nether millstones?

## A GREAT SCIENTIFIC OPPORTUNITY

IN the midst of war we cannot wholly forget the more important things that claim attention in days of peace. Above all, the call of the future must be heeded. There is strenuous work ahead, and the most tremendous part of it is the work of social readjustment. Many things that never yet have been right must be faced and dealt with.

If they are to be dealt with wisely effort must be guided by adequate knowledge. The national administration at Washington, like the governments of Great Britain and of France, has shown an intelligent appreciation of this necessity, and it is probably true to say that never before has so much attention been given to a systematic study of the perplexing problems of private and public interest and their interrelations in democratic society as the Departments of Education, Commerce, and Agriculture, as well as those of the Interior and the Treasury, and numerous commissions

and councils, including the National Council of Defense, are bestowing upon them now.

At the basis of sound knowledge of American social and business conditions is the data gathered, analyzed and tabulated by the census. This material is not of uniform value, and there have been costly inquiries that have not yielded results of consequence. All in all, however, the reports of the decennial census are informative and indispensable.

It will be a poor economy which unnecessarily curtails the work of the next enumeration, or delays the tabulation and publication of its findings, if such frugality is ordered on the plea of war saving. The census, made as complete and trustworthy as scientific expertness and non-political appointments and rulings can make it, is a money-saving, a poverty preventing and a strife avoiding work.

So far from crippling the census in any way the Government should now make it responsible for taking the first steps toward one of the greatest scientific studies ever made possible by events. On the questionnaire sheets filled out by draft registrants and drafted men there is and will be recorded a mass of detailed information about the composition of the American population which no publicist ten years ago could have dreamed of obtaining. It includes facts of race and nationality, of domestic condition, of economic status and occupation, of education, and of physical fitness or unfitness, not only more extensive but also far more trustworthy than could possibly be obtained by direct inquiry for a scientific purpose only. It is relatively trustworthy not only because set down under conditions of extraordinary precaution, but also because the military object for which it has been demanded makes it unbiased, in a scientific sense, as a social survey.

These filled in schedules—this mass of original material—should be saved for future analysis and tabulation—a great task not to be undertaken now of course. The Census Bureau with full authority and with help from the War Department should be required to collect, sort and store this material immediately, leaving its utilization to the future. It could not be stored at Washington, which already is bursting with people and paper; but there is plenty of room elsewhere.

Not only has no such opportunity ever occurred before, but we trust no other quite like it will ever occur again. It is the one chance of centuries to obtain data of such unique and tremendous importance. The future will not forgive us if we let it slip.

## THE LABOR PROGRAMS

WE have seen no serious attempt to explain why the American labor program is so much narrower and so much less interesting than the British program, and we are not about to offer one. An explanation presumably might be discovered, and it would seem to be worth looking for.

The American Federation of Labor, as everybody has learned from much newspaper reporting and discussion, sticks, as of yore, to pure trade unionism. No crash of empire nor crisis of civilization has yet been able to disintegrate its fixed idea or awaken its interest in anything beyond the three points of its inexorable Calvinism, namely: wages, hours, and "recognition" of the union. By comparison with this creed the British program seems almost as human as a Methodist camp meeting. British workmen have got their unions recognized "good and plenty." Now they want to be recognized themselves as human beings. They want not only wages and comfortable working conditions, but also participation in control. They want political influence and are getting it. They want education and are going to have it. They have awakened intellectually enough to know that an intellectual interest in life is rather good fun, and they intend to have more of it.

Instead of attempting to account for this important difference between the American and the British labor objectives we wish on this occasion only to call attention to the contrasting reactions which the two programs must necessarily provoke in the employing classes. It is not to be supposed that the American Federation of Labor desires to confirm the typical employer's conviction that industrial democracy, like Bolshevism "won't work" because wage-earners are not competent to work it. Precisely that confirmation, however, the American program will achieve. The typical American business man sees only two classes of human beings in the world, one made up of men able to "go it alone," and the other made up of men who must be told what to do and how to do it. You can't convince him that the man who is able to "go it alone" ever tarries long in the wage-earning class if he happens to be born into it, or, in a day of bad luck, to tumble into it; or that the man who has to be told what to do and how to do it ever "gets on" if he experiments with a business or a farm of his own. Therefore the American business man is cold and incredulous when any one tries to interest him in a scheme to place more responsibility upon the individual wage-earner, or to admit him to participation in industrial control.

Quite as certainly the British program disturbs the employing Briton's philistine complacency. If the wage-earner can get interested in politics and in education, what may not happen? If in his capacity as a citizen he actually begins to take responsibilities and to put things thru, is it quite so certain as it seemed that he might not bear up fairly well under responsibilities of less magnitude? Moreover, has not the vast growth and the solid success of the coöperative movement which began with the founding of the Rochdale Pioneers demonstrated that British workpeople really are competent to look at industrial and commercial problems from the business angle and to qualify, to some extent at least, as business men?

Does all this mean, as various other signs have seemed to indicate, that a real industrial democracy is nearer in England than in the United States? Shall we see English and American employers agreeing that British wage-earners possibly are fit to be admitted to participation in industrial responsibility and control, and that American wage-earners are not? That would be a curious judgment and one calling for explanation. We are not predicting it. We are only indulging ourselves in curious and possibly idle questions.

## SCIENTIFIC PERMISSION TO EAT

W O unto you Jeremiahs of dietetics who have been making us sad with your preachments! You have told us that we dig our graves with our teeth; and that we all surely shall die too soon, because we like beef-steaks and puddings at night, and fried eggs with liver and bacon and griddle cakes for breakfast. You are exposed and brought to shame. A greater than you has undone you.

He is Thomas Burr Osborne by name, and his local habitation is the Connecticut Agricultural Experiment Station. By reputation he is "one of the first authorities in the world on the subject of proteins and their different effects upon the animal organism." Also if anything has been found out about calories he knows that too. He has been over and thru and round about the whole theory of scientific feeding, of hogs and humans; and now his glad conclusion is that instinct is a safer guide to what and how much to eat than the laboratory formulas are.

It all came about apparently when somebody wondered what would happen if hogs and things should be permitted to eat instinctively under the eye of the experimenter, just as they once did in a state of nature before rations were invented. All sorts of victuals from good sound corn down to oil meal and salts were placed in separate hoppers and troughs where the swine could help themselves at will, with

the sequel that during early growth "these pigs ate much larger proportions of protein than when growth became slower," and in various other ways showed a certain kind of sense, and made out to grow "faster than any previously recorded which had been fed on mixtures made for them by the combined talent of agricultural experts, trained both in the science of nutrition and in the practise of the art of feeding." Experiments on albino rats confirmed the teaching of the hogs.

A plenty of other data and reflection have entered into Professor Osborne's induction that the American people do not after all eat too much. We can't repeat it, but it is interesting as he presents it in an *Atlantic Monthly* article. The most important part of it consists essentially of two propositions: one that the body must as a rule get a good deal more food than it can assimilate so that it may both keep a margin of safety and have at all times a sufficient quantity to pick and choose from the specific and often relatively rare chemical compounds at the moment needed; the other, that the body normally has ways of disposing of and getting rid of temporary surplus before injury is done. The one fairly trustworthy scientific guide in supplement of instinct is the avoirdupois scale. If your weight is abnormal and increasing, slow down.

## THE NEW CHILD LABOR BILL

HOWEVER the action of the Supreme Court in passing adversely upon the federal child labor law be regarded, one fact remains as indubitable as before—the people of this country believe in national protection for children. It therefore remains to determine what is the best basis for a new measure that will meet the test of constitutionality.

In the meantime large numbers of children are entering industry wherever the state laws permit. In the southern cotton mills young children who had either been removed from the mills or put on an eight-hour day when the federal law went into effect in 1917, are now going back to work and have been put on the old eleven-hour day schedule. Reports come from all over the country of the increase in the number of work-permits issued to children in the last few months. It is evident that something must immediately be done if we wish to conserve our child-power, which is the man-power of tomorrow.

To meet this emergency Representative Edward Keating of Colorado has introduced in the House a new child labor bill by which Congress under the war power may directly prohibit the employment of children under fourteen years of age in mills, factories, canneries and manufacturing establishments, of children under sixteen years in mines and quarries, and of children between fourteen and sixteen in factories for more than eight hours a day or at night. The bill is a war measure, "for the purpose of conserving the man-power of the nation and thereby more effectually providing for the national security and defense." It will be effective for the duration of the war and six months thereafter, and will give time for the careful consideration of a permanent measure. It has the approval of President Wilson, and is being actively supported by the National Child Labor Committee and the American Federation of Labor.

*Ad astra per aspera.* A Kansas farmer, Nicholas Tchaikovsky, is now president of the Russian Government at Archangel.

In Russia we now have the Red Guards (Bolsheviki), the White Guards (bourgeoisie), the Green Guards (Czecho-Slovaks) and the Black Guards (anarchists). Why not unite them in a Rainbow Division?

Germany's greatest mistake has been in appealing to the lowest motives of her enemies.

Have we made our greatest mistake in appealing to the best motives of Germany?

# THE STORY OF THE WEEK

**Smashing the Siegfried Line** The British victories are not confined to driving the Germans back to their old lines and recovering more or less of the ground lost last spring. On the Arras front they have already gone farther east than they ever were before and have penetrated the Hindenburg system of defenses which withstood their strongest attacks in 1916 and 1917. This line of fortifications was constructed by General Hindenburg in 1916 when he perceived that he would not be able to hold his original front on the Somme against the offensive which Haig was preparing to deliver the following spring. It was so well chosen and constructed that when the Germans unexpectedly withdrew to it in March, 1917, the British were baffled and the

season of 1917 was largely wasted in futile attempts to break, outflank or even to reach the new German positions that stretched in front of Cambrai, St. Quentin and Laon. Only at the ends of the Hindenburg line where it joined the old front did the British and French make any gains and these were very costly.

On the northern end before Arras the natural weakness of this junction had been covered by extensions of the Hindenburg line named after the heroes of the "Nibelungenlied." Of these the "Wotan line" extended from Quéant twelve miles southward and the "Siegfried line" extended from Quéant fourteen miles northward to Drocourt. This Siegfried line, called by the British the "Quéant-Drocourt switch-line," runs

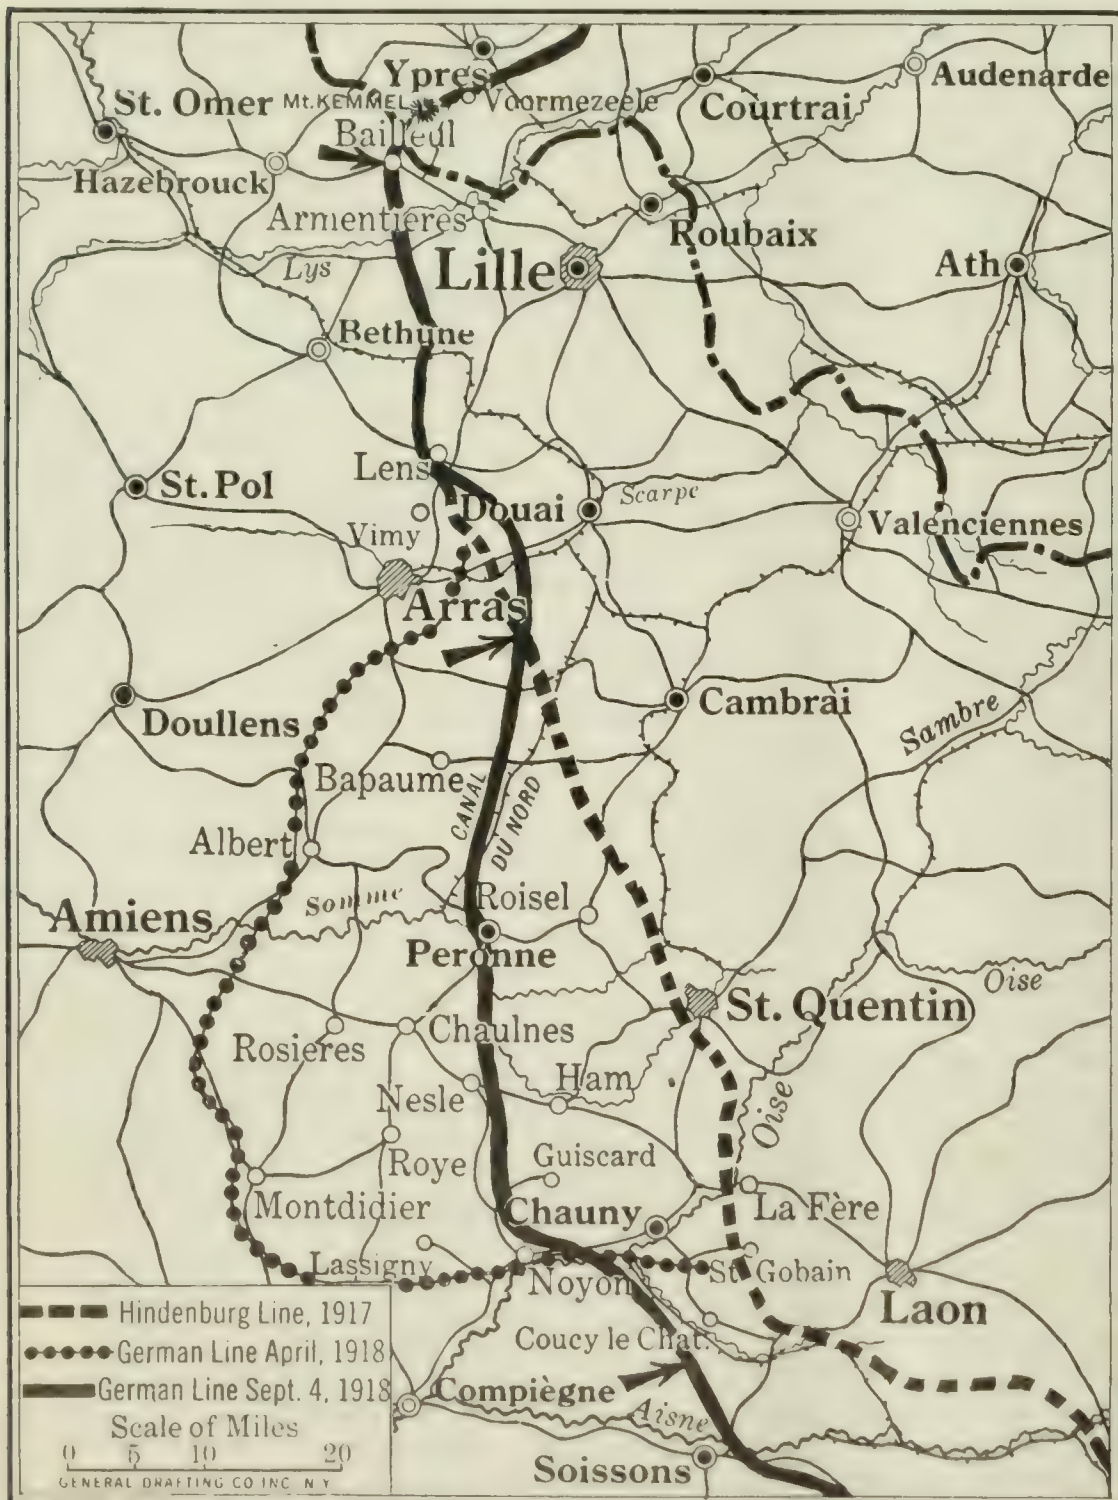

north and south across the Scarpe River eight miles east of Arras. On April 9 to 15, 1917, the British troops, largely Canadians under General Sir Julian Byng, their present commander, drove the Germans back from the suburbs of Arras and to the north stormed Vimy ridge, commanding the city of Lens. But they were not able to take Lens or make any serious impression on the Drocourt-Quéant line.

But now it is different. On September 2, 1918, the English, Scottish and Canadian troops penetrated the Drocourt-Quéant line to a depth of three miles on a front of six. The attack was opened at five o'clock in the morning by a terrific cannonading. When the barrage was raised the troops charged, with the support of numerous tanks. The Germans put down a heavy counter barrage and directed a murderous machine-gun fire at the advancing troops. But they could not be stopped and by 7:30 o'clock they had got thru the front and support lines. Once these defenses were pierced the mobile motor machine guns were able to run out upon the German supply roads and raid the country five miles to the rear of the German lines.

The German barbed wire barricades were largely broken down by the British barrage and where they were not the tanks crashed thru. But in the woods about Quéant the German machine gun detachments offered stubborn resistance. Piles of German dead were left on the ground over which the British had passed. Eleven German divisions were brought up to defend 8000 yards of the Siegfried line, but the British broke thru and encircling Quéant from the north captured it on September 2. Ten thousand German prisoners were taken.

**Americans Take Juvigny** Altho the great mass of American troops are being gathered together in a separate army ready for independent action under General Pershing wherever and whenever they may be needed, there are still detachments being employed at various points of the British and French fronts. For instance, a small unit of Americans was brought on August 28 to the sector north of Soissons occupied by the Tenth French Army under General Mangin. Three hours after the Americans arrived they were brought into action, much to the surprise of the Germans, who supposed they still faced the French.

The job set for the Americans was the capture of the village of Juvigny, four miles north of Soissons. This was accomplished the following day, but the Germans soon recovered it. On Friday the American and French artillery was concentrated upon Juvigny until it was thought to be completely reduced to ruins and its garrison wiped out. But

THE BRITISH ADVANCE

The British in August regained the greater part of the ground they lost last March and are rapidly approaching the old Hindenburg line. Peronne has been taken and Lens entered. The Siegfried line, an extension of the Hindenburg line east of Arras, has been crossed at Quéant (at the point of the arrow). The Americans have taken Voormezele, near Ypres, and are advancing toward Coucy-le-Château, north of Soissons, with the French

at four o'clock, when the Americans advanced upon the village, it was found that the houses and the hills behind it were still occupied by batteries of machine guns and it was too dangerous to assault. So the direct advance was abandoned and an encircling movement substituted. One party of Americans was sent around by the east and another by the west. They crept forward thru shell craters and old trenches, digging in whenever the German fire became too hot, until they met behind the town and entered it. Of the thousand or more Germans who originally held the town only 250 remained alive. Most of these were concealed in quarries on the side of the ravine. The prisoners were escorted to the rear and placed in a capacious quarry formerly used by the Germans as division headquarters. But a German shell exploded in the entrance to the cave and killed eight and wounded thirty of the Germans confined there. General Mangin sent his personal congratulations to the Americans for their gallantry at Juvigny.

On Saturday morning the Americans pushed forward to the north with the aid of thirty French tanks and supported by French troops on either flank. By nightfall they had advanced two miles and taken 600 prisoners and two guns.

**Americans in Belgium** For the first time American troops are fighting on Belgian soil. They are helping the British clear out the Germans from the region south of the Ypres. It will be remembered that the second of the German spring drives was directed between Ypres and Bethune with the design of reaching Calais and capturing the corner of Belgium that has been held by the Allies. The Germans succeeded in taking the chain of hills overlooking Ypres from the south. The loss of such hard-won heights as Messines, Wytschaete and Kemmel was naturally a hard blow to British pride, but the enemy was halted just beyond Kemmel and did not get Ypres.

Now the British are regaining the ground they lost then with much less difficulty than the Germans in taking it. On August 31 the British took Mount Kemmel and on the following day the Americans took the Flemish village of Voormezele between Ypres and Wytschaete ridge. All the houses had been demolished, but the German rearguard defended the ruins with machine guns. Both British and Americans are still advancing eastward, driving back the troops of General von Quast to the lines they occupied last year.

**Noyon Again French** The recapture of Noyon has a sentimental as well as a strategic value to the French. From 1914 until the German retirement to the Hindenburg line in 1917 it was the nearest city to Paris held by the enemy. Clémenceau, before he became Premier, used to run at the bottom of his editorials in each issue of *L'Homme enchaîné* (The Man-acted Man): "The Germans are still at Noyon," as a spur to governmental action. When the Germans broke thru last

© Press Illustrating

#### THE CITY OF LENS

The British troops are reported to have entered the suburbs of Lens, one of the most important mining and industrial centers of northern France. Last year the capture of Vimy Ridge gave the British a position dominating the city, but they were not able to capture it.

March at the junction of the British and French lines they regained Noyon. Now, however, the Germans are no longer in Noyon.

It was evident to any one following the campaign on the map that the advance of General Humbert to the north of Noyon and of General Mangin to the east of Noyon would soon put that city in a pocket. This maneuver was successful and the two armies met behind the city. Most of the German troops had been withdrawn, but those left behind made a desperate stand. The New York Times correspondent thus describes the fighting:

The struggle that ensued was one of the fiercest of the war. The Germans had received orders to resist to the last man, and to their credit be it said that they obeyed. They fought behind each stone and from each doorway and window. No quarter was asked on either side and none given. Most of the fighting was with the

bayonet and butt. Many men who continued to struggle ferociously after being brought down with the bayonet had in hundreds of cases to be overcome with the heavier end of the rifle. Where there was no room for bayonet fighting the antagonists threw away their rifles and fought with their hands, their feet, and their teeth. Every house was the scene of furious struggles, where men wrestled together in pools of their own blood and yielded only when death compelled. The few prisoners who were secured went to the rear still trembling in every limb from the frightful ordeal they had passed thru. All agreed in describing the struggle as simply infernal in its mad ferocity. In less than a quarter of an hour the suburbs of Noyon were ours.

After leaving Noyon the Germans tried to carry out their threat to demolish the city and its famous cathedral, but their bombardment was cut short by the capture of Mont St. Simeon, a height of 600 feet east of Noyon. The French troops as a whole did not enter the city till next day for fear of gas and man-traps, but the German shells drove out of their hiding places the last of the garrison, thirty-two Germans whom the Zouaves had overlooked in their search.

Peronne, which the French and English tried in vain to capture all thru 1916, fell an easy victim to the Australians on September 1, after they had in a brilliant assault captured Mont St. Quentin, that overlooks the city.

#### THE GREAT WAR

August 29—French take Noyon. Bolsheviks defeated on Ussuri River. Siberia. Lenine shot.

August 30—Americans take Juvigny. French take Mont St. Simeon, east of Noyon.

August 31—British take Kemmel. French take Leury, north of Soissons.

September 1—Australians take Peronne. Americans take Voormezele.

September 2—British take Quéant. Rhine cities bombed.

September 3—American Government recognizes Czecho-Slovaks as belligerent nation. British take 10,000 prisoners back of Siegfried line.

September 4—Germans retreating from Vesle River. More than 1,600,000 American troops have gone abroad.

**Czech Nation Recognized** The Czecho-Slovaks are now recognized by the American Government as a belligerent nation, and their National Council, with headquarters at Washington, as a de facto government with which the United States "is prepared to enter into relations for the purpose of prosecuting the war against the common enemy, the empires of Germany and Austria-Hun-

gary." Secretary Lansing gave out the following declaration on September 3:

The Czecho-Slovak peoples having taken up arms against the German and Austro-Hungarian Empires, and having placed organized armies in the field, which are waging war against those empires under officers of their own nationality and in accordance with the rules and practices of civilized nations; and

The Czecho-Slovaks having, in prosecution of their independent purposes in the present war, contended supreme political authority to the Czecho-Slovak National Council,

The Government of the United States recognizes that a state of belligerency exists between the Czecho-Slovaks thus organized and the German and Austro-Hungarian Empires.

It also recognizes the Czecho-Slovak National Council as a de facto belligerent Government, clothed with proper authority to direct the military and political affairs of the Czecho-Slovaks.

This follows up the policy of the Allies, who on January 10, 1917, in their statement of war aims in response to the President's request, specified "the liberation of the Czecho-Slovaks from foreign domination" as one of the objects for which they are fighting. This of course meant that the Allies were pledged to continue the war to the disintegration of Austria-Hungary, for the proposed independent Bohemia comprizes the Czechs of Austria, the kindred Slovaks of Hungary, as well as adjoining parts of Moravia and Silesia inhabited by these peoples. The Czecho-Slovaks in America and other parts of the world have energetically supported the nationalist cause and established a National Council, which has been virtually a government, altho without any territorial jurisdiction. But it collects voluntary taxes, carries on negotiations with foreign governments, organizes armies, and conducts campaigns. The dominant force in Russia is the army of Czecho-Slovak prisoners, to whose

**A PRESIDENT WITHOUT A COUNTRY**  
The recognition by the United States and the Allies of the Czecho-Slovaks as belligerents virtually makes their leader, Professor Thomas G. Masaryk, the first President of the Bohemian Republic that is to be when the war is won. Professor Masaryk organized the Czecho-Slovak troops, now doing gallant service in Russia

support the Allies and America have just sent an expedition to Siberia. At the head of the National Council at Washington is Professor Masaryk, of the University of Prague, who now, by the recognition of the United States, becomes practically the first president of the Bohemian republic.

**The Siberian Campaign**  
The Cossacks of General Semenov, moving westward from Manchuria, have come in contact with the Czecho-Slovak forces moving eastward from Lake Baikal. Since the Czecho-Slovaks now control the Trans-Siberian railroad from Penza to Baikal, this completes a chain of Allied forces across Russia from the Volga to Vladivostok, a distance of five thousand miles. The Bolsheviks, however, still hold Chita and the Onon River between Lake Baikal and the Manchurian frontier.

On the Usuri River north of Vladivostok the Allies have defeated the Bolsheviks. The battle was begun on August 23 by the Bolsheviks, who with a thousand men attacked the right wing, but the Japanese, who hold this position, twice repulsed them. In the afternoon a Bolshevik force of two thousand attacked the Czecho-Slovaks of the left wing and forced them to retreat. But on the following morning the Allied troops advanced and drove the enemy back fifteen miles. Further pursuit was impeded by the destruction of the railroad and bridges by the retreating Bolsheviks. The enemy lost four hundred men in the three days' fight.

The political situation does not look so favorable as the military. The Rus-

sian volunteer force numbering four hundred, organized by the Zemstvos, went over in a body to General Horvath, the dictator of Siberia, but the Allies spoiled his *coup d'état* by surrounding their barracks at Vladivostok with their troops and disarming the force. One of their officers, a lieutenant colonel, committed suicide because of this public humiliation. The Zemstvos are the provincial assemblies, almost the only form of constitutional popular government of the old régime or of the present. It was hoped that the Allied troops could secure their coöperation in the reestablishment of a Russian army and government, but the arrest of their troops seems to have alienated the Zemstvos of Vladivostok.

Nikolai Lenine, the Bolshevik Premier, was shot on a Moscow street by Dora Kaplan, a Russian revolutionary recently arrived from the Crimea. She tried to run away but was arrested. Three shots were fired and two took effect, wounding Lenine in the lungs. He was at first reported dead, but is now said to be recovering. About the same time Moses Urizky, Peoples Commissary for Home Affairs, or as we should say, Secretary of the Interior, was assassinated at Petrograd. The Bolsheviks ascribe these two attempts, as well as the recent assassination of the German representatives at Kiev and Moscow, to the Social Revolutionists and they have declared a reign of terror. All Entente subjects are to be interned and all non-residents are ordered to leave Moscow and Petrograd.

Evidently the reports received in this country that the Bolshevik Government had collapsed and the leaders fled to Kronstadt were quite false. On the contrary the tone of the Bolshevik press up to August 17 indicated greater confidence in the stability of their power since the suppression of the counter-revolutionary movement of the Russian officers.

The "Sovereign Government of the Northern Region of Russia" set up by the Allies at Archangel has enrolled an army of a thousand volunteers. The President, Nicholas Tschaikovsky, asks for American aid to provide arms, food and agricultural machinery. The movement of the Allied troops into the interior is at present checked about seventy-five miles south of Archangel by a force of Lettish troops in the Soviet service, equipt with artillery.

**Finland's Dilemma**  
Altho the Red Republicans were crushed and Finland completely dominated by Germany, the monarchical party has not had things its own way. A stout fight against the proposal to force a king upon the country has been carried on in the Diet ever since May. The Finnish Diet that was elected in November, 1917, consisted of 200 members, of whom 92 were Socialists and of course republicans. The Socialists, all but one, were shot, imprisoned or exiled. But even in this purged parliament Regent Svinhufvud could not get

© Underwood & Underwood

#### THE DEPOSED DICTATOR

General Horvath, who set himself up as the Dictator of Siberia and proposed to overthrow the Bolsheviks and restore the Czar, has been deprived of his power by the Allies, who disarmed his troops at Vladivostok

the necessary two-thirds majority for the monarchical measure that he was determined to put thru. The opposition consisted chiefly of Agrarians and Young Finns, altho some members of these parties have been won over to the side of the monarchists in the belief that only in this way can Finland secure peace. The Government held that since the Russian connection had been dissolved Finland had lapsed into the status of 1772-1789, when Finland was a monarchy under the King of Sweden. The duty of the Diet was therefore to elect a king. But the opposition pointed out that the Diet by a unanimous vote last September declared Finland a republic.

In July the bill establishing a monarchy of the Swedish type was accepted by the Parliamentary Committee by 16 votes to 15, but when it was brought before the Landtag it could command only a bare majority, not a two-thirds vote. So the Government withdrew the bill and adjourned the Diet. During the recess petitions were circulated demanding a king, and every kind of pressure brought to bear upon the republican members to induce them to change their votes. On reassembling August 5 the Landtag voted by 64 to 40 to refer the question to a committee and this committee reported back a recommendation for a monarchy. Doubtless the monarchists will have their way in the end no matter what the Diet decides, for they have the backing of the German army and navy.

The Diet, having got rid of its radicals and liberals, is passing legislation of the most reactionary character. For instance, all Jews are to be expelled from Finland by September 30. After that date communities are prohibited from giving food or shelter to any Jew. The Diet voted \$30,000,000 for military purposes and \$18,000,000 for extending the railway system into northern Finland.

This extraordinary appropriation can

only mean that the Finnish Government has decided to comply with Germany's demand and make war upon the Allied and American forces now holding the Murman and Karelian coasts. A member of the Finnish cabinet, Mr. Setälä, declares that "our generation must repair the secular injustice that might and violence have perpetrated." Finland, he said, needed eastern Karelia in order to give it a frontier more clearly defined and easily defensible, for it would follow sea, lake and marsh. The Karelians are of the same race as the Finns and, according to Finnish opinion, would vote for annexation if the Allies would withdraw their troops from Karelia and give them freedom of choice. Finland claims an Arctic port on the Murman coast as a natural right and an economic necessity.

**Uruguay's Friendship** The most recent of the commissions that have been sent to us by foreign countries is one from Uruguay, the purpose of which was to promote more intimate and confidential relations between the United States and all the South American republics. Its reception in New York on August 30 was characterized by a genuine spirit of welcome, especially by the business community. The commission, led by the Minister of Foreign Affairs, Dr. Baltazar Brum, was accorded an official reception, with military courtesies, by the mayor; and afterward was entertained at luncheon by the Pan-American Society. Prof. John Basset Moore presided, and in introducing Dr. Brum referred to the cordial reception given last year at Montevideo to Admiral Caperton's squadron, and to the remarkable declaration of solidarity that marked that occasion, when the Government of Uruguay had announced the principle that offenses against the rights of any nation on the American continent were to be regarded as offenses by all. Dr.

#### A DELEGATE FROM HOME

Mr. Julius Rosenwald, who has just arrived in Europe as a representative of the American War Department, has a unique commission. He will go among the men and talk to them about home conditions and the vocational opportunities that await them. Mr. Rosenwald will wear the uniform of an American officer, but will have neither title nor rank.

Brum, in responding, said that his compatriots were eager to see the ideals of Pan-Americanism realized, and that they were fully in accord with those of the United States.

A local statistician, commenting on this mission, has informed the public that Uruguay's exports to the United States have grown from less than \$2,000,000 in 1913 to more than \$33,000,000 in 1917.

At the same time our exports have risen from less than eight to more than eighteen millions. She is now a creditor country, and her prosperity rests on sure and lasting foundations, not the least of which is her new wealth in wheat.

**The New Draft** At last accounts the manpower bill, as the measure for the extension of selective conscription to all men between the ages of eighteen and forty-five is popularly known, had been sent to conference between Senate and House, using the House bill as a basis for agreement. The conference draft, submitted on August 29, aroused renewed debate in the Senate over the insistence by the House on the elimination of the "anti-strike" provision, but the opposition of those who wished to retain it was overcome by convincing them that the Government already had sufficient power to restrain would-be strikers from interfering seriously with the steady prosecution of war-industries. An important correction was made in the clause regarding homesteads to be provided for soldiers after the war, whereby

## HEAD OF THE URUGUAYAN MISSION

Dr. Baltazar Brum, Foreign Minister of Uruguay, heads the mission from the South American republic to this country. In a recent address delivered in New York City, Dr. Brum expressed the sympathy of his country with the Allied cause, and its efforts toward the ideals of Pan-Americanism. Uruguay has not declared war upon Germany, but broke diplomatic relations in October, 1917.

speculation in these rewards would be prevented. The bill was then passed unanimously, and was signed by the President on Saturday afternoon, August 31. Simultaneously Mr. Wilson issued a proclamation carrying the new law into action, and extolling the duty it required. He reminded the country that this is not a new policy, but one deliberately ordained by the founders of the Republic. He wrote:

We now accept and fulfil the obligation which they established, an obligation expressed in our national statutes from that time until now. We solemnly purpose a decisive victory of arms, and deliberately to devote the larger part of the military man power of the nation to the accomplishment of that purpose.

The proclamation continues:

The younger men have from the first been ready to go. They have furnished voluntary enlistments out of all proportion to their numbers. Our military authorities regard them as having the highest combatant qualities. Their youthful enthusiasm, their virile eagerness, their gallant spirit of daring, make them the admiration of all who see them in action. They covet not only the distinction of serving in this great war, but also the inspiring memories which hundreds of thousands of them will cherish thru the years to come, of a great day and a great service for their country and for mankind.

By the men of the older group now called on the opportunity now opened to them will be accepted with the calm resolution of those who realize to the full the deep and solemn significance of what they do. . . . They know how surely this is the nation's war, how imperatively it demands the mobilization and massing of all our resources of every kind. They will regard this call as the supreme call of their day, and will answer it accordingly.

Only a portion of those who register will be called upon to bear arms. . . . But all must be registered, in order that the selection for military service may be made intelligently and with full information.

This will be our final demonstration of

loyalty, democracy, and the will to win, our solemn notice to all the world that we stand absolutely together in a common resolution and purpose. It is the call to duty to which every true man in the country will respond with pride and with the consciousness that in doing so he plays his part in vindication of a great cause at whose summons every true heart offers its supreme service.

The War Department estimates that about 3,200,000 men would be affected by the new extension of draft age above the 9,586,508 registered as between twenty-one and thirty-one years old. The total number of men to be obtained under this law is given as 2,300,000, two-thirds of whom are expected to be derived from those not yet twenty-one. General Crowder is reported to have said, however, that youths in their nineteenth year will be placed in a separate group, not to be drawn until other available men in the new classes have been exhausted.

### "Lusitania" Decision

Many suits having been brought against the Cunard Company for damages sustained by the loss of the "Lusitania," torpedoed on May 7, 1915, the company petitioned the Federal District Court in New York for an adjudication of liability. Judge Julius M. Mayer has just rendered a decision absolving the Cunard Company from liability or blame, and placing the legal as well as the moral responsibility on the German Government. Judge Mayer said in his decision in respect to the ship:

The proof is absolute that she was not and never had been armed nor did she carry any explosives. She did carry some eighteen fuse cases and 125 shrapnel cases consisting merely of empty shells without any powder charge, 4200 cases of safety cartridges and 189 cases of infantry equipment, such as leather fittings, pouches, and the like. All these were for delivery abroad but none of these munitions could be exploded by setting them on fire in mass or in bulk nor by subjecting them to impact.

The decision discusses at length the alleged negligence of the captain, which he denied; and the judge reinforces his position by quoting principles of law to the effect that negligence charged must be shown to be the proximate cause of the damage, and even then will not justify recovery of damages in case a third party has intervened to cause loss. The decision holds that the Cunard managers were justified in disregarding the German warning published before the ship sailed, since at that stage of the war no one could believe that even were the ship captured or destroyed by a hostile warship the safety of the passengers and crew would not be ensured. The decision concludes:

The cause of the sinking of the "Lusitania" was the illegal act of the Imperial German Government, acting thru its instrument, the submarine commander, and violating a cherished and humane rule observed, until this war, by even the bitterest antagonists.

The long-expected revenue measure was introduced into the House of Representatives on September 3 by the chairman of the Ways and Means Committee. It calls for more than eight billions of dollars to be raised by taxation alone during the coming fiscal year,

and will require an average contribution of \$40 from every person in the United States. By this means is to be obtained about a third of the country's total anticipated expenditure between now and June 30, 1919. This bill follows the general plan of the two previous revenue laws, correcting certain inequalities that have been brought to light by experience, and depending on increase of the tax-rate in almost all schedules rather than on digging up new sources of revenue. As heretofore an attempt is made to bear lightly on the everyday needs of the people, and the increases are mainly in the direction of luxuries, to which has been added a new class called semi-luxuries. The chief sources of revenue are estimated to yield under this bill approximately the following amounts: War profits and excess profits, \$3,200,000,000; individual incomes and corporation incomes, \$2,400,000,000; beverages, \$1,137,000,000, leaving only a billion or so to be derived from miscellaneous sources.

The House voted to begin consideration of this bill on Friday, September 6, and to work on it until it is passed. The Finance Committee of the Senate will begin hearings on the same day. It is thought in Washington that the final enactment of the bill into law may be accomplished by October.

Pursuant to its resolution to take up the liquor question as soon as the draft matter had been disposed of, the Senate on August 29 passed the pro-

## THE LAWYERS' GUEST OF HONOR

To Mr. T. Mivoka has come the honor of being the first Japanese invited to address the American Bar Association. It was in response to this invitation that he came to America and spoke to the association at Cleveland, August 29. Since then he has also addressed the Canadian Bar Association in Montreal and the Empire Club in Toronto. On September 11 Mr. Mivoka was the guest of the Chicago Association of Commerce.

hibition amendment to the Food Stimulation bill, and did so without even the formality of a roll-call. In its final form it was the Sheppard substitute, which proposes to put the whole country into the dry column after June 30 next. This was done at President Wilson's request, in spite of some objection by those who desired to adhere to the original date of operation (January 1, 1919), in order to save to the Treasury more than a billion of revenue expected to accrue from war taxes on liquors. This prohibitory amendment provides that after June 30, 1919, no spirits, beer or wine shall be sold for beverage purposes except for export; that the Commissioner of Internal Revenue shall regulate the sale of wine for sacramental, medicinal and special uses; that after the approval of the act, no beer, wine or other intoxicants may be imported; and that the President may at any time after approval of the act establish prohibition zones about coal mines, munition plants, shipyards and other war works.

On August 30 the general bill, of which this prohibition amendment is a "rider," was taken up, but met opposition in the Senate on the ground that its emergency appropriations, amounting to \$11,000,000, are not needed by the Department of Agriculture; and debate on this feature continued after the Labor Day recess.

**Suppressing Disloyalty** The jury in the case of the I. W. W. men on trial in Chicago having last week brought in a verdict of guilty for the whole crowd, "because," as the court said, "in light of the evidence before it, the jury had no avenue of escape" from such a verdict, the culprits were brought before Judge Landis for sentences on August 30. Previous to pronouncing them he listened for four hours to individual pleas, which varied from frantic begging to sneering defiance. Two or three escaped immediate punishment, and several others will spend only a year or less in prison but must pay large fines. A still larger number were sentenced to five or six years in prison and five to fifteen thousand dollars fine. Haywood and fourteen others were sentenced to twenty years' imprisonment and \$20,000 fine each.

During the long time of their trial the Secret Service had been busy in ferreting out the work of the half-hidden forces they represented; and it was revealed on August 28 that an enormous amount of correspondence and printed matter had been seized in the mails at Chicago and elsewhere by the use of 300 search-warrants. Among the most important organizations whose pernicious activities were thus examined were the Socialist party (headquarters), and several Socialist clubs, largely among foreigners and including a woman's league; the I. W. W. central organization; the International Radical Club, with its subsidiary, the Dill Pickle Club; several periodicals, and a large number of individuals.

#### ROUNDING UP SLACKERS

Soldiers and sailors in New York last week stopped every man between the ages of twenty-one and thirty-one and demanded to see registration cards and draft board certificates. They were stationed at subway exits, business street crossings and theater and restaurant entrances. Every man who could not show the required papers had to explain at the nearest police station.

The agents of the Department of Justice who have been studying this mass of material announce that the evidence obtained by thus blocking the mails shows that the Socialist party is trying to raise a million-dollar campaign fund to use this fall with a view to electing anti-war candidates to office; and that they address their appeal especially to persons of German descent. Second, that from Chicago has been directed the raising of defense-funds for I. W. Ws., Socialists, draft evaders, and similar persons charged with felonies; and for comforting and encouraging those imprisoned on such charges.

**Results in the Primaries** The results of the recent primaries in several interior states exhibit both parties as sternly rebuking those members of Congress who have failed to respond to the sentiment of the people on the win-the-war question. In Ohio, William Gordon and Robert Crosser, Democratic Representatives, were beaten for renomination on the ground that both, in all their voting and influence, had opposed any vigor in the prosecution of the war against Germany. They voted against preparedness, against the selective draft, and against the Espionage bill; and Mr. Gordon is reported as saying that had he been in the House when the Man-Power bill passed he would have voted against that. Several other Representatives have suffered rejection by their districts on similar records, among them Lund of Minnesota,

Dillon of South Dakota, Woods of Iowa, Hamlin and Shackelford of Missouri, Sloan of Nebraska, Kehoe of Florida, Hilliard of Colorado, and, most conspicuously, McLemore of Texas, author of the famous resolution to surrender American rights on the high seas.

Many obstructive members of the upper chamber have fared no better. Senator Vardaman was rejected in Mississippi on patriotic grounds. In South Carolina the attempt of Governor Cole Blease to be nominated to the Senate has failed, and newspapers of both parties everywhere are congratulating his state on its escape. In Michigan the nomination of Mr. Henry Ford by the Republicans was regarded as somewhat of a joke, and he was voted down decisively. Then he permitted himself to be set up under the Democratic banner, having, as he confesses, no party bias. Senator Norris of Nebraska has fallen in his state because of his pacifist record. Finally, Miss Rankin appears to have failed of renomination in Montana mainly on account of her pacifist tendencies and her conciliatory attitude toward the obstructive and destructive elements in the ranks of labor.

In New York a lively campaign resulted in the triumph of Whitman and the organization Republicans. On the Democratic side Alfred E. Smith led William C. Osborne, in the nomination for Governor, by overwhelming majorities.

# SOISSONS AND REIMS

BY HAMILTON HOLT

SOISSONS, which the French and Americans regained in their August drive and now firmly hold, I visited immediately after the trip to Compiègne and Plémont Hill, which I described in my last week's article, shortly before it was retaken by the Germans. Soissons enjoys the unenviable reputation of being one of the most besieged cities in European history. It was a city of nearly 15,000 inhabitants before the war. But now it has been abandoned by the civil population and is all shot to pieces, as are all cities within range of the German guns from the Channel to Switzerland. As we motored thru the city a continual stream of great trucks was lumbering thru the narrow streets and crowding all other traffic up against the sidewalks. The one or two cafes still open were doing a rushing business with the American and French officers. It was a strange sight to see dining in the Croix d'Or restaurant when we stopped for luncheon a couple of American Red Cross girls. I was told that they had been quietly working away every day just as tho they were not perilously near the danger zone. They had shown great bravery on more than one occasion and they were known in all the neighborhood for their good works. A few of the little shops were open on the main streets. They seemed to be doing a thriving business in postal cards and souvenirs.

Immediately after luncheon we rode out of town a few miles to where the French had set up two enormous 16-inch guns which were engaged in the laudable occupation of trying to locate the Big Bertha or Berthas some ten miles behind the German lines that were shelling Paris. The French had found the exact location of these Big Berthas, thanks to the unwary admission of a German prisoner, and they had already put one of them out of action.

These colossal French guns were only fired when an aeroplane was in the sky to record the results of the shooting, for otherwise there was no means of knowing how effective they were, so far away was their target. They could shoot over twenty miles and were used whenever the day was clear. Each shot cost \$1000. One gun had already shot 180 times and the other 365 times. On the day previous they had fired 27 times. The guns could shoot 500 shots before they were worn out. Each had a crew of twenty-seven men, consisting of a captain, assistant, three non-commis-

sioned officers and twenty-two privates. The guns could be fired every five minutes and their emplacements could be taken apart and moved away in half an hour. They were brought up to their positions on two railroad cars. These guns were christened by the poilus "Marie Madeleine" and "Mirelle."

We then went via Soissons to Laffaux Woods, where one of the greatest battles outside of Verdun took place. Every square foot of the crest of the hill was bombarded and the place was strewn with pieces of shell and the wreckage of battle. Judge Wadhams was greatly rejoiced to pick up a rusty German helmet. While at this point we visited a 105 mm. battery and Judge Wadhams was permitted to fire one of the guns. He was firing at the German battery that was firing at the French 16-inch guns that were firing at the German Big Bertha that was firing at Paris. Whether the Judge killed the cat that ate the mouse that did something or other to the house that Jack built I do not know.

We then went along the famous Chemin des Dames road on the crest of the famous ridge mentioned now almost every day in the papers, to La Mal Maison and there saw another great field

of broken shell holes. On October 23, 1917, it was bombarded continuously for four consecutive days. There was not a tree left on the ridge and the batteries defending it were dug into the open fields with only straw colored matting to camouflage them. We visited a limestone cave where the French troops in that sector spend their nights. I was told that some of the American troops had occupied the same cave a few weeks before when they were taking their training with the French. As we walked over the top of the cave I peered down a hole where a German shell had broken thru the roof and there, half buried under some rocks and earth, was the body of a dead German.

On our way back along the Chemin des Dames road I noticed that a good deal of the camouflage had been shot away and we had to pass openings where we were clearly visible to the German observation balloons on the distant horizon. After going a mile or so on this ridge we stopped at four corners and walked down the hillside a hundred yards to what was left of a tiny village that had been demolished during the battle. When we arrived at the ruins we found that we were at the entrance of a

French field ambulance hospital. We walked down a flight of stairs some thirty feet under the earth and there we found a complete field hospital with all the modern conveniences. Except that the floor was of earth one would have said that it was clean as any hospital in France. We went thru the hot room where the soldiers are first taken after being brought in from the battlefield. The commander told me that no matter how warm the day was, wounded soldiers always came in shivering with chills. The operating rooms were brilliantly lighted with electricity and altho the other rooms were also electrically equipt the lights were not all turned on and the wards for the patients were pretty gloomy.

As we ascended into the sunlight again some twenty or thirty of the orderlies of the hospital were standing around in the neighboring cellars, evidently curious to get a glimpse of the visiting strangers. Just then a great whirr came over toward us, getting louder and louder as it approached. I saw the men ducking. And all in an instant a great shell exploded in the field about 200 yards from the crossroads where our two automobiles were stationed, and 300 yards from us. In a

© Kadel & Horbert

The statue of Joan of Arc that stood before the Cathedral has been removed with other treasures far from the ruined city

second another came along and then a third. In the meantime all the men had tumbled into the cellars.

It was my first experience in having a shell burst near me and I had often wondered beforehand what my sensations would be. I had fully expected to be terrified, but such was not the case. My sensation can best be described as one of intense curiosity. I could not believe in the possibility that I would be hit and it never occurred to me until long afterward that I should have fallen flat on my stomach to protect myself from the bursting shrapnel. Judge Wadhams said he had exactly the same sensation. In the meantime our French commandant was frantically signaling the chauffeurs to get our machines away as fast as they could. They needed no urging and sprang into their seats and in a jiffy they got our cars down into the hollow of the hill beyond the cross-roads while we hurried across lots to meet them. Whether the Germans had seen our automobiles going along the ridge and had taken a pot shot at them on the chance that President Poincaré and General Foch were within or whether they simply were putting down some of their periodical shells at the cross-roads thinking that ammunition trains might be passing by, I do not know and doubtless never shall know. But it was my first experience under shell fire and it makes a better story if I am permitted to think they were firing at us.

We motored back thru Soissons and then turned abruptly to the left. We rushed thru the long twilight, now over a country of wooded hills and rich valleys that reminded me of New England and now over great flat fields that suggested Kansas. Soldiers were camping everywhere. We passed munition dumps separated from each other by hills of sand bags. We flew by aerodromes with their planes out in front of the hangars facing the wind so as to be ready to mount at an instant's signal. And when at last after a good forty mile run we came into

Epernay, the center of the Champagne industry of France, we put up at a most delightful little inn with a pretty courtyard in the center and galleries running about on the inside. Then we five weary but happy travelers sat down to dinner, ordered a bottle of champagne, distilled from the grapes grown on the sunny hills surrounding the little city, and drank to the health of our good French commandant.

The next morning we left Epernay in a rainstorm and motored down the main road half way to Chalons, where we turned into a side road that shortly brought us to an imposing aeronautic school and repair station. It was situated some twenty-five miles back of the front lines. Altho it was a French station the repair shops were manned half by French and half by American mechanics working side by side. Lieutenant Hershfield, of Chicago, was in command of the 150 American boys who, he told us, came from all the states in the Union. He showed me a captured German aeroplane that was much heavier than ours, proving that Germany is short of necessary aeroplane material. He pointed out a French worker using a hammer on one of the French planes. "Hammers are too powerful tools to use on an aeroplane, anyway," he said. He told me that when his company first arrived on the field the French mechanics got it into their heads that the Americans were going to replace them as soon as the Americans "learned the ropes" and that they would be sent to the front trenches. Thereupon the French hid the tools of the Americans and some of the French aviators complained of the aeroplanes repaired by our men. But when Lieutenant Hershfield found out how the "land lay" and explained it to his superiors the French officer called his men together and the matter was amicably straightened out. Now everything is all right again and the American and French mechanics got on beautifully.

acroplane for a souvenir we returned to Epernay for luncheon and then in the afternoon started for Reims. The rain had stopped and our route took us up over sunny hills and down into pleasant valleys all plowed up and brown.

We were in the very heart of the Champagne district. Altho it was war time and we were almost within range of the German heavy guns the vines were as scrupulously cultivated as tho they were under glass. Finally we came to the crest of a great hill. There five miles below in the center of a broad, circular valley glistened the city of Reims with the great cathedral towering high above. So conspicuous was it in comparison with the surrounding buildings that it seemed as tho it were the only object in the great checkered green and brown plane stretching out below us. On the horizon to the right and to the left of the city were two black hill crests from which almost every day for nearly four years the city has been bombarded. And as if Reims had not already suffered enough the bombardment was redoubled when the big drive began on March 21. During the week between the 6th and 13th of April over 120,000 shells were dropt into the city!

We descended into the plain along a straight, white, wide road that was screened by a camouflage of dried grass matting. Tho we were going at top speed in order to avoid any possible shots from the German batteries on the surrounding hills, the peasants were plowing the fields on either side of the road as unconcerned as tho the front line trenches were a thousand miles away. Presently we entered the city—and what a city it was! I had always supposed a city was entirely a matter of mortar and brick and pavement. But I now learned that such was not the case. A city is traffic, roar, crowds, movement. A city is human.

Except for a stray soldiery every dozen blocks or so Reims was abso-

lutely deserted. Its stillness was sepulchral. Even the startling crash of falling bricks and masonry as a stray shell fell here and there only accentuated the deathliness of the place. Here was one of the most beautiful cities in the world—a city as large as New Haven or Newark—in which literally every building was damaged. Most of the houses were perforated with great gaping holes so that one could see [Continued on page 366]

(c) International Film

"Soissons has the reputation of being one of the most besieged cities in European history. Now it is all shot to pieces, as is every city within range of the German guns"

What became of Lieutenant Hershfield and his boys I never knew, for the Germans in the great June push toward Epernay captured the whole plant and all the aeroplanes in it. But I greatly misjudge the Yankee "pep" and resourcefulness of Lieutenant Hershfield if they got him and any of the boys under him.

After Lieutenant Hershfield had given me a splinter of a captured German

As Mrs. Wilkinson points out in the following article, many of the farmettes this summer have been teachers and normal school and college students who must now return to the classroom. Recruits are needed to take their places for the harvesting must now be done. So here is another opportunity for farm service for those who could not respond to the earlier calls. After you've read Mrs. Wilkinson's experiences you'll want to enlist in the Land Army.

# MY EXPERIENCE

BY MARGUERITE

HERE were three of us in the first squad in which I was sent out to labor for a farmer. My companions, who may as well be called Sally and Bertha, were both experienced, seasoned workers. I was a raw recruit determined to prove my mettle. I had caught the contagion of the land army spirit that disdains groans and complaints and makes each worker demand her best of herself, physically and mentally. Not only must she do the most work of which she is capable, and the best, but she must do it with good cheer and patience, in spite of aching bones. She must be courteous to fellow workers and willing to learn. The little paper tags that some girls have elected to wear pinned on the bibs of their overalls are not without significance. The legend on these tags is, "I'm laughing!"

After a twenty minutes' drive in the camp bus we reached the farm. The farmer for whom we were to work was leary and taciturn. He showed the effects of that ancient struggle with the soil in which every generation of men must have a share while men live upon the earth. He was tanned, burned, wrinkled by heat and labor. But he was very decent. In some way quite inexplicable to me he guessed that I was a new girl. He smiled a slow smile. "Jest keep a-goin' steady and don't get rattled," he said. "It's goin' to be a hot day. Take five minutes to rest if you hev to." Then he gave me a hoe and showed me how to cultivate his treasured young celery plants.

I had not realized that any operation

Even weeding is an art, and it is one of the first in which the raw

with a hoe could be delicately performed. I had much to learn. It seems that the hoe was to be used simply to crumble the soil to the depth of an inch or two. If I discovered a weed I was to twitch it cleverly out of the way with the edge of the blade in a sideways movement. It was desirable to get very near

the plants so that the softly crumbled surface might keep the underlying soil moist near the roots, but not a single stalk must be nicked! The cutting edge of the hoe must always be turned outward from the row. The task did not require strength, but it did require skill, and I am proud to relate that if any of those stalks of celery fall short of attaining crisp, white, sturdy maturity it will be thru no fault of mine.

After about an hour of this work we were given little tools called "scratchers" and told to cultivate the ground around larger plants. This done, we were sent, while it was still early, into a great field to hoe tomatoes.

Ever since that day some strange, magnetic power has drawn me toward tomatoes. My experience with them has been unusually extensive. I have hoed them, picked them and eaten them in prodigious quantities. I am in collusion with them. If I have what occultists call an aura I am sure that there must be something about tomatoes in it, whatever it is. They have become so closely associated with my workaday personality! But that day was my first real experience with them. I had never realized before how much effort goes into the making of a salad, a soup, or the sauce that accompanies baked beans. I had not, before that day, followed the process from the beginning.

Any one who has a vision of tomatoes as grown in a decorous home garden, on

The hired man thinks this will remain his job, but the girls prove he's wrong

# S A FARMERETTE

E WILKINSON

*fruit receives instruction, but it is also one that is easily learned*

neat frames, should forego the pleasure of that vision in connection with the tomatoes I hoed. They sprawled helplessly all over a field that had once been given over to grass. That field may have been a pasture or it may have provided last year's hay crop, but that grass had been wont to grow in it was obvious. Our task was to hoe out the stubborn chunks of roots reminiscent of last year, to get them from under the branches of the vine and then to hoe up a little hill of soft, weedless earth for the support of the plant. Skillful precision was necessary that the plants might not be hurt. But severe muscular effort was necessary also.

Chop, chop, chop went our hoes. Down the long field in the hot sun we trudged slowly, hilling up those sprawling plants. Sally could very nearly do two rows while I was doing one, but she cheered me along kindly and tactfully, telling me that I was doing very well indeed for a new girl and that it would be a lot easier when I had grown accustomed to it. Bertha did not work much faster than I, but she was steadier and did not have to stop for breath so often.

Chop, chop, chop. Birds were singing in the trees that bordered the field. Bumble bees buzzed along on their way to neighboring patches of wild flowers. But after a while I was only conscious of the fact that my back, my right wrist and my left elbow ached like mad, only

conscious of this and the chop, chop, chop of my falling hoe and the steadily increasing heat. For the farmer had told the truth. It was to be a very hot day.

At ten o'clock our lips were dry and burnt and our tongues stuck to them when we tried to talk. Sally went to the

house for a pail of water. We drank long draughts of it, left the pail under a big tree to keep cool and went back to work. We were painfully conscious of profuse perspiration. They have another word for perspiration on the farms which is more vulgar, vigorous and appropriate. Big drops of moisture were running down our foreheads into our eyes, down our necks into our clothing, down our legs into our mute, protective boots. But for the rest of the morning we kept an honest pace, stopping occasionally for a drink when our progress down the rows took us near the big tree and the tin pail. And at last came noon and the chance to rest.

I have sometimes been tempted to think that athletes and day laborers are a bit lavish and ostentatious in their use of water. On that day I learned the joy of all the little things that can be done with water to relieve a hot, dirty, weary human being. We poured it over our heads and faces and down our necks and across our shoulders. We washed our dirty, blistered hands. Then we took off our heavy shoes and stretched ourselves out under the big tree. When we were fit for it, we ate our luncheon of fruit, sandwiches, and sweet chocolate, and drank our ration of sweet milk kept cool in thermos bottles. Life began to seem good again. And then we went back to work.

Any one who imagines that a farmerette is a mere dilettante or fair weather worker is in need of instruction. We spent most of that afternoon in the tomato field, dumb and dogged in the heat. When we had done all the rows of tomatoes we were turned into a field of corn. The physical requirements of the work were the same. It was hoeing, using the same muscles in the same way. But we comforted ourselves with the thought that we were working for another vegetable. We were strangely weary of the pungent odor of tomatoes.

In those [Continued on page 364]

*Working in the corn field sometimes has the compensation of buttered corn for lunch*

# A LEAGUE OF NATIONS NOW

Mr. White is one of the founders and a member of the executive committee of the League to Enforce Peace. He is a well known lawyer and writer on subjects of constructive internationalism.

BY THOMAS RAE BURN WHITE

IT is generally recognized that a league of nations of some sort will be formed to secure the objects of the war, but there is a disposition to put the matter off until the war is over. It is thought in some quarters that a political organization should not be attempted among the Entente Powers at the present time, because of the difficulty of giving attention to so great a matter, and because of the possibility of creating dissension among the powers now engaged in the war. These objections are not without weight, but competent men can be found who would be willing to give the necessary time, and the probability of dissension in connection with the formation of such an organization would be much less during the war than after it is ended.

It is not, of course, to be expected that an elaborate world state or anything approaching this could be organized at the present time, but it seems reasonable that a simple, and at the same time, effective organization could be made by the Allied Powers without delay. The basis of such an organization must, of course, be a contract or treaty which would put in writing the frequently expressed intention of forming a league of nations, with the object of restoring order by the defeat of the Central Powers, and of better preserving order in future.

For the purpose of attaining the second object it is reasonable to assume that the treaty could go so far as to provide in general terms, if not in detail, for the setting up of an international court and council to which members of the league should agree to

submit their differences, to pledge the members of the league to enforce the treaty, and to cooperate in the preservation of world security against non-members who refuse to submit differences real or pretended to any international tribunal.

It could also provide a permanent council for the discussion, if not decision, of matters of common interest both during the war and thereafter. There is at the present time no recognized method by which constantly arising questions of vital interest to all the Allies may be thoroly discussed and considered by their representatives. The result is that such questions have to be decided by correspondence, except perhaps as to some military questions which are submitted to the Versailles Council, altho to what extent is not as yet generally known. It may be said without exaggeration that there are non-military questions which equally press for a decision and as to which an error would be quite as disastrous as an error regarding a military question; it is of great importance that some method be provided whereby such questions can be discussed by representatives of the Allied Powers, and a decision reached, even tho perhaps at first it might be required to be ratified by the home governments before being put into effect.

It is also of the highest importance that there shall be unity of action regarding "peace offensives." If there were an Allied Council which could arrive at a definite policy regarding proposals of this kind, there would be less occasion for rumors and misunderstandings based on the supposed views of individual nations or statesmen.

It is apparent that not only as to

matters referred to but others which now exist or may hereafter arise, the Allies would be much more certain to act as a unit, and the possibility of mistakes would be minimized, if there could be a thoroly discussion by a council of the character suggested.

We understand Russia so little that it is idle to speculate as to what might happen if a league were established, but it would go far to remove the impression, if any such exists in Russia, that the objects of the Allies are imperialistic. A solemn agreement that in future their relations with one another should be governed by principles of right and justice, rather than by force, would be inconsistent with imperialistic ambitions. The relations of the Allies with Russia would be improved if an international council were directing or advising about them, especially if representatives of the more orderly elements of the Russian people were invited to attend certain meetings of such council, or to confer with its members. It is not too much to hope that by this means Russia would again become a member of the Entente, and be admitted to the league, and again become an active partner in the Great War.

The effect of a permanent political organization of any kind among the Allies, with the objects above mentioned, could not fail to have a good effect upon neutral nations. All states which are now neutral are in power below first rank, and they have everything to gain and nothing to lose from a scheme of world organization which would protect them in a peaceful existence against more powerful neighbors. They would be much more likely to lend material assistance to a war conducted on behalf of an organized league, with its [Continued on page 363]

OUT of Kansas has come once more something entirely new in the development of democracy—a new experiment in public ownership. And this experiment does not concern itself with the utilitarian things of existence, like water, gas or transportation, but with something much more ethereal, something more communistic. For the new Community House of Manhattan, Kansas—the first permanently constructed institution of its kind in the United States—may be described as a “Municipal Sitting-room and Parlor.”

It is true that this splendid new building is now administered by Uncle Sam's War Camp Community Service, and is dedicated for the duration of the war to the use of the soldiers of Camp Funston and Fort Riley, and their friends. But that includes every man, woman and popcorn eating child in Manhattan. Moreover, when the war is over the Community House will remain the same sort of parlor clubroom for the people that it is today.

Altho opened to the public for the first time on the fourth of this July, and not yet completed in many essential details, the “Community” (as it is already called) sprang into instant popularity. The reason is doubtless to be found in the fact that the “Municipal Sitting-room” is better furnished and more attractive than the homes of the great majority of those who have paid taxes to help erect it.

And since the building belongs to them, and to their boy who has “just been made into a corporal,” isn't it natural that “Dad” and “Ma” should like to sit around one of the gaily-colored table lamps of an evening and read the Kansas City and Topeka papers, while Sis, who has got a case on that new buck private who was transferred down from Omaha, sings that “Long, Long Trail” song with him at the piano?

And then there are so many uses to which a Community Room and Parlor may be put. Its latch string hangs always out. In the course of a week's work it extends a friendly invitation to as odd a variety of western individuals as you might meet upon the friendly road itself. And with typical western zest, its invitation is usually very promptly and unreservedly accepted!

As I look back upon the last fifty hours of my responsibility as “the guy in charge” of the Manhattan Community House (a retrospect from the vantage point of a fleeting Pullman coach), it seems to me that nothing could be

## A CLUB-HOUSE OF DEMOCRACY

BY STUART A. RICE

more droll than the succession of events occupying those hurried hours.

To begin with, our weekly officers' ball on Tuesday night was a great success. In the neighborhood of 200 shoulder-ornamented men, from second lieutenant up, quickly discarded their self-conscious dignity. They became once more mere young folks having a good time with the girls as they tripped from hand to hand in the “Paul Jones” or crowded around the brimming punch bowl. Brilliantly colored paper hats of many a queer and rakish design glided or bobbed about the floor upon the heads of pompous colonels or youthful Madame Lieutenants. All were interlocked with paper streamers shooting out thru the crowd from nearby balconies. Little tin whistles were blown as triumphantly by each puffing major as by any trudging street urchin. But for the bewildered solemnity of a picturesque pair of British and Scottish officers in full dress uniform, the reign of full-joyed hilarity would seem to have been complete.

But all things light and giddy must in time give way to the more serious interests of life. And so the officers' ball came to an end in the small hours of Wednesday morning. The Manhattan Community House began to remove from itself the evidences of revelry. That afternoon it must welcome with dignified and decorous mien the “Capper Pig Club” of Geary, Riley and Pottawatamie counties.

Thursday will long stand out in my memory of the Community House as the day of the baby show. Pigs I had discovered were such an absorbing topic that I completely forgot on Wednesday night the still more momentous events scheduled for the following day. But before I had yet removed the lather from my face on Thursday morning there came over the

telephone a despairing yet fascinated plaint from an early-rising assistant at the Community House: “Say! What are we going to do with these babies?”

“How many are there?” I countered, with a brandish of my razor.

“Just millions,” the voice replied. And that's what there were: millions of dollars' worth of infantile humanity, getting its weights and measurements taken, getting its parents instructed on bath water and milk, and having the times of its young lives tumbling over big upholstered davenports, reaching for the pretty Persian shades of the floor lamps; essaying climbs over the writing desks and library tables, and quite upsetting the

decorum of even a Community Parlor. Was there ever a baby-proof parlor? Babies, babies and still more babies. Outflanked, enfiladed and out-maneuvered, all of the usual day's objectives unattained, nothing remained for the Community House staff and line but complete surrender to the babies. Yet the conquerors remained not to celebrate their victory, but quietly took the go-cart and carriage and stole away, when supper hour called mother to retreat.

For mothers and fathers and sisters and brothers were invited out for the evening. A public reception was to be held in the Community House. Manhattan was invited and Manhattan was delighted to accept. Was it given by the War Camp Community Service for the town or by the town for the War Camp Community Service? The matter was never quite clear, and it mattered little anyway, for they were really one and the same. An orchestra from Camp Funston and Fort Riley filled the great reception room with spirit and good cheer. There was a sure-enough receiving line. The punch bowl was again brimming full of cooling fruit juice. In the midst of these festivities I made a flying exit to catch my train. There was accumulating evidence as I left that the receiving line, having sufficiently upheld the formalities, would be relegated to an unused corner to make way for a community dance.

As I sank into the Pullman's dusty cushions I muttered to my wife in genuine relief: “What a life! Think of promoting an officers' ball, a pig club convention, a baby show and a public reception, and all within fifty hours by the clock. Some day I shall weaken and join the army, and then I shall have peace.”

“But how does the enlisted man come in with this chameleon Community House of yours?” I can hear the reader ask. Well, he comes in most all the time. For the Community House,

altho owned by the city of Manhattan, belongs to the soldier while the war is on. Its use by the civilian public is permitted only at such times, and in such ways, that the soldier is not displaced from what is designed to be first and foremost his own Club House. The enlisted man comes in most numerous on Saturdays and Sundays. On Saturday nights he throngs the building to the extreme limits of its physical capacity. He dances and perspires and is happy merely to crowd his way into the densely thronged structure. There is never enough room at the dances for these boys, free for a few hours from camp and eager to obtain a few crumbs of home atmosphere and entertainment.

Sunday is a day of quiet rest in the Community House. Reunited families sit together in the little secluded spots made possible by the ingenious grouping of the furniture on the restful blue rugs. The inviting davenports and deep easy chairs; the book-filled tables; the ever-present bowls of flowers and the frequent plates of candy; the sunshine tints of the Austrian shades and cheerful cretonne draperies in the windows, above the cosy little writing desks; the ferneries; and the many and convenient smoking tables: all of these and the presence of a charming and cordial young hostess, seem to draw mother and son, sweetheart and soldier boy, into a restful oblivion.

Sunday evening we usually sing. When last Sunday some one at the piano started "Keep the Home Fires Burning," one hundred and fifty voices scattered about the room took up the refrain. Were they not singing to loved ones, some of whom were near but most were far away?

And so the week goes. The Community House is the center of all community activities having to do with the war. Under the sign of the Red Circle the War Camp Community Service maintains there ten di-

visions of its own work, which is all carried on under the Commissions on Training Camp Activities of the War and Navy Departments. Three other affiliated organizations have accepted the invitations to make it their headquarters and coöperate with the War Camp Community Service staff.

The divisions of the War Camp Community Service are as follows: Entertainment committee, thru which small groups of men are invited to parties and entertainments; hospital-ity committee, thru which any soldier may receive an invitation to dinner with a private family; church coöperation committee, utilizing the united resources of the city churches for large-scale Sunday entertainments and picnic dinners in the city parks; travelers' aid, thru whose workers the stranger first receives a friendly greeting and a word of advice or direction; room information service, with its all-important task of placing the soldier's friend or relative in a comfortable place of lodging at a reasonable price; employment service, for soldiers' wives; girls' club work, to direct youthful feminine energy and romanticism toward constructive patriotic ends; base hospital committee, dispensers of good cheer in the shape of musical instruments, for the convalescent wards and nurses' home; the swimming pool, open exclusively and

free of charge to soldiers every Sunday; and finally the Community House itself, a soldiers' club and the Manhattan headquarters of every man in uniform.

In addition to the War Camp Community Service activities enumerated above, the Civilian Relief Bureau of the Red Cross, and the Girls' Protective Bureau of the War Department Commission on Training Camp Activities, make their homes in Manhattan at the Community House. Their workers belong to the "staff" and share in its team work. The mayor's committee on overcharges, protecting soldiers and civilians alike from unscrupulous dealers, likewise has its office there, its chairman being the executive secretary of the War Camp Community Service.

The erection and maintenance of the Community House is a coöperative undertaking, shared by the city of Manhattan, the Rotary Clubs of the Twelfth District, and the War Camp Community Service.

To erect the buildings, Manhattan, a small city of 7500 people, has contributed fifteen to twenty thousand dollars, principally by bond issue. The Rotary Clubs added \$13,500 for building and \$2500 additional for furnishing.

The War Camp Community service controls the building and is responsible for its maintenance and operation while Camp Funston and Fort Riley are on a war basis. After the war the building will again come under the management of the city government of Manhattan.

Over the building floats the red circle emblem of the War Camp Community Service. And thruout the building, as thruout Manhattan, hovers the spirit typified by the emblem: "Surround the camp with hospitality."

And it is that unlimited hospitality which means brotherly welcome, service and friendship.

## FOX HUNT COMEDY

*Dr. William J. Long has for many years been a lecturer and writer on nature and animal life. Besides magazine articles, he has written popular nature books, some of which are "Ways of Wood Folk," "Beasts of the Field," "Northern Trails," "Little Brother to the Bear," "Wilderness Ways."*

**T**HO my early impressions of wild life were mostly pleasant and wholesome, one thing often troubled me, and that was the clamor of a pack of hounds running a fox to death. There were fox-hunters in the neighborhood; I had shivered at tales of men who had been chased by wolves or bloodhounds; and whenever I heard the winter woods ringing to dog voices I pictured the poor fox as running desperately for his life, with terror lifting his heels or tugging at his heart. I could see no comedy in that picture, probably because, never having witnessed a fox chase, I was viewing it with my imagination rather than with my eyes.

There came a day when the hounds were out in full cry, and I was in the snowy woods alone. For some time I had heard dogs in the distance, and when an increased clamor came on the breath of the wind I hid beside a great rock near a shallow stream, all eyes and ears for whatever might befall. Presently came the fox, the hunted beast, and my first glimpse of him was reassuring. He was moving or rather drifting along very easily, confidently, his beautiful fur fluffed out as if each individual hair were alive, his great brush floating like a plume behind him. There was no sign of terror, no appearance of haste in his graceful, deliberate action. Tho he could run like a red streak, as I well knew, having often watched fox cubs playing outside their den, he was now trotting almost leisurely on his way, stopping often to listen or to sniff the air; while far behind him the heavy-footed hounds were wailing their hearts out over a tangled trail. When I saw this fox deliberately stretch himself on a rock in the sunshine, as if for a nap; and when, a little later, as the hounds pounded into sight, he raised his head to cock his

BY WILLIAM J. LONG

ears and wrinkle his eyebrows at the lunatic beasts who were yelling up and down a peaceful world, trying to find out where or how he had crost the stream below—then and there I put imagination aside and concluded that perhaps the fox was getting rather more fun out of the chase than any of the dogs. He had this advantage, moreover, that whenever he wearied of the play he had only to slip into the nearest ledge or den to make a safe end of it.

Another day, when I was roaming the woods alone, I heard in the distance the melodious voice of Old Roby, best of all possible foxhounds. It was a spring-like morning, with melting snow and misty air, and Roby, thinking it an excellent time for smelling things, had probably pulled the collar over his head and gone off for a solitary hunt, as he often did. When his voice suddenly rose triumphant over a ridge and headed in my direction, I hurried to the edge of a wild meadow and stood with my back against a great chestnut tree, waiting for the fox and growing more expectant that I should have at least a glimpse of him.

A short distance in front of me a cartpath came winding down thru the woods. Where this path entered the meadow was a dry ditch; over the ditch was a bridge of slabwood, and some loaded wagon had recently broken thru it, crushing the slabs on one side down into the earth. On that side, therefore, the ditch was securely closed; but on the other side it appeared as a dark tunnel, hardly a foot high and three or four times as long—an excellent refuge for any beastie that cared to shelter in it, since it was too low for a hound to enter bodily, and if he thrust in his head too far the beastie would have a fine chance to teach him manners by nipping his nose.

I had waited but a few minutes when down the cartpath came the fox, running fast but not easily. One could see that at a glance. The soft snow made hard going; as he plunged into it the moisture got into his brush, making it

heavy, so that it no longer floated like a gallant plume; and he had evidently run as far as he cared to run under such circumstances. At sight of the open meadow he put on speed and came flying gloriously down the hill. One jump landed him fair in the middle of the bridge; a marvelous side spring carried him into the ditch, and with a final wave of his brush he disappeared into the tunnel.

A little later Old Roby hove into sight, singing *Oh! oh! oooooh!* in jubilation of the melancholy joys he followed. Clean over the bridge he went, head up, picking the rich scent from the air rather than from the ground, and took three or four jumps into the meadow before he discovered that the fox was no longer ahead of him. Then he came out of his trance, circled over the bridge, poked his nose into the tunnel—and there before his bulging eyes was the fox, and in his sensitive nostrils was a reek of fox to drive any foxhound crazy. "*Ow-wow, here's the villain at last! And hoo-woo-wooooo, what won't I do to him!*" yelled Roby, pulling out his head and lifting it over the bridge for a mighty howl of exultation. Then he thrust his nose back into the tunnel and began to dig furiously; but the sight of the fox, so near, so reeky, so surely caught, set the old dog's tongue a-clamoring. Every other minute he would stop digging, back out of the tunnel for room, for air, and lifting his head over the bridge send up to heaven another jubilation.

Now Roby was bow-legged, as many foxhounds are who run too young; also he was apt to spread his feet as he howled, so that there was plenty of room to pass under him, and when his head was lifted up for joy he could see nothing but the sky. He had been alternately digging and celebrating for some time, working his way farther and farther under the bridge, when as he raised his head for another yell of relief a flash of yellow passed between his bow-legs, out under his belly and up over the hill. The thing was done so boldly that it made one gasp, and so quickly that a living streak seemed to pass thru

the woods; but the entranced old dog saw nothing of it. When he thrust his head confidently into the tunnel again there was no fox, and no odor of fox, where formerly the landscape had been full of them.

Roby looked a second time and sniffed loudly to make sure he was not dreaming. He looked all over the bridge and sat down upon it. He examined the ditch on the closed side, and took a final squint into the tunnel; while every line and hair of him from his furrowed face to his ratty tail proclaimed that he considered himself the foolishhest of all fool dogs that ever thought they could catch a fox.

Whenever I heard the hounds after that I pictured comedy afoot and followed it eagerly, still roaming alone in hope of meeting the fox. So it befell one winter that I saw Old Roby and a whole pack of hounds completely fooled by a fox that lay quietly watching them as they hunted and howled for his lost trail.

The place was a gully in some big woods. Its sides were covered with a mat of vines and bushes, and at the bottom of it ran a stream too broad to jump and too swift to freeze even in severe weather. Several times an old fox had been "lost" here, his trail leading straight to the gully and there vanishing as completely as if the river had swallowed him up. He was frequently started in some rugged hills to the westward, and would commonly play back and forth from one ridge to another till he wearied of the game, or till he met a hunter and felt the sting of shot on a runway, when he would break away eastward at top speed. For a mile or more his course could be traced by the hounds giving tongue on a hot scent until they reached the gully, where their steady trail cry changed to yelps of vexation. And that was the end of the chase for that day, unless the weary hounds had ambition enough to hunt up another fox.

At first it was supposed that the old fox had taken cover in a ledge, as red foxes do when they are fagged or wounded; but when the hunters followed their dogs they always found them running wildly up and down both banks of the stream, looking for a trail which they never found.

One Saturday morning (and a glorious day it was, with all signs pointing to a good fox run) I went early to the gully, crept it, and hid where I had a good view up and down the stream. Several times I heard hounds in the distance, but the chase did not head in my direction.

The next time I had better luck. From some hills far away the hoot of hounds came clear and sweet thru the still air; then the flat report of a gun, a brief silence, a renewed clamor, and my ears began to tingle as the hunt drew my way, louder and louder. Suddenly there was a flash of color, warm and very brilliant in the snow; the fox appeared on the farther side of the gully, slipped over the edge and disappeared among the vines below.

I was watching the stream keenly when the same flash of bright orange caught my eye some fifty yards above where the fox had vanished. He bounded lightly up the steep bank, springing to the level above, hesitated a moment to the dogs, ran along the edge a short distance, dropt down into the ditch, came up quickly, and scooted back to another place. There were fleeting glimpses of fur on beach as he dodged here and there, now on the brink of the stream, now in the thicket; then he tiptoed up and stood alert in the open, at the prettiest spot apparently, where he had first entered the gully. After cocking his ears at the increasing clamor of the hounds he leaped back toward them into the woods, and I— [Continued on page 367]

# His Mother Knows

## That Grains Should Be Super-Cooked

### Prof. Anderson Says:

A grain of wheat contains about 125 million food cells. And they must be broken to digest.

Ordinary cooking methods break only part of them. That's the great trouble with grain foods for children. They are generally not half-cooked.

### I Explode the Cells

In Puffed Grains I explode these cells. The grains are sealed in guns, then revolved for an hour in a fearful heat. Thus steam is created inside of each food cell.

Then the guns are shot. Instantly every food cell explodes—125 million per kernel. Every granule is thus fitted to digest.

You see grain bubbles, eight times normal size. You see airy, flaky, toasted tidbits with a most enticing taste.

I see only hygienic foods. These grains are cooked, then toasted, then exploded. Grains were never so cooked before.

That's the reason for Puffed Grains. They seem food confections. But the great point is, they do not tax digestion. And every atom feeds.

Mothers who consult their doctors will serve these grains in Puffed form all they can.

# THE NEW BOOKS

## The Fighting Fleets

IN the literature about the world conflict, the navy has somehow been neglected. The men who exterminate the gray-backed vermin of the seas have shown little inclination to talk about their adventures. For one thing, the Allied governments did not wish the Huns to know just why so many sinister shapes that nosed out into the North Sea waters never returned to their base. Suspense, questioning and doubt were injurious to the enemy's morale. So the navy man buried his adventures in his own heart and kept his peace.

Without divulging the secrets of the waters, Ralph D. Paine gives us almost the first account of the French, British and American navies' work in *The Fighting Fleets*.

Up in the North Sea, where the grim English bulldogs keep watch on the German High Fleet, a most interesting game is being played. Enemy submarines unexpectedly bump noses far beneath the surface and engage in a duel to the death; a trawler gets a chain tangled in her propeller and drags a mine after her until a gunner shoots it from its moorings; a British submarine follows German destroyers home thru the shadowy channel between mines and blows up a U-boat in its own port. Even stranger stories are whispered about silent men who wear the Victoria Cross but whose lips are sealed as to how they won it.

Death comes in many terrible ways to the navy man. He may suffocate in a submarine; he may be blown to atoms by a torpedo; he may be washed overboard while on his post of duty; he may starve to death in an open boat. But with all his hardships, there are times when the navy man gets his reward. When the first German submarine to be captured by the Americans rose to the surface, it found the Yankee guns trained straight at her deck.

It was wholly superfluous for the U-boat commander to pass the word to his men that they had better surrender. They waited not for any such formality, but concluded, unanimously, to do this very thing. There was no desire to be dead heroes. They wished very much to convey their intention to the destroyers before shells,

torpedoes and depth bombs should spoil their amiable program.

They came swarming out of an open hatch as if violently propelled from below, like so many jacks-in-the-box. Never was a large, populous German submarine emptied so rapidly. And as they madly erupted on deck, every Hun flung his hands above his head with the most passionate sincerity and held them upraised while he bawled:

"Kamerad! Kamerad! Kamerad!"

*The Fighting Fleets*, by Ralph D. Paine. Houghton, Mifflin Company. \$2.

## Women of France

The French, and they only, have found time to consider the woman's nature and her needs; they have put her to the most heroic uses; have drawn strength from her weakness—in a word, with consummate skill, have woven her in elaborate or simple forms, in colors brilliant and soft, into the great pattern of that fabric, ancient, beautiful and imperishable, which we call the French tradition.

This book is a series of brilliant essays in which the spirit of modern feminism is interpreted thru the lives of some of those "famous French women of letters who were also women of the world," sometimes enigmatic, sometimes bitter, often disillusioned, but always rich in spirit, broad in outlook, interesting and human.

*Women and the French Tradition*, by Florence Leftwich Ravenel. Macmillan. \$1.50.

## Edmond Genet

AS a simple, straightforward narrative of one boy's actions and reactions in the war, these letters of Edmond Genet are unsurpassed. Other books may have more literary merit—others may be more thrilling—touch more nearly the heights and depths, but none gives a more appealing picture of the boyish idealism, the unquestioning faith, the unswerving purpose of one of the many of our young men who have given their lives to this war. The great-great-grandson of Edmond Genet, the first Minister of the French Republic to the United States, he was the first American to fall after our declaration of war—a fitting tribute indeed to the very tangible nature of our debt to France and a very noble payment.

*War Letters of Edmond Genet*. Charles Scribner's Sons. \$1.50.

## On Highfalutin

HIGHFALUTINISM is defined as pompous speech or writing "usually addressed to uneducated or half-educated audiences who are supposed to appreciate bombast."

It was highfalutin—it was the wrong kind of idealism which, whether due to political expediency or to a mistaken statecraft, kept the United States out of the war from the date of the "Lusitania" sinking until April 6, 1917. The same evils brought failure to sense and act upon the fact of the war in August, 1914, brought failure then to prepare for war. The same evils left Mexico a festering tragedy. . . . The attitude of the peace societies toward preparedness for years before the war and the credulous faith of our peace idealists in the magic of treaties and arbitration is a perfect example of dangerous idealism—so is that class of opposition to universal service.

With this idea as a starting point, Huntington Wilson, formerly Assistant Secretary of State, and speaking with the authority of twelve years of Government service, analyzes in their extreme and therefore dangerous manifestations conservative, radical and idealistic tendencies in our present day social and political thinking. He writes of administration and the executive power, of socialism and socialization of policies foreign and domestic, of our allies and our common enemy.

Clear, searching, lucid—this is a book to stimulate thought and to inspire to a constructive program.

*The Peril of Highfalutin*, by Huntington Wilson. Duffield & Co. \$1.50.

## Pavannes and Divisions

THOSE who like Ezra Pound will find the collection of his poems and prose gathered from magazines and reviews, and published as *Pavannes and Divisions*, a comforting addition to their shelves. It may hold some fugitive bits hard to find. The book should serve, too, as a good first introduction for new readers, as the author appears as poet, journalist, translator, critic, commentator and expounder. A wide range this—and some new admirers may result. There are ears to hear every strange whimsy in art, literature or religion.

*Pavannes and Divisions*, by Ezra Pound. A. Knopf, New York. \$2.50.

## A LEAGUE OF NATIONS NOW

(Continued from page 354)

promise to protect its members from aggression in the future, than they would under existing circumstances.

It may perhaps not be useful to speculate regarding the possible effect of an organization of this kind upon the people of enemy countries; it is apparent, however, that it would tend to remove the misimpression so industriously circulated, that the aim of the Allies is to destroy Germany rather than to secure and maintain order. The establishment of the league would also tend to carry conviction to the inhabitants of the Central Powers that the Allied Powers have great confidence in their ultimate success and in their ability to maintain order in the future, and would tend to discourage further the people of those countries who would thus see a world organized against them.

There is another reason for immediately putting into effect an organization of the kind described which is not less important. If the negotiation of a permanent agreement among the Allied Powers should be put off until the war is over, there is danger that it would then fail altogether. It will not be easy to secure an agreement, even among the Allies, as to the international institutions to be set up, how they shall be constituted and the functions they shall perform. The powers forming the league will to a greater or less extent agree to the substitution of law for force in the conduct of international affairs. This involves the surrender of positions of advantage by the more powerful states. It may be they will not be willing to give them up without making stipulations regarding the structure and functions of such international institutions, which will give the great powers corresponding positions of advantage. Such stipulations might not be acceptable to states of lesser rank but whose membership is necessary to the success of the league. These are the dangers in the way. They may be avoided if the great project can be put into effect even in an incomplete and tentative way, while all feel the pressure of a great peril which will lead them to disregard their own interests (or rather what they may at the moment believe to be their own interests) for the common good. The Emancipation Proclamation, if it had not been made during the progress of the Civil War, might not have been possible at all.

It has been suggested that it would not be wise to attempt to form a political organization among the Allied Powers during the war because in such case the Central Powers, when the war is over, would refuse to join a league consisting of the nations which had conducted the war against them, and that a league without the Central Powers would be only an offensive and defensive alliance, which would fail of its high purpose and possibly tend to produce another great world conflict.

It is believed that this view of the case fails to take into consideration existing facts. Germany to a marked degree, and Austria in a lesser degree, have always held aloof from proposals to make treaties between nations providing for the peaceful adjustment of international difficulties. Germany especially has built her great Empire and her hopes of further expansion upon military aggression. The Central Powers will never join a league voluntarily until their forms of government are changed. This may happen as a result of the war and is certain to happen at some time, but when cannot now be foretold. These powers [Continued on page 367]

## McCutcheon's New Fall Catalogue

For upwards of sixty years, the name of McCutcheon has been a synonym for all that is best in Linens.

The new Fall Catalogue of "The Linen Store" is full of interest for every lover of "the House Beautiful."

It illustrates also a specially attractive selection of the most desirable Under- and Outer-

garments for Ladies, Misses and Children. The collections of both Imported and American-made Linerie are very extensive.

Notwithstanding the present strenuous wartime conditions we continue to maintain our high standards of merchandise and service, in every department. Orders by mail will receive the same scrupulous attention as heretofore.

*Send for New Catalogue*

A copy of the new Fall Catalogue will be mailed gladly on request.

## SCHOOLS AND COLLEGES

## SKIDMORE SCHOOL OF ARTS

CHAS. HENRY LAYNE, Ph. D., President  
 ALAN GRUBBS, Ross, A. M., Dean  
 A college for the professional and vocational training of women. Offers the most complete training to B. S. graduates.  
 Household Economics, Fine Arts, Music, Physical Education, Secretarial Studies  
 A student may graduate upon the completion of two years. A year commonly teaches an equivalent's course.  
 Residence accommodations for two hundred students. Open to all. Non-sectarian. Summer session. For catalogue address:  
 LOUIS HUGHES WATERBURY, B. A., Registrar  
 SARATOGA SPRINGS, NEW YORK

## OBERLIN COLLEGE

Henry Churchill King, President  
 A non-sectarian, co-educational college offering unusual advantages for study in either of Three Departments:  
 College of Arts and Sciences  
 Graduate School of Theology  
 Conservatory of Music  
 Military Training is provided by a unit of new Students' Army Training Corps. Special courses in Physical Education are offered for both men and women.  
 Applications for admission in September, 1918, are now being received. Students in College of Arts and Sciences limited to 1,000. Conservatory students limited to 100. For catalogue and Book of Views, address THE COLLEGE SECRETARY, OBERLIN, OHIO.

## GLENDALE COLLEGE

Glendale, O., Suburban to Cincinnati. Founded 1853  
 Junior College and College Preparatory Courses.  
 Limited number of young women offered exceptional advantages under a large experienced faculty, in a healthful, pleasant environment. *Music, Expression, Household Science.*

## Emerson College of Oratory

HENRY LAWRENCE SOUTHWICK, President  
 Largest school of expression in the U. S. The demand for our graduates as teachers in colleges, normal and high schools is greater than we can fill. Courses in Belles-lettres, oratory, pedagogy, physical culture, voice, dramatic art, etc. 18th year opens September 23rd.  
 HARRY SEYMOUR ROSS, Dean  
 Huntington Chambers Boston, Mass.

## SCHOOL DECISION!

The success of your son may depend upon your DECISION regarding the school to which he is sent this fall.

## THE PENNINGTON SCHOOL

offers preparation for Colleges and Technical Schools, and Business Life. Strong Faculty, Military Drill, Rifle Range, Gymnasium, with Pool, Infirmary, Athletics. MODERATE RATES. Half way between N. Y. and Phila. Write for information to  
 DR. FRANK MACDANIEL, Box K, Pennington, N. J.

## Pacific School of Religion

An undenominational union school of religion. Admits both sexes and all denominations. College graduation required for regular course leading to B. D. All privileges of University of California open to qualified seminary students. Term begins September 30, 1918. Address President C. S. Nash, Berkeley, Cal.

## The Sanatorium School

A school and sanatorium combined for nervous, delicate or deaf children. Instruction and treatments—No feeble minded—References.  
 CLAUDIA M. REDD, Principal, Lansdowne, Pa.

## Florida (Hulvey) Military Academy

Barracks new and modern. Military work directed by War Dept. Prepares for universities, business and Government academies. Personal instruction and attention. Perfect health record. Cadets from 18 states. Tuition \$460. Col. GEO. W. HULVEY, Supt., Jacksonville, Fla.

## DE MERITTE MILITARY SCHOOL

Jackson Springs, N. C.  
 An open air school for boys.  
 Prepares for Colleges and the Scientific Schools.  
 EDWIN DE MERITTE, Principal. Address until Sept. 5, Camp Algonquin, Ashland, N. H.

## ROANOKE COLLEGE SALEM, VA.

FOR MEN. A standard college in the mountains of Virginia. Degrees granted. Military training adopted for education in the war. Liberal Arts, Commercial and Preparatory Departments. Address  
 Dr. J. A. MOREHEAD, President.

## Efficiency Society Journals

FOR 1916 AND 1917

are filled with timely and valuable articles for Business Executives.

## MY EXPERIENCE AS A FARMERETTE

(Continued from page 353)

hours of the afternoon the heat was at its worst. The air seemed to be vivid with it and quivered about our faces. We felt it rising from the soil against the stiff leather soles of our boots. We were aching, and dripping wet. Little shivers ran up and down our spines occasionally. But we did not stop. We just thought of the boys in the trenches who have much more to bear. Sometimes we spoke of them.

Then came the honk of the camp bus, calling to take us home, and we climbed in, very moist, but serene, with a priggish and puritanical sense of duty well done, that was very satisfactory in its own way. When we got back to camp we learned that we had been working at a temperature of a hundred and ten degrees. We gloated over the fact. We were not alarmed and neither were we ill.

For the sake of those who know little of the personnel of the Women's Land Army of America, let me say that most of the women in it are under thirty, in the late teens and the early twenties. They are of many types. Many are teachers. Many have been students in our normal schools and colleges for girls. They are intelligent young women and girls from the best middle-class American homes, at least very many of them are. Many of them need do no work for a living. Many have given up vacations to serve because they have brothers, lovers, even young husbands "over there." Still others are doing this work instead of other work that might be easier and more lucrative because they believe that Uncle Sam needs his daughters as well as his sons in the service. If people in general understood this the girls might be spared the occasional crude questioning and the frequent astonished staring of ladies who limit their war work to a little becoming and genteel knitting on a cool piazza.

Most of the farmers realize that the girls work faithfully. They show their gratitude in many pleasant ways. Sometimes a farmer will bring a great jug of lemonade down into the fields for the workers, or a bowl of ice cream that his wife and daughters have made. Or he will treat them to sweet corn and fresh butter at luncheon time. Not long ago four of us who were working in a bean patch saved a farmer the trouble of making a trip with his cart to fetch home four sacks of newly picked beans. We carried the beans home for him on our shoulders. It was something he would not have asked us to do. But he was pleased. And so, at noon, when we had washed and eaten our luncheon he asked us if we would like to go for a drive in his big market truck. We accepted with alacrity.

After the day spent in hoeing tomatoes I did no more hoeing for a while. I was sent to another farm to dig potatoes. It is somewhat more tiring than hoeing, for the heavy forkful of earth must be pried up and lifted and shaken until the nutritious tubers are loose and can be rolled out to one side. The farmer for whom we worked—and he worked with us a good deal—was a kindly cheerful person with many of the good old-fashioned superstitions about farming that efficient modern methods and agricultural colleges are properly destroying. But unfortunately a bit of poetry will be taken out of farming when they are gone.

"These potatoes were planted in the full of the moon," he told us. "Didn't hev to plow for 'em." Or he would comment on the white dew gathered on the cobwebs at seven in the morning and tell us that we

Reopens Wednesday, October 2nd

## The Veltin School FOR GIRLS

160 and 162 West 74th St., New York  
 A Fireproof Sanitary School Building.  
 Classes limited to twelve pupils.  
 PRIMARY DEPARTMENT.  
 GENERAL COURSE.  
 COLLEGE PREPARATORY.  
 Unusual advantages in French are offered in every class.

## Union Theological Seminary

Broadway at 120th St., New York City

The charter requires that "Equal privileges of admission and instruction, with all the advantages of the Institution, shall be allowed to Students of every denomination of Christians." Eighty-third year begins September 25th, 1918. For Catalogue, address THE DEAN OF STUDENTS.

 DAY AND EVENING CLASSES  
 Convenient hours and Practice Hours

were to have a hot day. Or he would pluck an ear of corn and say, feeling the texture of the husk, lovingly, "Thick husks on the corn—goin' to hev a hard winter." When we were thirsty he would give us big yellow tomatoes to eat. The acid of tomatoes is very pleasant when one is doing field work, and a tomato is far more refreshing than tepid water. Every day that we spent working for him was a happy one, tho the work was hard and the weather hot.

"Dig in to the side, sister," he said to me, when I first began to dig his potatoes, "not too deep and not too near, and easy. I'll take two rows and you can start with one." Slowly and carefully I made my way down the row, mindful always of his young turkeys who ran around chirping and carefree in the weeds at my feet. After a while he chuckled with satisfaction because he could not do two rows quite as fast as I could do one. He told me that I was pretty good for a beginner and I felt as if I had been suddenly promoted. He let me do two rows at once after that. But he advised me not to stick the tine of the spading fork thru the tubers as he did occasionally!

In the last half hour of the day we gathered all the potatoes we had dug in pails, dumped the pails into big burlap sacks. Then Pete, who was the tallest and strongest of us girls, a supervising principal of a school in the winter, and incidentally our squad leader and a fine woman, helped him load the heavy sacks in his cart and drive them back to his barn. On the next day, we three girls, working alone for him, dug and harvested what he estimated as more than twenty-five bushels of potatoes.

But it was not in the potato field that I triumphed. Nor was it in the patch of leeks that we weeded, as one girl said, "without the protection of gas masks." It was with my friends the tomatoes. When the potato digging was done I was sent to a great truck farm to pick tomatoes and other things for market. The farmers gave us each a basket and told us each to pick two rows at once. I have told how these tomatoes in the truck gardens are planted. I made up my mind to make a record. There were other things that I was not strong enough to do fast. But this I could do.

Not that tomato picking falls short of being athletic. One has to leap from one bare spot to the next, tho it be five feet away, so that not a single vine is crushed, not a single tomato broken. One has to use both hands and both eyes at once, deciding almost instantaneously which tomatoes are red, or yellow enough, reaching out after them in all directions and dropping them softly into the basket without bruising them or breaking the skin.

Perhaps the greatest joy in the work lies in the health and vigor of it and in the peaceful sense of repose that comes when it is done. Moreover, a farmerette can always watch the fruition of her labor. Ten rows planted, six rows hoed, four rows dug and harvested. The accomplishment is definite and can be measured. The artist seldom knows which of his works will stand the test of time. The teacher seldom can be sure that his solution of an educational problem has been the best one. But ten rows planted are planted. Six rows hoed are hoed. Four rows dug are certainly dug. Any one can see it and know. And the labor is a labor without which neither art nor education can have use or meaning. It is the inevitable labor of the race. The farmerettes are producing food which creates the bodies and minds of mankind and sustains them, world without end.

## Trained Women Dietitians Needed in U. S. Medical Corps

One of the Government's great needs is for trained dietitians. To help supply them, Drexel Institute, in co-operation with the United States War Department, has prepared special training courses.

Graduates of these courses are eligible to certification for position as assistant dietitian, upon satisfactory completion of four months' probationary work as pupil dietitians in the United States Military Hospital.

1. A four months' intensive course for those who have had two years' college studies or hold a degree from some Domestic Science institution, and one year's occupational experience.
2. A one year's intensive course for college graduates.
3. A two years' course for high-school graduates.

*Drexel Institute's special war training Dietetic courses have been arranged under the supervision, and have received the approval of the Hospital Division, Medical Corps, U. S. Army.*

Students who enter these courses will be at once in training for their country's service. Uniform will be worn. Military regulations.

Enrollment will be limited and applicants carefully selected. Courses begin October 21.

The Army's need for trained dietitians is urgent, and the time is short in which to enroll.

We request that you write us at once for complete Bulletin No. 10 and enrollment blanks.

## DREXEL INSTITUTE

Hollis Godfrey, Sc. D., Eng. D., LL. D., D. C. L., President  
Philadelphia, Penna.

*In addition to the above Courses Drexel Institute offers Special War Courses for trained secretaries, an Engineering Course under the control of the War Department and regular Courses in Domestic Science and Arts.*

## 600 Shaves From One Blade

Yes, and more. That's the record of many men who shave themselves. Old blades made sharper than new—in 10 seconds. For all Safety Razors. Quick, velvety shaves for life with wonderful, new

### Rotastrop

Just drop blade in, turn handle. Nothing to get out of order. Machine gives "heel and toe action", just like a barber strops a razor.

T. W. MOFFAT, Treasurer.

## SOISSONS AND REIMS

(Continued from page 351)

daylight clear thru them. Every house was ripped, gashed, dented or nicked. Sometimes several blocks were completely razed to the ground. The streets were littered with broken fragments of shells. Some shells had not exploded. The sidewalks had been pretty well cleared of the debris, but no attempt had been made to do anything within the houses. Bricks, mortar, splintered wood, crockery, twisted iron were piled in masses sometimes twenty feet high. Many of the signs above the buildings were riddled with bullet holes and some dangled from a single nail.

We rode over the larger part of the city and then got out and walked. The first thing we visited was the cathedral. It was not quite so bad as I had expected, but it was bad enough. Nearly all the stained glass in the windows was gone. The whole front of the cathedral was all blackened because the wooden scaffold which held the protecting sand bags in place had caught on fire. The matchless sculpturing which adorns the facade was chipped and gashed. There were jagged wounds in the roof and sides where the giant shells had crashed thru. The floor inside was piled high with debris and many of the old paintings on the walls were riddled with shrapnel. Some of the canvases were actually hanging from the frames. Not ten feet from the door that lead into the graveyard, was the largest gas bomb that I ever saw. It had landed two days before and had never exploded. We were warned not to touch it with our canes and you can be certain we did not. We saw another "dub" bomb that had fallen into the nave. In front of the cathedral the statue of Joan of Arc on horseback was still unscathed—perhaps the only thing in town that had escaped *Kultur*. It was being taken down by a few old soldiers while we were there and Judge Wadhams helped them with the ropes and pulleys. I heard later they got it away and it is now far behind Paris in some safe resting place till the war is over. Before leaving the cathedral I picked up in the debris on the floor some pieces of twelfth century glass fallen from the windows and some rosaries as souvenirs. As I continued my walk about town I could not help feeling that the whole city of Reims should never be restored, but be kept as an object lesson to all future generations of the ruthlessness and blasphemy of a people drunk with the lust of power. If this once great and beautiful city should be allowed to remain just as it now is not even Pompeii would rival it as a place of pilgrimage. The property owners would be more than compensated for their loss by the contributions of tourists.

Then we reentered our cars and started for the front trenches which skirt the very edge of the city. As we motored along we saw three German observation balloons on the horizon. Our commandant instantly ordered our chauffeur to turn into a side street and then after zig zagging for a number of blocks we stopped, hid our cars behind a high wall and descended into a cellar from whence we proceeded underground for I should think a dozen blocks until we came to the front line trenches.

There we were met by the commandant of the French battalion holding that sector who showed us where two shots had fallen some fifty feet from us a few minutes before we arrived and completely filled with loose earth the communicating trench. He invited us into an observation post to get a good view of the German front line trenches. No Man's Land, as ever, was

green and peaceful and as still as death. We walked out thru the winding communicating trenches to the second and finally to the front line trenches which we found almost deserted of French troops. As we came to an intersection I looked up and counted seven observation balloons in the air, five German and two French. I noticed the two French officers whispering together and at once they ordered us to move on. But hardly had we turned the next angle in the trench when we heard the loud whirr of a shell coming straight at us. The commandant ducked and shouted to us to do the same. In less time than it takes to tell it the shell landed about sixty yards from us and then before we could get up another dropt not forty yards away. The French commandant said he could hear splinters of shrapnel whizzing over our heads as we were crouching in the trenches, but I must confess I was too much preoccupied by the novelty of the occasion to notice that little detail. This was the nearest I came to an exploding shell in France, and this time it was a personal favor, for probably the observers noticed us from their balloons and had ordered their comrades to fire directly at us.

The French officer escorting us here explained to me the theory of the three trenches. At night the first and third trenches are filled with men, and patrols go out into No Man's Land. In the day time the second trench is manned and scarcely any one is kept in the first and third. In case of an attack either day or night the first trench is usually evacuated, and the second is held at all costs. In all the trenches we saw numerous hand grenades, mortars, machine guns, etc. The trenches were all muddy but not filthy. They were not dug as deep as I supposed they would be and I crouched down a little as I walked along so that my moving hat would not be visible to the snipers across No Man's Land. Once when we stopped the captain raised his head and chest over the top, but only for a few seconds.

After returning to headquarters the captain took us forty feet below the surface where he had his underground apartments. We saw the wireless operator taking the French and German *communiqués* from the front. We saw the soldiers eating their evening meal. We even saw the captain's boudoir which boasted of a piano, two mirrors, and some fine paintings taken no doubt from a deserted house in the city. What a relative thing luxury is! Here was this man as proud of the quality of his black hole in the ground as a Wall Street trust magnate would be of his Fifth Avenue palace and million dollar collection of old masters. We took another farewell look at the German trenches from the concrete observation post, watched the men eating their supper in the hollows along the sides of the trenches and then we returned thru the tunnel under the streets and cellars till we reached our automobiles. By that time the Germans had ceased their shelling, no doubt to get supper. Reims was as still as a tomb and as we whirled away the last thing that met my sight was a beautiful young woman drest in the deepest mourning walking thru the deserted main street of the city escorted by an officer. It was a strange sight to see a woman in such a place. I imagine she must have been a refugee come back to rescue some treasure from what had once been her home. We shortly passed thru the green fields over the rim of the hills and soon left far behind the largest and noblest city that this hellish war has ruined.

(Continued from page 361)

had the impression that he was stepping in his own footprints, or back tracking, as many hunted creatures do. So he went, catfootedly at first, then in swift jumps, till he came near a huge tree that had been twisted off by a gale, leaving a slanting stub some fifteen feet high. There he leaped aside, landed on the stub well above the ground, scrambled up it with almost the ease of a squirrel and disappeared into the top.

The hounds were by this time close at hand. A wild burst of music preceded them as they rushed into sight, heads up, giving tongue at every jump, and followed the hot trail headlong over the gully's edge into the vines. Evidently the fox had run about liberally there, for in a moment the hounds were mixt up in a pretty criss-cross, lost all sense of direction and broke out in lamentation. Most of them went threshing aimlessly about the sides of the gully, till the delicate fox trail was covered by a maze of dog tracks.

Meanwhile there was a stir, the ghost of a motion, in the leaning stub. Over the top of it came two furry ears, then a pointed nose and a bright yellow eye. The fox was there, watching every move of the game with intense interest; and in his face, in his cocked ears, his inquisitive nose, his wrinkling eyebrows, were the same lively expressions that you see in the face of a fox when he is hunting mice and thinks he hears one in the frozen grass.

## A LEAGUE OF NATIONS NOW

(Continued from page 363)

therefore, would (under existing conditions) become members of a league or be subject to its control only under compulsion. This might be as a result of the war, being stipulated in the treaty of peace, or might follow after the war when it had been demonstrated, as it soon would be, that no nation could profitably or safely remain a non-member of the league. In either case, these powers (so long as their present governments survive) would not be loyal members of a league of nations; it would have to be assumed that they would violate the terms of the treaty if they could safely do so. But the whole purpose and object of the combination now existing, and which it is proposed to make permanent by a league, is to safeguard the world against just such aggression—to restrain international criminals as individual criminals are now restrained by municipal government. This is a problem which must be faced and it would be idle to deceive ourselves into believing that the whole nature of the German state would be changed by becoming a member of a league of nations.

It may be suggested that a combination such as this would be only one of armed neutrality, and that conditions would be but little, if any, better than they were prior to the war. This is far from the truth. When the league is formed, the world will move forward from international anarchy toward international order under the protection of law. The new civilization will be so infinitely superior to the old that the wonder will be that we endured the old so long. No voice will be raised in favor of a retrogression, but the principles underlying the league will become so universally accepted, and the league itself will so grow in strength, that any nation seeking to interfere with its structure or to disregard its authority will court destruction.

"When did you buy the new phonograph?"

"Oh, that isn't new. It's just been cleaned and polished with 3-in-One Oil."

## Improve Your Furniture

Even the finest furniture soon shows evidences of wear. A mar or two, a tiny scratch, a dulling of the finish, fingermarks, stains—and the inevitable grime of time. The 3-in-One Oil treatment checks this process of deterioration—cleans thoroughly—polishes beautifully—brings back the charm of newness. Try it on your phonograph, piano, dining table, buffet or any other piece of fine furniture. Pour a little

## 3-in-One Oil

on a moistened cloth and clean the surface—avoid taking too much at a time. Then polish with a soft dry cloth, always following the grain of the wood. Grime, smut, stains, fingermarks and surface scratches—all will disappear. This brings out the beauty of the grain and leaves a brilliant, lasting lustre. No residue of oil remains to catch dust and show fingermarks. Your home has many other uses for 3-in-One, the high quality household oil. Read about them in the Dictionary of Uses, wrapped around every bottle.

3-in-One Oil is sold at all good stores in 50c, 25c and 15c bottles; also in 25c Handy Oil Cans.

**FREE** A postal request will bring you a generous sample of 3-in-One Oil and Dictionary of Uses—both free.

## Training for Authorship

How to write, what to write, and where to sell.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein, for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, especially valuable for its full reports of the literary market. Besides our teaching service, we offer a manuscript criticism service.

## THE INDEPENDENT LESSON PLANS

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL,  
NEW YORK CITY

#### I. Soissons and Reims. By Hamilton Holt.

1. Mr. Holt's article is a simple, direct, condensed narrative of personal experiences. (a) Prove that the article deserves the commendatory adjectives, "simple, direct, condensed." (b) Show how the author makes the article personal without making it egoistic.
2. Compare the style of the article with the style of any of the following school texts: Franklin's Autobiography, Parkman's Oregon Trail, Stevenson's Inland Voyage and Travels with a Donkey, Addison's Sir Roger de Coverley Papers.
3. Show how the author brings about coherence between this article and the preceding article.
4. Write a character sketch of a Red Cross nurse.
5. Give an oral account of one of the great French guns.
6. Give an oral account of Mr. Holt's experiences during his travels along the battle front.
7. Imagine that Mr. Holt, in private conversation, had told you how it feels to be near exploding shells. Retell his account.
8. Write a paragraph in which you draw a sharp contrast between the natural scenery in the region where battles are being fought, and the scene of battle itself.
9. Write a picturesque description of Reims as seen from a distance.
10. Give an oral description of the ruins of Reims.
11. Write an emotional description of the ruins of Reims Cathedral.
12. Prepare an exposition showing the relation of Joan of Arc and the city of Reims.
13. Write a brief for an argument on the proposition: "Reims should never be restored, but should be kept as an object lesson."

#### II. A League of Nations Now. By Thomas Raeburn White.

1. Give a full oral explanation of the term, "A League of Nations."
2. Explain in detail the purpose of a league of nations.
3. Write a brief in which you show the author's principal points.
4. Give a list of objections that may be made to a league of nations. Show how the author refutes every objection.
5. Write an original composition on the theme: "The new civilization will be infinitely superior to the old."

#### III. A Club-House of Democracy. By Stuart A. Rice.

1. Show that the title fulfils all the requirements for a good title.
2. Give an oral explanation of the nature and purpose of a Community House.
3. Describe any part of the interior of a Community House.
4. Narrate, as tho you had been in a Community House, any of the experiences typical therein.

#### IV. Fox Hunt Comedy. By William J. Long.

1. Here is one of the most delightful articles The Independent has ever printed. What makes the article so thoroly delightful?
2. Compare this article with somewhat similar articles in The Sketch Book and The Sir Roger de Coverley Papers.
3. Show where the author makes appeals to different senses.
4. Point out effective adjective and noun combinations.
5. Point out words that aid in giving the article a distinctly "literary flavor."

#### V. My Experience as a Farmerette. By Marguerite Wilkinson.

1. Point out five excellent characteristics of this article.
2. Write an account of your own farm experiences, imitating the characteristics named above.

#### VI. The New Books.

1. Explain the following expressions: Gray-backed vermin of the seas, sinister shapes, the grim English bulldogs, the spirit of modern feminism, rich in spirit, unswerving purpose, half-educated audiences.

#### VII. The Story of the Week.

1. Give an oral summary of the recent movements on the Western Front. 2. Give an account of the work of American soldiers abroad. 3. Summarize recent evidences of Germany's weakness. 4. Make a list of great world problems suggested in the news of the week. Give your opinion on any one. 5. Make a list of important non-war subjects worthy of serious consideration. Give your opinion on any one.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. Progress of the War—"Open Warfare," "Soissons and Reims," Story of the Week.

1. The editorial will give you an excellent opportunity to summarize the military movements which have taken place since the closing of school last June.
2. Discuss the military significance of one or more of the following: (a) Mount Kemmel, (b) Verdun, (c) Chemin des Dames, (d) the "Hindenburg Line," (e) the "Siegfried Line," (f) the "Wotan Line," (g) Lens, (h) Noyon.
3. What new impressions about conditions in France do you get from the article by Hamilton Holt?

#### II. Domestic Affairs—"The New Child Labor Bill," "The Revenue Bill," "War Time Prohibition," "Results in the Primaries."

1. On what grounds was the Child Labor Bill declared unconstitutional? How will the new bill overcome the objections of the court?
2. Trace the Revenue Bill thru the stages which it has already passed. What stages are still to come?
3. What relation has the Prohibition Bill to food conservation? to the Revenue Bill?
4. Discuss the plan and purpose of the primaries. Look up the record of the candidates referred to who come from districts nearest your home.
5. The same reason is given for the failure of reelection of many representatives in various parts of the country. What is the reason, and what is its significance?

#### III. International Agreements and the War—"A League of Nations Now," "Strange Bed Fellows," "Czech Nation Recognized."

1. What efforts were made in the past to minimize the possibility of war and to insure the continuance of peace? Why did these efforts fail to avert the present war?
2. Under what circumstances did the movement for the establishment of a League to Enforce Peace take place? How far has the idea been accepted by the various belligerents?
3. What arguments can you present for the establishment of a League of Nations at the present time? What arguments against it?
4. Do you agree that an agreement among the Allies would perhaps bring Russia back into the war against the Central Powers?
5. Do you think that the establishment of such a league "would tend to remove the misimpression . . . that the aim of the Allies is to destroy Germany," etc.?
6. Who are best known leaders for the establishment of such a league in America, France and England?
7. Look up the history of the Czecho-Slovak movement. Why are the Allies recognizing these people as belligerents with a de facto government?

#### IV. The Remnants of the Russian Empire—"Finland's Dilemma," "The Siberian Campaign," "Lenine Shot."

1. Give a brief résumé of the history of Finland (a) previous to 1772, (b) since 1789.
2. What is the present status of Finland? What will be the probable outcome of the struggle which is now going on?
3. In what respect do conditions in Finland resemble those in Poland? in Ukrainia? in Lithuania? in Siberia?
4. Who is Lenine? Look up his career.

#### V. Women and the War—"My Experience as a Farmerette."

1. What war work similar to that described in this article have you done this summer? What was the value of this work?
2. What activities other than farming have been taken up by women as a result of the war?

#### VI. The New Industrial Democracy—"The Labor Programs."

1. What is the British Labor program referred to in this editorial? In what respects is this program more comprehensive than that of the American Federation of Labor?
2. "The American Federation of Labor . . . sticks . . . to pure trade unionism." Explain this statement and trace the historical development of this American program.
3. Upon what facts is "the typical employer's conviction that industrial democracy, like 'Bolshevism,' won't work" based?

These Five Men Supervise the Estes Field Staff of Forty Senior Engineers.

## Don't Judge Efficiency Service By "One Man" Results

**Y**OU wouldn't think of using a single-cylinder engine to drive a five-ton truck. To benefit fully by the power possibilities of gasoline, you must apply it properly.

And so it is with efficiency service. To experience its full power possibilities in your business, you must not limit it to "one-man" efforts.

## Estes Supervised Specialists Set New Efficiency Standards

No matter how competent the industrial engineer you employ, he has his human limitations.

He may be highly efficient as a time study specialist, but woefully weak on comprehensive study. He may be wonderfully competent in planning and scheduling, but pitifully poor in executing.

Estes service is a many men service. And every man is a specialist—a proved master of some particular branch of efficiency engineering. Back of each of more than forty senior staff men (Estes employs no "juniors") are the immense resources of the entire Estes organization—the statistics, the record files, and the vast knowledge gained during many years experience in scores of varied industries.

### The Value of Versatility

Each Estes engineer is kept on a job only so long as his special skill is required. Then another specialist takes up another step in the work. And these changes are made without any break in the service.

Working directly under the general supervision of Mr. Loring V. Estes are four supervising engineers of exceptional talent. Each supervisor reinforces the efforts of each staff man in his department and works continually in the interests of the clients.

**New Booklet Now Ready.** A new edition of "Higher Efficiency" is now ready for mailing. Copies will be furnished gratis upon request of executives only.

**Estes Service is immediately available to firms engaged in essential war production work.**

## REMARKABLE REMARKS

**THE KAISER**—I am right.  
**GENERAL MARCH**—The American Army is all cream.  
**WOODROW WILSON**—The nation is proud of the Boy Scouts.  
**BILL REEDY**—Nothing is quite what it was a second ago.  
**BILLY SUNDAY**—The saloon is a rat hole to dump wages in.  
**PROF. IRVING FISHER**—All economizing begins with bookkeeping.  
**E. S. MARTIN**—Just now we are as much of an autocracy as Germany.  
**MARSHAL FOCH**—We must always seek to create events, not merely to suffer them.  
**CHARLIE CHAPLIN**—As I grow older I try to keep closer and closer to the ground.  
**GERTRUDE ATHERTON**—Dear Mr. Hoover, please put an embargo on chewing gum.  
**COLONEL REPINGTON**—The German defenders have been knocked into a cocked hat.  
**SECRETARY LANE**—America is the land of the free because it is the home of the brave.  
**H. G. WELLS**—British political life resists cleansing with all the vigor of a dirty little boy.  
**NICHOLAS MURRAY BUTLER**—The dreams of the seers of past centuries can soon be realized.  
**HERRBERT C. HOOVER**—I am happy to say that food supplies are assured for the period of the war.  
**PAUL M. WARBURG**—Nothing but mismanagement could wrest the financial premiership of the world from us.  
**CHARLES M. SCHWAB**—Patriotic addresses are good and so are posters, but the thing is being grossly overdone.  
**NICHOLAS LENINE**—It was easy for Russia to begin a revolution but extraordinarily difficult to continue and conclude it.  
**ED. HOWE**—For a good many years people everywhere have been looking for a hell of a time and have finally found it.  
**GENERAL MANGIN**—It is easy to lead Americans to victory. In fact they take their generals with them as upon an on-rushing tide.  
**G. K. CHESTERTON**—Only a creed can really broaden the mind since it obliges a man to think of everything when he thinks of something.  
**BOOTH TARKINGTON**—The citizens once called German-Americans will work out their own salvation if we do not make it too hard for them.  
**GENERAL PERSHING**—We of the army think with great pride and emotion of the unflagging service and wonderful trust in us of the churches at home.  
**ADMIRAL VON HINTZE**—We in Germany and Austria-Hungary stick to a free press; even under war's compulsion we do not want to shackle public opinion.  
**CLEVELAND MOFFETT**—We must hate the Germans, just as we must use poison gas against them, and bombard their cities

with long-distance guns and follow all their hellish methods of war efficiency.

**GENERAL VON ARDENNE**—These tank attacks have something bewildering and demoniacal about them. They are calculated to frighten superstitious souls.

**PROF. SHAILER MATHEWS**—The God we must worship is not the God of a finished world, but a God who coöperates with mankind in the production of a new world.

**SENATOR SHERMAN**—Against the clandestine activities of this administration hidden under the thick clouds of war, I raise my voice seasonably in remonstrance.

**DR. WILLARD CARVER**—I have never found a physical director of a Y. M. C. A. that was a well man and have many times offered a gold medal for one who is not sick.

**SAMUEL GOMPERS**—The American labor movement declines to yield its course of leadership to the high brows who solve the problems of life and labor in their parlors or sanctum sanctorums.

## THE NEW PLAYS

*Someone In the House*, by Larry Evans, Walter Percival and George S. Kaufman. A slow-moving melodramatic comedy whose happy ending is due to a gentleman thief's streak of respectability. Lynn Fontanne and Hassard Short enliven what threatens during the first act to be a dull evening. (Knickerbocker Theater.)

*The Woman on the Index*, by Lilian T. Bradley and George Broadhurst. Villainous Turkish Prince, all conquering American Secret Service, pseudo French grisette, Honorable Japanese spy, General Sir William Thorndyke, V. C. Curtain falls as American Ambassador takes heroine detective wife in arms, declaims all is forgiven, and reads anonymous epistle from Woodrow Wilson. Deep deed war melodrama. S'death. (Forty-eighth Street Theater.)

*San Carlo Grand Opera Company* opened its season in New York last week. Real lovers of music will make no mistake in patronizing this most excellent company as it tours the country. The soloists are all highly trained virtuosos, the orchestra of twenty-five is most capable, and the chorus and ballet good. The performance is as good as one could see in Europe and the prices are popular. (Shubert Theater.)

Under the direction of the French High Commission, the Paris Conservatoire Orchestra, Andre Messager, leader, will begin its first tour of this country with a concert at the Metropolitan Opera House, October 8. The members of the orchestra have all been with the French armies at the front, and have undertaken this tour for the benefit of the Red Cross.

## DEMOCRACY'S CALL

The article we publish on another page concerning the new requirements of draft registration and the need of boys of nineteen and twenty on the firing line brings to mind this poem, "Wars Are for Youth to Wage," published in The Independent more than a year ago. It was written by Morris Gilbert, at the time a college boy, but soon after a soldier in the American Army.

Wars are for youth to wage; for youth alone

Can fling the unsullied ore of his tomorrow

Into the crucible that flames today;

Bringing his metal, splendid in the assay.

To give its heart for lesser gold to borrow,

And for the giving let the gift atone.

Wars are for youth to wage; not even death

Can make of war a greater thing than youth.

So that when it comes walking in the dawn

Some lad will laugh, rejoicing to be gone

In witness to the youngest ageless truth

That honor is more beautiful than breath

It is very gratifying to us to be able to contribute, in the present crisis, the results of 60 years experience gained in the solution of fuel conservation problems.

FUEL WASTE IN THE POWER PLANT  
WHERE TO LOOK FOR IT—AND HOW TO REDUCE IT  
AND IMPROVE PLANT EFFICIENCY

# IT tells how to save coal

*A real help sent free to  
Plant Owners & Operators*

WHAT question could be more pressing to those interested in a power plant or factory than that of next winter's coal supply? Particularly now, when the government has added further emphasis to the situation by its move to cut fuel waste through a plant questionnaire.

The booklet offered above, "Fuel Waste in the Power Plant," is designed to be of help in assuring coal supply, by suggesting, as it does, many simple and effective measures for the reduction of preventable waste, in the burning of coal and in the use of steam for power, heating or processing.

The pamphlet does not attempt to suggest radical and expensive equipment additions. It discusses plants as they are and indicates a score of individually small but collectively large losses

commonly overlooked in the operation of the power plant and factory.

A reading of this pamphlet will be reassuring to manufacturers or other plant interests in showing how inexpensively and often how readily, waste power, heat losses, wear and tear and frictional losses can be reduced. Its timeliness speaks for itself.

For sixty years we have been developing and advocating the use of coal and power saving materials and feel that we can serve the common good by sharing our experience with plant executives and engineers—particularly now when coal and power saving mean so much to everyone.

We will be glad to forward you a copy of "Fuel Waste in the Power Plant," if you will write our nearest branch.

Write any of the offices listed here for your copy; use the coupon below. To insure this pamphlet reaching the proper party give name of individual to whom it should be directed.

If you want to see a Johns-Manville representative so indicate on the coupon in circle.

## INTELLECTUAL PREPAREDNESS

AMERICA has become a world power. She must now become a world intelligence. Otherwise her new power may be dangerous to herself and the world. Good intentions and a big stick are not all that is needed for the delicate task of putting together the dissected maps of Europe, Asia and Africa. It has often happened that a war won on the battlefield has been lost on the council table.

Our lack of military preparedness has been splendidly met. Our lack of intellectual preparedness cannot be so quickly and readily remedied. A soldier can be turned out in six months, but it requires six years to train a scholar. In the words of the original Jingo song: "We've got the ships, we've got the men, we've got the money, too." But have we got the information to use these material means to the best advantage?

Compared with other nations, the United States takes a fair rank for literacy, and stands above the average in the numbers that seek some sort of higher education, but is deficient in real knowledge of foreign lands and languages. America is so big that we have difficulty in looking beyond it.

Americans, it is true, have been fond of travel, but travel has been to them purely a recreation. They have left their native sense of practicality at home and gone about with medieval eyes. They have visited the Old World to see old things. They have looked at the Stones of Venice instead of its people. They have read the Bible of Amiens but not its newspapers. They know all about the Hotel des Invalides but nothing about the Bourse du Travail. They have gone to Weimar to see the house of Goethe down in the city without becoming aware of the significant fact that the house of Nietzsche on the hill was drawing a larger number of German pilgrims. England was to them merely an Old Curiosity Shop. They have become familiar with the outsides of foreign buildings but have failed to become acquainted with the inside of foreign brains. They have diligently inspected tombs without realizing that they would not have to deal with dead Europeans but live ones. Travel has been confused with mere sight-seeing, so it has not contributed as much as it might to their knowledge of the dynamic factors of modern life.

In some respects our American school system and industrial training have admirably met the unprecedented demands made upon them by the Great War. Engineers and ship-builders have come forward at call. Chemists and psychologists have proved competent to their new duties. But when a call comes for a hundred telephone girls understanding French or a dozen statesmen understanding Balkan politics, the supply was not equal to the demand.

The other day a Russian representative was in our office urging that the only salvation of Russia was for the United States to send over immediately a commission of a hundred

men to explain to the Russian people our war aims and to give them active aid in straightening out their own affairs. We asked him who ought to be appointed on such a commission, and he said, not diplomats, but business men, engineers, captains of industry, authors, professors, publicists, the foremost men of America in all lines; then he added: "Of course they must all be able to speak Russian fluently." We express the fear that the President might find it difficult to fill the bill according to specifications.

On the other side of the earth there is another and still greater republic, struggling for life and suffering from internal dissensions. The Chinese look to us for advice and aid in maintaining their new won liberties; yet here, too, we are powerless because there are few Americans who understand their language and problems.

Our choice of languages, like our travel, has been too much dictated by dilettantism. Living languages were treated the same as dead. Students have elected language courses in the same way as tourists have bought Cook's tickets: they fancied that they might like the country and find its antiquities interesting. They studied Italian because they wanted to—or thought they ought to—read Dante; French to read Molière, and German to read Goethe. Now it is desirable to be able to read these authors in the original, but it is not necessary, for they have been admirably translated. But the daily papers, the literary and scientific periodicals, have not been translated, and here a knowledge of the language is indispensable. One can get a very thorough knowledge of the life of ancient Greece and Rome by reading English alone, but he cannot find out much about the life of modern Greece and Rome without reading and talking Greek and Italian.

Americans who formerly held the funny notion that they were doing a favor to a people they liked by learning its language, now think that they can spite a people they dislike by refusing to learn its language. They imagine that they can "cut" a country as they would an offending acquaintance by declining to speak as they pass by. In fourteen of the United States German is excluded from the schools, in some cases even from the universities, and the movement is spreading rapidly, altho it is opposed by the administration. Dr. Claxton, United States Commissioner of Education, says: "For practical, industrial and commercial purposes we shall need a knowledge of the German language more than we have needed it in the past." In this policy he is in agreement with the European belligerents. The Germans are not fond of the English, as the Hymn of Hate shows, yet they are studying English harder than ever. The University of Edinburgh, in spite of the war strain upon its finances, has appropriated \$62,500 for a professorship of German language and literature. The committee appointed by the Prime Minister in 1916 to consider the

deficiencies of the educational system of Great Britain has recently reported a radical program of reforms. The British committee recommends that:

Modern studies be energetically fostered; that means be taken to bring the business world into closer touch with education; that neither Latin nor Greek be compulsory for an arts degree in any of our universities; that modern studies at the universities comprehend for each of the five principal European countries, language, history, economics, literature and philology; that the present day conditions of each country should be included as far as possible; that modern language teachers be granted facilities to visit foreign countries, and that the system of interchange be developed with regard both to teachers and children.

The five European languages selected for such special study are French, German, Spanish, Italian and Russian. The British committee suggests that fifteen new professorships and thirty lectureships be established for French, ten new professorships and twenty lectureships, respectively, for German, Spanish, Italian, and Russian, and that opportunities be offered for the study of Asiatic and African languages. Without waiting till the war is over Great Britain is reconstructing her entire educational system from the bottom up just as Prussia established hers in the midst of the Napoleonic wars and the United States Government during the Civil War took its greatest advance step, the founding of agricultural and mechanical colleges in every state.

We should apply the same principle to education as to eating and automobile riding. If learning is a luxury, it should be curtailed like the other luxuries. If study is a mere amusement, a form of distraction, a kind of mental indulgence, a way of killing time or gratifying idle curiosity or showing off—as too often it has been—then we ought to sacrifice it in these strenuous times. As Bacon says: "Studies serve for delight, for ornament, and for ability." The first two aims of education, tho legitimate enough in the days of peace, must give way now to the third. We must study not what we like to learn, but what we need to know.

What we need to know is the modern world, how it came about, and what is to become of it. We must try to understand our allies and our enemies, not merely their language but more their mentality. We have all been enrolled by the declaration of war in a compulsory course of current events, in which the best text books are unbound and come out in daily, weekly and monthly installments.

## COAL

**I**N war time results are the only things that count. If a general fails in the field he must make way for another man, no matter how good his excuse.

Last winter the United States registered three colossal failures—we did not produce enough ships, airplanes or coal.

We have put Mr. Schwab in charge of ships. He is making good. We have put Mr. Ryan in charge of airplanes. Time will tell what he can do. Mr. Garfield still remains.

Every one knows that there is enough coal in the American mines to supply every legitimate need of ourselves and our allies. There are only three things that can prevent our getting it in ample quantities. 1st, the interference of the mine owners; 2nd, the lack of labor; 3rd, inadequate railroad facilities.

Mr. Garfield is responsible for dealing with the mine owners and with labor. He can commandeer the mines if the operators get obstreperous. He can no doubt find means to commandeer the labor, if that extreme should be necessary. He has had nearly two years to work out his problem and the American people have been long suffering.

If now he mines the necessary coal and then the railroads cannot transport it, the blame shifts to Mr. McAdoo.

We trust and believe we shall not have a coal famine this winter, but if we do, it will be clearly up to Mr. Garfield or Mr. McAdoo to get out and let some one else run the job.

We want results or resignations—not excuses.

## HOMES FOR RETURNING SOLDIERS

**I**N a recent letter to the President, Secretary Lane called attention to the importance of preparing soon for restoring soldiers to civil life, and expressed the belief that for many "land would afford the great and fundamental opportunity."

As the great expanse of fertile public domain which furnished the open road to economic independence at the close of the Civil War is gone, the Secretary proposes that the irrigable swamp and cut over timber land in public and private ownership be reclaimed and made available for settlement by soldiers under carefully thought out plans.

To these there should be added the neglected or badly used lands of other sections of the country which can be acquired in areas large enough to permit of group or community settlement. If these were acquired thru the coöperation of the states or the patriotic efforts of individuals, it would have a far reaching influence in the improvement of agriculture and creating a new and better rural civilization in many sections of the country.

In accord with the Secretary's recommendation, Congress made a small appropriation to begin an investigation of the areas of land which could be reclaimed and made available for settlement, and a notable group of engineers and land settlement experts have been enlisted in this investigation as a war service. These include among others A. P. Davis, director of the Reclamation Service; Elwood Mead, irrigation engineer and connected with state aided land settlement in Australia and California; and H. G. Cory, the engineer who closed the gap in the Colorado River and thus saved the Imperial Valley in California from being submerged. A progress report is to be submitted to Congress in December as a basis for further legislation.

The restoration of ex-soldiers to rural life should not, however, be left wholly to the Federal Government. There should also be early and adequate action by the states. In Australia the states have done more than the Commonwealth. In Canada the province of Ontario has done more than the Dominion. If privately owned lands are to be purchased, subdivided and improved and sold to ex-soldiers on long time payments, as is being done in Canada and Australia, there must be close business and financial oversight over the farming operations in these settlements for many years, and in this local knowledge and experience will be invaluable. State agencies like the agricultural colleges, the farm bureaus, the state engineering departments, should be mobilized in this undertaking in a definite and responsible way, as they have been under the state land settlement act of California. The state and Federal governments should coöperate. If this is to be accomplished, the states must act at the coming session of their legislatures, as it fortunately happens that all the state legislatures except three meet next winter or spring. This affords an opportunity for legislation by Congress and the states to give effect to coöperative action if a definite policy can be worked out and agreed to in advance. The study of this problem by the Interior Department should therefore be supplemented by similar action in the states. This need not wait on legislation.

## LIBERTY AFTER THE WAR

**W**ILL the war make the world safe for liberty? The question is asked now among thoughtful men. It will be asked with increasing insistence as war policies and legislation further transform our social structure and further curtail individual freedom.

If we do not share the apprehensions of those who are most disturbed by the vast extensions of governmental control and dictation already achieved and in prospect, it is not because we are indifferent to liberty, or willing to see our American democracy become bureaucratic instead of free.

and dynamic. Much less is it by reason of any sympathy with the intolerance which has now and again manifested itself towards legitimate differences of opinion. It is rather because we have faith in the liberty-loving instincts and the practical good sense of the American people, and believe that peace as inevitably relaxes collective tension as war tightens it.

The second mentioned of these two considerations is primary in the logic of the problem. Those who talk about the Prussianizing of our institutions as the price of our mighty effort in coöperation with western Europe to rid the world of autocracy, betray their ignorance of elementary sociology. War while it lasts curtails liberty because in war it is necessary to merge all purposes, all efforts and all decisions in one. Only so can victory be achieved. But to destroy liberty war must become a habit, a continuing activity or purpose; it must become militarism, and militarism is possible only where there is a dynasty or a privileged class to profit by it. Democracies cannot profit by it, and will have none of it. The supreme object in view in the present gigantic endeavor to destroy absolutism, is the destruction of the war-making interest.

The average common-sensible American sees this clearly, and his straight thinking is the basis of our faith in him. The nation has developed a solidarity of purpose in the war, and a collective efficiency, unexampled and amazing. It has shown a generosity of spirit and a readiness to make sacrifices worthy of men and women participating with France and Belgium and Great Britain and Italy in the supreme struggle of human history. When the task is achieved America, asking nothing for herself but peace and a good conscience, will disband her armies and quietly return to the ways of peace. The grip of governmental control will loosen, we shall take back the liberties surrendered for the war, and resume business as usual.

However, this is not the whole story, and a remaining chapter cannot be flung aside. War is not the only condition that limits individual freedom. It is restricted as well by growth of population, by expanding business, and by developing moral sensibility. Pigs cannot run on the common after it becomes a city square; fire risks permissible in open country cannot be tolerated in congested urban centers; contagion negligible in populations of one individual to the square mile cannot be ignored in crowded towns; the useful employment of children, proper enough under good home conditions and in light occupations of the farm, must be forbidden when it becomes systematic exploitation in mills and mines.

These normal curtailments of individual liberty—normal because incidental to social evolution, to civilization itself—were well begun in America before we entered the war, and they will continue after we return to the habits of peace; for this fact, too, the average common-sensible American grasps, and thinks straight upon when he votes, if not always when he buys and sells.

There are two other limitations of private liberty inevitable in war but also possible in peace, one of which probably will continue and be permanent, the other of which must diminish and be sternly opposed if we are to be a free and, in the best sense of the word, a civilized nation.

The unlimited private exploitation of certain business opportunities, legitimate and useful in the bucolic days of national development, becomes inexpedient and may become intolerable when population becomes dense, business stupendous in volume, and social relations complex. Private railroading had become intolerable in the United States when state and federal control by commission was instituted to check waste, discrimination, and too-frequent criminal practices. Commission control was a failure, and as a result of the failure of corporations and the Government to get together the great railroad systems of the country, as business men knew, and as Director General McAdoo now says, were on the verge of bankruptcy when they were taken over

by the Government as a war measure. They will not be given back to private exploitation.

The one restriction of liberty that is without excuse, in war or in peace, is that which is imposed by intolerance. Unhappily, fanaticism and mob mindedness are not confined to autocratically ruled peoples, and the United States cannot boast that they are negligible factors in our national life. There is yeoman work to do now and after the war in combating them with every weapon of education, intelligence, moral courage and the law.

## A NEW FACTOR IN EDUCATION

PRACTICALLY all the higher institutions of learning in America, the smaller colleges and the larger universities alike, become military schools this fall and for the duration of the war. Like West Point they will be military posts under military discipline. Studies that enter into the training of officers will have first place. More leisurely, and, for the moment, less imperative occupation with the humanities and with the sciences that neither bake bread nor kill Huns will not entirely cease, but it will be followed by students not liable to military service, and they will have to get on with such attention as faculties can spare from more pressing duties.

It is understood, of course, that when the war is over academic life will in general go back to the old order of things; but teachers and students alike may as well make up their minds now that the old order will not again be quite what it was.

For one thing, military training will probably continue to be a prescribed part of college work. The American public has discovered the great educational value of drill and discipline and the regular habits that belong with them. Our young men have never been so "set up" physically or morally as they are now, after a few months in camp. We realize how lax life had become, and how wasteful of energy and earnest purpose. Health, sanitation, exercise, good form, courteous manners, and self-control have become social values.

Military training, however, need not and probably will not greatly change the character of collegiate education. An influence that probably will change it is the demonstrated possibility of intensive training, and this influence contains possibilities of mischief as well as of good.

Intensive training had been discovered in America before the war began. The cult of efficiency in the business world had drawn attention to it, and it was being developed in schools of stenography and in commercial courses.

Then suddenly the war revealed to us the wretched inadequacy of our vocational and professional preparedness. It was found that on every hand we were deficient in technical expertness. Intelligence we had, but not swiftness and certitude of eye and hand and guiding thought.

This technical proficiency we must have, now and in the days to come, and it is certain that our colleges and universities, yes, and our high schools too, will be required to produce and deliver it on a larger scale than hitherto.

The possibility of mischief that lurks in this new departure is the danger that in the enthusiasm of a new faith we shall identify intensive training with education in its larger scope; and, most perilous of all, forget that the vital work of the true university is research resulting in scientific discovery. The difference between these two things goes down to the primal habits of the intellectual life. The intensive teacher of vocation or profession must drill his man as one trains a trick dog for the circus; the research worker must "beat the bush," like a dog on the loose, trying to pick up a scent.

To ignore or forget this difference will be fatal to our national life, to our civilization. Germany destroyed herself by becoming a nation of drillmasters and technicians. England, France and Italy have cherished the spirit of free inquiry. By it they live, and will live.

# THE STORY OF THE WEEK

Back on the Hindenburg Line The British and French have had another week of uninterrupted success. All along the western front from the Scarpe to the Aisne they have made advances, but their progress has been slower than in former weeks because the German resistance has stiffened as they approached the Hindenburg line. Their big guns have been brought into play indicating an intention not to retire further unless they are forced to. The Allies and Germans are now virtually back in the same positions on the western front that they occupied before the German drive of March 21. On the southern front the Germans still cling to the Vesle west of Reims, but the advance of the French and Americans north of Soissons and Fismes may eventually compel them to retire to their old line on the Chemin des Dames north of the Aisne. It now remains to be seen whether Foch will attempt to force the Hindenburg line or employ the American and his other reserve armies in an offensive on some distant part of the line, say in the vicinity of Verdun, with the object of scattering the enemy's depleted regiments.

According to an authoritative statement from Washington there are now only 195 German divisions on the entire front, and of these there are only sixteen that have not been engaged in heavy fighting of the present year. In at least eight divisions the battalion formation has been reduced to three

## THE GREAT WAR

*September 5*—American transport "Mount Vernon" torpedoed but not sunk. Hsu Shih Chang elected President of the Chinese Republic.

*September 6*—British continuing advance on Cambrai. "Persic," transporting 2800 American troops, torpedoed.

*September 7*—Germans raid American lines on Metz road. Japanese drive Bolsheviki back on Ussuri River.

*September 8*—British chase enemy from Havrincourt Wood. Czechs from Baikal make junction with Cossacks from Manchuria.

*September 9*—Americans and French advancing north of Aisne. Massacres by Bolsheviki in Moscow and Petrograd.

*September 10*—French closing in on St. Quentin. American troops landed at Archangel.

*September 11*—Heavy German counter-attacks on British northeast of Peronne. Prince Frederick Charles of Hesse, brother-in-law of the Kaiser, reported chosen King of Finland.

companies from four, which means a reduction of one-fourth in the fighting strength of these divisions.

The British took 57,000 prisoners in August and 20,000 more in the first ten days of September.

The cornerstone of the Hindenburg line is the forest of St. Gobain, which occupies the angle between the Oise and the Ailette west of Laon and south of La Fère. This knot of wooded heights, known as the St. Gobain

massif, resisted the French last year and now again they have a chance to attack it from two sides. The French are now within two miles of La Fère on the north.

On the northern end of the line the British who last week crossed the Siegfried switch\*line extending north from Queant, have made further gains. They have now got nearer to Cambrai than they have ever been before. The German regiments that have been driven back from the Somme salient are past to the rear of the Hindenburg line, where they are reformed and reinforced for future use. Meantime the troops on the front are making vigorous counter-attacks to recover strategic points taken by the British and French.

**Spain Seizes German Ships** Spain, the chief remaining neutral in Europe, has at last reached the end of her patience and taken action which in other cases Germany has regarded as the equivalent of a declaration of war. On August 10 the Government sent a note to Berlin calling attention to the facts that more than 20 per cent of the Spanish merchant marine has been sunk and more than a hundred Spanish seamen have lost their lives, and that this has resulted in the reduction of tonnage to the extreme limit. Consequently, the Government had decided that, in case any more sinkings occurred, German vessels now interned in Spanish ports would be substituted. This measure would not imply the confiscation of the ships, for it would be only a temporary solution of the difficulty, to be finally settled on the establishment of peace. It was not proposed to make the measure retroactive and seize ships in compensation for the previous losses. There are ninety German ships interned in Spanish harbors.

To this note Germany is said to have returned a conciliatory and temporizing reply, but the depredations of the U-boats did not cease. The Spanish steamer "Ataz-Mendi," carrying a cargo of coal from England to Spain, was torpedoed and sunk, tho the crew was saved. The Spanish Government thereupon immediately put its threat into effect by replacing it with one of the German ships of equivalent tonnage and also taking possession of all the other German vessels.

Such action in the case of Portugal and Italy was followed by a declaration of war, but Spain is desirous of maintaining her neutrality so long as possible and Germany is reluctant to add her to the long list of her enemies. But if Germany gives even tacit assent to the seizure of her shipping Norway and Sweden may be embold-

Paul Thompson

## PROOF POSITIVE OF OUR SUCCESS AT ZEEBRUGGE

This photograph of the British warships sunk to block the channel of the German naval base at Zeebrugge, was taken by a German aviator subsequently captured by our men. The original photograph is now on view in a London gallery

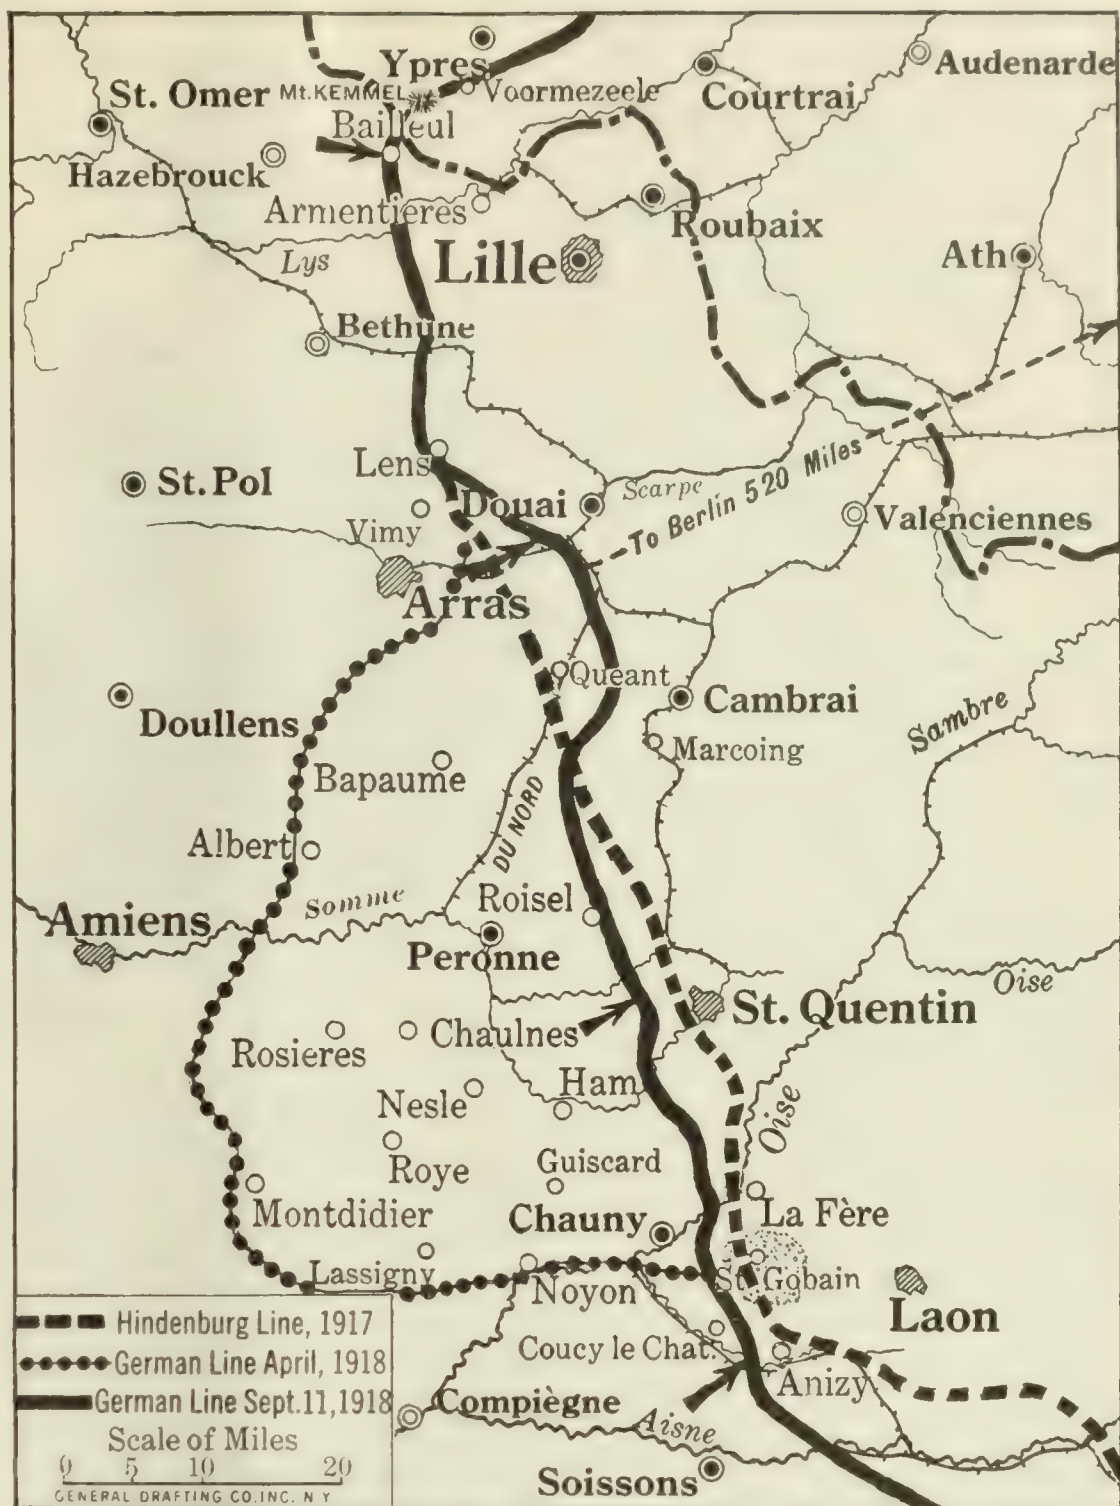

ened to seek compensation for their losses in the same fashion.

For four years Spain has suffered under the strain of divided sympathies. Both groups of belligerents have carried on continuous propaganda and it has been difficult for the Government to maintain neutrality and administer the censorship and sedition laws impartially. The court and higher army officers and clergy were inclined toward Germany, and on the other hand the King and the common people were pro-Ally. There are over 100,000 Germans in Spain and they abused the hospitality of the country by intrigue and espionage as they did in America. U-boats used Spanish ports as a rendezvous and spies signaled to them from the shore as to the movements of Allied vessels. Leading papers and politicians were subsidized with German gold. Spain was urged to take advantage of the preoccupation of England and France to recover Gibraltar and extend her territory in Morocco.

But the Spanish people have become increasingly sympathetic toward the Allies. Besides the revulsion of feeling aroused by German brutality and arrogance the economic interests of the country have drawn Spain to the Allied side. The produce of her fields, forests and mines has been in constant demand at unprecedented prices. Spain has been raised from poverty to wealth by the war. Formerly a debtor nation, she is now loaning money to the Allies. In exchange for American coal, oil and cotton she is supplying Pershing's army with many of its necessities. The recent extension of a credit of \$100,000,000 by Spain to the United States is an indication of the extent of this traffic.

The "Persic" The desperate efforts of the Germans to Torpedoed reach the transports carrying American troops to Europe met with a certain success on September 6th when a torpedo struck the "Persic" and exploded just forward of the engine room. The ship immediately began to sink at the bow, but the soldiers were saved to the last man by climbing down ropes to the decks of the destroyers which promptly came to the rescue. The "Persic" was a twelve thousand ton steamer of the White Star Line and had sailed from New York on August 24th for a British port. She carried 2800 American soldiers. On account of trouble with her engines she had lagged behind the convoy when she was attacked by the German submarine. It is believed that the U boat was sunk by the depth bomb discharged by one of the destroyers. The rescued soldiers and sailors were conveyed to the British port 200 miles away. This is the fourth transport carrying American troops to the war zone that has been attacked by the U-boats. The "Tuscania" was sunk in February while under convoy and 204 lives lost; the "Modava" was sunk last May in the Channel and 55 Americans lost; the

#### BACK ON THE HINDENBURG LINE

The map shows that the Allies have almost restored their front to the position where it stood before the Germans made their drive toward Amiens March 21 and that in the north the British have gone over the Quéant extension of the Hindenburg line and are approaching Cambrai. The French, aided by Americans, are driving the enemy back from the angle between the Oise and the Aisne and will soon be in a position to attack the forest of St. Gobain. The capture of this fastness would compel the Germans to evacuate a large part of their French holdings.

"Oronsa" was torpedoed in April with a loss of three of the crew.

The American troop transport "Mount Vernon" was torpedoed 200 miles off the French coast when returning from a voyage to France, where she had landed troops. She was not so seriously injured but that she was able to return to port under her own steam. The "Mount Vernon" was formerly the "Kronprinzessin Cecelie," one of the largest of the German steamers taken over by the United States when war was declared.

The British Government has hitherto consistently refused to give out information as to the number and names of the U-boats sunk. Recently, however, Premier Lloyd George stated in the House of Commons that "At least 150 of these ocean pests have been destroyed." This claim was denied by the Germans, but the British Admiralty has confirmed it by printing the names of the commanding officers of 150 German submarines known to

have been sunk or captured. Among them was Kapitän-Lieutenant Schweiger, who while in command of "U-20" torpedoed the "Lusitania" in May, 1915; Kapitän-Lieutenant Paul Wagenfuhr, who sunk the "Belgian Prince" in 1917 and drowned forty of the crew by submerging the submarine when they were on its decks; and Kapitän-Lieutenant Rudolph Schneider, who torpedoed the "Arabic" in 1915. In reply to this the German Admiralty states that the list is inaccurate and that however heavy the loss of U-boats more are being constructed than have been destroyed.

The Czechs The most important factor in the war at present in Russia is the nation which was not recognized at the beginning and which has not yet found a place upon the map—that is, Bohemia. Now that England, France and the United States have recognized the Czecho-Slovaks as belligerents entitled to independence

#### THE CZECHO-SLOVAK BATTLE LINE

The forces of the Bohemians to extend from the Atlantic to the Pacific. There are Czecho-Slovak volunteers fighting on the French and Italian fronts and the Czecho-Slovaks who were captured by or deserted to the Russian army are now fighting the Bolsheviki along the Trans-Siberian railroad all the way from the Volga to Vladivostok. The position of the Czecho-Slovak troops is indicated by the black and white oblongs representing their red and white flags. The black area in Austria-Hungary is the proposed Bohemian republic.

they must be counted among the Allies fighting against Germany and the accompanying map will show what an active part they are actually taking in the conflict. The proposed republic of Bohemia marked upon the map in black is designed to embrace Bohemia, Moravia and Silesia inhabited by the Czechs in Austria, and in addition the adjacent part of Hungary inhabited by the Slovaks. This will give a territory four times as large as that of Belgium. The population will be about twelve million, of which ten million are Czechs and Slovaks, the remainder consisting of Germans and other nationalities.

Voluntary armies have been formed from the emigrant and exiled Czecho-Slovaks and from those who were formerly in the Austro-Hungarian armies but were taken prisoners or voluntarily surrendered to the Allied forces during the war. There is a Czecho-Slovak force under the red and white banner on the Italian front, and another on the French front, not counting the large number of that race who are incorporated into the American Army. The most important force of Czecho-Slovaks, however, is that which was previous to the war imprisoned in Russia or fighting in the Russian armies. These were prevented from making their way out of Russia by the Bolsheviki, so they seized the Siberian railroad and held it until now the Allies have come to their assistance. It was the necessity of rescuing the Czecho-Slovaks from their perilous position in the interior of Russia which overcame the reluctance of President Wilson to sending an Allied expedition into Russia. The action was not, as was for a time feared, too late, but has accomplished its purpose. The joint expedition of Allied and American soldiers under Japanese command which started from Vladivostok, crossed Manchuria, and after quelling the resistance of the Bolsheviki on the border was surprised by encountering the advance guard of the Czecho-Slovaks, who had forced their way over six hundred miles of territory occupied by the Bolsheviki and had taken the city of Chita. There is now telegraphic connection and a tolerably clear track all the way from the Pacific to Penza by which supplies can be sent into the heart of European Russia.

One of the strategic points that have been held by the Czecho-Slovaks in Russia is Samara, which, being situated where the trans-Siberian railroad

crosses the Volga, controls at once the overland traffic east and west and the river traffic north and south. An attempt has been made to form here the nucleus of an anti-Bolshevik government for Russia. Recently two hundred members of the Constituent Assembly, which was dissolved by the Bolsheviki, met at Samara and elected a triumvirate consisting of General Alexiev, Stepanov and Avksentiev. Samara is now besieged by the Bolsheviki and has been falsely rumored to have fallen into their hands. The Berlin Government is reported to have asked for permission to send German troops across Russian territory to expel the Czecho-Slovaks from Samara.

#### The Bolsheviki

The State Department at Washington gives out the information that the Bolsheviki leaders have signed a treaty of alliance with Germany against the Entente Allies and the United States. The text of the treaty is withheld from the public for military reasons, but its chief provisions are as follows:

Russia agrees to fight against the Allies. Germany, in return for this, agrees to safeguard Russia against attack either by or thru Finland. Russia agrees to pay Germany 6,000,000,000 marks (\$1,500,000,000 under normal exchange). Germany, in return, agrees to guarantee that the Russian coastal and fishing fleets now in Russian waters shall not be molested after the ex-

pulsion of the Allies from Russian territory.

The Bolsheviki of Petrograd made a raid upon the British Embassy in search for counter-revolutionists supposed to be sheltered there. The Embassy was defended by Captain Cromie, the naval attaché, who shot one or more of the Bolsheviki scouts, but he was soon overpowered and killed. His body was then mutilated in a horrible manner and hung out of the window. The building was sacked and forty persons arrested, including Prince Schachowsky. The Bolsheviki claim to have discovered weapons and documents indicating that the British were supporting the counter-revolutionary movement. The British Government has protested against this abominable outrage and threatens to hold the Soviet leaders personally responsible for any such violations of international law. The Soviet representatives in London have been arrested.

The Bolsheviki threaten bloody vengeance against all their enemies, both internal and external. They announce the execution at Moscow of twenty-nine prominent counter-revolutionists, among them two former members of the Czar's cabinet and two chiefs of police. The Petrograd Soviet announces the execution of 512 counter-revolutionists in reprisal for the assassination of Moses Uritzky, chairman of the Commission for the Suppression of the Counter-Revolution. The Soviet is holding as hostages 121 prominent men, including grand dukes, generals, members of the Lvov and Kerensky cabinets, and editors, who are to be shot if any more attempts at assassination of Soviet officials are made. The newspapers urge the execution of a thousand of the bourgeoisie or Allied nationals for every one of the Bolsheviki killed by the Allies. Dora Kaplan, the medical student who shot Lenine, has been executed. Miss Spiridonovo, who was rumored killed because of her open denunciation of the Bolsheviki leaders in the July congress, is apparently still alive, for they hesitate to execute so famous a revolutionist.

Consul-General Poole sent from Moscow August 26 a special train with the Allied and American officials and civilians. They were provided with safe conducts by the Bolsheviki, German and Finnish governments and arrived at Stockholm on September 7. The

American party includes consuls, vice-consuls and attachés, the staff of the National City Bank numbering twenty persons, the staff of the Y. M. C. A. numbering twenty-six, the staff of the Y. W. C. A. numbering seven, and others. There are left in Moscow 240 British and French, of whom seventy are in prison.

**The Japanese Campaign** The Japanese *communiqués*, now being issued, are admirably clear, explicit and unpretentious and give us for the first time a grasp of the Siberian situation. The Japanese plan of campaign provided for four different expeditionary forces. First troops were landed at Port Arthur and sent north to Harbin, where they were joined by a contingent from Vladivostok and the two proceeded northwest to the Manchurian frontier. Here General Semenov and his Cossacks had been fighting a losing battle with the Bolsheviks on the Russian side, but reinforced by the Japanese, Czechoslovaks and Allied troops he has been able to drive the enemy back toward Chita. But Colonel Gaina, commanding the Czechoslovaks about Lake Baikal, advanced eastward at the same time and took Chita, which brought him into communication with their compatriots from the Pacific.

The Bolsheviks, who had hitherto held the section of the railroad between Baikal and Manchuria, were thus caught between two fires. On the west were the Czechs and on the east were the Allied forces, to the south lay the Mongolian desert, so the Bolsheviks escaped toward the north up the railroad that branches off from the main line at Onon and goes up to the Amur River. Here they can join the Bolsheviks who hold the line of the Amur as far as Khabarovsk, where the Usuri River runs into it. The Bolshevik force in this region is said to number 19,000 and they are provided with armored cars, gunboats and artillery. Their headquarters are at Blagovestchensk, the capital of Amur province. The Soviet here has declared war against China because the Chinese Republic has sent a contingent of troops to join the Allies in their Siberian expedition. The Chinese of the city have been expelled and their property con-

Bain

"TOMMY" HITCHCOCK, ESCAPED FROM GERMANY

The popular young American aviator, wounded and forced to land behind the German lines in a fight with three enemy planes last March, got away from the guard who was transferring him from one prison camp to another and walked a hundred miles in eight nights, hiding during the daytime, until he got across the Swiss frontier. Lieutenant Hitchcock is in this country now; he is to transfer from the Lafayette Flying Corps and return to France soon in the United States air service

fiscated. The feeling against the Chinese has always been strong on the Amur. In 1900 when the Chinese authorities in Manchuria declared war against Russia the Cossacks at Blagovestchensk drowned five thousand Chinese, men, women and children, in the river.

On the east Manchuria is separated from the Russian maritime province by the Usuri River, which runs north and flows into the Amur at Khabarovsk. Toward this point the Japanese are directing two expeditions; one landed at Nikolayevsk is coming up the Amur River, the other landed at Vladivostok is coming down the Usuri. The latter expedition contains also Czech, Cossack, British, French and American contingents, all under Japanese command. This force defeated the Bolsheviks who were trying to hold the railroad running along the river. The pursuit of the retreating enemy was impeded by his destruction of the bridges across the numerous tributaries of the Usuri, but the Allied forces have followed them almost if not quite to Kharovsk.

**Senate and House** The Senate on September 7 passed the emergency agricultural bill, with its rider providing for national prohibition after July 1, 1919, and also with another rider, known as the Pomerene rent bill, which regulates rent profiteering in the District of Columbia. It appointed conferees, but the House of Representatives refused to agree to a

conference and instead sent the measure to its Committee on Agriculture.

The House meanwhile passed the water power bill by a vote of 231 to 23, retaining that recapture clause which is not approved by the President and which provides as a condition precedent to the taking over of any power project by the Government that there must be paid, at the end of the fifty-year lease, the actual, legitimate cost or "net investment" of the project to the lessee. The minority wanted to substitute the phrase "fair value" for "net investment."

The revenue bill was taken up in the House on the 9th, when considerable criticism of it developed on the Republican side, especially by Mr. Fordney of Michigan, who argued that it would produce much more money than eight billions and was excessive in its burden on the present generation.

**Contract with Railroads** The contract by which the Government takes the railroads of the country under Federal control was issued by Director General McAdoo in its finally revised form on September 5, and on the next day the Railway Executives' Advisory Committee, representing more than four-fifths of the roads, advised that it be accepted and signed without further demur. During the long negotiations by means of which the contract has been formulated many protests were considered, made by the managers and by the Association of Security Holders in behalf of their privileges and interests; and meanwhile the Government has paid 90 per cent of compensation claims to needy roads.

The contract is identical for all the roads except that the specific annual compensation for each will be the average net operating income for the three years prior to June 30, 1917. In favor of this compensation the Government will take all the operating revenues of the roads; but it is believed that these receipts will fall far short of the billion dollars a year it is estimated that the Government will have to pay to maintain bond interest and dividends.

The contract stipulates that the

From the Times

BEGINNING TO SEE THINGS

Knight in Dallas News

GOTT DOESN'T SEEM TO BE CO-OPERATING

roads must be returned to their respective owners in good condition at the end of the period of Federal control, but expressly provides that nothing it contains shall be construed as expressing or prejudicing the Government's future policy in respect to them; and losses by fire or accidental destruction will be made good, but not any destruction by "public enemies."

During Federal control the Government is to assume all expenses growing out of settlement of claims arising since the roads were taken over, joint facility and equipment rents, and damage suits against railroads.

Salaries of corporation officers, or other corporation or railroad expenses not directly necessary to actual operation, must, in general, be paid by the companies.

Ordinary Federal, state and local taxes will be paid by the Government, but each company must pay special war taxes.

Most of the objections to the first draft raised by the security holders were overruled by Mr. McAdoo. Particular objection was made to the clause that permits the Government to abandon lines and connections not found profitable in war use, and to divert business at will, arguing that this might involve enormous "loss of good will, loss of business, diversion of traffic, and loss of business organization." This plea was denied on the ground that the Government's provision for compensation was expressly designed to cover such contingencies. Another strong protest was made at the Government requiring additions and betterments to be made out of the capital of the companies, contending that the cost of such new work—which after the war may become unprofitable—ought in the first instance to be borne by the Government, which makes them for its own benefit and takes all their earnings. This contention was denied on the ground that any risks of that kind should be accepted by the roads as war risks.

The most serious objection by the roads, probably, was that the original contract required them to accept as final and conclusive the decision of the

Interstate Commerce Commission acting as referee in any dispute, without any chance of appeal to the courts. This is now modified, so that an appeal may be made to the United States Court of Claims on all questions of law.

#### Report on Government Railways

Mr. McAdoo's report as Director of Railways was published on September 9, and gives an account of his stewardship for the first seven months of Federal administration. He reports that the total steam railway mileage is 397,014 miles, owned or controlled by 2905 companies, employing 1,700,000 persons; the property also comprises various steamship and boat lines, including 3000 miles of usable canals.

Mr. McAdoo believes that substantial progress has been made "in accelerating the movement of traffic and employing the available equipment more intensively," and is confident that the railroads will shortly be in a condition to meet any demands that may be made upon them if the needed motive power already ordered can be secured and the skilled labor necessary is not withdrawn from the railroads for military and other purposes. His statistics show that both the trainload and the carload have been increased, and that by rerouting the distance of freight hauling between important centers has been greatly shortened.

Expenses have been lessened. By reorganization of the operating force the number of men drawing salaries of \$5000 or more has been reduced by 500, and the total salary bill from about \$21,300,000 to \$16,700,000. The largest salaries now paid are those to the seven regional directors, who receive from \$40,000 to \$50,000 a year; and in general pay of both officers and laborers has been adjusted more equably than heretofore. The "principle of the basic eight-hour day" has been recognized; women now get the same pay as men in similar posi-

tions, and must not be put at work in places or conditions "unsuited to their sex"; negroes are paid the same as white men with similar duties; and plans are contemplated for insurance, old-age pensions, etc.

Great economy has been effected by consolidating offices and terminals, and by canceling passenger trains that could be spared, thus saving 46,000,000 running-miles per annum. The standardization of freight cars and of locomotives; a system of uniform and simplified accounting; a uniform classification of freight; through waybills, and measures for coördinating the railroad administration with other departments of the Government, are among the many alleged improvements discussed.

New York's Greater New York  
Slacker Raid and its suburban towns were treated on the Tuesday following Labor Day to a realization of the Government's strong arm. Early in the morning thousands of agents of the Department of Justice, accompanied by armed soldiers or sailors, stationed themselves at strategic points in the highways of travel and required every man that appeared to be between twenty-one and thirty-one years of age to show his draft-registration card. Inquisitors also searched saloons, lodging houses, theaters—in short, every hole and corner in the metropolitan district was combed for men trying to escape military service. The questioners were polite but faithful, and if a man could not produce the papers he was sent promptly to detention in an armory, and very likely was laughed at by the crowd because he had not heeded the warning of the newspapers and carried his card with him.

The inquisition continued on Wednesday and the total result, as officially stated later, was the temporary detention of 67,187 men, some of whom were kept over night because their homes (and cards) were far away or they had difficulty otherwise in proving their

#### A GOOD DAY'S HAUL

The one American soldier at the left is the only guard necessary to bring this long line of captured Germans back to the prison camp. Perhaps the fact that they know there's a hot supper waiting at the camp has something to do with it, too

registry. In the case of those who had not registered that fact was soon manifest and they were at once inducted into the army or turned over to their boards for retributive action. These delinquents numbered 16,505, of whom about 1500 were found to be out-and-out slackers. The police also captured a large number of criminals who were "wanted."

The matter was taken up in the Senate and two hours of stormy debate was devoted to the subject, in which the action was likened to the French reign of terror and the big, airy armories were called "dungeons" and "bullpens," and a senator wanted to know whether there was "any difference between democracy in the United States and Kaiserism in Berlin." Other senators defended the action, which was shown to have been ordered by the Department of Justice, there was some talk of "politics," and the Senate dropt the matter.

#### Bomb Outrage in Chicago

A bomb exploded in the front part of the Post Office in Chicago

on Wednesday afternoon, September 4, killing four citizens, injuring many others and doing much damage to the building and to neighboring property, especially in Adams street. The Post Office is on the ground floor of the great Federal Building, on the sixth floor of which is the courtroom of Judge Landis in which the recent trial and conviction of the I. W. W. men took place. Haywood, their leader, was in the building but was not hurt, and he is reported to have said that the explosion of a bomb there was "unfortunate, at this time." Federal and local detective agencies began investigations instantly, but thus far have failed to get any sure knowledge of who placed the bomb or when it was concealed behind the steam radiator that hid from view the suitcase containing it. Experts report that the bomb was very carefully made and was of a powerful, "slow" type, apparently designed to wreck the building more completely than it did.

#### HERE'S A HERO!

Lieutenant Edmund G. Chamberlain, an aviator of the United States Marine Corps, had already distinguished himself for bravery in active service when he asked permission during his holiday to fly with a British Aero Squadron. During that flight he downed five German planes and disabled two more. Forced by his disabled engine to land behind the German lines he dispersed an attacking company with his machine gun, took one prisoner, got safely away and on his way back to the British lines carried in a wounded French officer. He has been recommended for the Victoria Cross of Great Britain and our own Congressional Medal of Honor, the highest military awards of the two nations

#### Army Welfare Work

The decision of the President, recently communicated to Raymond B. Fosdick, in charge of Training Camp Activities, that the proposed "drive" for funds for welfare work in the army abroad shall be for a common fund in which seven designated societies shall share, settles a much discussed question of policy. Arrangements had been largely completed for two drives, one by the Young Men's and Young Women's Christian Associations, the American Library Association, and the War Camp Community Service, this year, and another, early next year, by the National Catholic War Council, the Jewish Welfare Board and the Salvation Army. Instead of that plan the public will be asked during the third week of next November to pour its contributions into a common fund

of \$170,500,000 to be raised in a "War Work Campaign" directed by the Y. M. C. A. leader, John R. Mott. This fund, when accumulated, will be apportioned as follows:

Young Men's Christian Association .....	\$100,000,000
Young Women's Christian Association .....	15,000,000
National Catholic War Council (Knights of Columbus, etc.)	30,000,000
Jewish Welfare Board.....	3,500,000
American Library Association	3,500,000
War Camp Community Service	15,000,000
Salvation Army .....	3,500,000

Total .....\$170,500,000

The argument, in the mind of the President, in favor of this "war chest" is that the spirit of the country may be exprest without distinction of race or religious opinion in support of what in reality is a common service. "This point of view," he writes, "is sustained by the necessity, which the war has forced upon us, of limiting our appeals for funds in such a way that two or three comprehensive campaigns shall take the place of a series of independent calls upon the generosity of the country."

The Washington correspondent of the New York Evening Post has developed a new aspect of the matter by ascertaining and explaining the feeling of the military authorities in France. He learns that not only are they sometimes embarrassed to find room and transportation for so many workers at or near the front, apart from the Red Cross, but that they observe too much overlapping of energy and expense, owing largely to the effort of each organization to show itself the most useful. They say that better harmony and more co-operation and team-work are needed. Therefore the commanders will recognize hereafter only the Red Cross, the Y. M. C. A., the Knights of Columbus, and the Salvation Army. This means that the Jewish Welfare Board and the Y. W. C. A. are affiliated in army regulations with the Y. M. C. A., and several Catholic societies will be merged with the Knights.

# DEMOCRACY'S CALL TO YOUTH

BY DONALD WILHELM

**I**T is youth that wins wars. It is youth that will win, if it is not already doing so, this war. The Marines are youth—a very large proportion, about 70 per cent, of that little host (the Marines have in France altogether, General March says, only 15,000) that began the Hun funeral march at Chateau Thierry were under twenty-one years. In fact, 13,826 of the total Marines enlisted from April 1, 1917, to July are under twenty-one and 15 per cent of those are under nineteen. The Navy is youth, in large part; 75,000 of its 200,000 officers and men are under twenty-one—97,500 if we count also the Reserves—and it is estimated that 15 per cent of the total Navy forces are under nineteen. And in what was the Regular Army—all are Regulars now—practically all the enlisted men are outside the draft age and not only are about 70 per cent of all these enlisted men under twenty-one but many of those who have won commissions, in the Army generally, abroad, for gallantry in action, are under twenty-one years.

It was youth that won the Civil War. In that war, on the Federal side, there were 104,987 soldiers, all volunteers, under fifteen years of age; there were 231,051 under sixteen, 844,991 under seventeen, 1,151,438 under eighteen, 2,159,798 under twenty-one, and only 618,511 were twenty-two years or over.

Youth in large part makes up the effective belligerent armies abroad. France has not needed to call her youth—her army in normal times was made of men of eighteen years and over, and the boys still younger responded with fervor equal to that of their older brothers, when war came. England's age limits include all, married and single, from eighteen to fifty, now. And General March, the Chief of Staff, who served abroad, says that many of the German prisoners, tho claiming to be eighteen, patently are sixteen, even less.

America is taking full advantage of the experience of her allies—and of the retreat of the Germans. To understand just why, to see with what incontrovertible logic General March, General Crowder, Secretary Baker, and other authorities insist that the singing, glorious army that is to win the war must be made in large part of youth, it is only necessary to listen, in either of the Committees on Military Affairs, to this triumvirate sitting at the end of a long committee table, confident, assured.

"It is up to us to win the war," says the tall, slender Chief of Staff, timing his words. "We can win it. How long it will take will depend exactly upon what we do. If we drag along and put a small force over there, we will be playing Germany's game. It is my belief that with an American army of 4,000,000 men in France under one commander in chief we can go thru the German line wherever we please."

"Only God knows—" interposes Chairman Dent.

But the brusque and kindly, bearded general counters: "In calculating the

amount of strength for a given campaign, the commander looks primarily to the number of rifles he can throw in. The Germans had at the beginning of this year a marked superiority of rifle power. I think it would be the consensus of opinion among military authorities that eighty divisions, of about 45,000 men each, would give us that position in 1919."

The General Staff completed its program June 30, 1918. There is more reason now than there was then for hastening that program—now that Foch has tangled the legs of the centipede. The program calls for ninety-eight divisions—eighty in France and eighteen in training here—on the day of days, July 1, 1919. It calls for the sending of 250,000 men before the end of August, 200,000 in September, 150,000 in October, in November, in December, 100,000 in January, when coal and other difficulties are severe, 200,000 in February, and 300,000 every month thereafter.

The General Staff laid out the program, sent its specifications down the hall to General Crowder.

General Crowder says "It is simply a

Central News Service

"It is youth that wins quickly, effectively"

mathematical proposition. The men remaining in Class I are not sufficient to supply even September's requirements."

General March insists that it will take six months' training to make the men effective—four at the very least—and, therefore, with the capacity of the camps and cantonments clearly in mind, it is simply a mathematical proposition—the necessity of calling all possible men at the earliest possible opportunity.

General Crowder answered with figures of which he is, in the War Department, everywhere, the authoritative master, and began by remarking that there will be a breach in the endless bridge of ships unless we do one of two things—call youth, or invade Classes II, III and IV. The calling of men from 31 to 46, he said, is difficult; the questionnaires are complex, laborious; making selection is a long drawn out process that would necessitate a breach in the program that is to win the war, and, moreover, there are not enough men without dependents who are not doing necessitous things, to supply military requirements anyway. In other words, General Crowder says, the ages 32 to 40 would provide only 448,086 effectives, as nearly as can be approximated, and the ages 32 to 45, inclusive, only 601,236, which is only about 10 per cent of the men required. But the ages 19 to 20 would furnish 1,121,634, and the ages 18 to 20 would furnish 1,797,609, almost at once, comparatively, since the handling of the questionnaires is, relatively, so simple. By combining the ages 32 to 40 with 19 to 20, General Crowder says, there would be 1,569,720 effectives forthcoming. By combining the ages 32 to 45 and 19 to 20 there would be 1,722,870 forthcoming. But the greatest number would be forthcoming if the ages 32 to 45 were combined with the ages 18 to 20, which combination would produce 2,398,845 men. These ages, accordingly, are chosen—not for any sentimental reasons, but rather to the contrary, because these are the ages that can win, quickly, effectively.

Secretary Baker explains why: "The men from 31 to 45 are older men. It would be unwise to have military contingents made up of older men only. We want youthfulness and maturity, to make a good composite." But the controlling reason, he insists, with the two generals to right and to left of him, is that it is only by combining these ages that the necessary men can be procured immediately—which contention offset the McKensie amendment to the new draft law, because this amendment provided "That registrants who on the date fixed by the President for registration are of the age of nineteen and not over twenty years shall be designated as the nineteen class and shall be drafted subsequent to registrants in Class I of the age of twenty years and over the age of twenty years; and registrants of the age of eighteen years and not over nineteen years shall be designated the eighteen class and shall be last called for service." [Continued on page 382]

## THE DAY'S WORK WITH PRESIDENT WILSON

The indefatigable camera keeps a record not only of the President's achievements, but of his many-sided personality—the statesman, the popular leader, the philosopher, the golfer, the man who likes a joke. In the center of this page is the President as we think of him oftenest, the man who wrote, "For us there is but one choice. We have made it. We owe to the man or group of men that seeks to stand in our way in this day of high resolution, when every principle we hold dearest is to be vindicated and made secure for the salvation of the nations. Once more we shall make good with our lives and fortunes the great faith to which we were born, and a new glory shall shine in the face of our people"

### TRYING ONE ON THE VICE PRESIDENT

Perhaps because he doesn't unbend often few people know the President as a good joke teller. But it's a favorite relaxation with him, even when the joke is on himself. Do you remember the verse Washington ascribed to his authorship a year or more ago? The last three lines were: My face, I don't mind it. For I am behind it. The people in front get the jar

**I**N my article of August 31 I described my visits to America's main port of disembarkation and one of our great base hospitals a dozen miles up the line.

The next stopping place of Captain Gardner Richardson and myself on our journey from the sea to the front trenches was an American artillery school, situated in a substantial French city where a century ago Napoleon established a cavalry school now perhaps the most famous school of its kind in the world. As cavalry has played hitherto an insignificant part in this war, the French Government turned the school buildings and grounds over to the A. E. F. in order that the United States might have as good a place for the teaching of our prospective artillery officers as there was to be found in all France. Colonel P. G. Glasford was in command of the school and he and his assistant, Major E. C. McDonald, lived in the old chateau adjoining the barracks that Napoleon probably occupied. The colonel was good enough to invite Captain Richardson and myself to spend the night with him as his guests.

After depositing our luggage in our rooms we were assigned to a young lieutenant who turned out to be a cousin of my Yale room mate and he took us all over the school and even into the recitation rooms, where our boys were bending over their desks and taking notes from the lecturers just as they do in every university classroom at home. I was told that there were eighty-six American and thirty-five French instructors on the "faculty" and 900 candidate students. As no man can now become an officer in the American army without first serving in the ranks, these boys all started in as privates and have only been assigned to the school by their officers because of demonstrated meritorious conduct in their line of duty. The present plans call for an expansion of the school from 900 to 1800 students, so that eventually there will be about 600 graduating every month.

The sons of ex-President Taft and Mr. Charles E. Hughes were taking the course while we were there, and I understand that one of Mr. Roosevelt's sons arrived since I left. It speaks well for our American democracy when the sons of such distinguished parents start at the bottom of the military ladder and not at the top—as they do in Germany, for instance.

The Artillery School suggests a good-sized American college. There are the usual barracks, recitation rooms, dining halls, stables, parade grounds, etc. There is also a fine artillery range about ten miles out of town that boasts a field of fire three miles long and one mile wide. As it is located on broken ground it affords a fine opportunity for varied practice. There are both rear and advanced observation posts, which are suitably placed for direct, unilateral and bilateral observation. The advance observation posts are made of concrete and give a close view of the targets.

That evening after mess with the officers in the old chateau, we went over to see a moving picture at the Y. M.

C. A. rooms and I wished I had my two daughters with me when that idol of all American femininity, Mr. Douglas Fairbanks, made his athletic appearance on the screen. After that we came back to the chateau for a bite of cheese and a glass of "ginger ale." And as the younger officers were standing about the piano singing, a telegram was brought in announcing the promotion of Major McDonald to the rank of lieutenant-colonel. It was fine to see his eyes sparkle as he read the good news. I suspect he must have been a very good commanding officer, for all his juniors were as happy over his promotion as tho the honor had come to them.

The next morning at sunrise, before we were out of bed we heard the men on the parade ground shouting with laughter as they played the O'Grady games, which are now a part of the regular training of the American army. We have adopted the games from the British and a British instructor was leading our men. The French, however, who do not love sport as the English and Americans do, wonder how such silly games can possibly have any military value, since they are nothing but kindergarten 'spiels for grown-ups. But they have already promoted efficiency and alertness and obedience in the British army at least 25 per cent, and no doubt they will do the same for us. But any way, we like them, and that in itself is sufficient.

After breakfast I went to a lecture where a talented young French officer was explaining in perfect English that the muzzle velocity of a 3-inch gun was 14,000 feet per second that the "vivacity" of the powder increases with age like wine. I took most of the lecture down in my note book, but, as often happened in my college days, I could not tell afterward what half my notes meant. After the lecture I visited a handsome old chateau, now occupied by the American Y. M. C. A. It was presided over by Mrs. Mallon, a charming lady from Cincinnati who had five sons, all graduates of Yale, in the American army, and two daughters, one a sub-freshman and the other a last year's graduate of Vassar. There were one or two young ladies assisting her and I have never seen any Y. M. C. A. in all my travels that had such a delightful home atmosphere and spirit of refinement. Mrs. Mallon took me all over the chateau and then out in the pretty garden with its miniature lake and still more tiny island. On entering a dense clump of trees I stumbled into an old dungeon where one could imagine that Blue Beard himself might have committed some of his evil deeds. Then walking over

to the barracks, where Colonel McDonald had ordered the troops to assemble in the quadrangle before marching to mess, I gave them a brief talk on the spirit of America as I knew it when I left home. They gave me three good cheers when I finished and then after luncheon Captain Richardson and I proceeded on our way along the line.

Our next stop was a good sized city now used as the center for the Services of Supply for the American Communicating Lines. The headquarters of this is in the southern part of the town and consists of a quadrangle of permanent barracks loaned to the United States by

the French Government. In addition there is a very interesting salvage depot at the other end of the city while a few miles out in the country is an aviation training station, which we visited later in the day. While visiting the Services of Supply Headquarters we ran across an old college friend, Major Hugh A. Bayne, who came to France with Pershing and has served as a judge advocate of the A. E. F. ever since. When we entered his office he was writing an opinion as to whether certain supplies imported by the Y. M. C. A. to be sold to the American soldiers should come in free of duty or pay the local octroi taxes. The question was a pretty

*About 25 per cent of damaged American equipment is salvaged*

one and depended on whether the Y. M. C. A. was or was not a Government institution. He told me his decision was that tho the Y. M. C. A. was partially under Government control, they should pay the taxes.

Major Bayne authoritatively denied the many rumors afloat thru our army that France sends in a bill to the United States every time we look at the view. He especially emphasized the absurdity of the charge frequently heard that America pays rent for the trenches we occupy. This rumor apparently arose from the fact that we do pay the French Government for the damage we do to the growing crops when digging the emergency trenches miles back of the front. But France does exactly the same thing, so we naturally follow suit.

The Salvage Depot was to me the most interesting institution back of the front lines that America has established in France. And if any proof is longer needed to show that the United States has buckled down to real fighting the mountains of dilapidated uniforms, boots, harness, equipment, blankets, tentage, clothing, etc., direct from the front would dispel the idea. Altho the United States has only been on the first line a short while, already a force of 3500 people, of whom 3000 are women, are employed in mending and repairing damaged American equipment. And so valuable is their work that out of every \$100,000 worth of goods that are brought in for repair we save on an average 80 per cent. If one can judge a woman by appearances, the employees varied from girls in their early teens to great-great-grandmothers. Many of them are the widows of French soldiers killed in battle. Tho Captain Shine, who showed us about, said our Government was willing to pay more, the French Government fixes their wages at seven francs a day lest the whole labor market be demoralized. The hours of work are from seven to eleven-thirty in the morning and from one-thirty to six at night, with a fifteen minute period for rest in each session.

It costs 15 per cent "overhead" to run the plant and it costs about \$15,000 to save \$100,000 worth of goods. The work is done entirely by French women except for the twenty American officers and the several hundred enlisted men who do the supervising. The workers have to be taught everything from the ground up, but they become proficient in a very short time.

Every bit of salvage that is brought in for repair—and nearly 200 carloads come in each week—has to be fumigated in great cauldrons, then thoroly cleansed in gasoline and finally washed with soap and water

before the mending is begun. Everything comes out in the wash, shoes, rubber boots, leather, canvas, as well as clothes. At the main depot 50,000 pieces are washed each week. Of these over 16,000 are coats. After they are washed and mended they are put up in neat bundles and sent back to the men as good as new. When I was there 200,000 rubber boots were being repaired. So much is coming in now from the front that the storage facilities of the factory are utterly inadequate. In order to keep the day workers fully occupied an extra night gang sorts out the carloads of material that arrive the previous day.

We next motored to the outskirts of the town where in an open field we visited the spot where ninety-five carloads of junk from the front were piled up in a small mountain. There thirty-five girls were going over this material and I noticed a hill twenty feet high of worn socks and another thirty feet high of shredded underwear. Some of the Mexican and Indian troops in our army who have not been able to learn English fast enough have been transferred to this outdoor rag pile. I was told they were as popular with the French of the opposite sex with whom they worked as the more white complexioned Americans. A great truck carried all the workers back to town for luncheon in the middle of the day and a ride in this was apparently such a novelty that some of the girls would work overtime Saturday afternoons without extra pay just to enjoy a little joy ride afterwards.

After luncheon at the Y. M. C. A. hotel we walked across the street to the city square, where we were so fortunate as to witness the ceremony of bestowing military decorations upon French soldiers who had done some deed of valor at the front. Those who were to be the recipients of the honor stood in the first line, some with their faces bandaged, some their arms in slings, mostly all wounded. Directly behind them stood the relatives of those who had died and were to be posthumously decorated. And in the third line were the little children of both classes. Two French infantry companies in their sky blue uniforms stood on two sides of the square and an American regiment in khaki completed the third side. In the background a large crowd of townspeople were assembled. When the general finally came forward to bestow the decorations, the soldiers and officers all came to rigid attention. Yes, he kissed the heroes on both cheeks as he pinned the coveted medal on each breast, just as you have seen him do in the movies.

When it was all over the general reviewed the troops as they passed by headed by the band. Out of compliment to the United States the American troops led the procession. I noticed that our boys wore no jackets over their khaki shirts, whereas the French were not only swathed in their coats but also in their long, ungraceful overcoats. The French and English dress much heavier than the Americans do in France. They wear warmer underwear and stouter shoes and thicker stockings and the French sleep [Continued on page 398]

Hydro Service

*The tractor draws a plow more steadily, more economically and faster than a horse*

**R**ENDERING mobile heavy field artillery, thus permitting the recent continuous advance of the armies of world democracy on the western front, making possible the production of record crops of food for the subsistence of these armies and the nations behind them, and in so doing multiplying their numbers in this country alone, fourfold—this is the achievement in barely a twelfth-month of the tractor. And the “tank” of modern warfare, whose fighting value is too well known to need recounting here, is more a development or adaptation of the tractor than of any other type of self-propelled vehicle.

At the beginning of the current year there were in use in the United States, according to an investigation made by the Department of Agriculture, some 34,000 tractors owned by farmers. In addition there were a few hundred of the so-called agricultural types employed in road hauling, logging operations and kindred work where rough ground had to be negotiated. This year the production of these tractors in the United States will approximate 100,000, representing an increase of 300 per cent. Of this total production close to 30 per cent comes from a single manufacturer,

while about 25 per cent of the country's total output is being exported, almost entirely to England and France.

According to the use to which they are being put these hundred thousand tractors may be divided into three classes, military, road hauling and agricultural. They may also be classed by their method of traction as wheeled tractors or track-laying tractors. The latter are also called creeping tread and caterpillar, but the term track-laying best describes their predominant feature. Again they may be divided as either large or small or light or heavy tractors according to their capacity for work, either in hauling or delivering belt power for running other machinery. Of the hundred thousand mentioned above approximately eleven thousand are going into military service, about eight hundred into road hauling and the balance into agricultural work. Figures are not available giving proportions under the other classifications, but the wheeled tractors greatly outnumber the track-laying type, and the light tractor predominates over the heavier one.

In rendering mobile heavy field artillery the tractor has proven itself an efficient military instrument, and has

# ON THE TRAIL OF THE TRACTOR

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT  
MOTOR SERVICE

contributed largely to the new methods of warfare. With the outbreak of the war it developed that not the least of the special preparations made more or less secretly by the Germans, was that of powerful tractors capable of hauling over both roads and hard, rough ground the famous 28-centimeter guns (approximately eleven inches). When the Germans flowed over the Belgian border, batteries of these guns towed by tractors followed close behind, and were used to reduce the forts at Liege and Namur, and later at Antwerp. So we see that the tractor made possible the rapidity of the initial German advance, and furnished the element of surprise, as anything like mobility with such heavy ordnance hauled by animal draft had been found impractical. A few months later the then highly effective Austrian Skoda 30-centimeter howitzer was motorized, the barrel being hauled by one tractor and the platform with the mounting, etc., by another, and these guns figured prominently in the successful fighting on the eastern front in the first two years of the war. The Germans were even prepared for the terrible conditions encountered in Russian Poland during the first winter of fighting there, and had special tractors with driving wheels of ten feet in diameter.

Today the Allies enjoy a superiority in tractor equipt field artillery and it has contributed largely to the continuity of their recent advances, by enabling guns of large caliber to keep abreast of the progress made by the infantry. Previous to the start of the war the French had experimented with four wheel driven motor trucks for hauling artillery up to about eight inches in caliber, but while often called and used as tractors these special types of motor trucks are not within the scope of this article. The real success of the Allies in motorizing artillery is due to the use of track-laying tractors with the exception of the Italian army, which has a remarkably efficient rear wheel driven tractor, capable of hauling twenty-five tons, and provided with pedal treads for use away from hard roads. The Germans, as indicated in the previous paragraph, have adhered largely to the wheel type of tractor, altho they used for a time in the early stages of the war a combina-

Hydro Service

*The French army uses tractors almost entirely to bring its artillery into place*

tion of wheel and caterpillar drive which was ingenious if not altogether practical.

The principal tribute to the value of the tractor for military purposes is to be found in the plans of the Ordnance Department of the United States Army, which plans provide for the substitution of tractors for animal draft in hauling all sizes of artillery from the light three-inch field pieces up. Five sizes of track-laying tractors have been developed for this purpose, the largest having a load hauling capacity of twenty-five tons. The guns will be hauled both on their own wheels and on specially designed trailers. These tractors have proved successful in severe tests and 10,600 are in process of manufacture, this number being included in the total of 100,000 tractors being built in this country this year. In addition the Ordnance Department has on order nearly four times this number of four wheel driven motor trucks, to be used partly to haul light artillery under certain conditions, but principally to carry ammunition to the tractor hauled guns. The development and employment of tractors in hauling artillery in this war is worthy a whole book and can hardly be discussed further in a short article.

With over 95 per cent of the tractors in use in this country prior to this year engaged in agricultural work and about 88 per cent of those built here this year going into the same field, it is in this direction that we must look to find the tractor's big contribution to winning the war. Because they first felt the pinch of food shortage the British and French were ahead of this country in adopting effective means to increase their own production of food crops, and an extensive adoption of tractors was found to be the answer. During 1917 the British Government supplied to farmers in England and Wales 1618 tractors with gang plows and by November 1st of that year these had plowed some 200,000 acres. During the same period the United States Food Administration sent 1500 tractors to France to aid in raising larger crops, and the French Government added several times this number. It is estimated that this extensive employment of tractors in France last year produced an addition to the food supply which otherwise would have required two million tons of shipping to transport from this country. During the early months of this year a single manufacturer in this country supplied 6000 tractors to the British Government and 13,000 to the French Government, all of which were added to the tractor equipment in the agricultural districts of each of these countries. French authorities have estimated that their Government's action in supplying tractors to the farmers made possible the planting of 500,000 additional acres last spring and double that number this fall.

In the United States prior to this year the increase in tractors on farms followed a natural course and exceeded 100 per cent annually. Outside influences including direct governmental aid began to exert themselves about last

Courtesy "The Commercial Vehicle"

An American army ordnance tractor making a test haul of light artillery

January and have steadily increased since then. It is the state, rather than the national Government, which has given direct aid to farmers in securing tractors in order to increase crop production in the face of a shortage of labor. In consequence thousands of tractors have gone onto the farms in various states which otherwise could not or would not have had them. The results thereby attained in adding to the food supply must be proportionate with those secured in England and France, and to the tractor we may properly credit much of the relief in the food situation recently experienced in this country.

The real worth of the tractor on the farm is shown in detail by the report of the investigation conducted during the past year by experts of the United States Department of Agriculture, covering the work of 643 tractors in the state of Illinois. The first significant fact is that 90 per cent of the owners of these tractors reported that their investment in one of these modern power machines had proved profitable. A similar investigation somewhat smaller in scope conducted a year previously showed only 80 per cent profitable investments, indicating on one hand an improvement in the newer models of tractors and on the other greater skill

on the part of the owners in operating and caring for these machines. A minimum of 130 acres seems essential to the profitable use of a tractor. The latter investigation further showed the almost entire elimination of the older type of tractor of large size and great weight and the power to haul gang plows with from five to seven or more bottoms. Seventy-one per cent of the tractors recently investigated in Illinois were three plow size, while there were twice as many two plow machines as four. However, a somewhat different proportion was established when the owners were asked what size they considered best for their own farms. This result was 11 per cent for the two plow tractor, 13 per cent for the four plows and the remaining 76 per cent declared in favor of the three plow tractor. While this conclusively proves that the medium to small sized tractor has by a wide margin the biggest field in this country, it would be a mistake to apply the above percentages to every section of the United States. On the large ranches of the Far West, for example, the big tractor equipment would be accorded first place.

The statements made by these tractor owners as to what they considered the principal advantage— [Continued on page 399]

One of the biggest farm uses of the tractor is to furnish belt power

# BUYING AND SELLING IN WARTIME

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

**T**HE critical war measure for the average person is to spend money wisely. There is no other act so often

repeated with so direct a bearing on the outcome of the war. We should regard our views and habits of expenditure as the real test of our patriotic zeal and wisdom.

Every commodity that we buy or sell is now affected by the war. New standards of quantity, quality, cost, utility and necessity have been forced upon us by the shortage of labor, skill, transportation, money, manufactured goods and raw materials. The prompt and loyal observance of these new standards requires that both dealer and consumer adopt new opinions, methods and relationships covering their joint responsibility for the duration of the war. Every article bought and sold is now a silent witness to the loyalty or disloyalty of the buyer and the seller. Each is bound as a good American to carry out the rules and requests of the Government, which apply to foodstuffs, clothing, factory products, all other articles involving the use of man power, fuel, time or money.

For the first time in history a friendly business partnership exists, or should exist, between every dealer and consumer, with Uncle Sam the senior member of the firm. Each partner consults the experience and regards the welfare of the other two before taking action that affects all three.

The patriotic dealer and customer now conduct together a partnership of service, each to the other and both to the Government. While the fact of this new partnership has been vaguely apprehended, no statement of the rules and conditions applying thereto has appeared. The aim of this article is to offer such a statement for the mutual benefit of dealer and customer. These suggestions are compiled from the experience and counsel of great merchants, noted economists, and Government experts. We will amplify the suggestions by comments of our own.

Before studying any subject a wise person studies the reasons for studying it. Why should the matter of buying and selling in war times be of sufficient importance to claim our thoughtful attention? Why should everybody make it a personal study?

Because every citizen of the United States, being a daily consumer of merchandise, ought to know on general principles how to be the right kind of consumer, both for his own sake and for that of the dealer. Because every human aim and enterprize should be founded on the partnership ideal of mutual benefit, and the quickest way to get this working truth established in our consciousness is to apply it to our daily acts of buying and selling. Because the art of careful buying means a large saving to the consumer, and every dollar we save thus we can give to war relief work or invest in Thrift Stamps or Liberty Bonds. Because the Government now requests us to omit the purchase of non-essentials during the war, that materials and man power used in their manufacture may be conserved; hence we must form the habit of stopping to think before we buy.

Because every dealer is seriously handicapped by the excessive cost of doing business, by lack of products, supplies, labor and equipment; by delay and loss in transportation, by confusion, error and waste owing to unskilled help; and if the dealer is to serve us right under the grievous war conditions that strike him hardest, he must have our understanding, appreciation, co-operation. Because the products of the world are being rapidly exhausted; a mem-

ber of the War Industries Board says that he considers the next six months to be the critical period in the commercial life of this country, because reserve stocks are being rapidly used up and raw materials must be devoted entirely to war needs; hence to make the merchandise on hand go as far as possible, we must learn immediately how to buy to the best advantage.

Furthermore the Government in prosecuting the war buys everything from needles to ships. Every time we go on a shopping expedition we virtually compete with the Government. If we buy excessively or unwisely we buy against the Government and for Germany. Every article we buy wrong is equal to a bullet fired at the American army, whose operations demand huge quantities of foodstuffs, clothing, chemicals, woodwork, leather goods, metal implements, products of glass, clay, iron, rubber, steel, brick, stone, electrical materials and appliances, and hundreds of other kinds of merchandise that we would buy for ourselves alone but for the war. The plain, urgent war duty and responsibility for each of us when we go forth to buy is to remember the war handicaps of the clerk, the rights of the dealer, the necessities of the Government, and the needs of our boys at the front. The buying rules and suggestions offered by experts are as follows:

Do your buying in person. Cut down telephone orders to a minimum. They are mostly unnecessary. They involve extra

Paul Thompson

*Carrying the market basket habit is one of the easiest and best aids to thrift*

delivery and accounting costs, with liabilities of error and dissatisfaction. Send or go for trifling purchases. Make every telephone order large enough to pay the dealer for the extra cost. You can do this by planning ahead.

Carry all purchases home, save in the few cases where the extraordinary bulk or weight requires wagon delivery. Get the market-basket or shopping-bag habit.

Resolve and prepare to pay cash. Don't ask for credit or open a charge account unless you have to, for the sake of life, health, war duty or personal efficiency.

Limit your C. O. D. purchases to those of necessity.

Shop early—early in the week and early

in the day. You will not only secure fresher goods, with a service more prompt and dependable; you will at the same

time help the dealer to distribute the peak load of trade and thus by employing fewer clerks to release man power for the use of the Government.

Shop definitely. Know what you want before you go. Make out a shopping list in advance. Carry it with you. Also take any advertisement of goods you wish to buy, to aid the clerk and to verify the purchase.

Shop deliberately. Don't let social or other superficial obligations hurry you into fretfulness and rush. Don't confuse and impede the clerk with a demand for unreasonable haste. Allow yourself at least a quarter more time than you think you will need, which is about the delay to be expected by war-time congestion of traffic and trade.

Overlook errors, misunderstandings or delays that might be construed as unavoidable. Enter no complaints that you could fairly omit. Records of a large number of the complaints of customers indicate that the fault rested as often with the customer as with the store.

Be as thoughtful, gracious and considerate with clerks in a store as you would be with guests in your own home. The honest and willing clerk even more than the ordinary society guest deserves our utmost effort to be patient, courteous and kind. The clerk is doing his best to make a fair living by serving us well—the society guest is merely fooling away time in a superficial manner with an artificial motive. A friendly word and a cheery smile cost you nothing, but are invaluable to the heart and mind of a clerk worn out with long standing, frequent lifting and stooping, and the more frequent spiritual exercise of attempting to look pleasant in the face of mean, cross, foolish and selfish customers. When you treat a clerk like a slave or a machine, you get poor service and you deserve poorer than you get.

Buy with discrimination. Before you purchase an article, judge not only its worth to you, but also its war value. Be sure that its sale does not violate a war ruling or request of the Government. Find the class of goods in which every dealer specializes, then take advantage of the particular bargains he alone is likely to offer in that line. Study with unusual care the advertisements of local merchants; you will soon discover which among them are both patriotic and progressive, and which accordingly deserve your patronage. Nothing but the war has ever shown clearly the difference between the good and poor stores of a community; every customer owes it to himself and the community to judge every store in the light of the war situation.

Buy home products first. This rule applies not only to perishable foodstuffs like bread, meat, fruit, vegetables and greens, which are always better when bought fresh, but in addition to all canned or manufactured goods to be had from nearby kitchens, farms and factories. Goods that must be shipped half way across the country will occupy railroad space needed by the Government, will be uncertain as to date of arriving at your store, will cripple your dealer because of delaying the turnover of his stock, and will cost you a higher price.

Buy only what you need for current use. That is, buy no more merchandise ahead than you would in times of peace. The rule against hoarding applies not only to food products, but also to clothing and other manu

# THE TOUCHSTONE OF SUCCESS

BY JOHN CALDER

VICE-PRESIDENT OF THE AERO-MARINE PLANE AND ENGINE COMPANY

**E**FFICIENT preparedness is demanded nowadays at every stage in business if we are to lead the procession. It must be in evidence from the earliest thought regarding a promising idea or a generalization of value down to the elaborate formulation of specific plans to realize these ideas and to a host of precautions for launching them safely on the sea of experience and ensuring a successful voyage.

The relations concerned in business "preparedness" are "inceptions"; "organization"; and "operation." There are just three ways for attaining wisdom and thereby efficiency and preparedness on anything, whether it be business or baseball, motors or morals. These are thinking, imitation and experience. Thinking is the finest way, imitation is the easiest way, and experience the most difficult way.

Efficient preparedness in business is the result of the interplay of these three factors combined with the industry necessary to intensify them. Such preparedness, however, in the matter of inceptions cannot be always measured by the result of the project, for many other elements enter into performance and enhance or nullify the original conception. It is for this reason that good ideas poorly supported are apt to be overlooked and that efficient support of a poor scheme is a thankless task.

The thoro coöperation of the three wisdom factors named and the quality of the minds engaged are the sole factors conditioning the birth and expansion of new business ideas. Mental grasp and imaginative power exercised upon the real facts of the problem are paramount here.

Obviously if the inception of a policy or plan is insufficient, inaccurate, and therefore inefficient, it matters little what may be done later by good organization and operation to support it. The best thing that can happen to the many inefficient inceptions is that they should never see the light or that they should be submitted to the test of intelligent and fearless criticism.

Unfortunately, many of them reach the rank and file in business and in military organization with executive endorsement, if not also with executive origination, and are not open to challenge. Thereby hang not a few sad tales about rainbow chasing. Actual business occurrences show that lack of thought, lack of imitation and observation, and lack of knowledge of scientific and industrial principles are to be found in men who have inceptions of the highest importance in their control. Good business is the art of selecting probabilities and poor business is the result of taking chances on possibilities merely.

Sound concepts, visions, forecasts of coming events or needs, or estimates of conditions by leaders in finance, commerce and industry are fundamentals in business preparedness and those concerns have been most successful and stable where the fewest things, external or internal, "just happened." Lack of preparedness is always rooted in lack of prevision or inaccurate estimates and we do not know how many bad guesses at the future are made on the average by our professional forecasters or the men at the masthead of business. One authority says 10 per cent is the minimum and that 30 per cent more just escape failure.

It is very important, therefore, to start right with the elementary ideas of projects and many of our business and military inceptions have failed right here, tho, unfor-

tunately, the failure is sometimes concealed from the onlooker until capital has been irretrievably wasted upon the project, and then various obvious but secondary reasons are advanced for the collapse.

There have been no more striking instances of this than in the adventures of some of our own men of finance in the realm of industry, particularly since "war brides" were in fashion. Their failure and surprize at being unable to juggle with matter and men after the skilful fashion of the world of figures and speculation has been instructive. Again and again financiers of the keenest intelligence and success in their own special spheres having been fooled, not thru the operation of the law of average, but by inceptions and projects inherently uneconomical and needing no wizard to discover this. For any efficient preparedness in such cases we look in vain. Apparently they could not resist the attractive terms either offered or possibly conceded for their capital and they swallowed the bait whole, with the reservation that any resulting burdens could be fastened on the backs of others.

**I**N the matter of the inception of great business ideas the lack of the trained mind in the adult is almost beyond remedy. But even trained minds will fail here if they lack imagination. Nearly every good idea in business, embodied finally in a project, arose from trained minds carrying thought past all verified phenomena and experiences into the realm of intuition. In other words, the step attained by what is really the scientific use of the imagination was a step beyond the last solid ground. Imagination played with and around ideas and ultimately flamed into consciousness of that which was yet to be proved.

But with our imagination among the stars, our feet must be firmly planted on the ground, for we are not dreaming here; we are consciously cerebrating and so long as we think correctly we must think of things as they are. The state of mind within us must correspond to the state of things without us whenever a call comes for comparing them. Some people are intellectually dishonest and in inceptions decline to see what they do not want to see. It is as if a man relished cheating himself at solitaire. In all preparedness, therefore, a passion for facts should rule and we should be willing to go far afield to get all relevant experiences. The mind also should be a nimble one for immediate decisions may be demanded. But given a clear, clean intellectual start, the originator of business, industrial and military ideas should launch out boldly in mental speculation; open-minded, struggling against preconceptions of ideas and of people; ready to correct imperfect estimates of things and of character and to welcome any new truth when it has proved its title.

Such thinking and brooding over facts, always fortified by personal experience, keen observation and resourcefulness, is the secret of power and of efficiency in business preparedness. It gives a man the ability to acquire, to marshal, to master ideas and to forge from them a weapon to conquer men, or commerce, or circumstances.

Industrial preparedness also calls for truer discrimination of suitability than at present and, at the initial stages, more use of the science of character-reading and of the psychology and physiology of business aptitudes in which notable progress has

been made in the past five years. The employment department is coming into its own. Under competent administration it is no longer a mere laborer's registry. It classifies aptitudes competently and even the higher salaried men are no longer engaged upon chance impressions of their personalities.

The ability to sense truly the psychological elements of a situation is all-important and it can be cultivated. But it can also be atrophied, and when this happens to a whole nation the result is the world tragedy we are now witnessing.

The new leaven which has been fermenting in business in the last ten years has worked chiefly in industry. Management has been struggling from an art toward a science and, while it has not yet attained that goal, the machinery of management, namely, system, has been evolving rapidly. Whether too rapidly or too completely we will not inquire here. The question before us is what is the essence of preparedness in the operating department; in our mills and plants, arsenals and stores, in sales and distribution of products, and in the office functions of all of these.

The new element in preparedness is the use of the "scientific method" in attacking problems. The scientific method, however, is not any particular system nor is it a tool that can be kept handy on the shelf for occasional use only. It is old as Socrates and the dawn of science, but in its conscious application to business it is as new as today. It is essentially an attitude of the mind which influences our business conduct, plans and decisions, and causes us habitually to observe, describe, analyze and classify with accuracy the phenomena which recur in our daily round.

The result is that we apply these analyses and experiences to regulate later affairs and shape all our records so that they are interpretive and constructive. At the same time (unlike pure scientific research) all this is confined solely to the problems where it is *economically justified*. Many men of outstanding ability in inception do all of these analyses by mind and memory, and this fact is sometimes used to depreciate the value of conscious preparation and to suggest that such ability cannot be cultivated. But this is not really so. Not a few of our business geniuses themselves confess to limitations due to lack of educational and other opportunities which people of lesser talent dare not neglect.

In operating departments we need store houses for facts and conveyors for decisions and the real question of system economy is: what kind and how many? It is the possession of adequate discrimination in this matter that distinguishes the mere statistician from the efficient business planner and forecaster.

The matter of business preparedness is then simply the concentration on the inceptions in every department of the best minds we have and the provision for systematically widening and recording experience. Behind every method, every practise, every custom in business and society alike, lies an idea or group of ideas—a theory—a reason. Hence, the only practical things in life are ideas, the only practical man, the man of ideas, the man who knows, not merely the man who does. Behind our individual practise, whether we are conscious of it or not, lies the theory, and only he who knows it can take the next step wisely.

## Why Doesn't Your Automatic Telephone Rust?

When the warm days come—and you are working your trusted Automatic overtime to keep up with the wartime activities of your organization—why doesn't the base stand or transmitter rust?

When the acid from the perspiration of your hand works its way through the enamel down to the metal, why doesn't the steel corrode and shortly cause the enamel finish to flake away?

To forestall these conditions the Automatic Electric Company uses the Parker Process. The Parker Process prevents rust and thereby insures all users of the Automatic Telephone a permanent finish—and a permanent service.

### *A Book on Rust-Proofing for Industrial Executives*

No matter what you manufacture—if you use iron or steel in any way—you will find valuable information in the Parker Process book. This explains how the Parker Process is rapidly reducing the great toll rust takes annually from our steel supply—how it is being used on metal articles from motor trucks to typewriters—and how easily you can apply it to your own product without in any way interfering with your present production plans. For your copy address

In addition to the base stand and transmitter the Automatic Electric Company rust proofs the coils and armatures of all coils—as well as other small parts of exposed metal.

**PARKER RUST PROOF COMPANY of AMERICA**  
DETROIT, MICHIGAN, U. S. A.

## LOCKWOOD, GREENE & CO. ENGINEERS

**R**EMARKABLE records are being made, both in the production of ships and in establishing yards to produce them. When the Staten Island Ship Building Co. contracted for a large tonnage with only the beginnings of a modern yard, they recognized the advantages of expert engineering service.

Lockwood, Greene & Co. were engaged to design the plant and specify the equipment. We made a thorough study of conditions; determined the best methods of constructing the plant and providing adequate power supply. The requirements included facilities to build complete cargo vessels—steel hulls, boilers and engines. And *speed was essential*.

This represents but one phase of our broad engineering service. In all lines of industry we plan new projects and rearrange running plants.

Perhaps in your case, we can help you to meet unusual needs or special war time demands. If you are looking farther ahead, we will be glad to discuss your plans with you. Write to our nearest office for further information. We shall also send you the book, "Building with Foresight."

### Uncivil War

It's a horrible thing to think that half the world must be maimed and slaughtered in order to make the other half think.

And yet, until little over a year ago, America was in too much of a hurry to think.

Altho hurry, says Porter Emerson Brown in *The Uncivil War*, came in really with the bicycle, we didn't hurry well till the advent of the trolley which made us step lively to keep from being run over. Then electric lights, by making it possible for us to stay up all night, helped along for a while; and at last the automobile put the finishing touch upon speed. And as the twin of Hurry is Excitement, the motor of course necessitated the cabaret and roadhouse.

"A roadhouse," the author defines in his volume of slangy epigrams that are as thoughtful as if they were more solemnly worded, "is a form of suburban saloon where people go to pay \$18 for a dinner for which they'd fire the cook at home. It usually has the highly original name of the Blue Moon, or the Pink Lion, or the Blossom Brae."

Then comes the war, and with the war that grimly growing list of names in the morning paper, to enlarge, thru sorrow or sympathy or privation, the heart and mind of the woman who "gives parties that would keep a Belgian family, children and all, in luxury for a year," to sober the thoughtless young man whose main object in life seems to be "darkness saving and to support Henry Ford in the style to which he has so recently been accustomed."

It's a horrible thing to think that half the world must be maimed and slaughtered to make the other half think. But if so it must be, can't you who may be left begin to think now?

*The Uncivil War*, by Porter Emerson Brown. George H. Doran Co. \$1.25.

### The Black Monk of Russia

**F**EW of us mortals can resist the fascination of an exposé. None could refrain from seizing upon this large red volume whose covers, bearing the sinister countenance of the Black Monk of Russia, seem fairly bursting with startling secrets. *Rasputin and the Russian Revolution* is written by Princess Catherine Radziwill, who has published books of this sort before under the name of Count Vassili. The author's purpose is to describe the revolution and the events which preceded it, among which the extraordinary story of Rasputin figures so curiously. In her estimation the importance of Rasputin is entirely misunderstood and greatly overrated outside of Russia and she devotes about two-thirds of her book to an earnest endeavor to put him in his proper place—a pawn in the pay of certain high personages, who in their turn are in the employ of Germany. We are whirled into a merry-go-round of intrigue whose machinery is of German make. And in the midst of it all we make the acquaintance of innumerable prominent Russians from the late Czar, whom the writer is inclined to forgive everything save his "insane weakness" for his wife, "the evil genius of the dynasty whose head she married" to Alexander Kerensky, "an interest-

### Don't Wear a Truss

## 21 JEWEL BURLINGTON WATCH

**250  
PER  
MONTH**

The masterpiece of watch manufacture—adjusted to the second, positions, temperature and isochronism. Encased at factory into your choice of the exquisite new watch cases. The great Burlington Watch sent on simple request. Pay at rate of \$2.50 a month. You get the watch at the same price that the wholesale jeweler must pay us.

**Write Today** See color illustrations of all newest designs in watches that you have to choose from. Name and address on a postcard is enough. Write today. Burlington Watch Co. Dept. 2486 19th & Marshall Blvd. Chicago

ing and brilliant historical figure, but only a figure." The latter part of the book comprises an account of the Revolution itself and a prophecy of Russia's future. Princess Radziwill's first-hand knowledge of facts, which assists her in her efforts to clarify the prevalent erroneous opinions of the great changes which have taken place in Russia and her absolute faith in her country's integrity, which leads her to discuss the delicate subject of Russia's peace with Germany, make the book well worth reading.

... the Bolsheviks seized the government, ... and at last started the negotiations which culminated in the shameful peace signed at Brest-Litovsk. After three and a half years' war and a Revolution, Russia as an independent nation ceased to exist, and became virtually, and to all appearance, a German province. Germany can look triumphantly on the success of her work and glory in it. Happily for Russia, for the world and for the cause of civilization, it is only one chapter of it that has come to an end. Russia, the great Russia of the past, is not dead. She possesses far more vitality than she is given credit for, and she still has sound, true, and honest elements amidst her citizens. When attempting to judge her, one ought to think of the great French Revolution, and to remember that in France, also, it took years before its work was at last consolidated and set upon a sound basis. Our Russian Revolution is hardly one year old and—I think she has not yet passed through that phase of real terror which is always a symptom of great upheavals such as Russia has undergone and is undergoing. But this will not mean that the end of Russia has come, nor that she has become, or will remain, a German province. The hatred of the Teuton, on the contrary, will grow as the events progress and the great disillusion arrives.

*Rasputin and the Russian Revolution*, by Princess Catherine Radziwill, John Lane Co., \$3.

## With British Ships of Trade

IN *The Merchant Seamen in War*, by L. Cope Cornford, we have a splendid record of how British seamen of the merchant marine are living up to their tradition of courage and steadfastness in facing the ruthless methods of German sea warfare. Of the fifty odd stories told, where all redound to the credit of those who went down to the sea in dire peril, one hesitates to single out any for special mention. Yet, there is probably no stronger sea tale written than "The Castaways," and none more heroic than that of Captain Thomas Crisp, master of the fishing smack "Nelson," to whom the posthumous honor of the Victoria Cross was awarded. Admiral Sir John Jellicoe in his preface to the book, writes:

In this book it has been the design of the chronicler to present the character and the virtues of the British seamen, rather than the wickedness of his enemies or the horror of his sufferings. For a tale of wrong is of no worth in itself. If in adversity men and women fail of courage and constancy and cheer, then we should lay our hands upon our mouths and keep silence, for there is no more profit of speech.

Readers of this book will find no single page where humanity lost faith in itself.

*The Merchant Seamen in War*, by L. Cope Cornford, Doran, \$1.50.

## Juvenile Books in Brief

*HEALTHY LIVING, Book 1*, by Charles Edward Avery Winslow. (C. E. Merrill Company, 52 cents.) Small illustrated book by a professor of public health telling children how they can grow strong for their country's service.

*Our Patriots*, by Wilbur F. Gordy. (Charles Scribner's Sons, 50 cents.) Makes clear to children and foreign-born adults the meaning of patriotism by sketches of our leading patriots.

*My Country's Part*, by Mary Synon. (Charles Scribner's Sons, 50 cents.) Teaches the principles, plans and activities of our country in the war and tells how children may help.

*My Country's Story*, by Frances Nimmo Green. (Charles Scribner's Sons, 50 cents.) Illustrated book showing the spirit of America by careful selection from literature of our great authors.

*Boy Scouts at Sea*, by Arthur A. Carey. (Little, Brown & Co., \$1.25.) An active, interesting and worth-while story of three boys and their cruises on the Boy Scout ship "Bright Wing."

# How to find the right pencil

You have run across a pencil now and then that suits you to a T—makes your work easier, quicker, more satisfactory. Why not be sure of getting such a pencil every time?

## DIXON'S ELDORADO

*"the master drawing pencil"*

has strong, firm leads that save a lot of resharpening—smooth, responsive leads that write with much less effort. Made in 17 degrees—6B (softest) to 9H (hardest). HB (medium) is most popular for general work; but be sure to get the degree *exactly* suited to your work.

## How to find your grade

With the aid of the chart below, select the grade you think you should have. If the first is not exactly right, next time select a degree or two softer or harder as the case may be. When you have found *your* degree, specify it every time and you will be assured of satisfaction from then on.

- |    |   |
|----|---|
| 6B | } Varying degrees of extra softness—6B softest. |
| 5B |   |
| 4B |   |
| 3B |   |
| 2B | } Extra soft and black.                         |
| B  |   |
| HB | } Very soft and black.                          |
| F  |   |
| H  | } Medium soft.                                  |
| 2H |   |
| 3H |   |
| 4H |   |
| 5H | } Varying degrees of extra hardness.            |
| 6H |   |
| 7H |   |
| 8H |   |
| 9H |   |

Write us which degree you want, or what kind of pencil work you do, enclosing 16 cents in stamps and we will send you full-length samples worth double the money.

**They're going over there on  
"A.B.A." American Bankers Association Cheques**

On what kind of funds are you going over there to engage in works of mercy or to perform sterner acts of duty? Are you going to travel on funds that are *safe and convenient*? "A.B.A." Cheques are *safe* because those you purchase are usable only after you have countersigned them. They are *convenient* because of just the right denominations (\$10, \$20, \$50, and \$100), compactly arranged in a neat little pocket case and good for payment of purchases and services in all Allied and neutral countries.

Thousands of men and women embarking in war work have supplied themselves with this "safest, handiest travel money." Entire units of nurses have been equipped with "A.B.A." Cheques, before sailing. You can conserve your time and spare yourself many annoyances by getting a supply of these Cheques at your bank.

*If your bank does not sell them, apply to*

## HOW TO USE THE INDEPENDENT IN THE TEACHING OF ENGLISH

This brochure prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address The Independent, 119 West 40th St., New York.

## DEMOCRACY'S CALL TO YOUTH

(Continued from page 382)

The McKensie amendment called attention to the fact that if there are to be any further wars youth and women are to have more to say about things than ever before. Youth and woman are to be the arbiters as they never have been before because no war between nations, certainly no world war, can be waged without such support of industry as has never been given before. In this instance General Crowder points out that to disregard youth would simply mean going into the deferred classifications and that would be to bring on chaos because "The nation is carrying a heavy industrial burden as well as a heavy military one." This nation, in this war, in other words, must provide for its own 100,000,000 population, must keep its promises to the neutral nations to send exports, must provide for its military forces, and to do all these things necessarily must keep the bulk of its older men busy at home, and if they, and the women who are helping them remain at home, then only youth remains, to carry arms.

It is youth, again, that is to win this war so far as it is to be won in the field.

And as a consequence of this new draft law it follows that youth will have, after the war, a voice in our national affairs that it has never had. That is, just as after the Civil War the epochal things in America—the building of the trans-Continental railroads, the pioneering of the West, much else—were done by veterans, so after this war there seems to be not the least question that the veterans will do the big things in the nation—and those veterans, in large proportion, will be youths.

All this does not mean that simply because a man is not a youth he is not to be called into service. To the contrary the new law makes special provision and grants special tolerance to the War Department for drawing into the service every man up to forty-six years unless he has dependents who really require his presence at home, notably his earnings and the fruits of his continuous toil, or because he belongs to the class of "persons engaged in industries, occupations, or employments, including agriculture, found to be necessary to the maintenance of the military establishment or the effective operation of the military forces or the maintenance of national interest during the emergency."

The definition, with reference to individuals, of this classification and the calling or exemption of others with reference to the classifications resulting from individuals having dependents is left largely to the Executive Departments, which is one way of saying that the responsibility upon General Crowder and upon those faithful, little-mentioned draft boards, is greater than ever before. It is greater because the net is closing with democratic precision upon every one from eighteen to forty-six years. When the first call came and 9,586,508 men registered, General Crowder and his boards were working, in a sense, extensively. There were elements of uncertainty and of the problematical and experimental in this phenomenal and unprecedented draft. Moreover the supply of man-power was very great. Since then the withdrawals from this supply have been greatly augmented. Men have gone into essential work in the shipyards—nearly half a million of them. Others have gone into other essential industries. The exemptions again and again were combed over, sometimes nationally, when physical and other requirements were altered, sometimes locally, in regions where there seemed to

have been too much tolerance allowed. But Uncle Sam has been tightening the reins steadily; that is why, in connection with this law, we have reached the point where work-or-fight is the order of the day. And even now the law does not designate—it could not, since every case, wellnigh, is a problem in itself, for a local board—precisely which men shall serve and which shall not. It simply affords authority for the Executive Departments—notably General Crowder and his agency of the War Department—to make the rules, in detail, or to leave justice in the hands of local boards fully conversant with each individual case. But it is possible, after one has attended the hearings before the House and Senate Committees on Military Affairs and followed closely the representations made by General Crowder, Secretary Baker, Senators and Congressmen, to get the spirit with which the new legislation will be applied, and it becomes plain that it will be applied with complete justice, with scrupulous regard for such justice as will make it impossible for any man between eighteen and forty-six years to escape such responsibilities as his rights in this democracy have made him heir to. To illustrate: Men merely married, i. e., men who are married, have wives living, have children, even, are not, by that fact alone, to escape service; they will have to show that those dependents of theirs are dependent, continuously, upon their continuous work at home, unless they are working in the ship yards or at tasks which are indispensable, in which they cannot easily be supplanted by women or by older men. Indeed, those concerned are determined to comb out of every hidden place and out of every sinecure and out of every niche and corner of the country every man who is not continuously essential to the maintenance of dependents or of essential industries. Some of these men may have wives. It may not be safe in all instances to suppose that these wives, who, let us say, have no children, can resume work they have done before, assuming that they worked before marrying. Frequently, Secretary Baker points out, things have been altered so much since they worked that they cannot easily resume their old places or similar places; but if they can, then the men are likely to be called. The board in charge of the chaplains of the army has recommended that even theological students be called and be subjected to these rules of classification.

Such even-handed justice does away with any cry for or against drafting labor. Labor will take its place along with rich men and poor men, all other men.

The direct results, abroad, will be the realization of our military program—and we have the repeated word of General March for it, that our military program is duly calculated, in most cold blooded fashion, to knock the hairy and Imperial Knees together and send the Imperial Hopes of Great Pled Paper over, under or thru, into the inferno, beyond the setting sun.

The home results are almost as many as one might be asked to enumerate if one were told to set down on paper, very definitely, the position of each individual in a nation before a nation just as different qualitatively from the nation we know as the United States as the imagination could describe in all of a week-end's work. It is the realization—this draft law—of our democracy: it is as if Uncle Sam had run ribbons out to every American man from eighteen to forty-six, drawn all into solid phalanx, started all marching into glorious struggle to the tune of the "Star Spangled Banner." That is why it is a glorious thing, a thing produced, as change and growth always are, by sacrifice, but an inspiring, one might say, inspired, thing, therefore.

## ARTILLERY, SALVAGE REFRIGERATION

(Continued from page 387)

with their windows closed. It will be interesting to know whether our boys will eventually do in France as the French do.

After the touching ceremony of bestowing the decorations was over we took our car and drove out a few miles to the aviation training field to the north of the city. This is the kindergarten school in France for American flyers, bombers and artillery observers. It boasted, I should think, of fifty aeroplanes. The machines were, of course, safe and slow. After the men graduated from this school the finishing touches were put on at more advanced training stations.

The next day found us at a large and famous city where a mile or so beyond its outskirts America maintains barracks for casual officers and men. As far as I could see it was nothing but a great quadrangle of stone barracks around a dirt square. At the time of our visit there were 500 officers and 4000 men there awaiting orders. From this station small detachments are sent to the trenches when extra men are needed. There is usually drill in the morning and in the afternoon organized baseball, boxing, etc. The Y. M. C. A. is here, as everywhere, most active. Lieut. C. C. Campanieri, lately of the Metropolitan Opera Company of New York, met us at the station, having been assigned to show us about for the day. He suggested that we take a cross country trip of twenty-five miles and visit the American Aviation Assembly Depot and Refrigerating Plant. As there was nothing special to see at the barracks it was not long before we were on our way. After a pretty ride over a well tilled country—evidently not much affected by the war—we stopped at the Aviation Assembly Depot and were introduced to the colonel, who I may say was the only American officer I met in France who seemed to be suspicious of my identity. It was only when I brought "To Whom it may Concern" from Ex-President Taft and the State Department that he permitted us to visit the station under his charge. So far, only about one-fourth of it had been erected. The depot for day bombing planes was already up, but the depot for night bombing machines had not even been started. Only three Liberty motors had so far arrived in their crates to be assembled. After the machines are put together at this depot and tested they are flown directly to the front lines.

We concluded our day with an inspection of the refrigerating plant, the greatest in France and for all I know in the world. It had a capacity for 1200 tons of refrigeration and could manufacture 550 tons of ice a day. Tho it was a hot day outside, the men in the cold storage room had on two sweaters apiece and their breath came out in puffs of condensed steam vapor. While I was there they were unloading 600 beeves from twenty cars that came in that morning—about the daily average.

This Ice and Cold Storage Plant was begun only eight months ago and will be completed in six months. All the material, even the wood, has been shipped from the United States and when finally finished it will keep in cold storage indefinitely 5000 tons of meat. This is the largest of the quartermaster's supply station in France.

Our Government has been criticized by some for putting so much money into a refrigerating plant, but it is not generally realized in Europe how important cold storage has become in the sanitary and economical handling of food supply.

Let Us Put A  
**"Victor"**  
METAL  
BASKET  
Beside  
Your Desk

Big Business Demands the Best in Office equipment.

The Victor metal basket has the approval of Big Business.

It is attractively finished in Olive Green, Oak or Mahogany. It is fireproof, practically indestructible and has molded rubber corners at the top.

**Ask Your Dealer for a Victor**

When you need a waste basket buy a Victor. It is sold by first-class dealers everywhere. It is unequalled for attractiveness and will stand the hard knocks. Every office should have a Victor basket for every desk. It is most economical because it lasts longest.

# ON THE TRAIL OF THE TRACTOR

(Continued from page 389)

tages and disadvantages of their machines are interesting. The ability of the tractor to do heavy work and do it quickly, thus covering the desired acreage within the proper season, is considered the principal advantage. The saving of man labor and the doing away with hired help, enabling one to farm a larger acreage and thus increase the crops, is next in importance. The ability to plow to a good depth, especially in hot weather, is also emphasized. Under disadvantages the difficulty of efficient operation, the expensive delays which come with broken parts, the packing of the ground when it is damp, and the inability to use tractors for many kinds of work for which horses are used, thus preventing the doing away with horses entirely, are most frequently mentioned in the above order by the owners. In the matter of quality in plowing, a much discussed point, 50 per cent of the Illinois owners asserted that the tractor did better than horses, while only 3 per cent favored the latter.

In view of present conditions one of the most significant features of this Governmental investigation was that a third of the tractor owners had been able to increase their crop acreage thru the use of a tractor, in the face of a serious shortage in manual labor. This is not the full measure of the tractors contribution to food supplies, however, as a majority of the owners investigated hired out with their machines to neighbors not owning tractors, both for plowing and for stationary power purposes.

The tangible proof which this investigation presents of the value and profitability of agricultural tractors is the more remarkable because it was also shown that the 643 owners used their tractors for an average of only forty-five days in the year. This figure will not seem so low if we bear in mind that the average employment of horses on farms is 100 days in each year.

One further phase of this investigation may well be considered here and that is the costs of work performed by tractors. In plowing the averages for a day of ten working hours are 6½, 8½ and 10 acres for the two, three and four plow tractors respectively. The average fuel consumed is 2½ gallons per acre, with the gasoline average but slightly lower than that for kerosene (a little over fifty per cent of the tractors covered in this investigation operate on kerosene). Three-fifths of a quart of lubricating oil per acre and one pound of grease per day were also averaged giving the cost per acre plowed for fuel and lubrication about 57½ cents where gasoline was used and 32½ cents with kerosene.

The tractor has a bright and potential future. Its present status may be likened to that of the passenger car some eight years ago, and motor trucks four years ago, and it may be conservatively estimated that ten years hence there will be over a million tractors on the farms of the United States alone.

Of great value to the progress and success of the tractor will be the general application of automobile methods of distribution and service. The dealer in farm implements is fast giving way to the automobile dealer in the selling of tractors. The two principal disadvantages of the tractor shown by the investigation quoted at length herein were inefficient operation and delays due to repairs; in other words the lack of skilled knowledge and service facilities on the part of the implement dealer instead of the real help the automobile dealer is able to render his customers.

## Use This Rule To Measure Food Cost

Food is measured by calories, the energy unit adopted by governments. The average person needs 2,500 calories per day.

Food cost depends largely on the number of calories you get for each dollar spent.

Among some of our best foods, at this writing, the comparison is as follows:

### What \$1 Buys in Food

In Quaker Oats	- 20,000 calories	In Eggs	- - - 2,310 calories
In Round Steak	- 2,820 calories	In Leg of Lamb	- 1,935 calories
In Young Chicken	- - 1440 calories		

One dollar spent for Quaker Oats buys as many calories as from \$8 to \$10 in meats.

Eight breakfasts of Quaker Oats can be served at the cost of one average meat breakfast, containing the same number of calories.

Quaker Oats, pound for pound, has twice the calories of lean beef. And 2½ times the calories of eggs.

Quaker Oats is also better-balanced than meats or eggs or fowl. It is one of the greatest foods we have.

Nowadays, in millions of homes, it is the basic breakfast. And millions of housewives mix it with their flour foods.

# Quaker Oats

Made from Queen Grains Only

The Quaker grade is made from Queen bushel. That grade means extra flavor only - just the big, plump, flaxy grains. We get but ten pounds from a without any extra price. And you will get it if you ask for Quaker Oats.

12 to 13c and 30 to 32c Per Package

## BUYING AND SELLING IN WAR TIME

(Continued from page 390)

factured articles legitimately called necessities.

Buy from old stocks, even if you can't get exactly what you want. A second choice is more patriotic than a first choice of merchandise when the second is on the counter and the first is still in the factory.

Forget that there are such things as "latest styles." Buy clothing, hats and shoes a little out of date if you can get them; first, because they are likely to be more sensible, and their purchase cuts down the demand for new stock; second, because they are cheaper and the money you save you can put into war loans or gifts; third, because nobody who feels and thinks right about the war would spend time, thought and money foolishly and criminally adorning his person when millions of people are dying for lack of the bare necessities.

Remain loyal to the dealer and the store you know to be good, even in spite of little vexations or deficiencies that may have resulted from war conditions. Judge the dealer not by how fully or promptly he serves you, but by how hard he tries to serve you.

But make a study of all the good stores in your neighborhood and buy from each what you can buy best. Don't settle down to a particular store because it is near you, or because you know the proprietor, or because your friends trade there. The only basis for good buying is personal knowledge and comparison. I was recently called upon to spend considerable time in a certain large town where many of the housewives were having trouble to keep their families supplied with a cheap and good variety of war food. Just for fun, and for the benefit of the housewives, I spent a couple of days personally investigating the groceries, bakeries, butcher shops, candy stores, restaurants, and other food emporiums, to see what they all really contained. I found at one place or another more than fifty new articles of food with which the average housewife was not familiar; and some of these were both healthful enough and cheap enough to satisfy both the lady and her husband—a rare feat on the part of any article of food.

Discern between legitimate and illegitimate war prices; pay the former cheerfully, do not pay the latter at all. The increased price of wool and of all garments containing wool is an example of a legitimate raise. The demand of the army and the navy for woollen goods has depleted the reserves of the country so that now there is not enough wool available to furnish every civilian of the United States one whole suit a year. Your dealer is therefore justified in charging you nearly twice as much as the ordinary price for a good suit of clothes. He is not justified in doubling the price of silk neckties, because silk is not a war essential.

Be on the lookout for the profiteer; when you find him, boycott and blackball him. Among the few but vicious renegades who are trying to make financial capital out of the war we should note the following: the dealer who tries to sell you shoddy stuff because good merchandise is hard to get; the dealer who palms off on you cheap substitutes not authorized by the Government as necessities of war; the dealer who charges as much for a cash-and-carry purchase as he gets for a wagon delivery of the same; the dealer who is willing to sell or serve more wheat, meat, or sugar than the Government specifies when there is nobody around to witness the transaction; the dealer who takes advantage of the pop-

ularity of the Red Cross or any other war agency to exploit himself and his store.

Buy principally from the dealer who is doing the most he can to help win the war. It is unpatriotic to buy goods from an unpatriotic merchant. How do you keep your money from falling into the hands of a pro-German dealer? How do you size up the war efficiency of a storekeeper and a store? We name a few test points which are not infallible but are indicative. The patriotic store follows the rules and suggestions of the Commercial Economy Board of the Council of National Defence, the sheet of rules being prominently displayed in the store. Patriotic emblems, such as the membership card of the U. S. Food Administration and subscription card of the Liberty Loan, appear in the windows or elsewhere. Each employee wears a Red Cross button or a War Savings Stamp or Liberty Loan emblem or some other badge of war duty well done. The employees register 100 per cent or more of their quota wherever the officials of a national war drive designate the quota. All public announcements of the store carry small advertisements of some branch of war activities. The products of manufacturers leading in war service are specially featured and specifically named. Full stocks are kept of substitutes recommended by the Government, with explanations of their character, and free directions for their use. A department is conducted for the benefit of American soldiers and sailors, with prices cut or services increased. The proprietor of the store takes an active part in the war work of the community or the nation, he and other officials of the store act also as officials of one or more war bodies or committees.

Any retail establishment that makes a grade of 70 per cent or more on the preceding is worthy of a goodly share of your trade.

Now we turn from the side of the buyer and consumer to the side of the dealer and seller. The interests of buyer and consumer, just as the interests of employer and employee, are always identical—you can no more separate them than you could cut a silver dollar in two and have a dollar left.

The dealers of America now hold our third line of defense. Our fighters compose the first line, our manufacturers the second, our dealers the third. It takes from five to ten workers at home to maintain every soldier in the field; the food, clothing, housing, equipment and supplies of the home army all depend on the skill, knowledge, courage, resourcefulness and patriotism of the local dealers of any community; therefore a dealer willing to face war conditions fairly and able to meet them fully serves the community as powerfully as the soldier who is backed by the health, money and productivity that a wise and loyal dealer conserves and promotes in the lives of his customers. Therefore you dealers, holders of our third line of defense, pay attention to these marching orders taken from the lips of the foremost manufacturers, merchants and financiers, who in leading America now lead the world.

Keep your nerve, your faith and your temper. Conditions are going to improve and are not now so bad as you may have been tempted to think. The number of failures in the United States during the first part of 1918 was only half the number during the first part of 1915, and the liabilities of the concerns that failed in this period were less than half those of the concerns that failed in the first six months of 1915. A business failure, disappointment or discouragement is really caused not by the presence of war, but by the absence of wit.

# Why Teeth Lose Their Glitter

*All Statements Approved by High Dental Authorities*

## You Leave the Film

Why do well-brushed teeth discolor and decay?

Why does tartar form?

Why does pyorrhea start?

Millions of people are asking those questions, and the answer is this:

A slimy film constantly forms on your teeth. It clings to the teeth. It gets into crevices, hardens and stays, and your brushing doesn't remove it. And most tooth troubles are due to that film.

That film is what discolors—not your teeth. It hardens into tartar. It holds food which ferments and forms

acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea, and many internal troubles are due to them.

These facts have been known for years. But dental science found no way to effectively combat the film. A vigorous dental cleaning from time to time, was needed to remove it.

Now a way has been found to combat it. That way is embodied in a dentifrice called Pepsodent. You can prove it, as thousands have, by a simple one-week test. This is to urge that you do it—at our cost.

## See the Difference

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object is to dissolve the film, then to constantly prevent its accumulation.

Ordinary pepsin will not serve. It must be activated, and the usual agent is an acid, harmful to the teeth.

But science has now found a harmless activating method. Five governments have already granted patents. That method, employed in Pepsodent, makes teeth-cleaning vastly more effective.

Able authorities have made clinical tests of Pepsodent. In thousands of

cases they have watched its efficiency. Now we are urging all people to prove it in their homes. It means results you do not get without it, and they are all-important.

Send the coupon for a One-Week tube. Use it like any tooth paste. Note how clean your teeth feel after using. Mark the absence of the slimy film. See how teeth whiten as the fixed film disappears.

That film is your teeth's chief enemy. One week will show you that you can combat it. Then you will always clean your teeth, we think, in this scientific way. Cut out the coupon now.

## Service to Investors

**UNUSUAL** opportunities for investments offering exceptionally attractive returns, without sacrifice of security, are available under present conditions. Our Bond Department issues monthly a booklet of *Investment Recommendations* which describes securities offered and recommended by this Company. We shall be glad to place your name on our mailing list for the current and succeeding issues.

In our Bond Department are centered this Company's activities in investment securities. It daily meets problems which only occasionally confront the individual investor. In selecting bonds and notes which will best meet your requirements, the extensive facilities and services of this Department can be of advantage to you.

This Company is an organization of two thousand people and forty departments, and has correspondents of its Bond Department in various cities. It offers the facilities and services of a commercial bank, a trust company, a foreign exchange bank, an investment institution, and a safekeeping depository. Each department is complete in itself; all work together under a single policy of service.

The co-operation of these resources of organization, facilities and capital, within one institution, makes possible a service of the broadest scope.

Your inquiries as to how any feature of our service may meet your needs will be welcomed.

from those pertaining to the war. Such advice is given free or at nominal charge by various national organizations now specializing in the solution of war problems. Among these are the Council of National Defense, the War Industries Board, the War Trade Board, the U. S. Employment Service, the U. S. Food and Fuel Administration, the U. S. Departments of Commerce and Labor, the War Labor Policies Board, the United States Chamber of Commerce, the National Security League, the Merchants and Manufacturers' Association, the Consumers' League, the Nation's Forum, the National Industrial Conference Board, the Associated Advertising Clubs of the World, the National Efficiency Society, the Independent Efficiency Service.

Investigate your local war committees and boards, learn what mutual benefit may be worked out by their coöperation. For example, the recruiting of labor to supply your need should be handled by the local board of the United States Employment Service. The war industries of the United States are now short nearly 1,000,000 common laborers. A war plant or industry within a radius of a hundred miles or so will probably affect labor conditions of your employees. One of the aims of the local community board is to protect the community from being drained of labor and to use the local supply for local demand. The new survey and digest of community needs and requirements will enable the Government, for the first time in history, to serve the employer and the employee together by forming connections which would be otherwise impossible.

Mobilize all the women workers you can. There is hardly anything in a store that a woman cannot do, from keeping the books to driving the delivery wagons. There is in every community more untrained and unemployed woman power than man power. This will have to be utilized before we can win the war. The industries of France and England are now manned chiefly by women. Neglect of the woman labor situation has become intensely unpatriotic and also clearly unprofitable. Whatever is unpatriotic is finally unprofitable.

Readjust and reorganize. Don't expect to do business now on the same old plan you followed before the war. Your store will survive only as it gets rid of antiquated methods, foolish ideas, faulty principles and unworthy aims.

Specialize in products most likely to remain plentiful during and after the war. Look ahead, figure what materials and supplies that you need for your customers will be affected least by the necessities of war. It is possible to educate customers into wanting merchandise really useful.

Train your clerks to know and explain the advantages of war substitutes. More than 7000 substitutes are now selling in Germany, and the market for these had to be made in two years. Some of the German dealers have grown rich selling substitutes. Every clerk in your store who handles a war substitute should feel the responsibility of helping to create a fundamental desire and consequently a permanent demand for it. A complete list of war substitutes in your line should be prepared, and each clerk be taught how to call attention to those in his department and how to complete the sale. A certain large dealer holds once a week what he calls a "War Commerce Class," the purpose being to make every clerk a specialty salesman of war goods. The public now wants and expects to be enlightened. Purchasing in the dark is no longer fashionable.

Take your customers into your confidence. Most of your selling problems, viewed from a different angle, are their buying problems. If you tell them frankly what

you are doing to effect a solution of your joint problems, you may find the solution just in the telling. The way to inhibit complaint is to invite coöperation.

Figure out a way to render the bulk of your trade cash business, on a cash-and-carry basis where possible. A downward revision of prices, with full explanation of the whole matter to customers, should be the first step. The only fair way to price most goods seems to be on a strict cash method of sale, with the extra cost of deliveries and charge accounts eliminated from the reckoning. When deliveries are necessary, the exact cost should be borne by the customer. When charge accounts are unavoidable, a legal rate of interest should be added to the bill, as the transaction virtually amounts to a loan by the dealer. Proper figuring and management will reduce to almost nothing the burden of store deliveries and charge accounts.

Go after new custom as never before. Consult a good business counsel or advertising agency on the development of your wartime publicity campaign. Get a few modern books on advertising and selling, put your clerks to studying them, try out new ideas. Organize special sales on the plans to be found in the columns of business journals and the technical salesmanship magazine. Follow closely the advertising pages of these periodicals, note the advertisements of new products and new manufacturers in your line, coöperate in local distribution of wartime goods nationally advertised.

Keep in mind not the temporary disadvantages but the ultimate advantages of war modifications and restrictions. The birth of a new business world means pain during the process but new life thereafter.

Prepare now to seize the fine opportunities and overcome the fierce competition sure to follow the war. The need of commercial preparedness after the war will be greater than military preparedness was before the war, because the economic struggle of the nations will be as close and bitter as the struggle of arms, and it will endure much longer. The sly, venomous agents of the German dealers and manufacturers want to kill American trade immediately after the war; these fellows are abroad in the land whispering advice to the American dealer to retrench on all sides, particularly to stop advertising, because he is already oversold and shipments are delayed and stocks cut down, so why go after more trade? The goods you are selling today you somehow advertised yesterday; the goods you advertise today you will sell tomorrow; the goods you fail to advertise today you will fail to sell tomorrow; and you could not please a Hun pirate more than by neglecting to advertise now, because, quick as the war is over, he will grab the trade you have lost before you can get it back.

The name or product that loses its reputation, identity, popularity and influence cannot recover prestige by resuming publicity after the war. Be so proud of your reputation that you will not let it die. Remember that the American public soon forgets. Keep your name everlastingly in the minds of the people by strong, clear, clean, convincing, daily advertising. But more than that, keep your name in their hearts by courteous, careful, honest, cheerful, helpful merchandising. Ten years from now the great merchant will be the man who did two things: served his customers, his nation and the world with a fine will and skill during the war, and at the same time served himself, his partner and employees by looking and planning ahead so as to gain more after the war than he lost during it. There is no permanent loss but the loss of will, conscience or intelligence.

## Salt Mackerel

### CODFISH, FRESH LOBSTER

RIGHT FROM THE FISHING BOATS TO YOU

**FAMILIES** who are fond of **FISH** can be supplied **DIRECT** from **GLOUCESTER, MASS.** by the **FRANK E. DAVIS COMPANY**, with newly caught, **KEEPABLE OCEAN FISH**, choicer than any inland dealer could possibly furnish.

We sell **ONLY TO THE CONSUMER DIRECT**, sending by **EXPRESS RIGHT TO YOUR HOME**. We **PREPAY** express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want **YOU** to try some, payment subject to your approval.

**SALT MACKEREL**, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

**CODFISH**, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

**FRESH LOBSTER** is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in **PARCHMENT LINED CANS**. They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

**FRIED CLAMS** is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

**FRESH MACKEREL**, perfect for frying, **SHRIMP** to cream on toast, **CRABMEAT** for Newburg or deviled, **SALMON** ready to serve, **SARDINES** of all kinds, **TUNNY** for salad, **SANDWICH FILLINGS** and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send **BOOK OF RECIPES** for preparing all our products. Write for it. Our list tells how each kind of fish is put up, with the delivered price so you can choose just what you will enjoy most. Send the coupon for it now.

The Board of Directors have declared a dividend of one and one-half (1½%) per cent. on the First Preferred Stock, and a dividend of one (1%) per cent. on the Common Stock, payable, out of the surplus earnings, on October 1, 1918, to stockholders of record at the close of business, three o'clock in the afternoon, September 16, 1918.

First Preferred and Common Stock transfer books will reopen for transfer of stock certificates at the opening of business September 17, 1918.  
L. H. HEINKE, Secretary.  
September 5, 1918.

## AMERICAN TELEPHONE AND TELEGRAPH COMPANY

A dividend of Two Dollars per share will be paid on Tuesday, October 15, 1918, to stockholders of record at the close of business on Friday, September 20, 1918.

G. D. MILNE, Treasurer.

### THE ELECTRIC STORAGE BATTERY COMPANY

Allegheny Avenue and 19th Street,  
Philadelphia, Sept. 4, 1918.

The Directors have declared a dividend of one dollar (\$1) per share from the net earnings of the Company on both Common and Preferred stocks, payable Oct. 1, 1918, to stockholders of record at the close of business on Sept. 16, 1918. Checks will be mailed.

WALTER G. HENDERSON, Treasurer.

## UNITED FRUIT COMPANY

### DIVIDEND NO. 77

A quarterly dividend of two per cent (two dollars per share) on the capital stock of this Company has been declared, payable on October 15, 1918, to stockholders of record at the close of business September 20, 1918.

JOHN W. DAMON, Treasurer.

### RAY CONSOLIDATED COPPER COMPANY.

September 10th, 1918.

The Executive Committee of the Ray Consolidated Copper Company has declared, for the quarter ending September 30th, 1918, a dividend of seventy-five cents per share, payable September 30th, 1918, to stockholders of record at the close of business on September 18th, 1918.

E. P. SHOVE, Treasurer.

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. Democracy's Call to Youth. By Donald Wilhelm.

1. The first sentence of the article is epigrammatic. What does the sentence mean? What is an epigram?
2. What is the value of an epigram?
3. What famous writers are noted for their use of epigrammatic expressions?
4. Select three good epigrams from your school texts, or from other books. Explain the meaning of every epigram that you select.
5. Make three original epigrams concerning school life. Suggest that a committee of your class edit all the epigrams submitted, and present them to your school paper for publication.
6. Make a list of words that are somewhat synonymous with "epigram." Explain the meaning of every word. Give examples that will illustrate every word.
7. In the paragraph next to the last paragraph is a rhetorical phrase: "The Imperial Hopes of the Great Pied Piper." What is a rhetorical phrase?
8. The rhetorical phrase just named includes an allusion. What is an allusion?
9. Explain the full meaning of the rhetorical phrase.
10. What is the value of a rhetorical phrase?
11. Explain what is meant by the sentence: "President Wilson's speeches show remarkable phrasal power."
12. Point out examples of rhetorical phrases in any speech or proclamation made by President Wilson.
13. Write a paragraph in which you make use of an original rhetorical phrase.
14. Give a talk in which you show that the Civil War was fought by boys of high school age.
15. In a short talk prove that "it would be unwise to have military contingents made up of older men only."
16. Give a talk in which you show that "youth will have a voice in our national affairs that it has never had."
17. Give a talk in which you show that the United States is becoming "a nation reborn."
18. Write, for your school paper, an editorial article on "Why the United States Is Proud of Its Boys."

#### II. Artillery, Salvage, Refrigeration. By Hamilton Holt.

1. Challenge your fellow students to a contest in speaking, without notes, on the following subjects: An American Artillery School in France; An American Salvage Depot Behind the Lines; The Contrast in Appearance and Habits of the French and American Soldiers; An American Refrigeration Plant in France; The Chateau Home of the Y. M. C. A.
2. Rewrite, in your own words, Mr. Holt's description of the salvage depot.

#### III. Buying and Selling in War Times. By Edward Earle Purinton.

1. Condense the article into one-eighth of its present length.
2. Give a speech to your class, proving that "it is unpatriotic to buy goods from an unpatriotic merchant."

#### IV. On the Trail of the Tractor. By John R. Eustis.

1. Write a single clear paragraph showing the importance of the tractor in the field of war.
2. Write an editorial article, suitable for a country newspaper, urging farmers to make use of the tractor.

#### V. Intellectual Preparedness.

1. Explain the sentence: "We have all been enrolled in a compulsory course of current events, in which the best text books are unbound and come out in daily, weekly and monthly installments."
2. Explain to your class why the study of current events is now absolutely necessary.

#### VI. The Story of the Week.

1. Give oral resumes of the news of the week under the following heads: The News of the Western Front; Events in the Far East; Russian Developments; The Attitude of Neutral Lands; America's War Preparations; Important Events Not Closely Connected with the War.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. The American Bill of Rights—"Liberty After the War."

1. Discuss the second paragraph in this editorial. Does our experience in the Civil War prove that the author is right?
2. "Those who talk about Prussianizing our institutions . . . betray their ignorance of elementary sociology." Prove this statement.
3. "War is not the only condition that limits individual freedom." What examples of social limitations are discussed? Are all of these limitations wise?
4. "The unlimited private exploitation of certain business opportunities . . . becomes inexpedient . . . when population becomes dense," etc. Do you agree?

#### II. Our Educational Problem—"Intellectual Preparedness," "A New Factor in Education."

1. What does the writer mean by "our lack of intellectual preparedness"? How does he propose to remedy it?
2. In what respects has our school system met the demands of the Great War? Where has it failed?
3. What arguments in favor of the study of foreign languages are presented in the editorial? Do you agree with all that the author says?
4. "What we need to know is the modern world," etc. What are you doing to satisfy this need?
5. What new movements in education are suggested in the second editorial?
6. What is the "possibility of mischief that lurks in this new departure"?

#### III. Land Policy of the United States—"Homes for Returning Soldiers."

1. Study the history of the American public domain in its relation to (a) the settlement of the Great West, (b) the development of our railroads, (c) the demobilization of our armies after the Civil War.
2. Can you see any relation between the proposals of the writer and the intelligent settlement of our problem of conservation of natural resources?
3. Why will the demobilization of our troops after this war be more difficult than after the Civil War?

#### IV. "All In It."—"Artillery, Salvage, Refrigeration," "Democracy's Call to Youth."

1. Of all the things which Mr. Holt describes, which one would you most like to see? What general impression do you get from his article?
2. Show that besides the five people at home whom we need to provide for every man in France, we apparently need almost the same number of men behind the lines to provide for each man in the trenches.
3. What are the arguments in favor of using the young men under twenty-one in our army? What are the arguments against it?
4. What will be the effect of the new draft in your community?

#### V. Industrial Organization and the War—"Coal," "Buying and Selling in War-time," "On the Trail of the Tractor," "The Touchstone of Success."

1. Select one or more quotations from each of the references which illustrate the fact that success in this war will be based upon industrial organization.
2. "Last winter the United States registered three colossal failures," etc. What have we done to remedy these failures?
3. Summarize the history of the development of motor drawn traffic and discuss its effect upon the economic development of this country. Compare this development with that which resulted from the building of wagon roads, the invention of the steamboat, the building of canals and railroads.

#### VI. Affairs Here and Abroad—The Story of the Week.

1. What benefits and what possible harm may have come to the railroads as a result of Government control?
2. Summarize the course of events in Asia as indicated in the news items.
3. What is the latest news from the western front?

## A Stenographer's Advice On Typewriter Buying How to Save \$51

THE young lady who suggested this advertisement convinced the writer that too few people realize that The Oliver Typewriter has a STANDARD keyboard. A definite propaganda, she insisted, had been spread to lead people to believe that the Oliver keyboard was different, and therefore difficult.

This advertisement is to set people aright. It should be understood once and for all that the Oliver has the same standard arrangement of letters as on all standard typewriters. And it has improvements and simplifications not found elsewhere. Several hundred thousand stenographers use the Oliver daily.

The young lady brought up another point. She said many people might think that the new \$49 Oliver is a second-hand or rebuilt machine of an earlier model.

But note that this advertisement is signed by The Oliver Typewriter Company, a \$2,000,000 concern. This assures you that the \$49 Oliver is the exact model formerly priced at \$100. Not a change has been made. It is brand new, never used.

### How We Both Save

The entire saving of \$51 comes from ending wasteful sales methods.

We no longer have hundreds of expensive salesmen and agents traveling all over the country, nor expensive offices in numerous cities. These, and other costly practices, amounted to \$51 for selling each machine.

Now we sell direct. We save the \$51 and give it to you. You are your own salesman. Over 600,000 Olivers have

been sold. It is used by the big concerns, as listed below.

The entire facilities of this company are devoted exclusively to the production and distribution of Oliver Typewriters. This Oliver Nine is a 20-year development. If any typewriter is worth \$100, it is this, our latest and best model.

The only reason we have been able to maintain this \$49 price is that we have had such a large increase in sales. We hope to be able to maintain this price. But, if the cost of materials and labor continues to go up, we may be forced to increase this price.

We do not wish to. We do not expect to. But we advise you to act now to be certain of getting your Oliver Nine at \$49.

### Free Trial

We ship an Oliver Nine to you for five days' free trial. If you decide to keep it, pay us at the rate of \$3 per month. If you return it, we even refund the transportation charges. What could be fairer, simpler? You may order an Oliver Nine for free trial direct from this advertisement. It does not place you under the slightest obligation to keep it.

Used machines accepted in exchange at fair valuation. Or, you may ask for our free book entitled, "The High Cost of Typewriters—The Reason and the Remedy." This amazing book exposes the old way of selling and tells where the \$51 used to go.

Read the two-way coupon—then mail it today. Note how simple the whole plan is—how you deal direct with the manufacturer.

## THE NEW PLAYS

*Watch Your Neighbor*, by Leon Gordon and LeRoy Clemens. Capital war play of love, laughs and thrills. English Secret Service versus German spies. (Booth Theater.)

*Forever After*. A war play along the general lines of recent fiction, in which a Red Cross nurse, just graduated from high society, nurses her soldier sweetheart back to health. (Central Theater.)

*One Of Us*. A well-acted comedy of metropolitan life, full of action and good lines. A novel plot introduces two social classes which previously were without even a bowing acquaintance. (Bijou Theater.)

*Crops and Croppers*. A comedy of frivolous farmerettes, who abandon Fifth Avenue for pastures green. With an invalided French aviator disguised as a hired man the plot moves rapidly. (Belmont Theater.)

*Another Man's Shoes*. A cleverly contrived comedy, adequately acted. Yet somehow it misses fire because the audience can't tell whether it should be received as tragedy or farce. (Thirty-ninth Street Theater.)

*Mr. Barnum*, by Harrison Rhodes and Thomas A. Wise. Good, clean comedy, typically American. No war; no tears. Mr. Thomas A. Wise as "Barnum" is at his best. Decidedly worth while. (Criterion Theater.)

Gregory Kelly, of "Seventeen," takes us back still further in *Jonathan Makes a Wish* to the days of fourteen-year-old dreaming. A delightfully human play, staged with Stuart Walker's characteristic good taste. (Princess Theater.)

Otis Skinner transforms himself from a hair dresser with socialistic tendencies to an English Earl and back again with skill and humor in *Humpty-Dumpty*. The best acting in the piece is by Beryl Mercer as Mrs. Mott. (Lyceum Theater.)

*Head Over Heels*. A girl with an engaging giggle like Mitzi makes an entertaining vaudeville sketch but she cannot be made to fill a whole evening even when backed by a battalion of beauties from eighteen to forty-five. The title of the play is a misnomer. (George M. Cohan's Theater.)

## REMARKABLE REMARKS

CHARLIE CHAPLIN—I like people.

ED. HOWE—I am disgusted with the follow-up letters.

GENERAL LUDENDORFF We will settle the Americans.

MARSHAL VON HINDENBURG We Germans must have colonies.

DR. SHAHLER MATHEWS—We are repatriating Jesus in Christianity.

PROF. E. A. ROSS It is vital to the cause of the Allies that the Russians be helped, but we can help them only in case

# The Farmer in New York

SOMETIMES the farmer gets to New York. You can see that it's an event by the fact that he is still caricatured in the comic papers. He gets to Chicago, St. Louis, Kansas City, San Francisco, too, and Philadelphia. But so do you get off in the woods, or the shore, for a change now and then.

The farmer spends most of his money in the smaller trading centers—some 4,000 of them are shown on the Woman's World map.

It is the smaller towns which are feeling first the effect of the farmers' billions of new wealth; here they spend most of their money. That phonograph they had so long wanted comes from here—the nicer clothes, over and under, come from here. The better packed groceries—the kitchen, household and outdoor labor-saving devices, hats, corsets, shoes, toilet goods, paints, electric, oil and gas appliances. Woman's World has spent five years and tens of thousands of dollars photographing and tabulating the facts of small towns because where most magazines reaching smaller places at all, reach 1 in 12 to 1 in 20 or so homes, Woman's

World reaches 1 in 2 or 4, to 1 in 6 or 8 homes. It dominates where others touch but lightly. It puts the power of relatively great consumer pressure behind its dealer influence, thus making the latter real and tangible.

No manufacturer can afford to overlook the profound change that has come over the smaller places. It is, at least, as striking as the changes brought about through the increasing difficulty of making business grow under a brand in the larger centers on account of the profound merchandising changes brought about by the department and chain stores, the immensely speeded-up competition, rising costs, etc.

It is not only striking, this small town change. It means vast new outlets to the advertiser, for on the 4,000 shopping centers is first unloosed that vast new wealth the farmer is tapping every year. Each year as this rural revolution progresses, more and more manufacturers are seeing the jobber in a new light—with a friendlier eye—many are sending their own men direct to towns of 5,000 and even under. They see the natural responsiveness of trade to consumer demand. They see consumers with unexpressed, uncentered longing for and the means to buy goods that add pleasure, zest, comfort, convenience, pride to living.

The sixth in a series of statements on present day merchandising conditions prepared by Frank L. E. Gauss, *Advertising Director*, WOMAN'S WORLD, 280 Madison Avenue, New York City, *The Magazine of the Country*, the first magazine member of the A. B. C.

# CARTOON COMMENT

## THE TURN OF THE TIDE

### IT'S GETTING ROUGH

"Don't you think we'd better be going home, Papa?" urges the Crown Prince in the bow. "The tide seems to have turned." The three kings in the boat are beginning to look rather seasick, and a huge wave threatens to swamp "The Jolly Junker" of the Central Powers. This cartoon was recently published in "London Opinion"

### THE ROAD TO BERLIN

At the right, an Italian cartoon from "Il 420," Florence, that pictures forcefully our recent drives

### ESCORTING HIM HOME

There is a gratifying haste about this retreat of the German wild boar that brings to mind such recent news dispatches as: "Americans and French Take St. Mihiel, 100 Guns and 13,000 Prisoners," "British Pierce Hindenburg Line, Take 10 Towns, 6000 Men in 22-Mile Drive." The cartoon was drawn by an English artist, Owen Aves, and published in "The Passing Show," London

### THE HUN CHANGES HIS MIND

"I thought this was to be my offensive," murmurs the beaten Boche. Cartoon by Cesare in the New York "Evening Post"

### GOOD-BY TO THE MARNE

Hermann-Paul in "La Victoire," Paris, advises the retreating Huns to "take a last look at the Marne. You won't see it again"

## FOR A LASTING PEACE

**P**RESIDENT WILSON has rejected Austria's peace proffer. His reply is timely, direct, brief and belligerent.

The issue is perfectly simple. We are fighting this war to destroy German militarism. German militarism can be destroyed either by the Allied armies or by the German people. There is every evidence that the Allied armies are now in the process of doing the job. There is no evidence that the German people either now or in the immediate future will give any appreciable aid. We must therefore fight on.

If Germany and Austria want peace they can easily get it. We have given our terms to the world. Let them do the same openly and without equivocation. Then as a proof that they mean business let them give guarantees to evacuate those portions of Belgium, France, Italy, Russia and Serbia

they now occupy. Let them also drop the subterfuge of the Brest-Litovsk treaty and quit their grip upon the wheat fields of Ukrainia and the oil wells of Rumania and Russia.

Then if after full, free and open discussion by all the belligerent peoples it appears that there is a substantial agreement in peace terms, there will be no difficulty whatever in calling a conference to work out the details.

But we must insist absolutely that the conference be public. No locked doors for us! No elderly beribboned aristocrats sitting around the green table intriguing to stifle popular aspirations and to preserve rotten dynasties!

The issue of this war must be settled not by Kings and Kaisers, not even by Premiers and Presidents, but by the public conscience of mankind, free and untrammelled.

But first militarism must be destroyed.

## THE SHORT WAY WITH WAR INDUSTRY STRIKERS

**E**MPLOYERS who cling to the good old doctrine that it is nobody else's business how they deal with their help, and employees who insist, in war as in peace, that they have an indefeasible right to strike whenever they feel "that stubborn," have received a lesson that they are likely to remember for a while. The Smith & Wesson Company of Springfield, Massachusetts, manufacturers of pistols on Government contract, and the striking machinists of Bridgeport, Connecticut, employed in making guns and munitions, refused to accept decisions of the National War Labor Board. The Smith & Wesson plant and business were commandeered by the War Department and the Bridgeport machinists were told by the President that unless they returned to work they would be barred from employment in any war industry for the period of one year and that draft boards would be instructed to reject any claim of exemption based on their alleged usefulness in war production.

It was a crisis that called for firmness and the short way, and the President met it resolutely. The entire country commends his action.

If there are any more obstructors, slackers and recalcitrants, they will do well to heed the warnings that have been handed out to disloyal speakers, I. W. W. conspirators, profiteers and war industry strikers. The jaws of the American Government are wide and powerful.

Classifications are practical devices, and for the time being there are just two kinds of people in America, namely, the patriots and the profiteers. The men and women that stand ready to make any sacrifice and to serve in any capacity to help crush the enemies of human liberty are the patriots. The men and women who are thinking of their safety, their money and their "isms" are profiteers. They deserve nothing but the scorn of their fellows and the relentless retribution which the Government administers.

It is a fortunate circumstance that both parties to the chronic industrial conflict have simultaneously been called to account in this instance. The nation can be no respecter of persons in these matters. Big business and labor organizations, prosperous private enterprise and wage earning in the sweat of the brow, are alike and equal before the law. This principle American public opinion stands for, and never more unfalteringly than now. Laws are made by fallible men and under pressure from interests and mob-mindedness, and may be unjust. It is then necessary to amend them and to rectify wrong, but while they are law they must be obeyed.

In the present instance it is supremely just and expedient law that the nation sets its face to enforce. The business man, whatever his wealth or social standing, who puts his private interests or his pride of rule over his own industrial household above an endangered civilization will find himself a pariah. The wage-earner who won't accept a decision of his dispute by men of such exceptional ability and fair mindedness as those who compose the National War Labor Board will shoulder a gun.

Not only is the principle underlying the Government's action entirely sound, the method also that has been followed is practical and expedient. And because they are sound and expedient, principle and method will be remembered after the war ends. We shall then have vast enterprises under governmental administration which hitherto have been private interests, and the American public will not tolerate an indefinite paralysis of production and transportation by disputes over hours, wages or conditions.

During these years of war we have learned to think of public interests as paramount and private interests as subsidiary. As rapidly as possible we shall do away with those restrictions upon individual freedom that are necessary in

time of war but not in times of peace. But we shall realize, as we did not adequately before the war began, that mere vastness and complexity of population and business create a state of affairs that calls for correlation and coördination under law and by administrative action. The disorganization and paralyzing of human society by industrial disturbances was becoming intolerable before 1914. It cannot be permitted to go on in the new era of peace. The parties to dispute must submit to an arbitral decision, subject perhaps to review, and to redress in cases of demonstrated injustice and always to that ultimate review by the popular judgment which in democracies expresses itself in public opinion and at the polls. Pending such final decisions and adjustments the wheels of industry must move.

## THE AMERICAN SOLDIER IN FRANCE

A new song of Roland will be written one day, and it will tell of a more heroic resistance unto death than we read of in the older tale. It will be the story of what the men of Belgium did in 1914. There will be in the books of tomorrow a greater chronicle of France than that which records for us the saving of civilization at Chalons-sur-Marne in 451. It will tell how in 1914 the Hun again was held and turned back at the Marne. And if some day a new Iliad shall be composed, it will recite the deeds of a mightier overseas expedition than that of the men who followed Achilles across the blue Ægean waters. It will tell the deeds of the men of Britain and of Canada, of Australia and of America whose ships once more have borne to foreign parts a matchless military strength derided by a fatuous foe.

In all the long centuries of human adventure there is no figure comparable to the American soldier in France. There is no other so romantic, not even the Crusader. The American soldier in France is not like the man of the Northern armies in 1861, fighting to preserve his own nation from immediate disruption. He is not like the poilu, resisting the invader of his own fireside; nor like the Briton, throwing himself into a life and death struggle for the preservation of an empire in immediate peril. He does indeed know that his home and his country were threatened, but that is not the compelling reason for his effort and his sacrifice. He has surrendered every cherished thing and is offering his life because he saw women and children being murdered and their fathers and husbands and sons nearly spent; and because he saw every fair fruit of civilization being wantonly destroyed, and liberty once more in danger of extinction. The American soldier is fighting on the battle lines of France simply and solely because he is a civilized man.

And a braver, a cleaner, a more high minded civilized man there never has been. He has long interested and a good deal puzzled the men of other lands. They have thought him boastful. They have found him, instead, singularly modest, glad and quick to learn, and ready to play his part in obedient subordination to others, if that be the way to military success. They have thought him irresponsible and trifling, caring only to "match with Destiny for beers," and they have found him, instead, turning a calm, untroubled face Home to the instant need of things and ready at their call "To shake the iron hand of Fate."

This is not the time to talk of the American soldier's military competency and achievement. It is enough for the present to say that he has met and more than met every demand and opportunity so far. There is bigger work yet to do. He will not fail.

It is only a little while since the first American soldiers left us for the world war, yet already nearly two million men like them have followed and death has not spared them. There are ten thousand graves of American soldiers in France, and there will be tens of thousands more. In thousands of American cities and towns, and in hundreds of thousands of scattered homes by country waysides, gold stars are scattered among the blue. No more than the women

and children and the fathers and mothers of France and of England do our women and children and fathers and mothers complain. They have given the greatest gift, and they ask only that it shall not be for nought. For the American soldiers in France who will return, and for those that sleep eternally over there, the American nation can offer but one meed of remembrance. It must forever cherish and keep beautiful the civilization that they have helped to save.

## TWO WAYS OF PUTTING IT

### FRENCH

Further south we captured Noyon in a bitter struggle.

### GERMAN

Noyon was subjected by the French to the heaviest fire. The town lies in front of our battlefront.

### FRENCH

On the whole of the front between the Somme and the Aisne the advance of our troops has not slackened during the day, in spite of the efforts of the Germans to stem it. We hold Ham and Chauny.

### GERMAN

From Péronne and over the Somme the enemy yesterday only hesitatingly followed our rearguards. Between the Somme and the Oise he crouched after them more keenly, and in the evening he stood west of the Ham-Chauny line. Also between the Oise and the Aisne the freeing of ourselves from the enemy was completed according to plan.

### AMERICAN

This morning, our troops operating in the St. Mihiel sector, broke the enemy's resistance and advanced at some points to a depth of five miles. We have counted 8000 prisoners up to the present.

### GERMAN

In the night the evacuation of the salient was completed without interference. We are now standing on new lines which had been prepared.

## THE BAN ON BEER

THE action of President Wilson in prohibiting brewing after December 1 has greatly strengthened the temperance cause in England. The British press expresses admiration tho it despairs of emulation. The *Sunday Evening Telegram* says:

As America sends us grain, it looks as if she is closing her breweries that ours may remain open. It is very doubtful if, supposing the circumstances were reversed, we should do the same for her.

The London *Daily Chronicle* is still more emphatic:

This country looks with admiration and envy upon the sureness and ease with which America attacked a problem that baffled our nerveless statesmen and timid House of Commons. Owing to the lack of courage among our leaders the trade in alcoholic liquors in the United Kingdom has actually benefited from the war, and owing to the war many declining brewery businesses have been set on their feet again financially. What a lamentable contrast there is between our feeble futilities in dealing with this superfluous trade and the clear and the decisive action by the American President and Congress.

The brewers of England have indeed reaped an unexpected harvest from the war. Allsopp & Sons, which in 1913 was hard up and had stipulated that full interest on the 4½ per cent debentures need not be paid until 1921, found it possible to pay off the interest in full for 1917 and, after providing fully for prior charges, depreciation and repairs, declared a net profit of \$535,500 as compared with \$304,000 the year before. The Newcastle Breweries showed a net profit of \$455,500 as compared with \$407,000 for 1916 and accordingly increased its dividends from 10 to 15 per cent. Huggins & Co., of London, which paid 5 per cent in 1915 and nothing in 1916, declared a dividend of 15 per cent in 1917, for its profits were \$198,000 instead of the \$29,500 of the year before. In consequence brewery shares have gone up 300-900 per cent. The distillers are almost as happy, for they have reduced the alcohol in the whisky by half and the tax accordingly and have doubled the price, in this way making an extra profit to the trade of 160 per cent. But neither diluting the whisky and beer nor raising its price has proved effective as a temperance measure.

Last year the drink bill of Great Britain amounted to \$1,295,000,000. This is more than twice what it was in 1913, that is, \$630,000,000. But apparently the British Government did not think this enough, for on January 1, 1918, permits were issued by the Food Controller allowing the brewers for the following quarter an increase of 20 per cent in their barrelage over that of 1917. Of this increase 13½ per cent is allotted by the Controller to "the necessitous munition areas."

We should naturally expect a very considerable diminution in drinking since so many of the men of Great Britain are killed or in hospitals or in military or munition service where their drinking is restricted and since treating has been prohibited in London and elsewhere and many of the public houses have been closed and the cost of living has greatly risen. But the expenditure for alcoholic liquors continues to increase and drunkenness has not yet been conquered. Premier Lloyd George said that "Drink is doing us more damage than all the German submarines put together," but even he, with all his forceful personality and unprecedented authority, has not been able to put it down. He curtailed the power of the peerage, but the beerage is too strong for him.

Germany, on the other hand, seems likely to go dry like the United States. The *Allgemeine Zeitung für Brauereien*, the organ of the German breweries, says that on account of the bad crop of oats barley will have to be used for horse-feed, so barley cannot be supplied to the breweries and the production of beer will have to be stopped even for the army. This is bad news for us, if all we have heard from temperance orators about the injurious effects of beer be true.

## INDUSTRIALIZED WAR

VICTORY is no longer, as in Napoleon's day, on the side of the big battalions; it is now on the side of the big factories. Without a constant supply of munitions and war necessities of ten thousand kinds the bravest and biggest armies may be bombed, gassed or starved out of their trenches. An industrial revolution has overtaken war as sweeping as that which overtook manufacture with the introduction of power driven machinery. If this is not the last great war there is every reason to believe that in costliness and complexity the military establishment of the year 2000 will make these primitive days of the forty-two centimeter cannon and the superdreadnaught read like the wars of King Alfred with the Danes.

This industrialization of war has had some interesting by-products in the field of politics. For one thing it has made war a luxury which only the very rich can afford; not, as in the days of knighthood, the rich individual, but the rich community. At the present time there are only four nations which can sustain the full economic burden of a long war on the modern scale: Great Britain, Germany, the United States and France. All other nations, including even such powerful military states as Italy, Austria-Hungary and Japan, lack a sufficiency of material resources or else, like Russia and China, have failed to develop and organize them on the lines of twentieth century industry. Nothing important can happen anywhere except by the open instigation or tacit permission of one at least of the big four. Even if the present war leaves all four still in the first rank, the keener industrial competition of the future will be more apt to reduce than to increase their number.

Another result of the increasing importance of the laboratory and the railway in war is the permanent impossibility that undeveloped or primitive peoples can threaten civilization. If there is ever to be a world empire there is indeed danger that it may fall to a power morally barbarous, but this conqueror must at least be highly civilized in all material affairs. A nation that fails to foster science will never count for anything in the future; it cannot even aspire to be a peril.

A third and most curious effect of the new developments in warfare is the rise of feminism. In England and the United States, and to some extent in continental Europe, this war has meant the spread of woman suffrage. The reason is obvious. In the old days war exalted man as the fighting sex, and in proportion as a nation was militaristic the position of woman was abased. But in those times a man could get all needed munitions of war at the smithy, he fed himself by pillage and he did without the Red Cross nurse. Today the work of woman has become so direct and indispensable a part of the war machine that war actually exalts her importance in the national life.

## DOLLARS AND DYNAMITE

"IRON is the master of gold" ran the old proverb, and it is sometimes hard to make vivid to our imaginations the mastery which gold has over iron. War is won by men and by materials; and of the necessary materials iron, copper, cotton and petroleum rank near the top of the list, gold almost at the bottom. Everyone can see the need of economizing in food and fuel, in metals and explosives, in cloth and hospital supplies. But who would venture to face the enemy with a golden bayonet, or fashion a trench helmet of the scraps of paper on which are written "This certifies that there has been deposited in the treasury of the United States of America One Silver Dollar"?

It is true that the real wealth of a nation consists not in the little piles of coin and paper locked up in its treasuries, but in the man-power, grain-power and coal-power which coin and paper represent. But it does not follow that the Government can afford to be indifferent to your contribution from the family stocking. Money is like the tiny explosive cap which sets off a charge of dynamite. Explode that cap in isolation and you will hardly force aside a stone; explode it in a tunneled mine, crammed with high explosive, and you will crumble a mountainside. If the United States had not the ships to take goods to Europe, or the goods to send, or the men to fight, Germany could afford to laugh at our Liberty Loans. But having these things, the problem before the Government is to "set them off," to arrange the credits which will mobilize our resources. The dynamite slumbers until the cap rouses it to duty; our surplus resources are scattered for luxuries at home unless the Government controls the credits which can make them all march in the same direction—toward the winning of the war. When you give money to the country what you are really giving is mightier than any cannon; it is a magician's wand, weak as a reed in itself, but with the power of commanding trains to run, ships to sail, men to march, farmers to plow, miners to dig, and factory wheels to turn. This wand is now in your hands, to give or to withhold. Will you give it, or wait until it is snatched from you by the taxgatherer; a taxgatherer perhaps in American uniform, perhaps in German?

## Lenine and Trotzky

By Harry Kemp

*The holiest name of all is liberty,  
This name you took, and, under its disguise,  
Led a whole people to their sacrifice,  
Condemning what you throve by secrecy!  
Peace was the mask you wore for Perfidy;  
Your candor was a labyrinth of lies;  
Deceit was captain of your enterprize;  
Judas could not have done more for his fee!*

*You showed a path with flowers strewn and lined,  
To calm suspicion led, yourselves, the way:  
Thronging like sheep your people poured behind.  
Now, driven hard, they see themselves as prey,  
Glimpsing the sharp, uplifted knives too late—  
But you—you slip out thru your master's gate!*

# THE AUSTRIAN PEACE FEELER

On September 15, 1918, the Austro-Hungarian Government address thru neutral governments the following note to the belligerent powers of the other side:

The peace offer which the Powers of the Quadruple Alliance address to their opponents on December 12, 1916, and the conciliatory basic ideas of which they have never given up, signifies, despite the rejection which it experienced, an important stage in the history of this war. In contrast to the first two and a half war years, the question of peace has from that moment been the center of European, ay, of world discussion, and dominates it in ever increasing measure.

Almost all the belligerent states have in turn again and again exprest themselves on the question of peace, its pre-requisites and conditions. The line of development of this discussion, however, has not been uniform and steady. The basic standpoint changed under the influence of the military and political position, and hitherto, at any rate, it has not led to a tangible general result that could be utilized.

It is true that, independent of all these oscillations, it can be stated that the distance between the conceptions of the two sides has, on the whole, grown somewhat less; that despite the indisputable continuance of decided and hitherto unbridged differences, a partial turning from many of the most extreme concrete war aims is visible and a certain agreement upon the relative general basic principles of a world peace manifests itself. In both camps there is undoubtedly observable in wide classes of the population a growth of the will to peace and understanding. Moreover, a comparison of the reception of the peace proposal of the Powers of the Quadruple Alliance on the part of their opponents with the later utterances of responsible statesmen of the latter, as well as of the non-responsible but, in a political respect, nowise uninfluential personalities, confirms this impression.

While, for example, the reply of the Allies to President Wilson made demands which amounted to the dismemberment of Austria-Hungary, to a diminution and a deep internal transformation of the German Empire, and the destruction of Turkish European ownership, these demands, the realization of which was based on the supposition of an overwhelming victory, were later modified in many declarations from official Entente quarters, or in part were dropt.

Thus, in a declaration made in the British House of Commons a year ago, Secretary Balfour expressly recognized that Austria-Hungary must itself solve its internal problems, and that none could impose a constitution upon Germany from the outside. Premier Lloyd George declared at the beginning of this year that it was not one of the Allies' war aims to partition Austria-Hungary, to rob the Ottoman Empire of its Turkish provinces, or to reform Germany internally. It may also be considered symptomatic that in December, 1917, Mr. Balfour categorically repudiated the assumption that British policy had ever engaged itself for the creation of an independent state out of the territories on the left bank of the Rhine.

The Central Powers leave it in no doubt that they are only waging a war of defense

for the integrity and security of their territories.

Far more outspoken than in the domain of concrete war aims has the rapprochement of conceptions proceeded regarding those guiding lines upon the basis of which peace shall be concluded and the future order of Europe and the world built up. In this direction President Wilson in his speeches of February 12 and July 4 of this year has formulated principles which have not encountered contradiction on the part of his allies, and the far-reaching application of which is likely to meet with no objection on the part of the Powers of the Quadruple Alliance also, presupposing that this application is general and reconcilable with the vital interests of the states concerned.

It is true it must be remembered that an agreement on general principles is insufficient, but that there remains the further matter of reaching an accord upon their interpretation and their application to individual concrete war and peace questions.

To an unprejudiced observer there can be no doubt that in all the belligerent states, without exception, the desire for a peace of understanding has been enormously strengthened; that the conviction is increasingly spreading that the further continuance of the bloody struggle must transform Europe into ruins and into a state of exhaustion that will mar its development for decades to come, and this without any guarantee of thereby bringing about that decision by arms which has been

duces misunderstandings which take root and are not removed, and makes the frank exchange of ideas more difficult. Every pronouncement of leading statesmen is, directly after its delivery and before the authoritative quarters of the opposite side can reply to it, made the subject of passionate or exaggerated discussion of irresponsible elements. But anxiety lest they should endanger the interests of their arms by unfavorably influencing feeling at home, and lest they prematurely betray their own ultimate intentions, also causes the responsible statesmen themselves to strike a higher tone and stubbornly to adhere to extreme standpoints. If, therefore, an attempt is made to see whether the basis exists for an understanding calculated to deliver Europe from the catastrophe of the suicidal continuation of the struggle, then, in any case, another method should be chosen which renders possible a direct, verbal discussion between the representatives of the governments, and only between them. The opposing conceptions of individual belligerent states would likewise have to form the subject of such a discussion, for mutual enlightenment, as well as the general principles that shall serve as the basis for peace and the future relations of the states to one another, and regarding which, in the first place, an accord can be sought with a prospect of success.

As soon as an agreement were reached on the fundamental principles, an attempt would have to be made in the course of the discussions concretely to apply them to individual peace questions, and thereby bring about their solution.

We venture to hope that there will be no objection on the part of any belligerents to such an exchange of views. The war activities would experience no interruption. The discussions, too, would only go so far as was considered by the participants to offer a prospect of success. No disadvantages would arise therefrom for the states represented. Far from harming, such an exchange of views could only be useful to the cause of peace.

What did not succeed the first time can be repeated, and perhaps it has already at least contributed to the clarification of views. Mountains of old misunderstandings might be removed and many new

things perceived. Streams of pent-up human kindness would be released, in the warmth of which everything essential would remain, and, on the other hand, much that is antagonistic, to which excessive importance is still attributed, would disappear.

According to our conviction, all the belligerents jointly owe to humanity to examine whether now, after so many years of a costly but undecided struggle, the entire course of which points to an understanding, it is possible to make an end to the terrible grapple.

The Royal and Imperial Government would like, therefore, to propose to the governments of all the belligerent states to send delegates to a confidential and unbinding discussion on the basic principles for the conclusion of peace, in a place in a neutral country and at a near date that would yet have to be agreed upon—delegates who were charged to make known to one another the conception of their governments regarding those principles and to receive analogous communications, as well as to request and give frank and candid explanations on all those points which need to be precisely defined.

## PRESIDENT WILSON'S REPLY

*The Government of the United States feels that there is only one reply which it can make to the suggestion of the Imperial Austro-Hungarian Government. It has repeatedly and with entire candor stated the terms upon which the United States would consider peace, and can and will entertain no proposal for a conference upon a matter concerning which it has made its position and purpose so plain.*

vainly striven after by both sides in four years filled with enormous sacrifices, suffering and exertions.

In what manner, however, can the way be paved for an understanding, and an understanding finally attained? Is there any serious prospect whatever of reaching this aim by continuing the discussion of the peace problem in the way hitherto followed? We have not the courage to answer the latter question in the affirmative. The discussion from one public tribute to another, as has hitherto taken place between statesmen of the various countries, was really only a series of monologues. It lacked, above everything, directness. Speech and counterspeech did not fit into each other. The speakers spoke over one another's heads.

On the other hand, it was the publicity and the ground of these discussions which robbed them of the possibility of fruitful progress. In all public statements of this nature a form of eloquence is used which reckons with the effect at great distances and on the masses. Consciously or unconsciously, however, one thereby increases the distance of the opponents' conception, pro-

# THE STORY OF THE WEEK

## The Capture of St. Mihiel

On another page we discuss the strategic significance of the St. Mihiel salient. Here we shall describe the way it was reduced. The first American troops sent to the front were placed for training on what was known as a quiet sector between St. Mihiel on the Meuse and Pont-a-Mousson on the Moselle and north of the fortress of Toul. This sector, as may be seen from the maps in this issue, formed the southern side of the St. Mihiel salient. Here our boys had the opportunity to try their steel, and Hamilton Holt has told in *The Independent* of August 3 how they took Seicheprey. Recently, without the knowledge of the public, the American line was extended north to cover the western side of the salient in preparation for a coördinated attack from both sides, to be planned and carried out under the command of General Pershing.

The extensive preparations could not be concealed from the Germans, who in accordance with their present policy of shortening their lines wherever necessary, began to withdraw the troops from the salient. Some of the heavy artillery was removed as early as Sunday, September 8, and by the time the jaws of the American pincers closed about St. Mihiel the greater part of the 60,000 men in the salient had escaped. Most of the rest, some 20,000, were taken prisoner by the Americans. Among them are a body of Austrians who complain that they were left without support from the Germans to meet the brunt of the American attack on the southern side. One German regiment, when it found itself entirely surrounded, surrendered in a body after a loss of only two men, and after the roll had been called marched off in good order under its own officers to the prison pen escorted by a few American soldiers.

The reason why the Americans made such a large haul of prisoners and booty at comparatively slight cost was in part because the Germans were caught in the act of retirement, but chiefly because of the thoro study of the field in advance and the swiftness of the American movements. A large relief-map of the whole salient had been made, showing full details, and photographs of this were given to every lieutenant. Shortly before the attack a corps of the intelligence service made and distributed within a few hours 27,000 maps and 19,000 trial photographs.

Guided by these the American guns that opened fire at midnight were able to root out barbed wire entanglements, cut down trees, tear up roads and smash into fortifications with great accuracy and completeness. Over the road thus cleared for them the infan-

try began their advance at 5 o'clock on the morning of September 12. Those who came up from the Toul side had the easier task, for their march lay thru a gently rolling country. But those who entered the salient from the Verdun side had to take the hills of Les Eparges and the Mountain Forest, which the French in 1915 and 1916 had

### COMMANDING AMERICAN TROOPS IN ITALY

There was a great popular celebration upon the arrival in Milan and Turin of the soldiers of the American Army, under the command of Major General C. G. Treat. American aviators have already distinguished themselves on the Italian front—they played an important part in the battle of the Piave—but these are the first large body of American troops to fight with Italy

vainly made heavy sacrifices to gain. This time they were quickly captured by the Americans with the aid of a few divisions of French. The occupation of these heights is in itself a victory, for they overlook the Woivre plain to the east.

The two sections of the American forces coming from opposite directions met at Vigneulles in the middle of the salient on Friday morning, and all the Germans between there and St. Mihiel were entrapped. The French who entered the town found its population reduced from 10,000 to 1600. Still Acting

Kirby in New York World

Wilson said "No," Your Majesty!

Mayor Malard said: "On the whole we were not so badly treated by the Germans," but he added, "that is, compared to other places," and he went on to explain that the Boches exacted 1,500,000 francs on their arrival as a ransom from sack, and 500,000 later for roads, water, etc. They took away all the metal and the bedding, but did not burn the houses, perhaps because the Americans hurried them out.

French on Chemin des Dames While the British are breaking thru the Hindenburg line at the northern end before Arras, the French are smashing its southern end before Soissons. Here the north-and-south Hindenburg line meets at a right angle the east-and-west line of the Aisne. The river is paralleled at a distance of a couple of miles by a narrow mesa, along the top of which runs the famous Ladies' Road, gained by the French last year but lost this spring. Fort de la Malmaison, which dominates this Chemin des Dames at its western end, was captured in October, 1917, by General Maistre under the direction of General Pétain, one of the most difficult and courageous exploits of the French army, but so costly that it was not followed up. General Pershing was present as an observer at the battle of Malmaison.

Now the French are back upon the old ground and are again attacking the heights above the Aisne on the Chemin des Dames. The angle occupied by the Germans is being approached from two sides, from the Aisne on the south and from the Ailette on the west. The operations are being carried out by General Mangin, again under the direction of General Pétain. The French troops, working their way up the ravine from Soissons to Laffaux, stormed Monkey Mountain to the north and the hills to the east. Some 4500 prisoners were taken in three days. The Associated Press despatch describes the difficulties of this achievement:

In doing so they conquered four caves at the summit of the heights from which the stone was quarried to build the city of Soissons. One of the caves measures 400 by 300 yards and has a dozen galleries thru which an automobile can pass.

An entire German battalion was captured in one of the caves, while in another a colonel with his entire staff were taken. All the caves were defended by machine guns that were raised to the mouth of the cave to be fired when a halt in the bombardment announced the approach of infantry. This sort of resistance was particularly stubborn at the top of Mont des Singes, where the French troops exterminated the garrison which belonged to the Fifth Prussian Guard Division.

Fifteen violent enemy counter-attacks were repulsed around the quarries before they were finally conquered. The French were obliged to contend not only with these fortresses cut out of solid rock, but with floods in the valleys of the north.

## Austrian Peace Overture

The Austro-Hungarian Government has renewed the effort it made on December 12, 1916, to bring about peace negotiations, and has again sent out official notes to that effect to the neutral nations for transmission to the opposing belligerents. A special appeal for peace was made to the Pope.

The note to the Allied and American governments, which we publish in full on another page as we have published the previous papers of this sort on both sides, is of especial interest in showing the attitude and aims of Austria. The note is accompanied by an equally lengthy public communication which explains why Austria hopes that this move may succeed where her former attempts failed. We quote two paragraphs of this preamble:

The Austro-Hungarian Government is aware that after the deep-reaching convulsions which have been caused in the life of the peoples by the devastating effects of the world war it will not be possible to re-establish order in the tottering world at a single stroke. The path that leads to the restoration of peaceful relations between the peoples is cut by hatred and embitterment. It is toilsome and wearisome, yet it is our duty to tread this path—the path of negotiation—and if there are still such responsible factors as desire to overcome the opponent by military means and to force the will to victory upon him, there can, nevertheless, no longer be doubt that this aim, even assuming that it is attainable, would first necessitate a further sanguinary and protracted struggle.

But even a later victorious peace will no longer be able to make good the consequences of such a policy—consequences which will be fatal to all the states and peoples of Europe. The only peace which could righteously adjust the still divergent conceptions of the opponents would be a peace desired by all the peoples. With this consciousness, and in its unswerving endeavor to work in the interests of peace, the Austro-Hungarian Government now again comes forward with a suggestion with the object of bringing about a direct discussion between the enemy powers.

The Austro-Hungarian note was delivered on September 16 at the White

House by W. A. F. Ekrengrén, the Swedish Minister, at 6.20 p. m., and at 6.45 the President's reply was made public. This document, probably unprecedented in diplomatic history for brevity and promptness, we publish with the Austrian note. The press of America and England, with the conspicuous exceptions of the New York Times and the London Daily Chronicle, almost unanimously took the same view as the President, that the note did not deserve serious consideration.

## A Drive Against Bulgaria

Now that General Foch has supreme command of all the Allied armies they can do what they have never succeeded in doing before, that is, unite in coördinated and simultaneous attacks upon all the fronts of the enemy. The 700,000 men in Macedonia who have been idle for the last two years are now again in action. All the seven nationalities composing their Balkan force have within the last four months participated in attacks on the three hundred mile front between the Adriatic and the Aegean. In June and July the Greeks and French defeated the Bulgars between Vardar River and Lake Doiran, and in Albania the French and Italians drove the Austrians back of Berat and the Devoli River.

In the middle of September the Serbs, in conjunction with the British and French, delivered a strong blow at the heights held by the Bulgars between Monastir and the Vardar. Mount Sokol, 4600 feet high, and three other fortified peaks were captured, and with them a thousand prisoners and guns. This victory shoved the Allied line over nine miles north. Another such advance would bring the Allied forces nearly to Prilep, the Bulgarian base in southern Serbia.

The Bulgars have now been left to fight their battles alone, for most of the Germans and Austrians who formerly aided them have been with-

## THE GREAT WAR

September 12—Americans attack St. Mihiel salient. Registration of 14,000,000 men in United States subject to draft.

September 13—St. Mihiel salient occupied. 15,000 prisoners. British storm heights of Havrincourt.

September 14—French take Monkey Mountain on Chemin des Dames, 2000 prisoners. Poles forming army in Russia.

September 15—British gaining at Ypres. Bulgars lose Sokol heights in Serbia.

September 16—Austria proposes peace conference. President refuses to consider it.

September 17—War Department asks for seven billions in addition to eighteen billions previously appropriated. Government publishes secret documents showing Bolshevik-German conspiracy.

September 18—French and British advance to within three miles of St. Quentin, 10,000 prisoners. John L. Davis, of West Virginia, appointed Ambassador near the Court of St. James's.

drawn for service elsewhere. It is even rumored that Bulgarian troops have been despatched to France, which if true would bring them into conflict with the Americans and compel a declaration of war against Bulgaria by the United States. Hitherto the Bulgarian Government has resisted all the efforts of Germany and Austria to use her troops for any other purpose than the defense and extension of her own territory.

The renewal of the Allied offensive in Serbia will increase the disaffection inside Bulgaria. The Bulgars have long been sick of war, for they have nothing to gain from its continuance. The sudden departure of King Ferdinand of Bulgaria for Bad Nauheim, Germany, where he met the Kaiser, has given rise to rumors that he is dying or insane or exiled or determined to make peace. The announcement that the King of Bavaria was going to Sofia has naturally excited further speculation as to what is happening there.

The Archangel Campaign The Provisional Government headed by Tschaikovsky which was set up by the Allies and Americans at Archangel did not prove able to stand alone. On September 8 it was overthrown by a rival faction, and President Tschaikovsky, and half a dozen of his associates, were interned on an island off Archangel. "The victors in this political skirmish," according to the Washington State Department, "were not hostile to the Entente or to Russia's welfare, but simply wanted control of the government. They are anti-German and anti-Bolshevist and have their own plan for the rehabilitation of Russia." Nevertheless the Allied military and diplomatic chiefs set them aside and reestablished the Tschaikovsky government.

The American troops on their arrival at Archangel were reviewed by Ambassador Francis and were cheered by the

Gillman Service

## FIGHTING THE SPANISH "FLU"

England, too, is having her troubles with the new contagious fever-and-cold-in-the-head disease that has been spreading thru some of our seaport cities. These workers at a British munitions plant are lined up for the regular dose of quinine that they count on to prevent the "flu."

populace as they marched thru the streets of the city.

No information is, of course, given out by the Allies as to the number of their troops in north Russia, but according to the *Cologne Gazette* there are 20,000 British, American, French and Serbian soldiers, assisted by 6,000 to 7,000 Russian and Finnish volunteers.

From another enemy source, the Bolshevik organ, *Pravda*, of Moscow, we learn that the Bolshevik troops were recently defeated by the British on the Archangel front, and that a number of the Bolshevik officers went over to the British.

The British are presumably trying to break a passage thru from Archangel to Vologda. If they can do this, they will make connection with the Pacific, for Colonel Emerson, of St. Paul, whom Secretary Lansing sent to Vologda last April, has arrived at Harbin, Manchuria, in a special train.

It is reported that as soon as Prince Frederick Charles of Hesse is established on the throne of Finland, a joint army of Germans and Finns will begin a campaign against the Allies and Americans on the Murman coast. It is also rumored that Germany is trying to negotiate an agreement with the Allies by which both parties keep out of this region.

The House has continued Congress discussion of the Revenue bill, interrupted on the 12th by consideration of a bill recommended by the Secretary of the Treasury and intended to facilitate the sale of the fourth Liberty Loan. Its chief purpose is to provide a limited exemption from income surtaxes and war and excess profits taxes on incomes derived from the bonds of the next loan. This bill was passed on the 14th, after a struggle over the clause granting authority to the President to prohibit transactions in bonds or certi-

#### THE YANKS IN GERMANY

This is one of the first photographs to show American troops actually in possession of German soil. A French soldier is with the two Americans in charge of this camouflaged flashlight station of the U. S. infantry

cates of the United States. It was shown that this power was essential to the effectiveness of the law, to insure the stability of Government securities. On the 16th the House approved the increased normal and surtax rates for individuals, and defeated every change proposed in the Revenue bill, involving the rejection of certain amendments framed in the spirit of traditional states' rights.

In the Senate much routine work was done. An incident of wide interest was the fight made in committee by the Civil Service defenders against that part of the Census bill that permits employing a large class of helpers outside of Civil Service channels. The Military Committee recommended to the Senate the bill for establishing a Department of Aëronautics, with a Secretary as a member of the Cabinet, despite the fact that the Administration is strenuously against this purpose.

The New Army The registration for the new draft of men between eighteen and forty-five years old, inclusive, was made thruout the country on September 12. Provost Marshal General Crowder expressed his satisfaction in a message on the 14th to General Pershing in which he said: "The nation responded yesterday with an enrollment which promises to exceed all estimates, thus assuring an uninterrupted flow of man power to the army under your command." Later indications are that the total will reach

12,000,000 at least; and the War Department expresses confidence that an American army of five million men will be organized by June 1, 1919. New York City enrolled nearly 800,000, which, with those registered previously, makes about 1,400,000 registrants in that city alone.

A corollary of this fact is the announcement that the War Department has determined to ask for an additional appropriation of not less than \$5,000,000,000 for the needs of the fighting force and the increased expenses incident to the new army coming from the recent draft.

Industries Exemptions for drafted men from service in the fighting forces, outside of those obviously unfit, will be granted principally to those engaged in productive operations regarded as essential to carrying on the war, and will be made primarily by the local boards. It is the business of the man seeking exemption to state that fact and his reasons in his questionnaire, or have some one else do it for him. General Crowder has urged on employers their duty to make this claim for those of their men whom they regard as indispensable in their shops.

In order to give the boards a basis for their decisions, the War Industries Board issued on September 7 a classified list of essential industries under four heads in the order of relative importance, determined by consideration of the following factors:

Press Illustrating

## THE MEN WHO RATION FOOD FOR OUR ALLIES

These are the "Hoovers" of England, Italy and France. From left to right, J. R. Clynes, recently appointed Food Minister of England to succeed Lord Rhondda; Silvio Crepi, Food Minister of Italy; and Victor Boret, Food Minister of France. It is interesting to know that Minister Boret was head of a wholesale grain concern in France before the war and that he had previous experience with a German agricultural concern in Hamburg and in a grain shipping business in England.

(1) The intrinsic importance of the product itself for use during the war, and the urgency, as measured by time, of the demand or of the use to which it is to be put; (2) the necessity for maintaining or stimulating and increasing the total quantity of production, which in turn depends largely upon the relation of the supply to the demand for essential uses; (3) the proportion of the capacity of the industry or plant which is devoted to the production of the essential product.

Class I has priority of consideration because it contains those industries concerned in making or conducting things necessary to the continuance of war and the up-keep of the army's health and efficiency. Among these are aircraft; ammunition (guns, explosives, etc.); arsenals, camps, navy yards, etc.; chemicals (gas shells); foods (agriculture for man and beast); fuel (coal, coke and oil); hospitals and sanitariums; railways, canals and transportation generally; ships (making and maintenance); and steel and steel plates.

"This list," Mr. Baruch says, "is the basis for industrial exemption from the draft, and may be regarded as the governing factor in the distribution of labor, capital, facilities, material, transportation and fuel."

**Slacker Raid Explained** Attorney General Gregory, in a letter to the President, has justified "slacker raids" in principle, but withholds approval of the method of conducting them shown in New York, when thousands of men were arrested and detained in order to get about 200 wilful slackers on Manhattan Island and a similarly small number elsewhere in the district. Mr. Gregory explains that it was expected by the Department of Justice that its agents would have the aid of the American Protective League, and that the soldiers and sailors assigned to help would be used in guarding any persons arrested for not having "registration or classification cards, which registrants are required by the regulations to keep always in their personal possession." Mr. Gregory acknowledges the illegality of what

actually happened, as martial law had not been invoked. Judging by the newspapers this explanation or plea has been accepted by the people, on the understanding that the illegality will not be repeated; yet there appears to be also a sense that some means must be found for using "drag-nets" occasionally, since in no other way, apparently, is it possible to catch determined skulkers. Word comes from Washington that a special corps of detectives, organized by the Department of Justice for this purpose, is now ready to round up draft evaders.

#### War Labor Board At Bridgeport, Connecticut, on August 30, 6000 Sustained

union machinists in the munition factories went on strike as a protest to the award of the National War Labor Board, to which had been referred a dispute of long standing with their employers over a question of wages. The Labor Board had increased all wages under 78 cents an hour, but did not establish any rate above that, and did not change the classification of the machinists, for which their union had asked. The Bridgeport branches of the International Union of Machinists, as well as the Manufacturers' Association, had agreed in writing beforehand to abide by the board's decision. The manufacturers at once accepted it, but the strikers refused, and threatened to call a general strike in the trade, in spite of the fact that the national president of their federation had told them that if they did not accept within forty-eight hours their union cards would be revoked. Instead, they renewed the strike and appealed to President Wilson, who wrote to them on September 13.

After briefly reviewing the situation, and informing the men of what had been done in the case of the Smith & Wesson Company, Mr. Wilson said:

The arbitrator thus chosen has made an award which more than 90 per cent of the workers affected accept. You, who constitute less than 10 per cent refuse to abide by the award, altho you are best paid of

the whole body of workers affected, and are therefore least entitled to press a further increase of wages because of the high cost of living. But whatever the merits of the issue, it is closed by the award. Your strike against it is a breach of faith calculated to reflect on the sincerity of national organized labor in proclaiming its acceptance of the principles and machinery of the National War Labor Board.

It is of the highest importance to secure compliance with reasonable rules and procedure for the settlement of industrial disputes. Having exercised a drastic remedy with recalcitrant employers, it is my duty to use means equally well adapted to that end with lawless and faithless employees.

Therefore, I desire that you return to work and abide by the award. If you refuse each of you will be barred from employment in any war industry in the community in which the strike occurred for a period of one year. During that time the United States Employment Service will decline to obtain employment for you in any war industry elsewhere . . . and the draft boards will be instructed to reject any claim of exemption based on your alleged usefulness in war production.

This "work-or-fight" ultimatum was recognized as establishing the attitude of the Government toward such cases, and as virtually putting these strikers and others like them in a blacklist, apart from the danger of being put into uniform. It excited bitter resentment at first, but when the matter came to vote in a great meeting on September 16, all but an insignificant minority resolved: "That we go back to work, and that we work out our salvation thru the National War Labor Board."

The allusion to Smith & Wesson in Mr. Wilson's letter to the Bridgeport strikers was to a corporation manufacturing army revolvers in Springfield, Massachusetts, which recently was complained of by its workmen. The Labor Board investigated and found that the company had conducted for several years a non-union shop, and had required the employees to sign individually an agreement that they would not join a labor union without giving a week's notice in writing. Eight men violated this contract and were discharged, whereupon the force struck. The War Board decided that

these eight men ought to be reinstated; that the company ought to permit an organization of such of its men as cared to combine; and that it should treat with mediators representing the employees. The company denied the authority of the board, and declared that before it would comply with its demand it would turn its plant over to the Government. This alternative was immediately accepted, and the War Department now operates the Smith & Wesson factory.

#### Reviving Inland Waterways

Director General McAdoo has dismissed the Inland Water-

ways Commission, appointed last February, with high commendation of the work it has done, and has replaced it by a division of the Railway Administration. This will be in charge of G. A. Tomlinson, heretofore director of the New York and New Jersey canals. It will control all the canals and inland water-routes of the country as fast as taken in charge by the Railway Administration. At present the Erie, Cape Cod, Raritan, and Mississippi and Warrior canals are under Government control.

Federal management of the waterways relieves them of the jealous opposition with which they have been regarded by railway managers, and steps are being taken to utilize them far more than in the recent past. One of the most forward of these steps is putting into service on the Mississippi and its big tributaries lines of steel barges adapted to the navigation of those very uncertain streams. Hence a lively business is now returning to the levees of many river towns whose water-borne trade has been almost dead for a long time. Thus far the barges have been designed wholly for carrying bulky freight, but southern newspapers report that packets, built to conform to the utility model, yet arranged for carrying passengers comfortably, are being introduced on some of the new barge lines.

#### Conviction of Debs

A jury in Cleveland, Ohio, found Eugene V. Debs guilty of violation of the Espionage act in recent speeches, particularly that at Canton, Ohio, on June 16, and sentenced him

#### MORE MEN RELEASED

This electric storage battery driven chair car, similar to those to be installed at seashore resorts, is the first of a fleet to be used at the New York Zoological Park, so that men may be released for war work. Chairs of this type will also be used in hospitals.

on September 13 to ten years' imprisonment and \$10,000 fine on each of three counts, the sentences to run concurrently. He was then admitted to bail on condition that he remain quietly at his home until the appeal to be made by his attorneys shall be decided. No formal defense was presented, and the only argument was by Mr. Debs himself, who said he had no dispute to make with the evidence, or criticism of the conduct of the trial. He asserted that he did not consider that he had committed any crime, and would take back nothing he had said.

On the same day a "secret" convention of representatives of the I. W. W. at Spokane, Washington, was raided by Federal agents, a great quantity of correspondence was seized, and four leaders were arrested and bound over to the Federal grand jury, charged with conspiracy to tie up war industries in the Northwest.

John Reed, an American who came from Russia some time ago, seeking recognition as an official representa-

tive of the Bolsheviks, has been arrested for the second time, charged with violation of the Espionage act in a speech to New York socialists.

#### Twilight of Baseball

The annual series of match games to determine the world championship in professional baseball ended dismally at Boston on September 11. The contest had narrowed to a match between the Chicago Cubs and Boston Red Sox, and Boston won. Little interest was taken anywhere in the series, as compared with the concentration of attention to it previous to the war, and the attendance at all six games was much diminished. The gate receipts, consequently, were not up to expectations—in fact much less than half those of last year; and a quarrel over the division of their share of the money among the players almost prevented playing the final game. It was announced that the total paid attendance for the six games was 128,483; against 186,663, and the receipts \$179,619, as against \$425,378 in 1917.

#### THE CZECHO-SLOVAK TRAINING CAMP IN THE UNITED STATES

Near Stamford, Connecticut, a military camp has been established where a battalion of Czecho-Slovaks are taking an intensive training course to fit them for service overseas with their brothers-in-arms. The camp is maintained by Czecho-Slovak funds and commanded by both United States and Czecho-Slovak officers. The uniform is somewhat like the French horizon blue with gay blue tam-o'-shanters.

# WIPING OUT THE ST. MIHIEL SALIENT

BY THE MILITARY CRITIC OF THE INDEPENDENT

EVERY one who has looked at the war map of France at any time in the last four years must have been struck by the curious kink in the battle line at St. Mihiel. [Readers who have no opportunity to hear the correct French pronunciation of this name may call it Sang-me-yel.] The line dividing the belligerents is for the most part a smooth curve, for any projecting point, being exposed to attack from three sides, is likely soon to be smoothed out. Also a belligerent which crosses a river and secures a foothold on the other side but is not able to make a further advance, usually has to abandon this foothold and retire behind the river. For instance, the Germans have within the last two months been obliged recently to withdraw from the positions they had obtained on the further side of the Ancre, the Avre and the Marne.

But the St. Mihiel salient is an exception to both these rules. The Germans in their first offensive of September, 1914, drove a narrow wedge into the French frontier, captured the bridgehead of St. Mihiel on the western side of the Meuse River and have held it ever since. On an ordinary map this seems miraculous, but if one consults a topographic map showing the lay of the land one can see that there is some reason for it. The eastern frontier of France is protected by gigantic fortifications prepared thousands of years before the advent of man, but in accordance with ideas of modern military engineers. The Meuse is the moat, the heights on either bank form the escarpment and parapet and the slope of the Woevre its glacis. Along this plateau overlooking the Rhine valley the French had erected forty miles of fortresses, extending from Verdun on the north to Toul on the south. Further south there is a similar chain connecting Epinal and Belfort. These fortifications were deemed impregnable before the war and so they have proved themselves. The whole power of the German army concentrated against one of them, Verdun, was unable to reduce it and the Germans have never even got within reach of the other three. It was because of the known strength of the fortified frontier of France on the east that the Germans decided to invade France from the north, altho that involved the violation of the neutrality of Belgium and the antagonism of England.

Since, then, the Germans despaired of breaking thru the barrier of the Meuse they undertook to get in behind and so

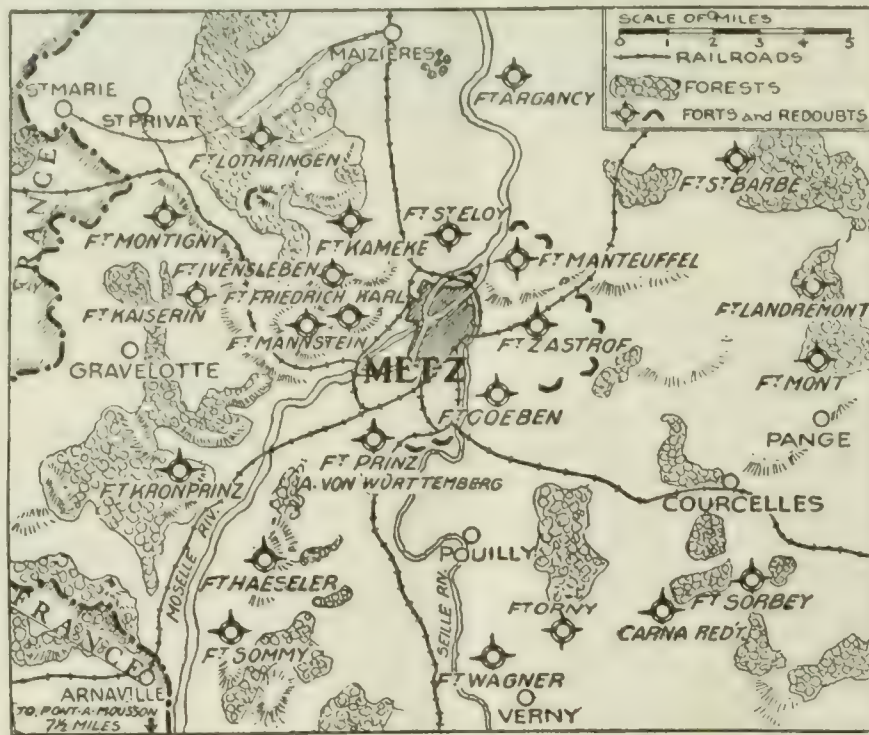

to cut off its great fortresses one by one, beginning with the topmost, Verdun. The army group under the Prussian Crown Prince, advancing southward on the west side of Verdun in August, 1914, got almost to Bar-le-Duc while an army from Metz, advancing westward, crossed the Meuse at St. Mihiel. This brought the two German armies within fifteen miles of one another and there was not a river or a fort between them. If they had joined, Verdun, twenty miles north, would have been caught in the loop and, being entirely surrounded and cut off from help, it would in time have had to surrender. But General Sarraill sent troops south from Verdun and General

ished and when he crossed the river by a pontoon bridge he found his forces opposed by a single battalion of French Territorials without artillery. If the German general had realized a few days earlier how weak was the French defense of the line at this point he would doubtless have made a swifter advance and perhaps have covered the fifteen mile gap separating him from the Crown Prince. But, as we have seen, Sarrail intervened just in time to prevent their conjunction and so the line has stood since September 25, 1914, with the Germans in possession of St. Mihiel and even holding the bridgehead on the western side of the Meuse. The French

have several times attempted to drive the Germans from this sharp salient by attacks on one side or the other, but it was left for the Yankees to do, and on Friday, the 13th of September, 1918, Secretary of War Baker, accompanied by Generals Pershing and Petain, walked over the shaky bridge across the Meuse into St. Mihiel.

This victory has an especial significance, since it is the first time we have been "on our own." In the operations on the Marne, the Oise and the Somme the American troops have been brigaded with the French or British and were under foreign officers. But this new offensive on the Meuse was managed by American officers and mostly carried out by American troops, altho actively aided by the French. There has natur-

ally been some nervousness over the anticipated debut of the American army in the European theater of war. The courage of our soldiers was not questioned and it was known that they had received as long and careful a training as the recent recruits in any army. But officers cannot be extemporized. The failure of the British offensives up to the present to realize the results to be expected from their numbers and preparation has been chiefly due to the impossibility of providing adequately educated commanders for the millions of new men. On the other hand the French and the Germans have often done better than was anticipated in carrying out an offensive or extricating themselves from difficult situations, because they were largely managed by men who had made the art of war a lifelong study. But the United States when it began to raise its new army of several millions had even fewer officers of experience in battle or even of professional training than England had, so it is gratifying to find that the American officers as well as soldiers have performed creditably the duties entrusted

THE FORTRESS OF METZ

*The advance of the Americans beyond Thiaucourt has brought them within half a dozen miles of Fort Sommy, one of the outer ring of forts surrounding the entrenched camp of Metz, the chief stronghold of the German frontier*

Dubail sent troops north from Toul, and between them they were able to keep the German forces from conjunction and so Verdun was saved from encirclement.

The reason why the Germans were able to get across the Meuse at St. Mihiel was partly because of the topography of the section and partly because the French made the mistake of leaving it virtually undefended. The natural rampart formed by the heights east of the Meuse is broken here by a ravine that reaches almost to the river at the bend, where stands St. Mihiel, a town of ten thousand inhabitants. It was supposed to be protected by a fort on an adjacent hill, which in Cæsar's time was occupied by a Roman camp.

Expecting to find the French frontier held in force, General von Stranz set out from the fortress of Metz with two army corps, some eighty thousand men, and heavy artillery. But these elaborate preparations proved unnecessary. The heights on the Meuse that he bombarded were unoccupied and when he reached St. Mihiel it was deserted. The Fort du Camp des Romains was easily demol-

ed to them. Both the planning and the execution of the St. Mihiel offensive appear to have been perfect. The St. Mihiel salient that has stood for four years was reduced in twenty-seven hours. More than 150 square miles of Lorraine were liberated, more than 15,000 prisoners captured and more than 200 guns taken.

In itself the recovery of the St. Mihiel salient cannot be called a major operation. It is not, for instance, so difficult or so important as the recovery of the Marne and Somme salients in which we participated, for these threatened respectively Paris and Amiens. The St. Mihiel salient had long since ceased to be a serious menace to France. It would have been of value to the Germans as a vantage point in case they renewed their attempt of 1914 to force the line of the Meuse. Otherwise it was a source of weakness and by cutting it off we have shortened the German line of defense from forty to twenty miles. The German official report is unusually amusing:

In anticipation of such an attack the evacuation of this salient, liable to encirclement on both sides, which had been under consideration for years, was begun a few days ago. We did not, therefore, fight the battle to a finish, but carried out the movements contemplated, which the enemy was unable to prevent.

It may be true that "the evacuation of this salient had been under consideration for years," but it is pertinent to inquire why after such mature consideration they "carried out the movements contemplated" in so hasty and careless a manner as to leave behind more than 15,000 troops and 200 guns.

This brilliant feat, as we have seen, adds to the glory of American arms and restores the French frontier. But it may be the beginning of something much more. If the Allies intend to carry the war into the enemy's country this fall they would naturally look in this direction. Here they are actually on the German border, within gunshot of its strongest fortress, Metz. If instead of striking east they choose to strike north they must drive the enemy all the way

### THREE GERMAN SALIENTS CUT DOWN IN TWO MONTHS

*On July 18 the French began the counter-offensive that drove the Germans back from the Marne to the Vesle. In August the British obliterated the German salient that extended toward Amiens. In September the Americans nipped off the St. Mihiel salient. This map shows the whole line of the western front. The territory shaded in black has been retaken from the Germans in the last two months*

back thru northern France and Belgium before reaching the boundary. To be sure, the land that lies to the east of France is not, in French opinion, German soil. It is Alsace and Lorraine and the French have never ceased to consider Strassburg and Metz as truly French as Reims and Lille. To destroy these towns and lands which they hope to recover would be as heartrending as to devastate northern France and Belgium. But they will not shrink from

Such is the vision to which the American advance invites us. But we must remember that this is only a first step and a comparatively easy step in the great undertaking. A second step of equal stride would bring us into the midst of Metz, which from the time of Cæsar to the present has been one of the most invulnerable of fortresses. The French frontier, as we have seen, is protected by four fortresses of the first class, Verdun, Toul, Epinal and Belfort.

The Germans, putting less faith in fortresses and more in field fighting, have concentrated their efforts on two, Metz and Strassburg. As the reader may see from the map of Metz here published the city is surrounded by two rings of forts, the inner consisting of ten forts, mostly within three miles from the center, and the outer consisting of twenty forts within ten miles radius. Fuller details may be found in the article on "Fortifications and Siegecraft" in the last edition of the Encyclopedia Britannica, where plans of Metz and of two of its forts are given.

Whether Pershing in cutting off the St. Mihiel salient has accomplished his complete aim or [Continued on page 439]

### THE ST. MIHIEL SALIENT IS NO MORE

*The German salient that reached to the Meuse and cut the connection between the French fortresses of Verdun and Toul has been recovered by the Americans who, advancing from the south and west, met at Vigneulles. The important objectives before the new American front are the railroad center of Conflans and the fortress of Metz*

I have visited Gettysburg—the greatest battlefield in America. I have visited Port Arthur—the greatest battlefield in Asia. In this article I shall describe my visit to Verdun—the greatest battlefield in Europe and the world.

There are four great modern fortresses guarding the French front from a German invasion. They are Verdun, Toul, Epinal and Belfort. Verdun is the northernmost of these and lies almost directly east of Paris. Verdun is the only one that has been tested in this war. The other three are still considerably behind the French lines. But Verdun holds fast today as she did in 1914—a sharp salient thrust into the German lines. She is the only fortress in this war that has been able to survive the shelling of the 16-inch guns.

The defense of the eastern side of Verdun has recently been entrusted to the Americans, who on September 12 drove the Germans out of the St. Mihiel salient. This ground may be made the basis of a future offensive that will sweep the enemy out of Alsace-Lorraine.

Every one I met in Paris told me that Verdun was the most interesting spot to visit on the entire front lines. Accordingly when I sought permission from the French Government to visit the French war zone I asked that Verdun be included in my itinerary. But for some reason which I never understood, Reims was substituted for Verdun. It was not, therefore, until I arrived at an American sector adjacent to Verdun and learned that I was within automobile distance of the famous fortress that it occurred to me that there were more ways of skinning a cat than one, and that I might be able to obtain permission to visit this famous salient thru the good offices of American headquarters. As G. H. Q. was most willing to try to arrange matters, great was my delight shortly to hear that my request had been granted and that Friday, the 16th of May, was to be the red letter day.

Accordingly bright and early on the appointed morning we started out. My cousin, Captain Gardner Richardson, was my escort. Sergeant Frye acted as chauffeur. The latter was a native of Oklahoma who left school-teaching two years ago for the automobile business and had been taken in the first draft. His knowledge of automobiles caused him to be put in charge of one of the dozen machines used for visitors at G. H. Q. He told me that once he had

substituted for the chauffeur driving the car that always follows General Pershing's. It was all he could do to keep up, for the General does not enjoy the reputation of paying the most scrupulous attention to speed laws.

Our route took us thru the city of Bar-le-Duc, where the famous jam comes from, and then on forty miles thru a rich undulating farming country to Verdun. The day was clear and warm, the road was fine, the curves broad and the grades gentle. Except for a couple of punctures we were making fine time. At one spot where we stopped for repairs two old men and an ancient woman were sitting by the roadside breaking stones by hand to be used in mending the road. The French have not yet got to the point where they use stone crushing machines, and one sees all along the roadside little piles of stone on which old peasants sit pounding away with their hammers all day long. We inquired of the old woman about her family. She said her four middle-aged sons—all she had—were now serving at the French front. We passed numerous small herds of cows in the pastures being tended by old women and children. Sometimes we saw an old woman knitting on a camp stool, as the cows browsed along the roadside. The French apparently never let the cows run loose as we do. Whether it is be-

cause they fear the milk will be stolen or not I cannot say.

We shortly passed thru the pretty city of Bar-le-Duc. It was filled with American troops. We then struck a broad turnpike, and "hitting up" our pace we sped on past various munition factories and supply depots, past aerodromes and freight yards, past farms and villages, and on and on, the roads continually getting more congested with troops and trucks until we ascended the long ridge overlooking Verdun, and then with one or two sharp turns we found ourselves in the city, now almost completely destroyed and entirely deserted except for the garrison still holding it.

We inquired our way to the citadel and then leaving our car down below the ramparts, walked up the circuitous road to the gates of the great fortress. After proceeding thru a maze of paths we finally entered the citadel itself, and then passing thru several corridors we walked down eighty-three steps—I counted them—into the underground city which holds the garrison and serves as a resting place for all the troops from the neighboring forts.

We were ushered into the presence of Colonel A. De Hay, who was the commandant of the citadel during the siege. He was a tall, heavy, fatherly looking Frenchman with a most pleasant and gracious manner. He conducted us thru the long, dank, officers' mess room into his little private dining room and reception room, where a very delicious luncheon was waiting to be served. The room was also the trophy room of the citadel and was most impressively decorated with flags and medals. The first thing that met my gaze was a great mirror in the center of the room over which hung a battle flag carried by Joan of Arc herself in one of her battles four hundred years ago. On one side of the flag was a colossal bronze replica of the Legion of Honor and on the other a huge Croix de Guerre six feet high, I should think. In addition to these tokens of honor I noticed on the walls decorations given to the garrison by England, Russia, Italy, Belgium, Serbia, Portugal, Japan, etc. The colonel, too, had evidently been decorated by all the Allies, as the multicolored strips of ribbon completely covering his breast indicated. After I had admired the trophies Colonel De Hay took a key out of his pocket, opened a small glass cabinet on a table, took out a small, faded, tawdry wreath of flowers and handed it to me. The card attached showed that it had been sent by some "Admiring Friends from

Darien, Connecticut." That was the only recognition from the United States of America of the deathless heroism of the defenders of Verdun. When the colonel asked us to sign our names in the guest book I noticed the name of Ambassador Sharp written above mine, and so when I returned to Paris I suggested to the Ambassador that inasmuch as Congress had just passed a law permitting the decoration of soldiers for heroism on the field of battle it would be a most fitting courtesy for the United States to decorate Colonel De Hay and his gallant garrison. The Ambassador said he would take the matter up with Washington, but what has come of it, if anything, I do not know.

We then sat down to luncheon. The colonel had at our plates an actual printed menu, which I herewith reproduce. The dinner bell was an inverted shell case suspended from an iron rod on the inside. It was a very simple but delicious luncheon and we did not arise until the colonel had proposed the health of America and we that of France.

After luncheon we started out to inspect the underground city. The fortress of Verdun was built by Napoleon but was modernized and rebuilt during 1882-1890. It has now all the conveniences of a modern city. It is electrically lighted and there is enough electricity generated in addition to what the citadel needs to supply the whole city of Verdun if necessary. It has nearly five miles of gallery. It boasts of a mill that makes the bread, and storehouses sufficient to hold the food reserves for 10,000 people for six months. It is seventeen meters under the solid rock and is practically shell proof. Verdun itself is above it. During the bombardment of 1915-1916 the heaviest shells cracked the roof in places and the water leaked thru here and there, but there is no danger of its being demolished by any guns now in use. The excavated city is down about the level of the Meuse River, which runs thru the town, and there is in consequence an elaborate pumping system installed in case of any flooding.

Verdun itself is in a valley surrounded by seven hills. Each hill contains a separate fort. The citadel of Verdun is, of course, the place to which the troops finally retire if hard pressed, but during all the German offensive they were out in the front trenches, and the citadel was deserted.

We went into an oblong assembly room filled with flags of all nations. The American Labor Mission had been given a dinner there a few days previously. There was a piano and stage at one end of the hall and a moving picture machine in the rear. Nearby was a reading and lounge room with all the latest Parisian periodicals on the tables. We visited the wireless station sixty feet under the ground, and while there we watched the operator taking down the German *communiqué* that was being sent out that very moment from Berlin. A vase of lilacs at his elbow gave a touch of color and sentiment to the murky surroundings.

Le Cap<sup>te</sup> Huillard  
C LE FORT DE SOUVILLE  
S.P. 218

The official seal of the Fort de Souville

We went thru a great kitchen where the cooks were preparing meals, and then into the bakery where 25,000 loaves of bread are baked each day for the French army in this sector. During the siege of 1916 this number was increased to 65,000 loaves a day. The Colonel turned to me with a smile and said I would be interested to know that 70 per cent of the bread was made from flour that America has sent to France.

We next went into the surgical room, where thousands upon thousands of operations had taken place. Along the wall I counted a row of fifteen steel helmets, each with a bullet hole or gash in it that had deflected a shot or piece of shrapnel and saved the life of the man who had worn it.

The garrison priest here met us and took us into the little chapel used by the officers and men of the garrison.

Colonel  
A. De Hay  
Commandant  
de Verdun

Menu of the luncheon at Verdun, autographed by Colonel A. De Hay, commandant of the citadel during the siege

He showed us the statue of St. Barbara, the patron saint of artillery, which the soldiers had rescued from some neighboring town which the Germans were shelling. The statue had not even been scratched. At the altar were three or four large vases filled with fresh flowers of the fields which the priest said the soldiers brought in every morning. There was also a handsome old baptismal font that had been rescued from an ancient abbey in a neighboring village that was being destroyed by the German bombardment. The priest said that a woman who could not be transported during the evacuation of Verdun in February, 1916, was taken into the chapel, where her baby was born. The child was baptized in the old baptismal font.

The last room we visited was used as a commissary store. A crowd of soldiers were at the counter buying goods. The Colonel said they did a business of 35,000 francs a day there. It was touching to hear him address the poilus—some of them gray haired men—as “mes enfants.”

We then walked down one of the long tunnels, pushed aside the gas curtain—the fortress had been bombarded with gas shells only six weeks before—and came out into the light of day. We summoned our auto and the Colonel did us the honor of taking us thru the city. It was in a far worse state of annihilation than Reims or any other large city I saw in Belgium, France, or Italy. Whole blocks of houses were literally razed to the ground. Not a single building was unscathed. It was destruction and desolation, complete and unredeemed. In a few minutes we had passed beyond the outskirts of the town and were proceeding up the side of one of the great hills in order to visit the fort on its top and get the view of the German trenches beyond. The whole side of the hill was honeycombed with dugouts where the soldiers were resting. These dugouts were tier on tier above each other and in some of them were horses. Half way up the hill we stopped at a little enclosure where we found a sight to bring the heart throbs to any American far from home. There, under a canopy of green camouflage, were three sturdy little Ford cars. Their drivers were a group of khaki clad American boys from the University of Michigan. You can rest assured that we had a real “Old Home Week” there together for about fifteen minutes. On the other side of the road was the vast cemetery where over 6000 French soldiers were buried. Above each grave was a little wooden cross with the name of the poor boy who lay there, and below was the French flag stuck in the ground. We walked about the graveyard, with the priest dressed in his long robes, a steel helmet on his head, and a gas mask on his chest. He had been tending the flowers about the graves as we came up. We then rode forward nearly to the top of the hill, where we got out and left our car behind a ridge and walked forward to the highest point of vantage. There spread [Continued on page 428]

**LIBERTY BONDS**

**J**UST why should we be called upon to pour out our blood and treasure as never before? Because the Hohenzollerns, the Prussian military caste and the great industrial chiefs of Germany plotted the conquest of the world and have already made a long stride toward its realization. The design seems to have been hatched some twenty-five years ago. By 1900 the Kaiser had reached the point of publicly holding up the Roman world-empire as Germany's ideal. From about 1908 on the avowal of the design by German statesmen and publicists became quite frank. Deaf to warning voices, the world smiled at these bold utterances as signs of swelled head because it was ignorant of the Kaiser's plottings with crowned heads, of the artful fostering of German Kultur among Russians and Americans of German blood, of the political penetration of other countries by Germans in commercial guise, and of the secret building in time of peace of a spy system such as the world had never seen.

Thanks chiefly to the Russian Bolsheviks the Kaiser now lords it over nearly a quarter of a billion of human beings. A peace on the basis of the actual war map would leave him with three and one-half times as many people to draw recruits from and squeeze taxes out of as he had four years ago. Apply the Prussian military system and in twenty-five years thirty millions of trained soldiers would be ready to march at the bidding of the Hohenzollern. Meantime submarines and other instruments of destruction would be perfected and prepared in enormous quantity, as were Zeppelins and big howitzers before August, 1914. When the Kaiser struck, the rest of Europe would be crushed, and the separated free peoples—England, Canada, and the United States, Australasia, South Africa and Central and South America—would be subjugated one after another.

# WHY IT IS A "LIBERTY" BOND

BY EDWARD A. ROSS

PROFESSOR OF SOCIOLOGY IN THE  
UNIVERSITY OF WISCONSIN

This is no fevered dream, but a reasonable inference from what the authors of German policy are continually saying. Already there are books and articles setting forth the "lessons" from his war and explaining how to insure the success of the "next war." The German leaders have not lost their faith in war nor disavowed their design of world domination. So this time there is no excuse for being caught napping as in 1914.

People-control of government disappeared from the world with the subjugation of the Greek city commonwealths about three hundred years before Christ, and reappeared only in the thirteenth century in the cities of Italy and Flanders. From the rise of the English Parliament six hundred years ago, people-government has not been a stranger to man, and since the American and French Revolutions it has spread like wildfire over the globe. Now it is forced to grapple with a league of four out of the five remaining Divine Right monarchs to settle whether it or autocracy is to perish from the earth.

Aside from Germany's treatment of the Alsations and German-Poles, our only clue as to what would happen to the world under the Hohenzollern scepter, is the fate of the ancient world under Roman dominion.

In the ancient world the Romans became a privileged race and remained such until the edict of Caracalla in 212 A. D. This means that the dominating people lorded it over the conquered for from three to six centuries. In the same way under the Teutonic world-domin-

ion the German would be promoted to superiority and would enjoy for generations a monopoly of higher educational opportunities, the public offices, the more dignified professions, and social prestige. Our grandchildren would be despised like the "natives" in the Asiatic dependencies of some European powers.

The consciousness of unfreedom paralyzes the higher life of man. Contrast the contributions to civilization made by the free Athenians with those made by the subjugated Athenians. Hence, presently a kind of pall would descend upon mankind. The German intellect would give itself to governing rather than to research. The grandchildren of us Americans, English and French would be smitten with intellectual sterility. The torrent of great poems, dramas, works of art and discoveries of science would shrink to a rill. Despite great public works and imposing monuments after the "Germania" style, the world would suddenly show signs of old age.

Society under the later Roman Empire was the most aristocratic the world has ever seen. There was no equality of classes before the law, and all small freeholders were forced to become tenants-on-sufferance of the senatorial nobility. So the triumph of Germany would mean the early death of socialism, social democracy, the labor movement, and every other endeavor to win for the toilers a better economic and social position. A power that throws poison gas bombs among the Ukrainian peasants who withhold their wheat, is capable of unloosing upon strikers flame projectors and aerial bombs as well as machine guns.

This will not come to pass only because most of us would rather live on acorns than let this blight fall upon the world. Day by day hardens in Americans the determination to *smash the Kaiser and smash him now*; more and more they see the fitness of calling the means of doing it, "Liberty" bonds.

# THE FIGHT AGAINST RUST

BY EDWIN E. SLOSSON

**I**RON is one of the rarest metals in the world, rarer than gold, rarer than platinum. The reason is that oxygen has too great an attachment for iron, and, since oxygen is the most ubiquitous of the elements, iron can only escape its ardent embraces by hiding away in the center of the earth. The united elements, known to the chemist as iron oxide and to the outside world as rust, are among the commonest of compounds, and their colors, yellow and red like the Spanish flag, are displayed on every mountain side. From the time of Tubal Cain man has ceaselessly labored to divorce these elements, and, having once separated them, to keep them apart, so that the iron may be retained in his service. But here, as usual, man is fighting against nature, and his gains, as always, are only temporary. Sooner or later his vigilance is circumvented and the metal that he has extricated by the fiery furnace returns to its natural affinity. The flint arrowheads, the bronze spearpoints, the gold ornaments, the wooden idols of prehistoric man are still to be seen in our museums, but his earliest steel swords have long since crumbled into dust.

Every year the blast furnaces of the world release 72,000,000 tons of iron from its oxides, and every year about a quarter of that amount reverts to its primeval forms. So man after five thousand years of metallurgical industry has barely got three years ahead of nature, and should he cease his efforts for a generation there would be little left to show that man had ever learned to extract iron from its ores. The old question, "What becomes of all the pins?" may be as well asked of rails, gas pipes and threshing machines. The end of all iron is the same. However many may be its metamorphoses while in the service of man it relapses at last into its original state of oxidation. To save a pound of iron from corrosion is then as much a benefit to the world as to produce another pound from the ore. In fact, it is of much greater benefit, for it takes four pounds of coal to produce one pound of steel, so whenever a piece of iron is allowed to oxidize it means that four times as much coal must be oxidized in order to replace it. And the beds of coal will be exhausted before the beds of iron ore.

If we are ever to get ahead, if we are to gain any respite from this enormous waste of labor and natural resources, we must find ways of pre-

venting the iron which we have obtained and fashioned into useful tools from being lost thru oxidation. Now there is only one way of keeping iron and oxygen from uniting, and that is to keep them apart. A very thin dividing wall will serve for the purpose, for instance, a film of oil. But ordinary oil will rub off, so it is better to cover the surface with an oil like linseed, which oxidizes to a hard elastic and adhesive coating. If with linseed oil we mix iron oxide or some other pigment we have a paint that will protect iron perfectly so long as it is unbroken. But let the paint wear off or crack so that air can get at the iron, then rust will form and spread underneath the paint on all sides. The same is true of the porcelain-like enamel with which our kitchen ironware is nowadays coated. So long as the enamel holds it is all right, but once it is broken thru at any point it begins to scale off, and then arises another rumor that German spies are poisoning our food with powdered glass.

Obviously it would be better for some purposes if we could coat our iron with another and less easily oxidized metal than with such dissimilar substances as paint or porcelain. Now the nearest relative to iron is nickel, and a layer of this of any desired thickness may easily be deposited by electricity upon any surface, however irregular. Nickel takes a bright polish and keeps it well, so nickel plating has become the favorite method of protection for small objects where the expense is not prohibitive. Copper plating is used for fine wires. A sheet of

Zinc is negative toward iron, so when the two are in contact and exposed to the weather the zinc is oxidized first. A zinc plating affords the protection of a Swiss Guard, it holds out as long as possible, and when broken it perishes to the last atom before it lets the oxygen get at the iron. The zinc may be applied in four different ways. It may be deposited by electrolysis, as in nickel plating, but the zinc coating is more apt to be porous. The sheets or articles may be dipped in a bath of melted zinc. This gives us the familiar "galvanized iron." Besides these older methods of applying zinc, there are now two new ones. One is the Schoop process, by which a wire of zinc or other metal is fed into an oxyhydrogen air blast of such heat and power that it is projected as a spray of minute drops with the speed of bullets, and any object subjected to the bombardment of this metallic mist receives a coating as thick as desired. The zinc spray is so fine and cool that it may be received on cloth or the bare hand. In the Sherardizing process the articles are put into a tight drum with zinc dust and heated to 800° F. The zinc at this temperature attacks the iron and forms a series of alloys ranging from pure zinc on the top to pure iron at the bottom of the coating. Even if this cracks in part, the iron is more or less protected from corrosion so long as any zinc remains.

Another way of protecting ironware from rusting is to rust it. This is a sort of prophylactic method like that adopted by modern medicine where inoculation with a mild culture prevents a serious attack of the disease. The action of air and water on iron forms a series of compounds and mixtures of them. Those that contain least oxygen are hard, black and magnetic like iron itself. Those that have most oxygen are red and yellow powders. By putting on a tight coating of the black oxide we can prevent or hinder the oxidation from going on into the pulverulent stage. This is done in several

*Tires and cannon made rust-proof by the Parker process at Detroit*

iron dipped in melted tin comes out coated with a thin adhesive layer of the latter metal. Such tinned plate, commonly known as "tin," has become the favorite material for pans and cans. But if the tin is scratched the iron beneath rusts more rapidly than if the tin were not there, for an electrolytic action is set up and the iron, being the negative element of the couple, suffers at the expense of the tin.

With zinc it is quite the opposite.

In the Bower-Barff process the articles to be treated are put into a closed retort and a current of superheated steam passed thru for twenty minutes followed by a current of producer gas (carbon monoxide), to reduce any higher oxides that may have been formed. In the Gesner process a current of gasoline and vapor is used as the reducing agent. The bluing of watch hands, buckles and the like may be done by dipping them into an oxidizing bath such as melted saltpeter.

But in order to afford complete protection, the layer of black oxide must be thickened by repeating the process, which adds to the time and expense. This causes a slight enlargement, and the high temperature often warps the ware so it is not suitable for nicely adjusted parts of machinery, and of course tools would lose their temper by the heat. A new method of rust proofing which is free from these disadvantages is the phosphate process invented by Thomas Watts Coslett, an English chemist, in 1907, and developed by the Parker Company, of Detroit. This consists simply in dipping the iron or sheet articles into a tank filled with a dilute solution of iron phosphate heated nearly to the boiling point by steam pipes. Bubbles of hydrogen stream off rapidly at first, then slower, and at the end of half an hour or longer the action ceases, and the process is complete. What has happened is that the iron has been converted into a basic iron phosphate to the depth of about one three thousandth of an inch. Any one who has studied elementary qualitative analysis will remember that when he added ammonia to his "unknown," iron and phosphoric acid, if present, were precipitated together, or in other words, iron phosphate is insoluble except in acids. Therefore a superficial film of such phosphate will protect the iron underneath except from acids. This film is not a coating added on the outside like paint and enamel or tin and nickel plate. It is therefore not apt to scale off, and it does not increase the size of the article. No high heat is required as in the Sherardizing and Bower-Barff processes, so steel tools can be treated without losing their temper or edge. Even the hairlike steel needles with which the dentist probes the cavity of a tooth can be subjected to the Parker process without injury.

The deposit consisting of ferrous and ferric phosphates mixt with black iron oxide may be varied in composition, texture and color. It is ordinarily a dull gray, and oiling gives a soft matt black more in accordance with modern taste than the shiny nickel plating that delighted our fathers. Even the military nowadays show more quiet taste than formerly, and have abandoned their glittering accouterments. Here the Parker process comes into play, and it is now being applied to various munitions from cannon to hand grenades, and from cameras to buttons.

The Parker bath is not expensive and can be used continuously for months by adding more of the concentrated solution to keep up the strength and removing the sludge that is precipitated. Besides the iron the solution contains the phosphates of other metals, such as calcium or strontium, manganese, molybdenum, or tungsten, according to the particular purpose. Since the phosphating solution does not act on nickel, it may be used on articles that have been partly nickel-plated so there may be produced, for instance, a bright raised design against a dull black background. Then, too, the surface left by the Parker process is finely etched, so it affords a good attachment for paint or enamel if further protection is needed. Then if the enamel does crack, the iron beneath does not rust and scale off the coating.

These, then, are some of the methods which are now being used to combat our eternal enemy, the rust that doth corrupt. All of them are useful in their several ways. No one of them is best for all purposes. None of them will afford permanent protection. Nature is insidious and unceasing in her efforts to bring to ruin the achievements of mankind, and we need all the weapons we can find to frustrate her destructive determination.

## McCutcheon's Fancy Table Linens

*Italian Needlepoint on Cream Handwoven Linen. Set of twenty-five pieces consisting of 20-inch Centerpiece and two sizes of plate Doilies*

**\$48.50**

From France, Italy, Ireland, Spain, Madeira and Fayal Islands, also India, China and Japan, we have collected an assortment of Fancy Linens, distinctive in character and many of which are moderate in price.

**Luncheon Sets**—round, square, oval and oblong in many styles of Embroidery and Lace. Twenty-five pieces to a set . . . . \$10.50 to 175.00 per set.

**Mosaic and Italian Cut-work Tea Cloths.** One to one and a half yards square . . . . \$7.50 to 55.00

**Tea Napkins**—plain and fancy in a large and attractive variety . . . . \$5.00 to 67.50 per dozen

**Lace Luncheon and Dinner Cloths** in a number of exquisite designs. These Cloths are made in round and oblong shapes . . . . \$57.50 to 350.00

**Scarfs** of every size and description. Lace-trimmed, Embroidered, Italian Needlepoint, Mosaic, Sicilian, etc., . . . . from \$2.00 to 150.00 each.

**Tray Cloths**—oval and oblong, in many styles of Embroidery and Lace.

Estimates and drawings submitted for the embroidering of monograms, crests, etc. Linens to be embroidered for the Holidays should be ordered now.

*Our Illustrated Fall and Winter Catalogue showing many other attractive Household Linens mailed gladly on request.*

*Reg. Trade Mark*

## This New Range Is A Wonder For Cooking

Although it is less than four feet long it can do every kind of cooking for any ordinary family by gas in warm weather, or by coal or wood when the kitchen needs heating.

The Coal section and the Gas section are just as separate as though you had two ranges in your kitchen.

Gold Medal

# Glenwood

Note the two gas ovens above—one for baking, glass paneled and one for broiling, with white enamel door.

The large oven below has the Indicator and is heated by coal or wood.

See the cooking surface when you want to rush things—five burners for gas and four covers for coal.

When in a hurry both coal and gas ovens can be operated at the same time, using one for baking bread or roasting meats and the other for pastry baking—It

## VERDUN, THE GREATEST BATTLEFIELD

(Continued from page 421)

out before us was a panorama that I shall never forget as long as I live. About us the country spread out for twenty miles in all directions. Before the war the whole ridge was completely wooded. Now there was literally not a tree or even a splintered trunk left. The whole region had been so completely shelled by the great German guns that the ground was nothing but a static sea of raw earth, shell hole following shell hole like the waves of the ocean. Here, there and everywhere had been erected isolated wooden crosses betokening the spots where some brave soldiers fell. Sometimes the shells would uncover the graves, and I was told that if I walked out in the fields in any direction I would have come across many uncovered corpses.

We could see Verdun down in the valley behind us and the other six giant fortresses on the neighboring hills. The Meuse wound its silvery way thru the valley on one side, and out in front of us not a mile away were the German lines. As I stood there the enemy were firing at some of our batteries in the valley half a mile below us, and the shells were exploding, throwing up great spouts of earth as they landed in the barren expanse. We were standing directly on the roof of Fort de Souville. Our third line trenches ran almost across it. We could see Forts St. Michel, Belleville, and Douaumont, the most famous of all, as well as Terre, Thaumont and Haudumont. Pointing to a spot on my left the Colonel said, "Look thru the glass and see the village of Fieury." I looked but could see nothing. "Of course you can't see anything," he replied. "There is not even a pebble left of that town." All that now remains of civilization about Verdun is raw pocked earth, bare hills seamed by roads and little paths where the soldiers walk to and from their batteries and dugouts. It is the grimmest and most terrible vision of the destructiveness of war that the human mind can conceive.

Near where we were standing there was a broad iron disk that looked something like a gigantic turtle's back. I was told that it was the cupola of one of the disappearing French big guns below. Nearby was also a concealed anti-aircraft gun. We walked on a hundred feet and came to the entrance of the fortress. It was nothing but a hole in the ground. We walked down sixty feet into the earth and found a labyrinth of passageways leading to gun implacements, ammunition caves and barracks. As the heaviest of the German shells only dislodge thirty-five feet of earth, the soldiers in this fort had fifteen feet of leeway between themselves and danger. We crawled thru winding, slimy passages dimly lit by an occasional electric light and finally came to a little room where we met the Commandant, a dashing French soldier in a blue coat and old-fashioned pre-war scarlet trousers. He took us into the wireless station where the operator was trying to get into communication with the Eiffel Tower in Paris. We then went into the soldiers' reception room where one of the Commandant's aides played for us an American ragtime tune on an American phonograph. This seemed to amuse the French greatly and they watched us keenly to see whether we appreciated our own records. Before we said goodbye the Commandant stamped my notebook with the official seal of the fortress which I herewith reproduce. We finally came out to daylight by the pas-

sage thru which the French soldiers once rushed out in single file and killed 500 Germans when the latter made their supreme effort to capture the fort. One would have thought that the Germans could have killed them all as they emerged one at a time from the hillside. It was only another of the countless evidences of French valor in this war.

From this point we got a very good view of Fort Vaux. This was the fort that the Germans took and held for five months during the time when it was thought possible that even Verdun might fall. But the French bombarded it so hard from all the other forts that the Germans finally had to give it up.

Just then half a dozen shots came over our heads. It looked as tho they exploded down the hill exactly where the Michigan boys and the Ford cars were stationed. We afterward learned that the shells had gone a couple of hundred yards beyond where we had stood. Fortunately no one was hurt.

We then re-entered our cars and circled about the valley. I counted over my head four French aeroplanes so high in the sky that they looked like dragon flies. Tiny white puffs of cotton were punctuating the sky all about them from the German anti-aircraft guns. We passed many of our machine gun batteries firing intermittently at the German lines, and saw thousands of dugouts on the slopes of the hills, the men sitting outside eating their evening meal. We went thru a dozen villages completely demolished and saw among other curious freaks of the war's destruction a skeleton railroad train that had been caught between the German and French fire the first days of the war and had been shot thru and thru by both sides. We finally came over a pontoon bridge—the original one was dangling over the river—and then back to Verdun, where we visited several anti-aircraft batteries concealed in demolished houses.

We left the Colonel at the entrance to his underground citadel, bade him goodbye and then started for our long homeward spin of sixty miles. We had gone but a few miles beyond the city gates when an incident occurred that, while of no special military importance, I sometimes think will linger longer in my memory than anything I saw in France. We spied a young French soldier walking along the road ahead of us. He was carrying some packages in his hand, and was evidently going somewhere in particular. Ever since my boyhood days among the old Connecticut hills when my Uncle John told me never to pass a stranger on the road without giving him a lift if there was a vacant seat in the carriage I have tried to follow his advice—even in these automobile days. At all events, we slowed up and asked the young soldier if he was going our way. He said he was, and at our invitation to accompany us he jumped into the car with alacrity. He was a fine-looking young sergeant-major of about eight and twenty, with very red cheeks and a little black mustache that turned up at the corners. His coat was open at the throat as it was warm walking but he instantly buttoned it up and sat very erect and respectful in the presence of Captain Richardson, a superior officer. We soon thawed him out, however, and found him a most agreeable and informing companion. It seems that he had been in the trenches since last summer and had just got his first leave of absence to go home for a few days. He had taken off his trench uniform and put on his best one and had started to go to the railroad station when he was given some duty to

## ELECTRICAL EXPERIMENTER SCIENCE AND INVENTION

THE AUTOMATIC  
SOLDIER  
SEE PAGE 278

and now

## The Automatic Soldier

No longer confined to the imagination of the inventor, but actually patented and successfully tested. This marvellously efficient automatic soldier, controlled by wireless, will enormously magnify the fighting power of the Allied Armies. Minutely described in the October Electrical Experimenter, with color illustration and diagrams.

### The Airplane's 400,000 C. P. Assistant

Brilliant beyond compare is the Yankee airplane's "flare"; suspended in midair, above the enemy's lair, this marvellous device will prove the Hun's despair. A brilliant subject, brilliantly described and illustrated in the October Electrical Experimenter.

### Does the Camera Lie?

You often suspect magic or trickery at the movies. Mysterious as they seem, "Movie Tricks Exposed" in the Electrical Experimenter for October makes their solution as simple as A. B. C. Charts and illustrations.

### The Latest U-Boat Detector

The simplest of them all and perhaps destined to be the most efficient.

*These with more than a hundred other splendid features graphically illustrated make up an uncommonly instructive and entertaining issue.*

*The Electrical Experimenter is non-technical. It predicts and reports every phase of science and invention in plain, understandable English.*

This mirror-like device, can be attached to the mast of any ship. Fascinatingly described and illustrated in the October Electrical Experimenter.

### In 1924 Mars Will Be Eleven Million Miles Nearer the Earth

than in 1911. Another fascinating chapter in Isabel M. Lewis' series of wonderful popular astronomy articles.

### What Is Telephotography?

A big word and a big subject. So big that the Electrical Experimenter engaged the author of this amazing invention, LeRoy J. Leishman, to describe it, with illuminating chart in this wonderful October number.

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

### BLACKWELL'S ISLAND, NEW YORK CITY

#### NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course has been reduced from three years to two years and six months. Every young woman who enters a training school for nursing to-day renders a patriotic service by releasing a pair of trained hands for service "Over There."

For Information write to MISS AGNES S. WARD, Superintendent

perform. Then when he finally arrived the train had left ten minutes before and there was not another train for twenty-four hours. He had started to walk the forty miles to his little village near Bar le Duc and had intended to spend the night at some farmhouse and then reach home the next afternoon. He said his leave of absence was given him so suddenly that he had not had time to notify his wife of his coming and he was going to surprise her. I had visions of a pretty family reunion and I asked him if he had any children. He looked rather wistful as he replied that his baby girl had died since he had been fighting—and his mother also. We found out that some American troops had been brigaded near his regiment and he told us of a certain American battery whose boys had been under his personal instruction. I asked him if the Americans could fight. "Yes," he replied, "they are splendid soldiers." I asked him if they were as good shots as the French, and he said, "Yes, just as good."

"But," I said, "surely the Americans have some faults?"

He laughed and then related this incident. When the American boys had been a few days on the line they took their underclothes down to the brook and after washing them hung them out on the bushes in front of the guns to dry. Of course the German aeroplanes came along shortly and took photographs of these strange white objects. The next day the Germans completely put the American battery out of business.

"But," said the sergeant, "the Americans will not hang out their underclothes again in a place they want to conceal from the enemy."

He told us that if we would be good enough to let him out at the cross roads about three miles this side of Bar le Duc he would walk the rest of his way home to his little village two miles off the main road. But I thought to myself, "I guess Uncle Sam can afford the extra gasoline to take a French soldier straight to his home who had not seen his wife for eight months." So when we arrived at the cross roads and the Frenchman signaled to our chauffeur to stop, we gave the signal to go ahead. I never saw a man's face light up as his did when he perceived what we were going to do.

I remember as we flew along the countryside he saw a woman working in the fields. He called out, "Alloa Jeanne!" The woman looked up, but we went by so fast that she could not recognize him. "That's my sister-in-law," he said. Then we saw a one-armed soldier coming along the road. "Alloa, Pierre," he shouted as we passed. And he added, "He is my school friend." But we had vanished before Pierre could realize who had called him. In a few minutes we came to a little village in which was billeted a battalion of jet black Algerian troops with red fezes on their heads. We had to slow down to our first gear in order to get thru them. As we turned the corner of the village, our friend, pointing five hundred yards ahead to a house, said, "That's my home," and then in a second, "C'est ma femme." There she was—as pretty a young Frenchwoman as you could want to see. She was dressed all in black—I suppose for the baby—and was standing in the doorway watching the evening street throng moving by. By her side was a girl of fourteen or fifteen years old, evidently his or her sister. Of course in this out of the way village a great American Cadillac coffee colored car with U. S. A. in large letters on the side and red, white and blue stripes painted on the glass windshield was a most conspicuous sight. We

were the cynosure of all eyes. Suddenly the girl recognized him and uttered a shriek. Then his wife saw him too. First the color came to her cheeks as I have never seen it come to any woman's before. Then it receded, leaving her deathly white. I thought she would fall, but she came tottering toward us. He jumped over the side of the car, but suddenly remembering that he was in the presence of a superior officer, he turned about, drew himself up, came to attention and saluted Captain Richardson. Then, turning to me said, "Merci beaucoup, Monsieur," and shook my hand. He turned swiftly to his wife but she had retreated to the shadow of the doorway. But he picked up the young girl clean off her feet, kissed her on both cheeks as he ran to the doorway, and then as we turned the corner half a minute later we saw them still in each other's arms.

Captain Richardson and myself did not have much to say to each other for the next mile or two down the road. But finally I said, "I am sorry we did not ask that fellow his name or give him ours, for I should like to see him again in this world. I know we shall never forget him and I don't think he will ever forget us." "And wasn't it good," said Captain Richardson, who is a bachelor, "that she was such a pretty Frenchwoman."

A few minutes later we were in Bar le Duc sitting at a little round table in a quiet cafe where we ordered an excellent table d'hote dinner with some real home-made jam as a side dish. And not until after the American band from the American regiment stationed in town had paraded down the street playing "Over There" did we motor back to our headquarters and the dubious comforts of the Hotel L'Agriculture.

# THE PROBLEM OF RAILROAD FINANCE

BY LUIGI CRISCUOLO

DIRECTOR OF THE INDEPENDENT SERVICE TO INVESTORS

WHEN the study of the physical requirements of the railroads of the country taken under government control was completed, the figures showed that over a billion dollars would be required to place the properties in the condition which the experts claimed was essential to insure efficient operation. The railroad corporations are required to expand a specified sum on their respective properties either from funds obtained thru the sale of securities owned or by the issuance of new securities. The improvements are being conducted under the supervision of the government officials in charge of the physical operation of the railroads altho the railroad corporations are told the character and cost of the work contemplated.

The interest rate for money has advanced to ten per cent or higher for industrial corporations having good credit. In late years, industrial companies have been enjoying excellent credit, some being able to borrow money on ordinary unsecured notes at favorable rates. Railroads, on the other hand, have been so buffeted and criticized, often unjustly, that investors have not become over-enthusiastic regarding the possibilities of government control as affecting railroad securities, both stocks and bonds. One thing is certain, and that is that for at least twenty-one months longer than the duration of the war, holders of sound railroad securities have what amounts to a government guarantee of interest on bonds, and even dividends on stocks provided such dividends have been paid regularly during the three years ending June 30, 1917.

The railroads will not only be required to finance their budget requirements of nearly a billion dollars but they must also take care of their maturing funded obligations. Such obligations are usually in large amounts and cannot be ordinarily taken care of from current earnings, excepting in the case of equipment trust maturities which are rarely refunded. There are two sources of money: the bankers, who in turn sell to investors, and the Government which on September 1 is reported to have held in the Railroad Administration's revolving fund a balance of something less than three hundred million dollars out of an original fund of half a billion dollars. The latter figure amounts to about half of the amount required for improvements and betterments and the fund was established to meet contingencies rather than as a financing fund for the large requirements.

Let us see how the railroads have met their requirements this year by the issue of securities to the public: The sale of \$20,000,000 ten-year six per cent secured notes of the Union Pacific Railroad to a syndicate of New York bankers last June was the first public long-term operation of any magnitude since the Government took control of the railroads. The notes were sold to investors at 98 and interest, affording a return of 6.25 per cent. Aside from being the direct obligation of one of our prime railroad systems the bonds are secured by the best grade of collateral, which has a face value of \$30,000,000.

About the same time bankers took \$10,500,000 six per cent notes of the Baltimore & Ohio Railroad at a price slightly under par in order to provide that company with funds to meet maturing loans and to keep it in good financial condition until permanent financial arrangements could be made. It had been the policy of the Railroad Ad-

ministration to keep interest rates to as near six per cent as market conditions would permit. As early as May when the New York Central wanted to borrow \$6,000,000 for a term of six months the bankers had asked the current rate of seven per cent. The newspapers made the announcement a few days later that the Director General had arranged with a trust company in New York to take the notes of the New York Central at six per cent interest net. This was highly commendable for the reason that any factor which keeps interest rates down tends to keep bond prices up, and not merely corporation bonds but those of the Government. Any factor which tends to elevate the price of Liberty Bonds makes new government issues all the more attractive as pure investments.

On September first there matured an issue of \$15,000,000 six per cent notes of the Chicago & Western Indiana Railroad, a system which affords terminal and switching facilities to a large number of railroads entering the city of Chicago.

© International Film

W. G. McAdoo, director general of railroads

Negotiations were under way for the renewal of the notes for some time but no public statement was made until the notes were about to mature. Bankers stated that in view of market conditions they would be obliged to place a note bearing seven per cent interest at a discount which would afford investors a return of seven and a half per cent. They also requested a syndicate commission of one-half of one per cent and a commission to brokers of one and three-quarters per cent. This brought the cost of the loan to the railroad company up to 9.75 per cent. The Director General stated publicly that the rate was excessive and he refused to grant authority for placing the loan on the terms suggested. The result was that the note-holders did not receive payment of the principal when due on September first.

In this case there was no real hardship inflicted upon investors inasmuch as the money was already tied up. The loss to the investor was in evidence in cases where the notes were bought at a discount which discount was figured upon in reckoning the return. Then there was some loss in not being able to place the funds at current rates in other securities. The important question for holders of short term railroad securities to consider is: What will govern rates, supply and demand or government jurisdiction? It is obvious that in order to insure successful financing for government account interest rates must absolutely not be allowed to run wild. On the other hand, it is not conceivable that bankers will lend funds to railroads for less than the market rate altho they will lend to the Government for purely war purposes at four and a quarter per cent.

As there is no doubt about the ability of the Government to borrow money at four and a quarter per cent for war purposes, it is likely that it could borrow money on a special railroad bond issue at a little higher rate so that it could supply funds to the railroads at less than six per cent and make enough profit on the transaction to take care of expenses in placing such loans.

This idea was suggested in these columns some months ago. Such a departure would not only place the railroads in a position to finance themselves without difficulty but would indirectly influence bond prices to move upwards and create a demand for sound securities, which could not fail to aid the placing of new issues of Liberty Bonds.

In order to finance the railroads the Government would be in a sense competing with the bankers. But it is readily seen that with the Government borrowing funds at four and a quarter per cent a rate of seven per cent or better for railroads now operating under government control is out of proportion, tho neither the Government nor the bankers are responsible for the condition.

Until the status of short term railroad securities is fixed, we would not advise the purchase of notes of that class unless the purchaser excludes consideration of the discount at which they are purchased and will not complain if he has to consent to an extension of the principal. In uncertain times, sound long term bonds on which the investor is sure to obtain his interest regularly are preferable to high yield short term issues the principal of which may or may not be met at maturity.

# The New Books

## General Foch

THIS study of General Foch and his policies as a military leader is particularly a propos at this moment when we may well feel that upon him and his wisdom depends the future of the war. His is a task of overwhelming responsibility, but as we learn more about this little-known man we are disposed to think that he is quite equal to his task.

The sketch of him by Major Johnston tells briefly of his early years of education spent in the period just following the Franco-Prussian war, when France, realizing the defects in her conduct of the war and the reasons for her defeat at the hands of a foe no better in fighting qualities or resources than herself, set to work to study the causes for the breaking down of her army. His ideas were molded during this formative period and later when he was on the teaching staff of the Ecole de Guerre, General Foch became a leader in evolving the present French doctrine of adopting the offensive when possible. It is quite in accordance with this doctrine that he has pursued his tactics in the series of brilliant drives instituted since his promotion to the post of generalissimo of the Allied armies.

We are glad to know more of this man of whose decisive action in the first battle of the Marne few were aware, but whom the whole world hails in the second battle of the Marne.

*General Foch.* An appreciation by Major R. M. Johnston. Houghton, Mifflin & Co. \$1.

## Above the Battle

THE war has brought aviation into its own and the fast increasing supply of books on the subject is convincing even the layman of the real significance of this branch of the service—how it controls the artillery, how it assists the infantry, how it takes photographs of the enemy's fortifications and activities, how it conducts bomb raids on hostile bases and munition plants, how it attacks Zeppelins and combats with Boche planes. Captain Drake tells all this and more in *Above the Battle*, which is devoted to an intimate, non-technical account of the manner in which the airman is trained at ground and flying school, and the soul-stirring way in which he makes good at the front.

*Above the Battle* is distinctly personal—Captain Drake tells of his own experiences from the time he enlisted in the British Flying Force to the time he secured his well-earned trip to Blighty, altho he includes many incidents of British heroism in the air and of uncanny adventures of other airmen. He writes easily, keeping close to his subject; he has a refreshing sense of humor which prompts him to relate many amusing episodes wherein the laugh is on himself; moreover, he is gifted with remarkable descriptive ability which enables him to play havoc with the reader's equilibrium:

We rushed smoothly forward up a gentle sloping path, the machine leaning as steadily and secure as a rock. To see the ground flashing by and feeling away beneath given a most wonderful sense of exhilaration—power the joy of

# Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures against marine and inland transportation risk and will issue policies making loss payable in Europe and Oriental countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has  
 insured property to the value of....\$30,949,773,989.00  
 Received premiums thereon to the extent of.....\$312,671,550.90  
 Paid losses during that period..... \$152,928,388.68  
 Issued certificates of profits to dealers... \$96,523,710.00  
 Of which there have been re-  
 deemed .....\$90,801,110.00  
 Leaving outstanding at pres-  
 ent time ..... \$5,722,600.00  
 Interest paid on certificates amounts to.....\$24,494,668.95  
 On December 31, 1917, the assets of the company amounted  
 to ..... \$18,041,890.25

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

 CORNELIUS ELDERT, President,  
 WALTER WOOD PARSONS, Vice-President,  
 CHARLES E. FAY, 2d Vice-President,  
 WILLIAM D. WINTER, 3rd Vice-President.

G. STANTON FLOYD-JONES, Secretary.

speed! One feels indeed a superman, caught up in that glorious rush thru the boundless space, while the earth with all its petty life falls rapidly down thousands of feet below.

Then things happened.

To my horror the machine now careened wildly over on its side, while the floor seemed endeavoring to drive my feet and stomach into my head!

I let go the controls and feverishly clutched the sides of my seat, gazing fearfully down at the right wing tip vertically below me. The earth seemed whirling about in all sorts of strange, mad ways and in fact anywhere but where it ought to have been. My anxiety was about reaching the bursting point when the earth slid smoothly back right under me. The floor stopped its efforts, and we were being carried quietly on again by the patient machine, which I thought very good of it!

Above the Battle, by Captain Vivian Drake. D. Appleton & Co. \$1.50.

## Caste Three

HEWITT sold books at the bookseller's in Alston, Indiana. Being clever, he naturally pored over Oscar Wilde, and coming therein on the dictum that the requirements of society were your ability to amuse, shock or dine society, Hewie shrewdly concludes that shocking your way into society—i. e., caste three—cannot be done in Alston. In this he was probably right. But Alston, Indiana, is rather more human and much more likeable than Hewitt . . . until he meets Mary. Mary Young is worth going to Alston to meet, even if she did make rather an ass of Hewitt—or because of it, perhaps?

When he has been made acutely wretched by Mary Young, Hewitt finally marries a sweet young thing, and by processes slightly mysterious becomes one of Caste Three in Alston. He forgets that he, too, had been in the past "divinely discontented." As he had never been much more, one wonders that the author should seem to find this pathetic.

Caste Three, by Gertrude M. Shields. Century Co. \$1.40.

## Miss Ingalis

READERS of "Aurora the Magnificent" will be grateful for the pleasure of a new novel by Gertrude Hall, *Miss Ingalis*, and for a heroine who really cares to keep her self-respect, and to save her soul from the smothering of luxurious living.

Poverty, the shining bride of Saint Francis, has her austere charm for courageous spirits. *Miss Ingalis* makes a brave, if somewhat unusual choice.

Miss Ingalis, by Gertrude Hall. Century Co. \$1.40.

## Barbara Picks a Husband

THIS story is a satisfying mixture of real romance, rollicking humor and quick action, all delicately seasoned with satire. It is essentially a love story, which sparkles from start to finish with rapier thrusts at our social institutions. The main plot is in no wise unusual, but it unfolds ingeniously, and there's no skimming thru the book, reading a line here and there just to get the story, because the charm of *Barbara Picks a Husband* lies in the way it is told. The conversation is entertaining, the characters are refreshingly original and most decidedly of the flesh and blood variety, and the book is rich, but never heavy, with epigrams and witticisms.

Barbara Collingwood, the heroine, is a New York society girl, who opens the story by rounding up her three suitors at a dinner-party and trying to decide then and there which one comes nearest to her requirements for a husband. She has considerable trouble before she succeeds in solving her problem, because

Barbara was very exacting. What she had to give possibly exercised her mind less than what she expected to receive. She rated herself high.

*Barbara Picks a Husband*, by Hermann Hagedorn. Macmillan Company. \$1.50.

## Darky Stories That Are True

GOOD negro stories are rare. Since Joel Chandler Harris gave us "Uncle Remus" we have had nothing to equal the group of negro stories recently collected by E. K. Means. Mr. Means knows the negro and loves him and he puts all the charm and pathos of his childlike character into his sketches, which are all the more delightful for being illustrated by Kemble.

Conko Mukes, for instance, makes an irresistible picture as he walks thru the swinging doors of Hen-Scratch saloon.

The negroes in Tickfall had never seen clothes like his, so large in stripe and so variegated in color. On either lapel of his coat was a large, brassy emblem of some secret lodge. On the middle finger of each hand was a rolled-gold band ring nearly an inch wide. Across the vast expanse of his sky-muckle-dun-colored waistcoat was a gangrened near-gold watch-chain like the cable chain of a Mississippi River steamboat, and a charm suspended from it was constructed of the talons of an eagle.

It is interesting to know that a good many of these darkies are real people and that Hen-Scratch saloon actually exists.

*E. K. Means*. Illustrated by Kemble. G. P. Putnam's Sons. \$1.

## The Good Soldier

MRS. DAWSON has rendered a public service by this valuable selection of letters from the published and unpublished records of French, English, Italian and American boys who have been able to express vividly their experiences and reactions in service with the forces. Donald Hankey, Charles Péguy, Empey, and many less well known to us are here represented in a compact and inexpensive form.

*The Good Soldier*. A Selection of Soldiers' Letters. By N. P. Dawson. Macmillan. \$1.25.

## Text Books of Value

ESSENTIALS OF MODERN CHEMISTRY, by C. E. Dull. (Henry Holt & Co., \$1.40.) A concise and practical textbook, pointing out the relation of chemistry to daily life. Well illustrated.

THE MAIN CURRENT OF ZOOLOGY, by William A. Lacy, Sc.D. (Henry Holt & Co., \$1.25.) For general readers. Discusses the results of zoological advances and is intended for collateral reading in courses in practical zoology.

RUSSIA, compiled by C. E. Fanning. (Handbook Series, H. W. Wilson Company, \$1.50.) A helpful volume of articles describing the empire's political and social institutions, its religion, history, and part in the present war.

THE HISTORY OF THE AMERICAN PEOPLE, by Beard and Barry. (Macmillan, \$1.20.) American history treated according to period and topic, rather than purely chronologically, designed to instruct boys and girls in citizenship.

ELEMENTARY NAVAL ORDINANCE AND GUNNERY, by Lieutenant H. C. Ramsey. (Little, Brown & Co., \$4.) A simple, direct treatment of the subject by an Annapolis graduate for naval reserve officers. Well illustrated.

MODERN NAVIGATION, by Frank Seymour Hart. (D. Appleton & Co., 15 cents.) Designed for the old-fashioned navigator as well as for the student preparing for the Navy, it explains in elementary form the various methods of navigation.

ENGLISH LITERATURE, by Herbert Bates. (Longmans, Green & Co., \$1.50.) Textbook with numerous illustrations, liberal extracts and reading lists to be used in connection with a college preparatory course.

ECONOMICS, by W. E. Smith, C. E. (Rochester Press Co., \$1.50.) Textbook for high schools and colleges dealing with the changes in our present economic laws, by a practical civil engineer.

ENGLISH LITERATURE, by Roy Bennett Pace. (Little & Brown, \$1.20.) A simple and useful survey of English literature with emphasis on the geographical element, by the author of "American Literature."

## A Personal Appeal

# Buy Liberty Bonds— Buy to Your Utmost

The duty of every American citizen is plain—as plain as the duty of every American soldier.

The soldier's duty is to fight for Liberty.  
The citizen's duty is to *lend* for Liberty.

But the time has gone by for merely "doing one's bit". We must do our *all*, if the war is to be won. No true patriot can be content with a subscription to the Fourth Liberty Loan that is less than the limit he can afford.

Buy Liberty Bonds and buy to your utmost! The loan is larger than before—the effort must be greater than before—the obligation on each and every one of us is greater. If you bought one bond in previous Loans, buy two. If you bought ten, buy twenty now.

Back up our boys in France with a smashing oversubscription of the Fourth Liberty Loan—an oversubscription that will wake the echoes in Berlin.

Every dollar you subscribe goes to arm and equip and protect our boys in France—to save the lives of those inestimably dear—to bring them home safely.

Let your subscription measure up to your patriotism! Buy Liberty Bonds and buy to the utmost.

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

## HOW TO USE THE INDEPENDENT IN THE TEACHING OF ENGLISH

This brochure prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address: The Independent, 119 West 40th St., New York

DIRECTOR OF THE INDEPENDENT  
INSURANCE SERVICE

AS the result of the world war, all social and political conditions here and elsewhere are in a fluid and uncertain state, and no man can predict what their final permanent status will be. Society is in the unmaking, preparatory to another reconstruction. All classes of men and all departments of human activities seem to be involved in the changes which are occurring.

In a very much larger way, to me, the reaction here has some resemblance to that in Britain following the revolt against the Stuarts under Cromwell, the main difference consisting in the cause. In the seventeenth century, Englishmen again actively resumed the task of curtailing the power of the King and of enlarging the liberties of the people; the tendency here, now, seems in the direction of abridging the privileges of the individual and increasing the power of government.

I can best illustrate my thought on this point by citing the favor with which certain proposals for sumptuary legislation are met. We seem to have traveled in a circle since 1776, at least to the extent of being ready to impose on the minority conditions which, in principle at least, do not differ from those that inspired the revolt against the government of George III. It has not been many years since Macaulay, the British historian and essayist, expressed as intolerable a government which dictated what we should wear, eat, drink and think.

Lest my readers conclude that as a writer on insurance I am wandering far afield in thus traversing some of the by-paths of what in this rapid age may be regarded as ancient history, citing principles which to many seem outworn, I would remind them that among the many instrumentalities of our present civilization which will be affected for better or worse, by the changes we have been considering, none is more susceptible of injury than that of insurance as an institution. When I employ the phrase, "insurance as an institution," I am trying to distinguish between the millions who have learned to depend on it as a system of organized beneficence and the private corporations now conducting that system. My interest has ever been primarily in the people who need insurance; and secondarily in those companies only which properly, efficiently and economically furnish the service.

Looked at in the large, the well-being of mankind is not so much dependent on the facilities provided by modern science and invention as most of us admit. The advantages are comparative only. I can imagine that the sum of the happiness enjoyed by our great grandfathers who knew nothing of electric lights, fast horseless carriages, wireless communication, and luxurious railway travel was not less, if it was not more, than that we manage to secure. And thinking along the same lines, it would be difficult for us to prove that insurance was an indispensable concomitant of comfort and convenience.

This, however, is no argument against railroads, all the splendid uses to which electricity has been put, nor to insurance. While we could be happy without them, we are better served by reason of their existence and it is our duty to improve them and extend their use.

Insurance has been brought to a high state of practical utility. This has been due mainly to the rewards which are earned by meritorious individual enterprise; and in this the insurance worker is no exception to his fellows in other occupations. The doctrine that the laborer is

worthy of his hire will never perish among men; but if I am mistaken in this, then I do not hesitate to assert that when it does, the human race will "take the back track" and end where it began, in "Chaos and old Night." For a while government will be supreme, but, slowly retrograding, industry and commerce will sicken and die, and men will return to that twilight zone occupied by a race of nomads, preparatory to the final lapse into barbarism.

But, as I have said, I do not believe that we—those of us classed in a general sort of way as Anglo-Saxons—will ever deprive individual effort of its proper reward. I think we are now inclined to experimentation in that province.

ANGLO-SAXONISM, so called, has been for centuries, as we know, passionately devoted to the struggle of establishing the freedom of the individual. The founders of the American Republic and their immediate successors brought this work to the highest point it has yet achieved. The British people have since kept step with us in that cause, and the result is that nowhere else in the world can we find so full a measure of popular liberty as that which is enjoyed by the peoples under the flags of those two nations.

Is it significant that they lead all others in the science of government, in manufactures, commerce, inventions—in short, in all those things which have widened the dominion of man over nature and advanced his condition spiritually, physically and politically?

Side by side with Britain and America have existed the autocracies of Germany, Austria and Russia. The latter have commanded the same opportunities, for thru the inventions of the two first named all that has been done in the world has been communicated in detail to them. They have weakly imitated us. Why have they not equaled or surpassed us?

If the reader were asked: In what country or countries has the science and application of insurance been most highly developed he would be compelled to answer: Britain and the United States.

I think the equivalent of this comparison is attainable in nearly all the other useful lines of endeavor in which men engage, a fact which warrants the conclusion that the superiority lies in the workers, rather than in the line of work undertaken. This difference in achievement is not due to accident; and, in my opinion, it registers the respective possibilities under conditions of almost complete civil liberty and virtual political serfdom. It may be argued that the divergences are expressions of temperament; and that may be a fundamental truth, one, which doubtless accounts for the Anglo-Saxon love for freedom and fair play.

I know of nothing more wholly the product of unrestricted liberty of operation than is the British system of insurance. Its regulation by government may be described as practically negligible. The criminal and civil laws of the realm have been sufficient in preventing, correcting and punishing all that was irregular or dishonest in insurance practice. Each company has survived or perished as it deserved.

British commerce and British fire and marine insurance cover the habitable globe. There is nothing more certain of perform-

ance than a promise contained in the policy of a British insurance company. They are accepted as sterling all over the earth because their guarantees are redeemed to the last farthing.

The Germans have sought to rival the British as world traders. They have extended their shipping, banking and insurance during the past fifty years in competition with the British, and while they seem to have achieved success in creating markets for their manufactured goods, if I were to express my opinion of the quality of that success—of which I know nothing—by what their efforts in fire and marine insurance have resulted in—of which I do know something—I should pronounce it neither substantial nor permanent.

Years ago I concluded on the stock of information I had gradually accumulated respecting the policies which governed German insurance managers, that the German was a bad loser. In the language of the sporting fraternity, he is a "welcher." He not only won't, he can't, take punishment. This welching disposition was made clearly manifest to the American insuring public by the conduct of the few German companies which were caught in the San Francisco conflagration of 1906. Without an opportunity at the time this is written to reinforce my memory by referring to the printed record, I think I am correct in stating that no German company involved in that fire paid its losses at one hundred per cent, and several of them scuttled, fled the country, and left millions to be sued for in German courts. Every British company settled in full under the terms of its contracts with funds sent from their home offices, leaving the assets of their American branches intact.

In the sense that American and British insurance companies are great—and in every sense they are fully deserving of that description—there is nothing in the autocratic German, Austrian or Russian empires to be compared with them. They have had like opportunities. Why the difference? My answer would be: Individual freedom.

Long consideration of the subject has caused me to conclude that the less specific interference by government we have with insurance, the better would be the quality of the security which insurance would have to offer its patrons, and the lower would be its cost. In admitting this, I am aware that I am lining up with a small minority. General laws imposing and defining the liability of stockholders in companies of all kinds, including insurance companies; laws making the directors and officers of all corporations civilly and criminally responsible for the trusts they have accepted; and courts so constituted that these laws will be rigorously enforced, would be all the government regulation needed.

The growth to greatness of the American system of insurance is not due to state supervision nor to the thousands of laws enacted ostensibly in the interests of policyholders. On the contrary, the simple truth is that it has flourished and developed in the face of these drawbacks. All the improvements, all the added facilities, all the perfecting processes, are the work of the men who have been devoting their time and talents to the science of insurance.

Revolutionary methods will be of no benefit and will work much harm to insurance. It is a product of slow growth. Such improvements as have been made in it during the past half century are the results of evolution, a gradual unfolding, an upward progression.

OLD FASHIONED DRIED APPLES

BY CHARLES EDWARD HOOPER

IN the suburbs and the country there are more apples going to waste than going to market. Fruit that is far too good to lie on the ground or go to the cider mill is to be found in large quantities and may be gotten cheaply if not allowed to pass thru too many hands before reaching the consumer. The best wartime economy is to dry these apples—that is, cure them by the process of the sun and air. The old-fashioned method was to hang the strings of apples, unprotected in the kitchen or the open, or spread them on the shed roof, so that the flies might not go hungry. But there is a better way.

Take any uncommercial apple that is not up to the market standard; bruised, slightly wormy, specked or under size. The variety should not be too dry, but rather of the tart or snappy sort, Baldwin or Greenings or the like.

First the fruit should be pared. This may be done more quickly and easily on a machine. When pared, quarter and remove core and blemishes. String on common cotton string, using a small bodkin or darning needle. String so that the round sides of the quarters are always on the same side. This allows the rounded and flat surfaces to come in contact and a better space for thoro drying than if two flat sides came together. Leave a space of bare string about the width of the hand when tying the ends of the string together.

If it is bad weather and it is late enough in the season for the flies to have gone to roost, the strings may be hung on a rod or stick over the kitchen stove. There should be a fire at least half of the time. But a far better method of drying is that effected by air and sun.

Perhaps you have several window screens that may as well come off. The ordinary full sized window screen will answer for what the average person wants. Have constructed a frame or box minus top and bottom and about ten inches deep. Insert the screens and nail a small strip on the inside to form a rabbet so that the direct crack which invites flies is done away with. In the frame shown in the photograph one screen only is movable, being held at the bottom by cleats and at the top by buttons. The apples are hung from a small wooden curtain pole. As they will have to be removed to the house at night or in damp weather, they should not be more than three feet long—that allows several strings to dry at once—and for the width of ten inches there should be two poles. The poles hang from screw hooks and there should be a corresponding set of hooks within doors for night and rainy weather. The frame in the picture is hung on brackets. If the post went thru the middle it would balance better and could be turned completely around to get both sun and air.

New York Life Ins. and Trust Co.

52 WALL STREET, NEW YORK

Grants Annuities. Accepts Trusts created by Will or otherwise. Manages Property as Agent for the owners. Allows interest on deposits payable after ten days' notice. Legal Depository for Executors, Trustees and Money in Suit.

Accepts Only Private Trusts and Declines All Corporation or Other Public Trusts

## Our Casualty Lists—

*Let's not get used to them—  
Let's STOP them—quickly!*

**H**OW? By rolling up an overwhelming subscription to the Fourth Liberty Loan.

After four long, frightful years the tide of battle is turning! The time has come at last when MONEY MIGHT will go far toward hastening the Victory that will *stop* these dreadful casualty lists and bring our boys home again.

Buy Liberty Bonds—to the very limit of your means! Never mind how many you have bought already—buy more, and more, and more!

Don't think about the money—that will all come back to you with interest. Think about the brave young Americans who are fighting and suffering and dying Over There for you.

*Don't make excuses—make sacrifices!*

## WIPING OUT THE ST. MIHIEL SALIENT

(Continued from page 419)

whether it is merely the first stage in a more extensive offensive is of course something that we do not know. Neither do the Germans and therein lies its importance. A fresh army of 1,500,000 men has been brought across the Atlantic and placed upon the quietest front in France. The coast defense guns of Sandy Hook have been set up with range of Germany's most famous fortress. Whether these troops remain immobile or not, whether these guns are fired or not, the Germans must be constantly prepared to oppose them. Forces already too scanty to hold the Hindenburg line must be still further depleted to meet the American menace. This extends the radius of Foch's initiative.

We can now begin to grasp the full scope of Foch's strategy. The lineup of the Allies is as follows: first, the Belgians, who hold a little corner of their kingdom near the sea, second, the British, whose line extends from Ypres to St. Quentin, third come the French, whose sector extends to Verdun, and fourth, the Americans, to whom more of the front is being entrusted as their numbers increase until, we may surmise, they will ultimately be put in charge of the rest of the line to its end at the Swiss frontier. All these armies are more or less intermingled but this in broad outline are their especial posts. To America, then, France has assigned the frontier where her hopes are greatest, the border of Alsace-Lorraine. For more than a year American soldiers have been fighting on the German side of the imaginary line drawn by Bismarck's pen on the map of France in 1871. Their latest advance from St. Mihiel brings them close to the boundary at a point further north. By driving back the Germans from the banks of the Meuse the French regain the use of the railroad line running along the western side of the river and connecting the fortresses of Verdun and Toul. Behind the American front is the elaborate system of supply stations, hospitals, concentration camps, rest resorts, repair shops and cold storage warehouses such as Mr. Holt has been describing in these pages. New railroads have been constructed leading directly from the front to the French ports that have been set aside for American debarkation. The Americans since they have been in France have constructed new harbors, towns and railroad of their own and now they constructed a new front of their own, the base line of the St. Mihiel triangle.

Looking at the sketch map of the French front we see that the battleline as drawn in 1914 and substantially maintained since makes two abrupt turns, almost at right angles: one bends about Laon and the other bends about Verdun. When the Germans, last spring, undertook their great offensive they started from the Laon salient as a vantage point and from either side of the apex advanced westward and southward. When the Allies start their great offensive, this fall or next spring, we should expect them to start from the Verdun salient as a vantage point and from either side of the apex advance eastward and northward. The fact that such a movement is to be expected may be a sufficient reason for choosing some other plan, but if Germany does not have to meet such a maneuver she will have to guard against it. At any rate the Americans having been stationed on the right flank of the Verdun salient occupy a post of great honor and responsibility.

## RED GUM "AMERICA'S FINEST CABINET WOOD" RED GUM

AN ENDURING HARDWOOD, SOFT AS SATIN, NATURAL TONE A RICH, WARM BROWN. "A JOY TO THE EYE."

RED GUM trim prevails throughout this residence of Murray Springer, Esq., Longwood Drive, Walden, Chicago. Mr. Arthur Foster, Architect.

## Aches and Pains

vanish quickly after applying the powerfully efficient antiseptic liniment Absorbine, Jr. Don't experiment—use Absorbine, Jr., first, which saves time and money—only a few drops usually required to do the work.

**Absorbine, Jr.**  
THE ANTISEPTIC LINIMENT

Does everything usually expected of a high-grade liniment, and in addition is a positive antiseptic and germicide. Its germicidal properties have been verified time and again by competent chemical laboratories and in actual practice. Being a germicide makes Absorbine, Jr., a better liniment and increases its usefulness.

Absorbine, Jr., is purely herbal and therefore safe to use anywhere. It is a clean, pleasant preparation—does not stain or leave a greasy residue.

\$1.25 a bottle at druggists or postpaid

A Liberal Trial Bottle will be mailed to your address on receipt of 10 cents in stamps.

W. F. YOUNG, P. D. F.  
283 Temple St., Springfield, Mass.

## Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein, for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. Real teaching.

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, especially valuable for its full reports of the literary market. Besides our teaching service, we offer a manuscript criticism service.

## GOING TO BUILD?

If you are planning to build a home, a factory, an apartment house, or a chicken house, do you know the modern materials which can serve your purposes best?

Do you know all about Concrete, Cellar Drainers, Insulating Felt, Fire-proof Windows, Glass Sky Lights, Building Boards and the thousand and one things which go into a modern home or factory, and where you can get them?

The Independent thru its Business Consulting Service can give you information on practically every article that is used in building construction. Send for our "Check List" and mark the articles on which you wish information. A nominal fee is charged, depending upon the information asked for. If our report isn't what you want, you owe us nothing.

Send for check list today. This service is confidential to Independent Readers.

## IOWA SECURITIES On Part Payment Plan

Denomination  
**\$100 — \$500 — \$1000**

We have issued two books of unusual interest to those who are seeking investments that combine

**Certainty of Income  
Safety of Principal  
Ease of Marketability**

Ask for *Iowa Investments No. 1556* and *A Safe way to Save No. 1558* and learn how easy it is to own an Iowa Municipal Bond, Iowa First Farm Mortgage or Iowa First Farm Mortgage Bond.

**Bankers Mortgage Company**

Capital \$2,000,000  
Des Moines Iowa

## Does Your Money Make You 10%?

An incorporated association of Christian workers desires to enlarge the scope of its work. Additional capital is required. If you have a hundred dollars or more that ought to bring you in 10 per cent to 12 per cent clear, here is a safe investment. Besides, you will help a very worthy activity of the Church. Only a limited sum will be accepted as a loan, when this amount is secured, all further offers will be rejected. Bond is given for payment of interest as well as principal. Loan must be made for six months, year, or eighteen months. For any further information, write the Pastor of the First Baptist Church of Cadiz, Kentucky, Lock Box 118.

### DIVIDENDS

## UNITED SHOE MACHINERY CORPORATION

The Directors of this Corporation have declared a quarterly dividend of  $1\frac{1}{2}\%$  (37½ cents per share) on the Preferred capital stock, and a dividend of 2% (50 cents per share) on the Common capital stock, both payable October 5th, 1918, to stockholders of record at the close of business September 17th, 1918.

L. A. COOLIDGE, Treasurer.

### UTAH COPPER COMPANY

120 Broadway, New York, Sept. 10th, 1918.

The Executive and Finance Committee of Utah Copper Company have declared for the quarter ending September 30th, 1918, a dividend of Two dollars and fifty cents (\$2.50) per share, payable September 30th, 1918, to stockholders of record at the close of business on September 18th, 1918.

The books for the transfer of the stock of the Company will remain open.

C. K. LIPMAN, Asst. Secretary.

### The New York Central Railroad Co.

New York, September 18, 1918.

Conditioned on the approval of the Director General of Railroads being given, a Dividend of One Dollar and Twenty-five Cents (\$1.25) per share, on the Capital Stock of this Company has been declared payable November 1, 1918, at the office of the Treasurer, to stockholders of record at the close of business October 8, 1918.

MILTON S. BARGER, Treasurer.

A constantly increasing number of readers are securing valuable information through the Insurance Service Department conducted by W. E. Underwood, Director.

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. Talking and Writing about Current Events.

A. "The school is a center for accurate information about the war, information about Government needs, information about opportunities and duties for personal patriotic service." Dr. John H. Finley, New York State Commissioner of Education.

1. Give a speech to your class explaining why it is the duty of every high school pupil in the United States to read good periodicals regularly, especially during the course of the war.
2. Explain, in writing, how the study of a good periodical aids in making one a good citizen, and a good student in English.

#### B. Wiping Out the St. Mihiel Salient.

1. In order to talk intelligently concerning war you must know the vocabulary of war. Define the following words: salient, moat, escarpment, parapet, glacis, fortifications, impregnable, frontier, barrier, fortresses, pontoon, battalion, brigaded, right flank.
2. From this article and the article in *The Story of the Week* give a clear, oral account of the reduction of the St. Mihiel salient.

#### C. Why It Is a "Liberty" Bond.

1. Give a talk showing the gradual development of Germany's plan for world conquest.
2. Give an emphatic talk showing the fatal results of any peace made at the present time.
3. Give a talk concerning the history of democracy.
4. Explain how a German victory would affect literature.

#### D. Insurance as a Product of Freedom.

1. Give a talk showing the good results of the Anglo-Saxon love of individual freedom.
2. What conclusions are to be drawn from the actions of German insurance companies?

#### E. The Austrian Peace Feeler.

1. Summarize the motives that prompted the Austrian note.
2. Tell why you admire President Wilson's reply.

#### F. The Short Way with War Industries.

1. Write a paragraph of contrast concerning two kinds of people in America.

#### G. The Story of the Week.

1. Give a talk in which you present the important domestic news of the week.
2. Explain what great military preparations are now being made by the United States.
3. What effects may follow the Allied offensive in Serbia?

#### II. Literary Interpretation.

##### A. Lenine and Trotsky.

1. First, explain the following passages; secondly, show that the words used have literary value: (a) This name *you* took. (b) Their sacrifice. (c) Condemning what you thrive by. (d) The mask you wore for Perfidy. (e) Your candor was a labyrinth of lies. (f) You showed a path with flowers strewn. (g) Thronging like sheep. (h) The sharp, uplifted knives.

#### III. Some Questions of Rhetoric.

##### A. Verdun, the Greatest Battlefield.

1. By what rhetorical means does Mr. Holt make this article interesting?
2. Read aloud passages of remarkably clear description.
3. Show that the story of the sergeant-major illustrates the following: interest, romance, pathos, direct discourse, climax.

##### B. The Fight Against Rust.

1. Show how the article illustrates the following characteristics of a good technical article for general reading: (a) attractive introduction, (b) clear development, (c) effective conclusion, (d) allusion, (e) illustrations based on the familiar.

##### C. Dollars and Dynamite.

1. Name and explain the following figures of speech: (a) Iron is the master of gold. (b) Money is like the tiny explosive cap. (c) Germany could afford to laugh. (d) The dynamite slumbers until the cap rouses it. (e) What you are really giving is mightier than any cannon. (f) It is a magician's wand. (g) Weak as a reed.

##### D. Industrialized War.

1. Show by what steps the writer proves that "Victory is no longer on the side of the big battalions."

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. The Problem of Peace—"For a Lasting Peace," "Austrian Peace Overture," "The Austrian Peace Feeler," "President Wilson's Reply."

1. Summarize the war aims and the peace proposals of the Central Powers and of the various Allies as they have been stated in the documents issued during the past two years.
2. How do you account for the issuance of the Austrian Note just at the present time? What are the reasons why we cannot accept the proposal at the present time?
3. Is it true that "all peoples, on whatever side they may be fighting, long for a speedy end to the bloody struggle"?
4. Study the paragraph of Austria's proposal beginning: "Far more outspoken than in the domain of concrete war aims," etc. In view of these statements why does President Wilson say that the United States "will entertain no proposal for a conference," etc.?

#### II. Progress of the War—"The American Soldier in France," "Wiping Out the St. Mihiel Salient," "Verdun, the Greatest Battlefield," "The Capture of St. Mihiel," "French on Chemin des Dames," "A Drive Against Bulgaria."

1. Describe as fully as you can the method by which the American army won the battle of St. Mihiel. "In itself, the recovery of the St. Mihiel salient cannot be called a major operation." Why, then, have the American newspapers made so much of the event?
2. "Here they are actually on the German border, within gunshot of its strongest fortress, Metz." What are the chances of a successful attack on Metz? If Metz is captured what will be the result?
3. Why does Mr. Holt regard Verdun as "the Greatest Battlefield" of the war?
4. Show that there is a direct connection between the Allied attack on the western front and the renewal of activity in the Balkans.
5. Why is it true that "the Bulgars have long since been sick of the war"?

#### III. The Fourth Liberty Loan—"Why It Is a 'Liberty' Bond."

1. Compare the plans and accomplishments of the first three Liberty Bond issues with the plans and proposed accomplishments of the fourth Liberty Bond campaign.
2. What are the proofs that "the Hohenzollerns . . . plotted the conquest of the world," etc.?
3. "Thanks chiefly to the Russian Bolsheviks the Kaiser now lords it over nearly a quarter of a billion of human beings." Prove that this is so.
4. Discuss one or more of the historical cases which the author instances to prove his point.
5. After you have read the article write a summary showing "Why It Is a 'Liberty' Bond."

#### IV. The Doctrine of "Laissez Faire"—"The Short Way with War Industry Workers," "Insurance Is a Product of Freedom," "War Labor Board Sustained."

1. Show by means of quotations that the editorial writer and the author of the special article have two different points of view. With which one do you agree?
2. Why is it "a fortunate circumstance that both parties . . . have simultaneously been called to account"?
3. "I do not believe that we . . . will ever deprive individual effort of its proper reward." Do you find any evidence in the article, the editorial or the news item that we are trying to do so?
4. "Anglo-Saxonism, so-called, has been for centuries . . . passionately devoted to the struggle of establishing the freedom of the individual." Is there evidence that this freedom will in the future be curtailed? Will this be a good or a bad thing?

#### V. Industrial Organization and the War—"Industrialized War," "Dollars and Dynamite," "Industries Classified."

1. "This industrialization of war has had some interesting by-products in the field of politics." What are they?
2. "Money is like the tiny explosive cap which sets off the charge of dynamite." What does this statement mean?
3. Upon what basis is industrial classification being made by the Government at the present time? Do you find any evidence that such classifications may be made after the war is over?

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. ## REMARKABLE REMARKS

**HENRI BARBUSSE**—Mankind is committing suicide.

**CORSE PAYTON**—Once a Kaiser—never a gentleman.

**THE KAISER**—Wilson is in the hands of the Wall Street group.

**UNCLE SAM**—I want to see a Liberty Bond in every American home.

**HERBERT C. HOOVER**—There will be no food rationing in this country.

**PROF. CALVIN THOMAS**—We are not immune to the bacillus of megaloccephaly.

**DOROTHY DIX**—Why do men pass over domestic girls for the fluffy ruffles ones?

**RICHARD DEHAN**—Fibbing seems to be natural to girls, like crimping the hair.

**CHARLIE CHAPLIN**—I'd be foolish to say that I do not enjoy being a public favorite.

**GENERAL MARCH, CHIEF OF STAFF**—A great war is not to be won by half measures.

**METS MARAUDER**—Dey told us dat der American army vas a joke. It vas, but on der Kaiser.

**H. G. WELLS**—The ordinary British colonel is a helpless old gentleman. He ought to have a nurse.

**MRS. JAMES FORD**—It would seem as tho there was never such a demand for aprons as there is today.

**SENATOR JOHNSON**—Terrorism makes it impossible today for any newspaper in this land to print what it desires.

**GERMAN OFFICIAL COMMUNIQUE**—The evacuation of the St. Mihiel salient was completed without interference.

**REV. W. T. McELVEEN**—We may not believe in original sin but there are certainly a lot of original sinners.

**THE SURGEON GENERAL OF THE UNITED STATES**—Your fate may be in your hands. Wash your hands before eating.

**CONGRESSMAN REAVIS**—I have come away from France with a love for the American soldier that is unspeakable.

**SYLVESTER J. SIMON**—I have just written a remarkable book on how to acquire pep—ginger—the "sic em" spirit—guts.

**P. W. BRUNDAGE**—It may not generally be known that some of the gold fish kept in glass vessels die from sheer want of rest.

**ED. HOWE**—The modern efficiency you are hearing about these days is the same old "Hard Work" your grandfather heard about.

**A NEW ZEALANDER AT THE FRONT**—We get on tip top with the Americans. And take it from me, Max, they are the dinkum stuff, too.

**R. L. GOLDBERG**—The Crown Prince is a great family man. He is a frequent visitor among all the families of his acquaintance but his own.

**AMY J. BAKER**—When a girl of eighteen falls in love she goes to the palmist; when a woman of forty falls in love she goes to a beauty doctor.

**SENATOR SHERMAN**—Behind this ram-part of a nation's devotion hides a coterie of politicians gilded and painted by a group

## THE CHARGE OF THE TANK BRIGADE

(Shade of Tennyson, forgive!)

Half a league, half a league,  
Half a league onward,  
Move like the scythe of Death  
Tanks, by the hundred.  
Boche bullets harmless glide  
Down from their metal hide,  
While from that steely Hell  
Showers of shot and shell  
Volley'd and thunder'd.

Was there a Boche that stayed  
To see how they were made?  
Not when each Fritzle felt  
His hours were number'd.  
Theirs not to peek and pry,  
Theirs not to wonder why,  
Theirs but to sprint, or die.  
Straight to Berlin they fly,  
Huns by the hundred.

Tanks to the right of them,  
Tanks to the left of them,  
Tanks back and front surround  
Fritz, Hans, and Herman.  
Rolling the wires straight,  
Onward they navigate,  
Crushing each creature that  
Smells like a German.

What is that yellow streak  
In the dim distance? Speak!  
Is it a circus freak?  
Has Nature blunder'd?  
Heh! 'Tis the Kaiser's kin,  
Trying to follow in  
Vain his retreating chin.  
Small blame you wonder'd!

Honor the Tank Brigade!  
Honor the fleet that made  
Every last Boche afraid  
Prussia was sunder'd!  
End all this sin with them,  
Help us to win with them,  
On to Berlin with them!  
War-Lord, who blunder'd!

Vida Savage Owens in the New York Times

# How Spending \$2 Ended Their Worry Over Money Matters

**This Couple Had Never Saved a Cent—Now Putting Money in the Bank Every Week on Exactly the Same Salary as Before.**

**A**FTER ten years of trying to save, Elizabeth and I didn't have a nickel laid away to show for all the many pay days that had come and gone. The best we could say was that most of the time we had managed to keep out of debt.

Then one day we found out what was wrong. We discovered the secret of making each week's salary go around, with something left over to put in the bank.

We haven't become misers. Haven't cut down our scale of living. We indulge in more pleasures and amusements than ever before—and without that old guilty feeling that we are spending money we can't afford. And yet we are now saving over \$15 a week, regularly as clockwork, on exactly the same salary that until recently was never enough.

About the happiest day of our lives was when we made the deposit that brought our bank balance up over the \$500 mark. To people who have never had any trouble in saving, \$500 may seem nothing to brag about. But in our case, after ten years of being poor in spite of a fair salary, that small but steadily growing bank account of ours looks as big as a house.

It has given us a feeling of self-respect that we never knew in the days when we were always more or less strapped. For the first time in our married life, we've at last got a margin of safety between us and the poor-house.

And best of all, we know that our present bank balance is only a starting point. We know that we have at last found the way to provide for a home of our own and for a comfortable old age, instead of always trusting to Providence. And incidentally, we get a whole lot more satisfaction out of the money we save than out of any money we ever spent.

## Depends on What You Spend and Not on What You Earn

Looking back, I don't think there has ever been a time when we could have been accused of downright extravagance or four-flushing. Yet it was always tight squeezing to make both ends meet.

Elizabeth and I often talked it over. We realized that we were

getting older every year, and that we were skating on thin ice. It worried me when I thought of what might happen if I should be laid up with sickness, or if any other unexpected development should cut off my income. Then there were the kiddies, with nothing set aside for their education. And no permanent roof over our heads. It wasn't a very pleasant outlook to think about.

We used to excuse ourselves by thinking that it was all a matter of income. But as I have since discovered, the size of one's income has mighty little to do with it. It is the amount of *out-go* and not the amount of income that makes the difference between poverty and independence. If you can't save on \$1,000 a year, then you can't save on \$10,000 a year.

## Breaking \$5 Bills Is What Kept Us Broke

My experience is that it isn't the big expenses that keep people down to their last dollar, but the little items. As I said to Elizabeth the other day, I can see now that it was breaking \$5 and \$10 bills that used to keep us broke. When it was a question of parting with a \$5 bill or bigger in one lump, we gave the matter a little thought. But once the bill was broken, we were often careless with the change. That is where our money went—for little things that didn't do us any good. A quarter or a dollar by itself doesn't seem worth worrying about. But in the course of a year, these small amounts all added together soon run up into big ones.

## The President Sent For Me

Our salvation came about through a little fatherly interest on the part of the President of the Company I am with.

One day he called me into his office. "Carey," he said, "we have decided that we need a Chicago branch. I am going to send Bates out there as manager. I have been thinking about giving you his job here—which means a bigger salary, of course. But instead, I have decided to give you some advice, and then wait and see what happens."

He paused a while, looking me straight in the eye; then point-blank: "Carey, how much money have you saved?"

I didn't know just what he was driving at. Also I felt a bit cheap. But I owned up that my bank account was practically at zero.

"That's what I was afraid of," the president answered. "Maybe you think I am getting too personal. But here is where it affects me. I have noticed that the man who saves a little money as he goes along can always put a little more into his work than the fellow who is constantly worrying about his personal finances. If a man can't save, he is always in hot water. Sooner or later it is bound to hurt his work—bound to hold him back, and maybe stop his progress entirely."

"Then again—if a man can't manage his own pocket, how can he be expected to manage bigger things in business? That job of Bates' involves management. You are the logical man for the place—except for that one thing; you haven't made a success of managing your own affairs. Now maybe I can help you. Suppose you tell me what seems to be keeping you poor?"

## Making it Easy to Save

It was plain that the president was sincerely anxious to be helpful. But I had to admit that I didn't know myself just what the answer was.

"Well," he said, "perhaps I can tell you. Saving money isn't half as hard as most people think it is. The trouble is they go about it wrong. The only practical way to get ahead is to have a definite system or schedule, and stick to it. Split your salary up into proportionate parts—so much each week for rent, so much for clothing, etc. In business we call it the budget system. It's the only sound way."

"The budget system shows you what you can afford and what you can't—before your money is gone, and not after it is too late. It elimi-

nates all that haphazard, hit-or-miss kind of spending that is keeping so many people in trouble.

"Now I'll tell you what you do. I know of an almost automatic method for adjusting outgo to income, and for laying something aside each week. It is called the Ferrin Money Saving Account Book. It shows you how to manage each week's salary, so you'll always come out ahead at the end of each week, month and year. It works just as well on a small income as on a big one. It automatically keeps track of every cent—always shows in advance just where each dollar *should* go, and also where it actually *does* go. It's the best system for managing personal money matters I ever saw—so simple that a twelve year old boy or girl could use it; and takes only a couple of minutes a day.

"I use it myself—or rather my wife does. The other night she showed me how this book has saved nearly \$1,000 for her in the last six months—not by any skimping, but simply by keeping track of things and thus avoiding waste.

## 4 Years of Help for 50c a Year

"If I were you," the president continued, "I would try this Ferrin Account Book at once. It will cost you only \$2, and is laid out to take care of all personal and household affairs for the next four years. That makes the cost only 50 cents a year. On your salary it ought to save at least \$600 to \$800 a year, without any cutting down that you can feel. Then let me know how it works out, and we'll talk about that new job again."

Well, I got the book. Elizabeth was delighted. Said she had no idea that money matters could be so simplified. For the first time in our lives we have learned how to manage. The big chief was right when he said that saving is easy if you go about it in a systematic way.

Incidentally, when I show<sup>1</sup> my bank book to the chief a few weeks ago, I got my chance at Bates' old job—and my pay has taken a jump of \$1,000 a year. But we've learned our lesson—none of that old spend-in-a-hurry-and-repent-at-leisure this time on the strength of that raise; most of it is going into the bank, on top of at least \$800 a year more that we have found we can save out of my former salary.

The Ferrin Money Saving Book stops the leaks and wastes because it figures ahead and looks ahead from day to day and from one year's end to the other—all with only two or three minutes' attention a day.

Even if it helps you save only a few dollars a month, it is still a mighty profitable investment. In these days, every home should be on a business basis. Every dollar must be watched. If you don't need it, Uncle Sam does.

## 5 Days' Free Examination—No Money Necessary

The Ferrin Money Saving Account Book is simplifying money matters for people all over the country—helping square up bills and debts—putting money in the bank for people who never before saved a cent. It will help you in the same way. We feel so sure of this that we offer to send you the book on approval for 5 days' free examination, so that you can see and judge for yourself.

You don't need to send us a single penny in advance—simply send your name and address on the coupon at the bottom of this page. Then after you look the book over and see how it simplifies the problem of saving, you can either send us \$2 in full payment and keep the book, or else return the book and there will be nothing whatever to pay. For your own good, mail the coupon today, then let the book speak for itself.

## Whether You Have \$500 a Year or \$500 a Week

"How do they do it on his salary?" Probably you have often asked this question of yourself about this or that couple among your friends or neighbors. You know their income is smaller than yours; yet they seem to live just as well, and at the same time have a comfortable and constantly growing bank account, while you barely manage to keep up with expenses.

The Ferrin Money Saving Account Book gives the answer. It makes good management easy.

The secret is in the budget system—buying and spending according to a schedule instead of haphazardly. Whether your income is \$500 a year or \$500 a week or anywhere between, this book shows you how much you *should* save each week, and then almost automatically helps save it for you—shows you what proportion of your income should go for rent, how much for recreation, how much in the bank, and so on with every item. Then every day it checks up and shows you just where you stand—watches over your money both before and after you spend it.

It is laid out in columns that provide a daily record of every item of both income and outgo for four years—all you have to do is set down the amounts each day in the proper columns. No other writing required. No knowledge of bookkeeping necessary. Handsomely and durably bound in dark blue imitation seal grain leather, semi-flexible, stamped in gold. Sent on approval—see coupon.

## LOYALTY AS CAMOUFLAGE

THE reaction of the American people to the Austrian peace proposal was one of the most impressive examples of instantaneous concurrent response by millions of human beings to one specific provocation ever witnessed in human society. When we remember how divided the same people was upon all the issues of the war before we entered into it, and how reluctant many hundreds of thousands of well intentioned persons were to countenance American participation, the rapidity with which a solidarity of purpose to destroy German militarism was attained is comparable only to the swiftness with which thousands of cubic miles of moisture laden air rush into the vortex of a cyclonic storm when an energetic center is formed. If there are still misguided minds in the community who think that we ought to negotiate with the Central Powers, and by negotiation stop the war, they at least know now that they cannot stand up against the tempest of American determination.

Such tremendous power as this unity of purpose creates is a fact to be profoundly thankful for because it gives the double assurance that the war will be fought to a real decision, and that we are now safe, in the United States, against a serious hampering of our war activities by any of the fifty-seven or more varieties of the moral traitor who gives aid and comfort to the enemy as far as he can without getting himself sent to Atlanta or Fort Leavenworth.

It would be a silly bit of credulity, however, to believe that all of our moral traitors have suddenly become loyal. There is a considerable part of an army corps of men and women in the United States, not German, nor even of German blood, nor Sinn Feiners either for that matter, who are disloyal at heart but have camouflaged themselves with professions of loyalty and an elaborate outfit of hypocrisies. They have ceased to be dangerous if they ever were, but they are perhaps worth studying as curious exhibits in mental and moral pathology.

Like all abnormal unfortunates they are victims of irre-

sistible obsessions and display a simple faith in childish trickeries.

One of the most infantile of these is the subjunctive or the conditional mood. "If" we could persuade Germany that the Allies do not intend to eat her alive she might become a sweet and gentle neighbor. "If" the Allies would only talk things over in a frank and reasonable way with the Central Powers it might be possible to accomplish an infinitely more satisfactory settlement than can be won by the bayonet, and so on thru the whole world of birds that might be caught by putting salt on their tails.

Another puerility is the "judicial mind" trick. Let us not forget, it is urged, that Great Britain, as well as Germany, has done many reprehensible things. In our denunciations of Kultur let us remember German efficiency and German music. If we don't like German atrocities, let us recall old Leopold of Belgium and the wicked things he did on the Congo. In any case, let us never be precipitate, but stand at attention like the hungry ass between two equally distant and equally succulent bales of hay.

A favorite pose is the attitude of intellectual caution. Scrutinize the Bolshevik documents. Some of them may be forgeries. Don't believe all the dreadful things you hear about the crimes of Trotzky and Lenine. Remember that Bolshevism is a "religion." Patiently examine all the evidences, avoid "hysteria," and await developments.

The hypocrisy that smears and sticks these trickeries together like a mucilage is the sentimentalism of a "human brotherhood" which excludes from its emotional embrace all capitalists, intellectual aristocrats and bourgeoisie, but welcomes to its heart the jail birds of all nations and races. This creed does not quite dare to proclaim itself boldly as anarchism, and its devotees imagine that they can maintain themselves as respectable members of society by picturing Christianity as piffle.

We are sorry for these disloyalists camouflaged with loyalty, but in these days of tension they doubtless have a certain value as a minor diversion.

## CONVICTS IN WAR SERVICE

THE New Jersey plan to put convicts into essential war service and give them military training is a social experiment of real importance and it will be closely watched by students of criminology and penology, as well as by the military authorities. The plan has often been discussed, but never really tried. In every war thruout history individual convicts, and often a good many of them, have served in the armies, but no attempt has hitherto been made to utilize the entire convict power of a state under systematic and intelligent supervision.

The plan proposed by Hon. Burdette G. Lewis, Commissioner of Charities and Correction of New Jersey, and approved by the War Department will put the convicts of that

state at work in building roads and railroads, digging canals, ditching and drainage and agricultural labor. They will be subjected to instruction by institutional officers under the supervision of United States Army officers. Military training will be a part of their discipline, and it is proposed that by good behavior and achievement they shall earn the right to go into the fighting forces; but since Army men usually oppose the placing of felons and misdemeanants indiscriminately with other troops, the Lewis plan provides for segregation in separate army divisions.

If the experiment succeeds in New Jersey it will probably be widened to bring the entire convict man power of the nation, a force of about 400,000 prisoners, into war service.

This is an important item, on every account to be conserved if possible, but the Third Assistant Secretary of War, Frederick P. Keppel, who has the matter under consideration, is wise in deferring decision until the results in New Jersey are known.

The attempt will fail unless it can be kept out of the hands of sentimental humanitarians, whose first thought always is for the offender, and who as a rule care little for the welfare of law-abiding society. If Mr. Lewis's plan is to be converted into practical success the first consideration will have to be the military utilization of men who have forfeited their freedom. Community safety will have to be regarded next and the convict himself will have to take what sympathy and interest are consonant with these imperative requirements.

It is a strange and absurd miscarriage of common sense when the least deserving and the least useful members of human society are comfortably lodged, abundantly fed and kindly cared for in absolute safety, while men of unselfish patriotism, exceptional intelligence and education are dying by tens of thousands to make the world free and humane. Mr. Lewis's proposal is commendable if it can be carried out in a businesslike way with military strictness and free from Bolshevik doctrinairism.

## AS OTHERS SEE US

WHILE we on our side of the Atlantic are assiduously cultivating a love for France as the foundation of a true *entente cordiale*, the French on their side are doing the same for us. Numerous books, articles and addresses are devoted to interpretation of American life and the eulogy of American institutions. One of the most enthusiastic and interesting of these friendly manifestations is the lecture on "The Land of Justice and of Wilson" by Maitre Henri-Robert, *Bâtonnier* of the Order of Advocates, and published in the *Journal de l'Université des Annales* of September 1, 1918. He gives an account of the peculiarities of American law and procedure enlivened by anecdotes of Lincoln, Choate and McKinley. He commends our practice of holding executions in private as better than the French way of making them a spectacle for the curious and vicious. Then he turns to the public and popular executions which in some years outnumber the legal and private ones and gives the following picture of the procedure of this form of American justice:

The criminal is arrested. He is conducted to the public square. The crowd that seized him assembles and deliberates. The magistrates intervene. They endeavor to have the law respected. In the name of the law they demand that the criminal be delivered to them, promising speedy justice. The question is put to the crowd which has constituted itself a supreme tribunal. It never acquiesces in the demand of the magistrates. They are told to retire. They depart and the trial begins immediately. The witnesses for the prosecution and defense are heard. The president-elect addresses the crowd asking if any one will speak in favor of the accused. Sometimes there is found an amateur or a professional lawyer who extemporizes an appeal. He is listened to in silence. The question of condemnation is put to a vote and if it is affirmed the execution follows without a second's delay. If it is a hanging the condemned man is launched into eternity. *Voilà quelle est la Loi de Lynch. (Vifs applaudissements.)*

In confirmation of this account the magazine publishes a half-page halftone from a photograph of an American lynching bee in which a jovial crowd have hanged upon a tree a German spy and strike promoter.

Maitre Henri-Robert admits that lynch law might be called "barbarous, frightful, savage," but he explains that it flourished in a scarcely civilized America and is tending to disappear, that it originated in race hatred and is encouraged by the complications and delays of American court procedure. With all our faults he loves us still. His sole aim, as he says, is to inspire a greater love and admiration for this marvelous and incomparable people, idealistic and self-sacrificing, which is shedding its blood on French soil. He closes with a vision of an ideal Temple of Justice, in the

center of which, in the place of honor, is installed the statue of President Wilson, the highest moral figure of the present time, the living incarnation of Honor and Justice. (Long and enthusiastic applause. The public demands with insistence the eminent speaker who is disrobing and does not reappear to receive the salutations.)

## THE SECRETS OF THE BOLSHEVIKI

THE Bolsheviks have been hoist by their own petard. The Germans, by whose aid they were established, tricked and foiled them at Brest-Litovsk. The weapon of assassination which they employed against their opponents is now turned against them. They tried to discredit the cause of the Entente Allies by publishing their secret documents, and now the Bolsheviks have lost their own reputation thru the publication of their secret documents.

With a calm and deliberate gesture, Uncle Sam unbuttons the inside pocket of his star-spangled vest—that same capacious pocket from which he drew the Zimmermann message, the *spurlos versenkt* note, and other private papers of the Kaiser's—and takes from it a package of seventy documents from the archives of the Bolsheviks. Some of them are originals or photographs of originals, initialed by Lenine and Trotzky and marked "confidential," "private," "secret," and "very secret." These documents Uncle Sam has had laid away in his pocket for the last six months, waiting for a suitable time to bring them out.

In importance these Bolshevik papers rank with the Lichnowsky memoir and the "secret treaties" of Petrograd. And like them, these are not so much "revelations" as confirmations of what has been more or less confidently surmized by those who had followed the course of events. It was, for instance, well known that Lenine and Trotzky and other leaders of the Bolsheviks were, when the revolution broke out, brought by the German Government from Switzerland in a special train to Berlin, and so sent on into Russia by way of Stockholm, and that they were abundantly supplied with funds, which of course could only have come from German sources and could only be intended to serve German ends, namely, the demoralization of Russia and her elimination from the war. This also was the aim of the Bolsheviks, for they hoped by demolishing the old régime to set up on its ruins a socialistic state. So the unholy alliance was consummated with the result that the Germans got what they wanted while the Bolsheviks failed to get what they wanted. It is only in fairy stories that one can make a bargain with the devil and get ahead of him.

The documents published show that the German Government, from the start of the war if not before, was intriguing with the revolutionists to subvert the discipline of the Russian army. A German bank circular (Document 57), dated November 2, 1914, says: "We are ready to support agitation and propaganda on the absolute condition that they will touch the active armies at the front." On June 18, 1917, Mr. Lenine's account in Kronstadt was enriched by 315,000 marks (61) and on September 8 by 207,000 marks (65). We are using numbers in parenthesis to identify the documents referred to. While the German Government was paying out 32,000 francs in Geneva for the publication of Bolshevik socialist pamphlets (63), it was in Finland providing funds and arms "for the undertaking of Comrade Trotzky." The German socialists were implicated in the plot (4, 67) and Herr Scheidemann is as anxious as the German High Command "regarding the destruction of the traces of the business relations of the party with the Imperial Government," for the German Socialists "saw in the said communications a danger to the cause of world socialism." No wonder! Herr Scheidemann on August 25, 1917, sends to Maxim Gorky 150,000 kronen for the support of his paper, *New Life*. Gorky, who was for a while at variance with the Bolsheviks, is now again supporting them. The version of this letter given out from Washington (67) is apparently

not so accurate as that previously published in the Ukrainian paper, *Priasojski Krai*. Germany is supposed to be hard up for ready money, yet the Reichsbank turns over to Lenine and Trotzky (8) the sum of \$25,000,000 in gold to increase their propaganda in the south of Russia and Siberia. The investment paid.

Not only are Lenine and Trotzky guilty of imposing shameful peace conditions upon their own country, but they also are responsible for forcing upon Rumania an equally onerous treaty. This they did, knowing that the purpose of it was to permit the Germans to begin in the spring the great offensive in France. All this is proved by the photographed copy (37) of a letter from Joffe, the head of the Bolshevik delegation at the Brest-Litovsk conference, in which he says that General Hoffmann, the German military representative at the conference, "in the course of a conversation with Comrade Trotzky twice hinted at the necessity of immediately beginning these war operations." If peace could soon be made with Russia and Rumania—this was December 29, 1917—then, as General Hoffmann said, the German and Austrian chief command "will be in a position to take up their operative actions on the western front on a very large scale." The Bolsheviks signed the peace treaty at Brest-Litovsk on March 3 and on March 21 Hindenburg began his operations in France on so large a scale that he nearly brought disaster on the Allied cause.

In accordance with the "confidential demand" of General Hoffmann, certain members of the Red Guard were charged with "the task of taking all measures for the deposing of the Rumanian King and the removal of counter-revolutionary Rumanian officers." Trotzky arrested the Rumanian minister Diamandi and seized the Rumanian gold reserve in the Moscow Kremlin. Ambassador Francis and the other diplomats protested against this outrage on the law of nations, so Trotzky consented to allow Diamandi to leave the country by way of Finland, accompanied by an officer with secret orders to have him shot at the frontier. But Torneo, the frontier station, had been captured by the Finnish White Guards, so the Bolshevik officer bearing the letter was shot instead of the Rumanian minister.

Orders for assassination are frequent among these documents, altho the Bolsheviks had not then begun the wholesale massacres against which President Wilson has just urged the united action of the world. In one (40) the Bolshevik counter-espionage staff in connection with the German Intelligence Bureau resolves "to take the most decisive measures, up to shooting *en masse*, against the Polish troops which have submitted to the counter-revolutionary and imperialistic propaganda." We also (42) see the Bolsheviks offering "twelve rubles a day with an increased food ration"—expenses paid by Germany, of course—for men to form "two companies, one from the best shots for the shooting of officers of regiments; the other of Letts and Lithuanians for the theft of food reserves in the places where the Polish troops are situated. Various local peasants have also agreed to attack the regiments and exterminate them." This ought to encourage recruiting in our newly formed Polish legion.

But the German plans for murder and theft often went wrong thru Russian inefficiency or perchance soft heartedness. Thus we find (35) Major von Boelke, *alias* Schott, registering a complaint with Lenine because "the talentless activity of scout Tulak paralyzed" his plans and because "the agents sent by order from Petrograd to kill Generals Kaledine, Bogaevesky and Alexieff were cowardly and unenterprising people."

The Bolshevik documents reveal the reasons for various acts of our Government and others which have been criticized by those who did not understand the circumstances. For instance, they abundantly justify the occupation of Vladivostok. On January 14, 1918, the German High Sea Command applies to the People's Commissars, that is, the Bolshevik leaders, to arrange to ship three German submarines, disassembled, by rail to the Pacific as soon as

peace was concluded between Germany and Russia (23). It seems strange that the Germans should have conceived this scheme possible, for on that same date the Petrograd papers reported that three Japanese cruisers had arrived at Vladivostok and landed 4000 men. The German General Staff also proposed (28) to get together all the "commercial boats, auxiliary cruisers and transports" that may be sent to the Pacific Ocean in order "to form a powerful commercial fleet flying the Russian flag" "for the purpose of opposing the American-Japanese trade." According to another "very secret" document (22), orders were sent by wireless from Kiel for the German agents at Vladivostok to load several steamships with goods and persons designated by them and despatch "as directed to ports of the United States, Japan, and the British colonies in eastern Asia. The object in sending the ships is to carry to enemy countries agents, agitators and agents-destroyers." San Francisco and Portland please copy, so the people there may be prepared to give a proper reception to any of these agents of destruction on their arrival from Vladivostok. Our officers who have just been sent there will also be interested to learn (29) that on March 9 last nine German agents were appointed "for watching and if necessary attacking the Japanese, American and Russian officers who may command the expeditionary forces in eastern Siberia." They will, for instance, find one Stauffer lying in wait for them in Panoff's house, Vladivostok. When they get to Harbin they will find Herr Kuzberg in the very office of the Chinese Eastern Railroad by which they cross Manchuria. And when they reach Irkutsk they should be wary of passing Zhinzheroff's drug store, for Herr Deze is posted there for the purpose of "watching and if necessary attacking" them. This man Deze, by the way, is one of the persons designated in Document 9 from the Reichsbank of Berlin on January 12, 1918, "to think out a plan for carrying off the Japanese and American war materials from Vladivostok to the west."

These are only a few of the amazing and appalling revelations of these documents. To appreciate them they must be studied in their entirety. Edgar Sisson deserves great credit for having obtained and annotated them. The first that the western world knew of the existence of such evidence was thru the publication of some of the papers abstracted from the Bolshevik archives in the *Petit Parisien* of February 5 and 6, a better version in places than Mr. Sisson's. At that time they met with considerable incredulity and some criticism on the ground of discrepancies and inherent improbabilities. We did not find in the points raised sufficient reason to question their genuineness, and our belief in them is confirmed by this more extensive and better authenticated collection.

But to say that they are authentic is not to say that they are true. There are numerous inaccuracies and incoherencies, possibly due in part to imperfect translation. They are written by liars to liars, and naturally are not free from falsehood. We do not, for instance, believe the statement twice repeated as "undoubted" and based on "exact information" that the American Government financed General Kaledin in his attempt to restore the monarchy. But such lies contribute to the truthfulness of the picture, and we do not believe that Lenine and Trotzky have any grounds for a libel suit, however black they are painted. John Reed says that they sent, on the eve of signing the Brest-Litovsk treaty, a telegram to President Wilson asking him to help them save Russia from Germany, and they complain that they received no answer. If that is true, we need not be surprised at the lack of response to their appeal, for the President already had in his hands the proof of their duplicity. The wonder is that he could bring himself a month later to send to the Bolshevik congress at Moscow such a cordial and sympathetic message to the Russian people. But the President is able in the case of Russia as well as Germany to make a distinction between a tyrannical government and a victimized people.

# THE STORY OF THE WEEK

## The Conquest of Palestine

For the second time in the war against Turkey British persistency has overcome British incompetency. The first Mesopotamian campaign came to a disastrous close in the surrender of the army at Kut-el-Amara. But a second expedition, under better management, more than retrieved the failure, and now the British hold Bagdad.

The first Palestinian expedition, under Sir Alexander Murray, collapsed unexpectedly at the gates of Gaza. But the second attempt, under General Allenby, has achieved a glorious victory and now the British hold the Holy Land from Beersheba nearly unto Dan.

Following out the idea of Kitchener's Sudan campaign, that the desert can be overcome only by the railroad, a line was laid across the peninsula of Sinai from Egypt to Palestine. Not being able, like Moses, to command a miraculous water supply while campaigning in this region, a pipe line was laid all the way thru the desert. A bridge over the Suez canal completed the connection.

With such backing the forces of General Allenby were able to overcome the enemy on the Gaza-Beersheba frontier and to take Jerusalem and Jericho. When the need came for men in France, most of the European and the veteran Indian troops were withdrawn and their places taken by fresh Indian levies. But even with these new and depleted forces General Allenby wiped out two Turkish armies and conquered Samaria. If the Ottoman forces are as weak and demoralized as they appear to be he may be able to continue his advance up to Damascus and perhaps even to Aleppo. At that point the Palestine railroad running north meets the lines running east from Constantinople and west from Bagdad, and here it was proposed that the British coming up the Tigris from Bagdad should join the British coming up the Jordan. But neither party has hitherto been able to

### BRITISH VICTORY IN PALESTINE

General Allenby attacked the Turks from the south by infantry on his right while the cavalry on his left swept up the coast and down thru the plain of Esdraelon. The ports of Haifa and Akka (Acre) have been taken. The Turks east of the Jordan are beset by Arabs and British. A drive up the railroad to Damascus may be the next move.

reach the rendezvous because the collapse of Russia gave the Turks an opportunity to concentrate their attention on the British. Now, however, we may surmise that the Turkish power has been greatly weakened thru the inability of the Germans to supply them with officers and munitions as formerly.

In this campaign the British have been actively assisted by their new ally, the King of Hedjaz. The Arabs, tho nominally under the sovereignty of the Sultan, have never been reconciled to his rule, and they have seized occasion of the war to establish with the aid of the English a quasi-independence which, if the Allies win, may prove permanent. The Hedjas railroad, running south from Derat to the holy cities of Mecca and Medina, is under their con-

trol, and while the British under Allenby have been advancing northward along the west side of the Jordan, the Arabs under the King of Hedjaz have kept up with them on the east side of the river, and by smashing up the railroad about Derat have cut off the Turks from their base at Damascus.

## The Battle of Armageddon

When the British, Australian and Indian horsemen charged across the plain of Armageddon they inflicted a decisive defeat upon the Turks which may result in the elimination of Asia from the war. The 7th and 8th Ottoman armies were completely crushed and over 40,000 prisoners captured. General Allenby's feat is unique in the present war, an enveloping action by cavalry on a large scale. The Indian lancers galloped against machine guns and speared their gunners. The Australian light horse sabered the Turks in the trenches. One regiment of cavalry rode seventy miles in two days. The Indian and Irish infantry marched twenty-one miles in twelve hours. The fugitives were pursued to the banks of the Jordan by airmen, and those who succeeded in getting across the river fell into the hands of the Arabs.

General Allenby's strategical scheme was brilliantly conceived and executed without a flaw. The Turkish 7th and 8th armies, said to number 100,000 men, occupied the hills of Samaria. Their left was protected by the Jordan, while their right rested on the Mediterranean coast above Jaffa, the ancient Joppa. According to the plan of attack the British infantry were first to engage the enemy in the hills west of the Jordan, while the cavalry were to drive up thru the plain of Sharon on the coastal side. The troops were brought up secretly by night and hidden in orange and olive groves by day. The superiority of the British in the air prevented the enemy from discovering these prep-

### THE MARINES IN VLADIVOSTOK

From left to right along the curb are the soldiers of Japan, America, Great Britain and the Czechoslovaks, united in Vladivostok to resist German domination of Russia. A company of British marines is marching thru the street; in the background is the headquarters of the Czechoslovaks.

arations. The battle began on September 18 by the Welsh, Indian and South African infantry, who marched in the night into the hills between the Jordan and Nabulus (the Shechem of Abraham's time). Altho the country here is exceedingly difficult to traverse, since it consists of rocky hills and deep ravines, the British succeeded during the next three days in gaining the entire left bank of the Jordan and so cutting off the Turks from any chance of escape to the other side.

Meantime the English yeomanry, Indian cavalry and Australian light horse on the British left wing had broken thru the enemy's line and pushed rapidly northward until they had crossed the railroad leading to the port of Haifa. Then swinging eastward they took Nazareth and cut the railroad junction at El Afule. One detachment went on to the Sea of Galilee, while the main body of the British cavalry swept south from Nazareth thru the plain of Esdraelon or Armageddon and attacked the Turks in the rear. They were now practically surrounded and those who did not surrender were cut to pieces by the aeroplanes. In one day the British airmen dropt over eleven tons of bombs and fired 66,000 rounds from machine guns at low altitude on the retreating enemy. The locomotives, trains and stores were captured complete. The German commander-in-chief, General von Sanders, escaped by a margin of six hours.

**The Loss of Baku** While the British have been gaining in southwestern Turkey they have lost in northeastern Turkey by being compelled to evacuate the Caucasus. In *The Independent* of August 31 we explained at length the importance of maintaining a hold on the Caucasus. The despatch in July of a small body of British thru Persia to Baku in support of the Armenians and Bolsheviks who had held that port against the Turks ever since March, gave grounds for hoping that the Ottoman advance might here be stayed. But on September 14 the British were forced to abandon Baku. The British despatch lays the blame for the disaster upon the cowardice and treachery of the Armenians. When Baku was attacked by the Turks in August the Armenians showed a lack of steadiness. In the Turkish attack of September 1 the Armenians and Russians "again failed to cooperate" and had to be protected by the Royal Warwickshire regiment, which suffered heavily. The British decided at that time to leave the city, but on September 2 a small force of Russians arrived to aid in the defense. But while the Russians in charge of the Caspian fleet refused to let the British have ships for departure, the Armenians were negotiating with the enemy for the surrender of the city.

On September 14 the Turks made a determined attack and after fighting for sixteen hours the British left the city. But before leaving they were able to set fire to the oil wells and to destroy the munition plants and refineries. At last accounts the oil fields and the city

were still burning and explosions were heard far out to sea, so it seems that the value of this district, formerly the richest oil region in the world, is practically destroyed and the enemy will derive little benefit from its capture.

But, on the other hand, the Germans by the occupation of Tiflis in Transcaucasia have gained great stocks of cotton and had shipped out 390,000 pounds by the middle of August. The Georgians, who declared an independent republic, have now placed themselves under the protection of Germany and the Armenians, feeling themselves forced to a

choice between Turks and Germans, seem also to have accepted the latter. The Turks, now freed from danger of attack from the Caucasus, have been able to advance in Persia beyond Tabriz, which brings them further to the rear of the British at Bagdad.

### The Underground Gibraltar

The French and British are joining in an attack upon

St. Quentin, one of the strongest points of the Hindenburg line. Together they have brought up their front on a semicircle only three miles from the city. The French from the southwest are coming up both banks of the Somme River, which runs by St. Quentin, but the British have a harder task, for they have to make their way thru the hills that overlook the river and city on the northwest. These hills are honeycombed with quarries which have been converted into the labyrinth of passages known as "the underground Gibraltar." But these dugouts, while impregnable, have proved deathtraps, for the Germans show a disposition to stay in them instead of fighting in the open, and when so confined in their own fortifications have often been captured in mass or killed by bombs dropt into the entrance. The British have been literally smoking them out by gas shells, and many of them, blinded by the smoke or with tears streaming down their faces from the lachrymatory fumes, have rushed straight into the arms of their captors. The occupants of some dugouts fight to the death; others coolly surrender at the first opportunity. On entering one dugout the British found four men playing cards. They called out "Kamerad!" and asked by signs to be allowed to finish their game before going to the prison pen. A couple of extremely young German soldiers captured by the British were sent back over the line with a loaf of bread under the arm and the message that the British did not fight boys.

In the operations north of St. Quentin during the week the British have taken more than 12,000 prisoners. The total taken by the Allies and Americans in France during the two months since they started their offensive is 185,000. Practically all the ground taken by the Germans in their spring drive has now been recovered except the Chemin des Dames, Armentières and the Wytschaete, while at St. Mihiel and Arras the Germans have lost ground that they have held since 1914.

### On the Kriemhild Front

According to their romantic custom the Germans named the

various sectors of the rear line established by Hindenburg in 1917 after the characters in the Nibelungen Lied. Those parts of the Hindenburg system which confronted the British below Arras were called the Siegfried, Wotan and Albrecht lines. The line which was drawn across the base of the St. Mihiel salient for use in case that position had to be evacuated was named after the heroine of the Teutonic national epic,

General Allenby, commanding British troops.

THE CONQUEROR OF PALESTINE. General Allenby, commanding British troops, and assisted by a cooperative attack of Arabs, has accomplished the conquest of nearly all the Holy Land and wiped out two Turkish armies.

Philadelpha Public Ledger

THAT AUSTRIAN PEACE PLEA

"I so soon yet vas done for,  
I vonder vot I vas begun for"

Kriemhild, the wife of Attila, King of the Huns. It is this line that the Americans by their victory at St. Mihiel have been brought up against. The Kriemhild line stretches from the heights of the Meuse southeast to the Moselle River, or more specifically from Maizeray, four miles east of Fresnes, to Vandières, four miles north of Pont-a-Mousson. It is the main protection of the fortress of Metz, altho behind it two other lines of entrenchments have been prepared. The American front is within

one or two miles of the Kriemhild line.

The Woivre plain between the Meuse and Moselle, which constitutes the present battlefield, is low and marshy and the heavy rains of the past week have made it impossible to continue infantry operation, if, indeed, such had been designed on either side. But the heavy artillery has been active on both sides. Our nine-inch guns have been shelling the forts of Metz, one of which, Fort Sommy, is less than seven miles from our new front. The city of Metz is about twelve miles and Conflans, a railroad center of almost equal importance, is only eight. The inhabitants of Metz who can get away are leaving the city for fear of the bombardment.

We now have figures that enable us to comprehend the completeness of the American victory at St. Mihiel and the thoroughness of its preparation. The territory taken embraces 152 square miles and seventy-two villages. The attack was opened by bombardment at one o'clock on the morning of September 12 and four hours later the infantry started over the top along a forty mile front. During the battle about 1,500,000 shells were fired from our guns. The motor trucks employed in bringing up men and supplies to the front numbered 4800. For the preliminary study of the ground and the guidance of the troops in action 100,000 detailed maps and 30,000 aerial photographs were prepared and distributed to every unit. All parts of the advancing lines were kept in constant communication with the staff by telephones. To accomplish this 6000 telephone instruments were employed and 5000 miles were laid in the salient by motor trucks and hand reels. The signal corps took more than 10,000

feet of film and thousands of photographs of battle scenes. To provide for the casualties 16,000 beds were placed in the advance areas, 55,000 farther back, with thirty-five hospital trains for transporting the wounded. Fortunately the resistance was less than anticipated, so not 10 per cent of these facilities were needed. The German and Austrian prisoners taken number 15,183. The spoil captured includes 111 guns, of which 75 are of large caliber, 200 machine guns, 42 trench mortars, 13 trucks, 66 railroad cars and 40 wagons. Four ammunition dumps were taken, but have not yet been inventoried.

#### Driving Back the Bulgars

Macedonia is again on the war map. The advance movement launched by the Allies on September 15 has been astonishingly successful. Beginning with a four mile gain on a ten mile front for the first day's work it had within a week attained the proportions of a forty mile gain on a ninety mile front. Over 12,000 prisoners have been taken and there is prospect of bigger hauls in the near future. The Bulgars are in full retreat, burning their munitions and supply depots as they go.

A glance at the map will show the strategic significance of this new movement. Two railroads run out from the port of Salonica. The main line follows up the Vardar River into Serbia and on thru that country to Belgrade. The other line, turning off to the left, runs to Monastir and there stops. The capture of Monastir, just inside the southern boundary of new Serbia, is the only active achievement of the Salonica army of several hundred thousand men during the last three years

#### BULGARS ON THE RUN

The attack of the Serbs and French drove a wedge into the middle of the Bulgarian line. They have taken Prilep on the west and the Vardar River and railroad on the east and may soon reach Kuprulu (Veles), which is just ahead of them. On the right the British have dislodged the Bulgarian Second Army from Lake Doiran and the lower Vardar. On the left the Italians in Albania have driven the Austrians beyond Berat.

up to the present. After the evacuation of Monastir the First Bulgarian Army retired into the mountains north of it and were not further disturbed. The Second Bulgarian Army held the marshy land about Lake Doiran and the mountain passes on the Serbian frontier thru which the Vardar River runs, with the railroad along side of it.

The Franco-Serbian offensive has driven a wedge in between the First and the Second Bulgarian armies. Crossing the Serbian frontier the joint forces carried the mountains deemed impregnable that lie between the Vardar and Monastir. Continuing northward they cut the military railroad that German engineers had constructed from the Vardar railroad to Prilep in order to feed the Bulgarian army above Monastir. The First Bulgarian Army, driven out of Prilep, will therefore have to make its way to the Vardar line by some circuitous route thru the mountains.

The Second Bulgarian Army is also endangered, for the Franco-Serbian wedge has likewise cut the Vardar railroad which supplies the Doiran front. While the French and Serbs were attacking the First Army west of the Vardar, the British and Greeks were attacking the Second Army east of the Vardar. Here the Bulgars put up a stiffer fight, and, according to their own account, inflicted heavy punishment upon their assailants. Yet here also they were driven back and are retiring toward the Bulgarian border.

The collapse of the Bulgars in Macedonia, like the collapse of the Turks in Palestine, may be ascribed in part to the withdrawal of German support. The Bulgars, especially those who used to live in the United States, have been disinclined to continue the war ever since America entered it. They have never liked the Austrians or Germans, and now they are at odds with their other allies, the Turks, with whom they were at war only six years ago. The overthrow of the Czar by the Russians has excited among the radical element of the Bulgars a desire for the overthrow of their own Czar Ferdinand, who as an Austrian has never been popular with his people. He is blamed for bringing them into the disastrous war with Serbia in 1913, and if the present war should take an unfavorable turn he might be made the scapegoat.

The Red Terror The wholesale execution or imprisonment by the Bolsheviks of all persons suspected of disaffection toward their rule has incited our Government to endeavor to secure the coöperation of other governments in a effort to put a stop to this reign of terror. Secretary Lansing has sent a telegram to all American diplomatic representatives which, after calling attention to "the daily massacre of untold innocents," goes on to say:

In view of the earnest desire of the people of the United States to befriend the Russian people and lend them all possible assistance in their struggle to reconstruct their nation upon principles of democracy

#### WHY THE SERBS ARE WINNING

This is one of the supply depots in the Balkans where the reorganized Serbian army got ready for the drive that it is now making thru the Bulgarian line

and self-government and acting therefore solely in the interest of the Russian people themselves, this Government feels that it cannot be silent or refrain from expressing its horror at this existing state of terrorism. Furthermore, it believes that in order successfully to check the further increase of the indiscriminate slaughter of Russian citizens all civilized nations should register their abhorrence of such barbarism.

You will inquire, therefore, whether the Government to which you are accredited will be disposed to take some immediate action, which is entirely divorced from the atmosphere of belligerency and the conduct of war, to impress upon the perpetrators of these crimes the aversion with which civilization regards their present wanton acts.

From the enemy side, it seems, efforts are being made in the same direction. A London *Times* correspondent says that the German military authorities, becoming alarmed by the

horror and indignation excited all over the world by these outrages, have brought pressure to bear upon the Bolsheviks to stop them, and that in consequence the number of summary executions has recently diminished. But the renewed attempts to assassinate the Soviet leaders are likely to lead to reprisals. Lenine is still laid up by the wounds inflicted by Dora Kaplan and Trotzky was recently fired upon by a sailor, but the shots missed the mark.

When the Bolsheviks captured Jaroslavl in August they put to death 300 of the 1500 Social revolutionaries arrested for defending the city. Among the recent victims of the Red Terror is General Brusilov, who proved himself one of the ablest of Russian generals in the present war. Prince Peter Kropotkin, the anarchist and geographer, who was exiled to Siberia by the Czar and afterward escaped to England, has now been arrested at Petrograd for alleged participation in an English conspiracy against the Bolsheviks.

The Senate on September 18 passed the Liberty Loan bill exempting from the income taxes and the surtaxes the interest received from the fourth loan bonds up to \$30,000 and from previous loans up to \$15,000. It was then sent to conference, from which it emerged in time to be passed as perfected on the 23d. On the 19th the Senate adopted without discussion a resolution directing the Judiciary Committee to investigate political and propagandish activities by certain brewing interests, particularly with reference to charges that a group of brewers furnished money for the purchase of a Washington newspaper.

The great revenue bill was sent over

#### THE GREAT WAR

September 19—British evacuate Baku. British take 12,000 prisoners north of St. Quentin.

September 20—British capture Moeuvres, seven miles west of Cambrai. Brazil at war with Austria.

September 21—Colonel Durov replaces Tschirikovsky as head of Archangel government. Terauchi cabinet in Japan resigns after two years of power.

September 22—Allenby defeats Turks in Samaria. Strike of Welsh railroad men.

September 23—House of Representatives passes prohibition bill 171 to 34. British take Haifa and Acre on Palestine coast.

September 24—French and Serbs take Prilep. French take villages, three miles from St. Quentin.

September 25—British and Greeks drive back Bulgars on Vardar River. Chancellor von Hertling makes peace speech in Reichstag.

from the House on the 21st and received by the Finance Committee, by which it was formally submitted to the Senate on the 23d; but general consideration will not begin until after the Senate Finance Committee has completed its review of the measure, perhaps a month hence.

This bill had taken a particularly rapid course thru the House on the 18th and 19th, the debate on Friday consisting of five-minute speeches. The momentous excess-profits and war-profits provisions were passed without a single serious objection; and several proposed modifications of the bill elsewhere were rejected or a decision was shirked, as in the case of a suggested tax on cotton, in the hope that the Senate would tackle the problem. The one amendment of any importance to modify the bill provides for allowing gas and oil wells, mines and other natural deposits, timber workings, etc., a "reasonable amount" to be deducted from net income before imposing income and profits taxes, the amount to be determined by the Government. This accomplished, the bill was passed on September 20 by a vote of 350 to 0, and the result was greeted with uproarious cheering. The anticipated revenue yielding value of this House bill is about as follows:

Besides the war excess profits sections, estimated to yield \$3,200,000,000, the greatest returns to come from the bill, provisions adopted today were taxes on estates estimated to raise \$110,000,000; transportation, \$187,000,000; amusement admissions, \$100,000,000; excise taxes, including automobiles, jewelry, luxuries and semi-luxuries, \$518,000,000; beverages, \$1,137,000,000; tobacco, \$321,000,000; capital stock, \$70,000,000; the Federal automobile license provision, \$72,930,000, and stamp taxes, \$32,000,000.

The House called up on the 21st the emergency agricultural bill, which carries the war prohibition measure as a rider, and accepted the amendment made by the Senate in conference by a vote of 171 to 34. All other Senate amendments were rejected by the House, which consumed four hours' bitter debate in which all the arguments for and against prohibition were produced. Legislative action on prohibition was completed, and only rejected amendments remain to be acted upon by both houses. Among them is one permitting the importation of foreign wines until May 1, 1919, the date when manufacture of alcoholic beverages will cease under the act, instead of stopping immediately as the bill requires. The immediate stoppage was insisted on as a protection to American wine makers; and opposed by the State Department as contrary to the spirit of treaties with France, Spain, Portugal, etc. The Prohibition leaders thereupon express much fear that the whole bill would be vetoed if it went to the President with this international flaw in it.

**Fourth Liberty Loan** Formal announcement of the Fourth Liberty Loan was made by the Treasury on September 23, and all the regulations were published; but the two important items of the total quantity of money to be asked for, and the date of maturity of the bonds were left by Mr. McAdoo for more dramatic publication on the 24th by means of his speech to his campaigners in and about New York. Then the country learned that the total loan was to be six billions, and the period twenty years from October 15. The interest rate is to be 4¼, beginning on Octo-

ber 24, 1918, and the first interest payment will be made April 15, 1919, and will be for the 173 days intervening. Thereafter semiannual payments will be made October 15 and April 15. Ten per cent. of the subscription will be required as the initial payment on the Fourth Loan. Twenty per cent will be due as instalments on November 21, December 19, and January 16, and 30 per cent January 30.

The increase of the initial payment from 10 to 20 per cent was to discourage subscribers from abandoning their purpose to complete payments, as happened too often in the last loan; and the postponement of the last payment until January 30 is interpreted as indicating that the fifth loan would not be floated before next spring. Bonds may, however, still be bought thru banks on a system of 10 per cent monthly instalments; and bonds may be sold by individuals or corporations unless in view of the President the sale is not bona fide or for the good of the country. The Bureau of Engraving and Printing has already begun printing the bonds, and plans to make about 35,000,000 of all denominations, with a larger proportion than heretofore of "baby bonds" (\$50), since special appeal is to be made for subscription from persons of small means.

**Industrial Slackers** A large number of men have found employment in shipyards and other war industries, whose need of workers has compelled them to accept almost all that offered; and it has become plain that many are incompetent. Worse, however, is the fact that thousands have taken jobs merely as a method of draft evasion, and now are trying hard to evade labor also. They will work for a few days, then desert to some other employer who offers higher wages, or will absent themselves on the plea of (pretended) sickness or some other excuse for idleness. This has been especially prevalent in the Eastern States, and the diminished output at Hog Island is mainly attributable to this cause. In one Philadelphia yard the skilled workmen threatened to strike unless the incompetents somebody had put over them were removed. Both their pride as good workmen and their patriotic honesty revolted against the situation.

Now the Government is framing a set of regulations designed to correct the evil conditions, which, it is freely alleged, have arisen owing to too great leniency, and also to a bad system of giving contracts. The foremost item in the regulations will be a standardization of wages, varying in different parts of the country, but the same for any one class of work thruout any local district. The man who has been "slacking" because he could get a better job elsewhere will not be able to do so hereafter; in fact, there will be no job at all for him elsewhere, for if he is discharged for absenting himself unduly, or for loafing, he will be immediately put into the army. If he "soldiers" in his work, he will be made to soldier in reality.

#### VETERANS OF THE FAMOUS FOREIGN LEGION CHEERING THE U. S. A.

These men, too often wounded to be able to serve any longer on the firing line, have come over to this country from France to celebrate the inauguration of our Fourth Liberty Loan. They enlisted from nearly all the countries of the world; they all wear now the decorations that proclaim bravery under fire. This photograph was taken on the roof of one of New York's big skyscrapers

Judging by the newspapers generally, this exertion of stern discipline is approved by the country, whose thrifty and industrious citizens have long resented the burden of supporting idlers and derelicts. Incidentally it is a practical exposition of the President's power to make unwilling men either work or fight, as Senator Reed maintained when he opposed the inclusion of that clause in the Draft law.

Less reprehensible, but equally ineffective, is the case of the man who is kept, or tries to keep himself, out of the army by employment in a "non-essential" industry. Attention has been given to this defect by the United States Employment Service, which hopes by a proper "combing out" plan, to be executed by the local draft boards, to bring half a million more men into the fighting ranks than would otherwise be available. Here the influence of community opinion is expected to produce the desired result in most cases, but recalcitrants will feel the strength of Crowder's arm. In connection with this search for recruits hiding behind trivial tasks Community Labor Boards thruout the country have been directed to prepare and publish lists of industries in which women may fill men's places, especially in such lines as accounting, cashier service, and salesmanship.

#### New Schoolhouses Forbidden

In various parts of the United States new schoolhouses seemed to be required by the increase of the pupil population, especially in the larger cities. The War Industries Board has felt compelled to deny permission to erect these buildings, for reasons given by Chairman Baruch in reply to an application by Mayor Hylan of New York—reasons applying to the whole country. In a word, we cannot afford the material and labor required. Mr. Baruch writes:

Every unnecessary undertaking of an industrial nature delimits the scope of our activities at the front. It ties up labor, capital, materials, facilities, transportation, and fuel—the six great elements that form the base of our economic structure. There is, at any given time, only a limited amount of each of these bases available. At the moment of strain all should be con-

centrated upon those enterprises directly connected with the war. To divert them to other ends, no matter how fine those ends may be in themselves, is at this period worse than a crime—it is a blunder that may cost us dear.

The board suggests that means be devised to utilize the present buildings more completely. "Surely," says the letter to Mayor Hylan, "under your direction New York, for the time being, can make one building do the work of two." This advice amused New York somewhat, for the most conspicuous of the mayor's preëlection contentions was that the part-time, or "Gary" system in the schools, which did this very thing, must go.

**Petroleum Supply** The tremendous importance of conserving the supply of petroleum as a fuel, as an illuminant, as a lubricant, and for other purposes, led to its control being invested in the Fuel Administration early last August; and this has been followed by a proclamation requiring licenses for all producers, large dealers in, and transporters of petroleum and its products (especially gasoline), and of natural gas, to go into effect October 1. A bulletin has just been issued by the National Museum giving a comprehensive survey of the oil situation by experts of the Bureau of Mineral Technology. The authors review the rapid exhaustion of the unmined supply of petroleum, the war needs for petroleum products, and the national importance of maintaining in the future an ample supply of motor fuel, in view of the limited nature of the resource and the wastes inherent in its present type of exploitation. As to the last point, they assert that scarcely 10 per cent of the resource value is now recovered, "while the unmined supply now available in the United States is only about seventy barrels to the person."

This situation has caused serious thought in Congress; and the discovery by the Fuel Administration that there would probably be a deficit of a million barrels this year in the gasoline supply caused the request not to use automobiles on Sunday except for really necessary travel, which has been so well o-

served, and has given as much pleasure to pedestrians as it has displeasure to joy-riders. Meanwhile the House and Senate are deadlocked in conference over the provisions of a bill regulating the leasing of oil-boring privileges on public lands, differing as to its effect on production. The placing of taxation on the various phases and products of the petroleum industry as arranged in the House revenue bill, is also arousing much opposition from certain interests, especially in respect to prospecting for new wells. These critics object to their business as producers being considered as a stabilized industry, like an ordinary factory, for success is a matter of chance—a gamble.

Bon

#### OUR NEW AMBASSADOR TO ENGLAND

Solicitor General John Williams Davis has been appointed by President Wilson to succeed Walter Hines Page as Ambassador from the United States to the Court of St. James. Ambassador Davis is at present in Switzerland, as head of the American delegation conferring with a German mission on the treatment and exchange of war prisoners.

# THE COLLEGES AS WAR CAMPS

BY CHARLES F. THWING

PRESIDENT OF WESTERN RESERVE UNIVERSITY

THE greatest change which has ever occurred in the history of the higher education in America is now occurring; it is a revolution. The richest gift which the Government has ever made to the higher education—and it has made many and rich ones—it is now making. The change and the gift lie in the fact that all the best colleges and universities, some three hundred in number, have become, like the railroads, Government institu-

tions. As in the case of the railroads, the administrative offices are remaining, but the determination of policies is made by the Government.

The facts are: all students who enter the American colleges this year, being eighteen years of age, become by that entrance soldiers of the United States and members of what is known as a Students' Army Training Corps. They pursue a course of study which is either military or colored by military conditions. No less than eleven hours of each week are devoted to drill and work therewith connected. In addition fourteen hours of lectures and recitations are provided from many subjects, some of which have a certain relationship to military affairs. These subjects include English, French, German, mathematics, physics, chemistry, biology, geology, mineralogy, geography, meteorology, topography and map-drawing, astronomy, descriptive geography, hygiene, sanitation, psychology, mechanical and free-hand drawing, surveying, economics, accounting, history, international law, military law and government. From these subjects the student makes such selection as the college officials think fitting. One course, however, is required of all, known as the underlying issues of the war-period, but this course is interpreted generously as standing for a course in the aims of the war or in history, government, economics, philosophy, or modern literature. It is to be noted that neither Latin nor Greek nor Biblical literature is included in this course. It is also to be noted that German is included.

All of these soldier-students, or student-soldiers, are required to live in barracks provided by the college and to have their meals at a common mess. The program of each day is (provisionally) arranged as follows:

6:45 a. m., Reveille.  
7:00, Mess.  
7:30-9:30, Drill.  
9:30-12:00, Recitation and study.  
12:15, Mess.  
1:00-4:30, Study and recitation.  
4:30-5:30, Athletics and recreation.  
5:30, Mess.  
Mess to 7:30, At student's disposal.  
7:30-9:30, Study under supervision.  
10:00, Taps.

The requirement of the Government, moreover, goes beyond the order of each day. It concerns the whole academic year as well. Each year is divided into four terms of three months each, beginning with the 1st of October. Each term will usually by each college be made a distinct unit of instruction.

The strictness of requirements has its counterpart in the generosity of the provision made by the Government for each soldier-student. The Government pays his tuition fee, lodging in the college barracks, board in the college mess, and gives him \$30 a month as the pay of a private as well as his uniform. The charge for tuition differs in different colleges, but assuming that this charge is \$150 a year, the Government pays for each student \$150 for tuition, \$360 for lodging and board, or \$510; his pay is \$360, which with the cost of his uniform, makes a total of \$900 at least. This most generous provision is without precedent in the history of liberal education.

Four bodies at least are immediately and deeply concerned with this academic revolution. They are the college faculty, the college trustees, the students, and the public. To this revolution college faculties are assenting, if not with alacrity, at least with willingness and cooperation. It is not, be it also said, the willingness of compulsion, but a willingness based on the assurance that this method represents one of the most ef-

fective forces for the winning of the Great War. Teachers recognize, as one of the advantages of the new system, the fact that students feel a certain obligation to work, an obligation which under the individualistic system of the former time was somewhat foreign to some of them.

Trustees, too, are shouldering the financial and administrative responsibility for housing and feeding these men with the same generosity with which they as private citi-

zens give to the Y. M. C. A. campaigns or buy Liberty Bonds. The few students are as yet enrolled in the S. A. T. C., yet all indications intimate that they will "take to" this new life, under unique conditions, with an enthusiasm born of a generous and direct interest. Be it said, too, that the number of these students promises to be large; in fact, the enrollment in the freshman class of the best colleges will be far greater than has ever been known. It may be added that the cause of this vast increase is not to be interpreted as slackness; for these men as college students are subject to the same general terms of the draft as if they dwelt outside of the college gateway.

The fourth body concerned with this revolution is the people themselves. The people seem to be responding to this change with an enthusiasm akin to that of the boys themselves. Education has become the greatest human interest of the American people; and the people recognize, moreover, that this development of the higher form of this interest is fraught with tremendous potentialities for righteousness intellectually as well as ethically.

In causing this transformation in the higher education, the Government has been moved by at least three considerations. First, the giving of relief from overcrowding to the cantonments. Second, the promotion of efficiency. The efficiency is promoted by the elimination of the unfit students and the discovering of the fit and even of the fittest for special jobs. For after a period which may be long or short, each man is assigned to military duty in one of the following forms:

(a) Transferred to a central officers' camp.  
(b) Transferred [Continued on page 28]

*The Harvard stadium, formerly devoted to sports, is now drill ground for radio students*

**D**ESPITE all the good work which has been done by economists, financiers and publicists to promote thrift campaigns, the great public is still largely unmoved. It does not realize the magnitude of our task or the true philosophy of economics.

This, the greatest of all wars, is greatest especially in its cost. It is estimated that the direct money cost alone, for all nations, is already far in excess of a hundred billion dollars. Every week it costs as much as did the entire Boer War; every month as much as the entire Russo-Japanese War; every two months as much as the entire Civil War, which hitherto has held the record for costliness.

Never before in history has an understanding of the simple principles of economics been so sorely needed. In spite of efforts to supply this need, we find the public confused and vacillating between two economic philosophies—the simple, direct, old-fashioned, correct philosophy of thrift and industry and the specious philosophy, perhaps best epitomized as “Business as Usual.”

Behind that phrase there are two great fallacies, which, as we shall soon see, are boon companions and keep each other in countenance. One is what in the classroom we call the “money fallacy,” the idea that we can pay for the war simply by creating more money. The other is the “make work” fallacy, that we make a living merely by getting a job. Deceived by the former idea, we tried to pay for the Civil War by the printing press, and issued greenbacks until it took two and a half dollars in greenbacks to equal one dollar of gold. We tried to pay for the Revolution by issuing continental paper money, until that money became a hissing and a by-word. People joked of the housewife who “took a market basket full of this money to the meat market and brought back a beefsteak in her pocketbook.” There was a barber in Philadelphia who papered the walls of his shop with this continental money, saying it was

# BUSINESS AS USUAL VS. SAVE AND WORK

## LET YOUR WAR ECONOMY BEGIN AT HOME

the cheapest wallpaper he could get! To this day we have a reminder of that money in the expression “not worth a continental.”

We flatter ourselves that we are too wise to indulge in such inflation methods today, but, as a matter of fact, we are doing the same thing in a more subtle way. When people subscribe to Liberty Bonds, without having reduced their ordinary expenditures so as to save the money, they are indirectly inflating the currency. They go to the bank and ask the bank to lend them money, and the bank, wishing to be patriotic, lends them money which it manufactures, so to speak, by writing “deposits” on its books. Then the “depositors” of this book credit are supposed to have some

money in the bank. They transfer this by check to the Government; the Government transfers it to munition makers, food producers, and others and so it keeps in circulation—a vast addition to our deposit—or credit—currency.

This new credit currency is just as truly a dilution of the total circulating medium as were the greenbacks in the Civil War. We therefore have an abundance of purchasing power but a scarcity of things to purchase, so that prices go up. The first Liberty Loan we were, apparently, able to pay for mostly out of real savings. Inflation began to show itself with the second and increased with the third. Abroad, the same principle is at work, only in somewhat different ways. Everywhere that records enable us to judge we find that the issues of paper money or the making of new deposits out of new bank loans have increased almost exactly in proportion with the Government loans of the nations.

The second fallacy of the “Business as Usual” philosophy is the industrial or “make work” fallacy, namely, that making a living consists merely in getting a job, and that therefore, in war, we must not interfere with jobs.

Some people hail a cold winter, filling the city streets with snow, as “a good thing” because it “makes work.” Undoubtedly we can

put our fingers on many individual cases where a man has been bettered thereby. But has the country been bettered? If so, obviously what the country ought to do is, not to wait for the good fortune to fall from the sky, but to hire people to fill up the streets with rubbish and then hire them to shovel it away. This would make work twice, and without waiting for winter.

It is just as erroneous to argue that to keep the country prosperous in time of war we must keep people employed at non-essential jobs. This will doubtless help certain individuals, makers of intoxicants, tobacco, confectionery, jewelry, pleasure automobiles, etc.; but will it help the country as a whole?

It is significant that the loudest com-

plants against curtailing "non-essential industries" come from, or at least originate with, the special interests affected, altho often these interests are kept well in the background.

Many examples can be cited. The liquor interests not only fought war-time prohibition directly, but, thru the members of their allied "Association of Commerce and Labor," were behind the vigorous public opposition to that measure in the press and in general. The tobacco interests even more aggressively "put over" on an innocent public the tobacco fund campaign, magnifying a grain of truth into a mountain of false ideas.

The owner of a large department store has recently address working girls, saying: "You must buy more during the war and not less, because, don't you see, you are supporting the girl behind the counter. You must come to our department stores and buy all you can." I have no doubt that his advice was sincere, but the man's view was biased by the fact that his income depends on a department store.

A lady said to my wife not long ago that all this idea about saving food was wrong; that we ought to eat more and not less during war time, in order to "help the farmer." In discussion it transpired that her brother was a farmer, and she had, unconsciously, acquired the farmer's bias.

#### THE LADY WHO LIKES NEW GOWNS

Another lady recently went to a dressmaker to get a new gown. The dressmaker, nearly in tears because so many of her customers had stopped buying, said: "I am so glad that you came. I was almost thinking of giving up my shop. I don't know how I am going to get thru the winter. It seems as if everybody has stopped buying dresses. What are we dressmakers to do?" Her customer took much the same point of view, because she had the bias, not of the dressmaker, but of the dressmaker's customer. She wanted that dress; she didn't want to admit that it was wrong for her to buy luxuries in war time. It was a comfort to her to hear the dressmaker's tale of woe and to fall in with her philosophy. Both of them had a bias in favor of keeping up that dressmaking.

I received some time ago a printed pamphlet from a motor car company, which is trying to "educate" the public not to give up buying automobiles, especially automobiles "of quality," during the war; since what is really needed is to keep people at work. If the stockholders and directors and officers of that company looked at this subject as I look at it, and as I believe it should be looked at, they would have cut off their right hands before they would have put out such unpatriotic advertising.

The newspapers are often full of advertisements of non-essentials and both the advertiser and the paper printing the advertisements find it hard to surrender the "business as usual" idea. A Boston philanthropist recently published affidavits proving that certain newspapers were compelled by their un-

patriotic advertisers to exclude material designed to tell the reader the truth about his war-time duty to refrain from buying non-essentials.

But what the country needs is not so much cessation as transformation of industries. Automobile factories should stop making pleasure cars and make motor trucks and "tanks" for the Army. We must, to whatever extent is necessary, convert non-essential industries into essential industries. Distilleries which formerly made whiskey are now making alcohol for industrial and military purposes.

When we talk about keeping labor employed, are we conscious of what we are saying? There is the greatest shortage of labor today we have ever had. During the Civil War the North could import the labor that it needed for the war supplies. Today, for lack of ships and for the reason that the whole world is at war, we cannot import labor. Immigration has stopped; the station at Ellis Island is closed. The shortage of labor is aggravated by the fact that we have already taken out of our industries a couple of million men for the Army and we are likely, before we get thru, to send as many more to the front. Coincident with this double labor shortage on the supply side of the market, there is an increased and ever-increasing call for labor on the demand side. The munition factories want labor, the navy wants labor, the shipyards want labor, the aeroplane factories want labor, the farmers want labor. We should be progressively transferring, or redistributing, an immense amount of labor to produce more munitions and food. Our philosophy of keeping men on the old jobs means that the new jobs will go unfilled. It is natural that many should hold back from changing jobs. They would rather "let George do it," or in plain English, be slackers.

But there must be some painful dislocations. The war itself is the most terrific dislocation. We must "see it thru," however drastic the dislocation may seem to those who are uprooted from old habits, and who lose the advantages of acquired skill.

#### PUT YOURSELF IN CRUSOE'S PLACE

Suppose we take the problem in its simplest form, and see how Robinson Crusoe on his desert island would meet the situation. Because of a war with neighboring islands he needs bows and arrows. How can he get them? There are only two ways: one is to take them out of accumulated stock, or capital, that is, use bows and arrows that he had already made. The second way is to take them out of income, and that, in turn, he can do in two ways: either by working harder and having Man Friday work harder to produce more; or by stopping the production of things which they had been producing before, say to take Man Friday off the job of producing chewing gum from the resinous trees and set him to producing bows and arrows instead.

The same simple principles as apply to Robinson Crusoe's island apply also to the United States altho obscured by

the camouflage of a circulating medium and the division of labor and their respective fallacies, the money fallacy and the make-work fallacy. I strongly suspect that one reason that the amount requested for the third Liberty Loan was so surprisingly small was because we had not been able to divert the productive energies of the country sufficiently to the things for which we were subscribing.

#### IT'S NOT A QUESTION OF MONEY

To provide the real sinews of war we need not money and jobs but certain definite goods and war services. These can come either from existing capital, i. e., stock on hand, or from current income. There is little to be had from capital. We have plenty of peace capital but little war capital. We were caught "unprepared." We had no great accumulation of firearms in this country, no great accumulation of food. We could take a little out of stock in the case of cattle and have done so, thereby greatly endangering our future meat supply.

We must depend, therefore, chiefly on current production. We must be more productive and eke out by cutting off non-essentials so far as necessary. If we are to use twenty-four billion dollars' worth of goods and services in the next twelve months, reckoning these values at the present price level, it is scarcely conceivable that as much as a billion of this can be taken out of capital. The other twenty-three billions and more will have to be produced.

The total income of the people of the United States is apparently about seventy billions. Already, by the withdrawal of two million men it has been somewhat reduced. The reduction let us, very roughly, place at two billion dollars—leaving sixty-eight billions' worth which we can produce without these soldiers. Of this sixty-eight billions, twenty-three billions, or approximately one-third, we need to use toward carrying on the war. Professor David Friday estimates that there were in 1917 a total volume of liquid savings in this country of eleven billion dollars. We must increase this amount, for we are spending double that much a year on the war. We cannot secure this huge mass of goods and services except by speeding up production and by transforming production from non-essentials to essentials. The last named method must do the great bulk of the work. Like Robinson Crusoe we must divert our energy from the production of chewing-gum to the production of munitions.

As Mr. Vanderlip, president of the National City Bank of New York, says: "No matter how well we can afford to buy unnecessary things, no matter how well we can afford to do it, the Government cannot afford to have us do it. If you saw a chauffeur driving an ambulance you wouldn't take him away to drive your car. Or if a woman was making a gas mask you wouldn't take her away to make a new hat. Or a mechanic working at a lathe on a shell—you would not ask him to repair your automobile."

If we expect "business as usual" to

#### AND THE BOCHIES COME OUT

*Americans and British are bringing back this horde of German prisoners, a part of those captured after one of our recent victories*

**I**N my two previous articles describing my trip from the American ports of disembarkation up to the battle front, I have taken the reader over two-thirds of the American communicating lines. This week I conclude my journey back of the American front. On this part of my trip I was accompanied by Lieutenant Wilson, of Texas, who was assigned to me from G. H. Q. Our next stopping place was a good sized French city where General Johnson, a West Point graduate, commands a force of 8000 American troops. We arrived in town before daylight and had to walk from the railroad station to the hotel a dozen blocks away, as there was no conveyance of any kind to be had for love or money. It was cold and drizzling and the city was strangely calm in its sleeping stillness. But after a couple of hours more sleep at the hotel, a shave, a cold rub down and a good French breakfast of rolls and hot coffee we proceeded to call upon General Johnson, who we discovered was a tall, handsome native of Minnesota and naturally of Swedish extraction. He received us with much kindness and at once put his limousine at our disposal for the day and assigned to us one of his aides—a bright young American college boy whom I had previously met on one of my lecture trips at home.

Our first visit was to the colossal locomotive repair shops which the United States has taken over from the French and which are now in the process of being enlarged. These shops are built of concrete so as to last long after the war is over. They are manned by 700 American engineers, all of whom were railroad experts before the war, and a battalion of troops. In addition the French have loaned us several squads of German prisoners, who seemed to be doing much of the unskilled work in the shops and about the yards.

The United States has now in France,

as I have already said, over 250 American engines and 800 freight cars, but 1000 more engines and 20,000 freight cars have been ordered. The shops when completed will maintain 1500 workers. They will be equipt to repair both French and American engines; the American engines being new will need little attention at first. I noticed a large number of Belgian engines in the yards. When Germany invaded Belgium the Belgians managed to get all their engines to France. These have now all been turned over to the American Army.

The officer who was conducting us about said the plant would be running at full capacity by September if the shipping was good in the meantime. Tho the engineers' battalion left the United States August 9, 1917, most of the time since then had been spent in getting the material for the shops shipped from home and enlarging the plant. The repairing of engines had only recently begun.

After walking about the yards and visiting the German prisoners' barracks, which we found clean and healthful, we rode out of town a mile and a half to a spot where America has erected an assembly and motor repair shop. I suspect that this is one of the most complete shops of its kind in the world. It employs 1500 automobile workers. It is really more of a hospital than anything else. I noticed hundreds and hundreds of cars in all stages of chronic illness. Some looked as tho they had fallen over precipices, others as tho they had actually been pinked by German shells. They ranged from aristocratic Wintons and Whites down to humble Fords and from giant Pierce-Arrow trucks to Indian motor cycles. We visited the various buildings where the Yankee mechanics were at work. Back of one of the sheds was a small mountain of used tires thrown higgledy-piggledy together. I have no doubt the Ger-

Camouflage along the sides and above the road is

mans would have given the Kaiser and the whole Potsdam family to capture them, so badly are they in need of rubber. This repair shop is complete from A to Z. It is said that nothing can happen to an automobile that cannot be mended there. Of course each automobile unit at the front has its own corps of mechanics to make minor repairs, so that only serious and chronic cases are sent to this auto hospital. This station, however, was only for temporary use. It will shortly be moved to another nearby town and amalgamated with three other automobile units. When the new station is in working condition, it will require 600 expert mechanics and a small army of helpers to keep the cars for all the American Army in running order. We were told that the American Army now has over 8000 automobiles in France.

Returning to town we next visited an automobile supply depot where 20,000 automobile parts are kept in stock. The depot has nearly \$3,000,000 worth of new tires in storage, all unpacked, classified and ready for instant requisition. In fact so many are on hand that 11,000 tires had to be piled out in a vacant lot protected only by a canvas covering. Such is the hard usage of tires under war conditions that the whole stock is turned over about every six weeks.

Before leaving town we motored out to the site of what is to be, when finished, one of America's largest base hospitals. This hospital is located in the open country on one of the main railroad lines so that the wounded can be brought directly to the hospital without having to be transferred to automobiles. It will eventually have fifty-six buildings and accommodate 10,000 patients. Now only a few buildings—all of red brick—are up. The grounds comprise 400 acres of dry, flat farming

# TH THE FRONT

## ON HOLT

Effective screen that hides the movements of troops

land. The whole project gives one a realizing sense of the vast preparations that the United States is everywhere making. The Government is evidently taking General Pershing's advice, given to the American people thru The Independent, to prepare as tho the war would last five years and require 4,000,000 or 5,000,000 troops.

After bidding goodbye to General Johnson we took the train to our next stopping place. Its chief object of interest was the American camouflage works. This is one of the most fascinating sights to see in all the back lines of France.

The Camouflage Corps is a motley group of engineers, carpenters, blacksmiths, mechanics, sculptors, artists, architects, landscape gardeners, etc., all busily engaged in making things seem what they are not. We were shown how an artificial tree can be manufactured to look exactly like a real one. After dark they remove the real tree and in its place substitute the camouflaged one. The next morning a periscope peering out of the fake woodpecker's hole gives the observer in the dugout below a very excellent and safe view of No Man's Land. We were shown *papier maché* rocks that when placed on the ridge of a shell hole, a soldier could crawl under, and therefrom do some very efficacious sniping. We saw an artificial trench which looked as tho old shoes and tin cans were casually tossed on the side, but on closer scrutiny we could perceive that the shoes had fine wire screened soles and the tin cans transparent bottoms. They made very good concealed outlooks for observation posts. We were shown life sized soldiers' heads that were made of pasteboard and fastened on a stick. They could be raised over the trenches and draw concealed German fire. In one of the huts these cardboard soldiers were

being made lifesize and in wholesale quantities. Some were standing erect, some were crouching and some were lying flat. They suddenly are erected in front of the trenches and are very effective in the morning haze in making the enemy think that an attack was impending. There have been instances where the Germans have reported in their official *communiqués* that they have repulsed our attacks and driven our men to cover when it was only cardboard men that were opposing them. A mile away, it is said these dummies cannot be distinguished from real men. They generally draw the German barrage.

Some 275 French women were employed at the factory to manufacture the green camouflage that is put over concealed batteries in the open fields and the brown camouflage that is erected along the road sides to prevent the movement of troops being seen. The green camouflage is made by tying green strips of cloth on fish netting. The meshes of the net are so close together that the one on the inside can look thru and yet the enemy on the outside sees only a solid surface. The principle is the same as the large window curtain. The one on the inside can look out, but the one outside cannot see in. Whenever an army in the field needs any camouflage it orders it from this place. If a special kind is required outside the staple stock always kept on hand, a specialist is sent up to the firing line to draw the designs and then, after the material is manufactured, to supervise its proper installation.

I was greatly delighted to run across—it was quite by accident, for I had no idea she was there—my former colleague, Miss Eveline Brainerd, who left The Independent to do Y. M. C. A. work in France when the United States entered the war. She was acting as welfare worker, efficiency expert and

Mother Superior to the French women employees of the factory and at odd moments ladled out lemonade to the khaki boys in the Y. M. C. A. hut. Thru her good offices I was invited to speak to the battalion that evening and a fine audience turned out to hear me. My talk was preceded and followed by some old-time American songs familiar to every boy there and sung most sympathetically by a bright-eyed young American Red Cross girl.

Our next stop was America's greatest railroad station in France. It is the center of the hour glass thru which all the supplies from the various depots behind the lines come to a point before distribution to the different sectors at the front. It is the business of Colonel Hildgard, in command of this station, to know where all things are stored and whether the goods he orders are delivered on time or not. About 20,000 cars packed with supplies pass thru his hands every month and he has 6000 labor troops under his command. All goods are received by train except in case of emergency, and then by trucks. Colonel Hildgard assured me that the United States will have to have 5000 American locomotives to pull all the freight to the front before we get thru. Now we have only 200 American locomotives and 500 cars for our own use. The rest that we have already imported have been handed over to the French who need them for the moment more than we do.

Each day the United States sends a supply train to the so-called rail heads at the front containing enough food and ammunition for the army for one day. In addition each rail head is supposed to keep three days' supply of storage on hand. Each day Colonel Hildgard has a list of all the staple commodities owned by the United States in France put upon his desk with a statement of where they are so that if the railhead's sup- [Continued on page 34]

## HAVE AN ORDERLY ATTIC

BY WINNIFRED FALES AND MARY NORTHEND

IN view of the many prophets who have arisen in recent years to preach the gospel of scientific home management and show the housewife how and why the practise of scheduling, timing, routing and other approved efficiency methods will cause the domestic machine to run with the smoothness and precision of a great industrial plant, it is amazing that so little mention has been made of a portion of the house wherein efficiency is sorely needed and but seldom found. To paraphrase the Revolutionary slogan, there are "Volumes on the kitchen, but not one line on attics," altho in the average home the attic may be tried and found wanting on at least four counts. It is a waster of space, of time, and of energy; and that it is also a constant source of danger from fire is proved by published statistics on the causes and points of origin of residential fires.

The need of reorganization being admitted, the first step toward the establishment of the attic on an efficiency basis is to rearrange its contents in such an order as will conserve space and reduce to a minimum the annual expenditure of time and effort involved in its care and management. As a preliminary it is imperative to dispose of all useless articles, which not only occupy space that might be better employed, but must be taken out, brushed, aired and returned to their places once or twice each year at a needless cost of time

A sample of efficiency in the attic

and energy. In the minds of most persons the word attic evokes a picture of a slanting roofed, cavernous interior, inadequately

lighted by a small window at either end. Suspended from the rafters, half hidden under the eaves, and littering the floor are innumerable objects which no longer have a practical value for their owners, but which have been thus honorably invalidated for reasons of sentiment, or to save the trouble of destroying them, or because of that singular attitude of mind which admits that a thing is "not good enough to use," yet contends that it is "too good to give away." When these have been weeded out—those of the first class discreetly, and the remainder with uncompromising rigor—the actual work of reconstruction may be begun.

The storage area first of all should be roughly mapped out on paper and places assigned to the various classes of belongings according to their frequency of use, those oftenest needed being arranged in the most accessible positions. Thus, in a family given to travel, the trunks and suitcases in active service should be stored near the head of the stairs and nothing placed on or in front of them to interfere with ease of handling. In like manner, seasonable accessories such as slip covers and summer or winter draperies, which are brought out, used, and packed away again at regular intervals, should take precedence over great grandfather's brocade waistcoat and great grandmother's wedding gown whose wrappings are only [Continued on page 32]

The good old fashioned attic is getting rarer as heirlooms come into rightful prominence downstairs and the attic space is made over into an efficient storeroom. At the right is an excellent example with deep shelves and clothes pole and cedar lined chests

The housewife's version of "keep the home fires burning" calls for careful planning and keen common sense in doing over the house

## WHEN A ROOM NEEDS DOING OVER

BY HAROLD DONALDSON EBERLEIN AND ABBOT McCLURE

**N**OTHING is more depressing, and nothing has a worse effect upon morale, than environment, shabby, careless and down at the heel. It is a standing regulation in the British Army that directly a man is relieved from trench duty he must polish up his buttons, clean his arms and put his kit generally in immaculate condition. This rule was found necessary in order to keep the men cheerful and punctilious and to contribute to the proper preservation of morale.

Upon all of us now lies the patriotic obligation to keep cheerful and mentally as well as physically fit. If we allow our domestic surroundings to lapse into a visibly neglected and depressing condition, we thereby detract materially from our efficiency. It is a very poor and mistaken policy to let things go and to say of this room or of that, "Yes, it's getting shabby and doesn't look cheerful and inviting, as it once did. But it will have to wait till after the war. We can't do anything about it now."

That is not the true spirit of carrying-on. You can do something about it, and you can do it now. By refusing to do anything about it you are inviting mental depression and indifference and are thereby making yourself less fit to serve vigorously and well. This article does not urge, nor even suggest, making any considerable expenditure. If your conscience and your pocketbook permit you to spend a moderate sum, and you feel that by so doing you are helping to keep legitimate trade from stagnation or collapse, then spend what you deem expedient. If you do not feel justified in spending, then make your wit take the place of dollars. A reasonable amount of decorative rehabilitation may be accomplished either at a minimum of cost or without any money outlay at all.

The chief obstacles to doing over or rehabilitating a room, under present conditions, are lack of a clear grasp of the situation and lack of a definite constructive policy on the part of the owners. The all-important thing is first to form some definite conception of what one wishes and then see how it may be accomplished in a systematic manner. Nothing worth while will be achieved by an unsystematic, spasmodic course of bestowing unrelated dabs first

here, then there, and then somewhere else. The second important thing is to know where to begin and, having decided that, to do the first thing first. If the transformation has to be made gradually, let each step be calculated to bring the desired result one degree nearer achievement. Done in this way, it will be surprising how soon the scheme will be fully perfected.

It may seem a piece of superfluous advice to caution people not to begin at the *wrong* end first in the process of doing a room over, but experience has proved that there are a great many well-intentioned folk who do that very thing, of course with discouraging results. They pick out their upholstery stuffs and hangings before they give a thought to the walls, woodwork or floors and then wonder why the effect is disappointing. Rehabilitation, as well as original creation, is to be done in a constructive, well-ordered way. Before all else, one must consider the room's exposure, the kind of light and the amount of light entering it. It will then be possible to arrive at some satisfactory and logical choice of color for the walls, woodwork, floor covering, and ceiling. In other words, it will be possible to determine the setting or background upon which the rest of the scheme is to be built. An artist must know what kind of background he is going to have before he can work out the scheme of a picture, for the function of a background is very humble it is, nevertheless, indispensable. The background must serve both as a foundation and a foil for the rest of the work and, without a properly calculated background, all color values and all effects of contour will be spoiled. The value of a proper foundation is precisely the same in dealing with the composition of a room and, whether a decorator is employed or not, it is well that the owner should have some intelligent idea of the method of procedure.

The background settled upon, a selection of upholstery stuffs and hangings can then be made with the added advantage of a base for experimentation with samples. The next step is to take stock of the furniture to be used. Not infrequently, when a wise choice of paint, paper and floor covering has been made, it will be found possible to make an entirely satisfactory composition

either by merely rearranging the same furniture that was used before but not judiciously placed, or else by eliminating one or two undesirable pieces and purchasing one good and suitable, but not necessarily expensive, thing to take their place, being always careful to avoid overcrowding. Keep in mind, too, the way in which the room is used and let utility be the guide to rearrangement or the purchase of new articles. A room should not be merely smart in its effect; it should be homelike as well.

Many a piece of furniture that we have, perhaps, long despised, may be acceptably transformed, and without appreciable expense, by a little judicious attention. A well known decorator's shop in one of our large cities has recently made a series of edifying window displays showing the results of this very process. Carved walnut or rosewood chairs and sofas of the much-decried Victorian pattern—the kind we usually associate with prickly haircloth, faded rep or threadbare brocade—have been revived and even endowed with a certain degree of charm by rubbing up the frames and upholstering with inexpensive but becoming chintz or cretonne. One of those obsolete creatures, an *etagere* or "what not," was even reduced to seemly subjection in an interesting bit of composition. Bedsteads, dressers and tables of the same vintage were redeemed by removing superfluous "ornamental" projections and painting them. The process of paint and simplification sometimes works wonders. Even offensive golden oak monstrosities will often yield to its transforming influence. Occasionally the mere lopping off of an undesirable member will be all that is necessary. This instance will illustrate the possibility: the galleried top and "barber shop" mirror at the back were removed from a Victorian walnut sideboard. What was left was not at all a bad substitute for an Italian Renaissance *credenza*.

For the sake of a concrete example of inexpensive doing over, let us briefly consider an unattractive room that was transformed, and note how the exercise of a little decorative common sense and orderly thinking produced a result entirely incommensurate with the trifling outlay involved. It was a combination library and living room. On the west [Continued on page 33]

# What to Do in October

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

## IN THE GREENHOUSE

**Cuttings** This is the last opportunity to make cuttings of geraniums, carnations, colons, ageratum, heliotrope, antirrhinum, petunia and stocks, if winter bloom is desired.

**Seedage** Sow the seed of sweet peas, verbenas, candytuft, stocks and mignonette.

**Storage** Store plants of hydrangea, fuchsia, azalea, camellia, genista and geraniums. The storehouse should be dark and cold. The temperature should be a little above freezing.

**Christmas Plants** Repot cyclamens, primulas and cinerarias in a rich, light soil. Fancy ferns should be repotted in a leaf mold compost. Apply dried blood to the poinsettias. Stir this fertilizer into the surface soil and water freely. This treatment will cause the plant to hold the foliage longer and it will be a bright green.

**Chrysanthemums** Select clumps of the desired varieties and store them in a coal house. The clumps should be labeled. Do not give much water. The plants need a rest.

**Late Bulbs** Hyacinths and tulips potted this month and stored will give a late bloom.

**Roses** Dust the foliage with the flowers of sulfur and paint the heating pipes with a paste of sulfur to prevent the mildew. Fumigate with punk or tobacco stems on cloudy days and after 5 p. m. This will keep in check the aphides. Spray the plants with clear water on bright days to check the red spider. Feed with a weak application of liquid cow manure once each week.

The three year old canes of the Rambler should be cut out this month. If the plant has been winter killing or is exposed to the north winds, spread on the ground in front of the bush excelsior one foot deep. Bring down the plant and cover it with one to two feet of excelsior or straw. This should be held in place by pegs or heavy branches. Small roses should be wrapt with excelsior, straw and burlap. A half bushel peach basket placed on the young plants after they are wrapt often prevents injury.

**Strawberries** This is the time to lift strawberry plants for pot culture under glass. Transplant into six inch pots and keep shaded for a few days until the plant becomes established. The plant should be well ripened before lifted and this is shown by the reddish green color of the foliage.

**Carnations** Continue to support the plants by wire and string. Spray on bright days. Do not neglect disbudding. Feed the plants a weak solution of liquid cow manure.

**Hardy Perennials** Mulch canterbury bells, columbine, fox glove, hollyhock and hardy chrysanthemums with a heavy coating of decayed stable manure mixt with a little coarse bonemeal. This mulch is to be dug into the soil in the spring. Mulch the wild flower and fern garden with leaf mold.

**Spring Pansies** Sow the seeds now. Transplant the seedlings into flats about two inches apart each way. When they grow large enough, transfer to the permanent bed. Scatter a few tobacco stems between the plants to keep the green aphids in check. Dust them with tobacco dust. Keep them growing slowly all winter, and

very early in the spring they will gain an abundance of bloom.

**Bulbs** Before planting bulbs at this date, prepare the soil by making it rich with stable manure which is very well decayed. Never use fresh manure. Plant golden jonquils, blue scilla, Spanish iris, crocus, snow drops, narcissi, grape hyacinths, Darwin tulips and anemones. These bulbs should be protected with litter before the soil is locked by frost. Do not use fresh manure. Dig and dry the tops of dahlia, gladioli, caladium and canna roots. After cleaning these roots pack them in a cool place in sand where they may retain their plumpness until spring. It is a good practise to change the location of the bulb bed each year and in this way avoid the danger of insects and disease which are found in old beds. The Darwin tulips like a partial shade. Do not plant the bulbs too close.

**Wild Flowers** When the leaves of the maples ripen is the best time to transplant trillium, hepatica, violets and ferns. The plant is ripe and they should be moved when the soil is moist. Take as much of the natural soil with the root as possible. These wood plants must be given their natural shade, soil and moisture if you expect them to thrive.

## VEGETABLES

**Fall Sowing** There are five general rules for sowing fall vegetable seed to be harvested next spring.

1. The soil must be rich in humus and deep.
2. Fertilizer, both stable manure and commercial, should be near the surface.
3. Sow the seed deep enough to prevent alternate freezing and thawing.
4. Sow extra early varieties.
5. Sow the seed just before the hard freezes when soil is cold, thus preventing germination.

**Peas** Sow the smooth seeded and dwarf varieties. Draw a furrow four inches deep, sow the seed thickly. Rows two feet apart. One quart will plant 100 foot row. Yield, four pecks.

**Carrots** Seed should be planted one-half inch deep. Rows, eighteen inches apart. One ounce to 100 foot row. Yield, twenty bunches.

**Lettuce** Seed planted one-half inch deep in rows eighteen inches apart, will yield greens very early. In the spring thin out the plants and transplant the uprooted seedlings. One ounce seed to 100 foot row. Yield, 100 heads.

The Grand Rapids variety may be transplanted to the hot bed the first week of this month. Keep the temperature between 45° and 55° F.

**Radish and Turnips** Both of these vegetables require the same treatment as the carrot. They mature early and require little attention. One ounce to 100 foot row. Yield, radish, seventy-five bunches; turnips, two bushels.

**Spinach** The New Zealand and Prickly seeded are the best for fall. Sow in rows twelve inches apart and plant one-half inch deep. One ounce to 100 foot row. Yield, one bushel.

**Potatoes** Sort out all bruised and small potatoes. Diseased tubers should be buried in an out of the way place. Do not put them in the manure or on the compost heap. Do not expose tubers to the sun for any length of time. The skin turns green and the potato becomes poisonous.

This is the last call to plant the sets of Multiplice, Potato and Egyptian Tree onions. One quart will plant 100 feet. Yield, seventy-five bunches.

**Storage** Cut the tops one inch from the root of beets, carrots, parsnips, salsify, rutabaga and turnips before storing. The pit or cellar must be well drained and the air pure. Do not store any bruised roots. Late celery may be lifted with the roots. The plants placed upright and a little sand packed about the roots. Both the roots and celery plants should be kept from frost.

**Rhubarb and Asparagus** Mulch the rhubarb and asparagus rows heavily with decayed manure. Never use fresh manure. It not only heats the soil but produces a heavy crop of weeds the following spring. If desired for forcing, lift the plants before the soil is frozen, pile them and cover with straw or some other litter. The roots must be protected from injury of snow and ice. Light frost does not hurt them. When ready to use, thaw them out gradually.

## ORCHARD AND SMALL FRUIT

**Harvest** This is the time to harvest the later varieties of apples.

1. Don't pick the fruit on wet days.
2. Don't pick the fruit when the dew is heavy.
3. Don't pile the apples in the orchard if you expect to store them for winter. The danger from bruises is increased on account of the number of times they must be handled.
4. Don't pull out the stem.
5. Don't bruise the fruit by dropping it into the container.
6. Don't fail to ventilate the fruit storehouse on warm days. The air must be kept fresh.
7. Don't fail to pick over the fruit once each month, especially if it is a variety that is ripening.
8. Keep the fruit in a dark, cool place.

**Young Trees** Place wire guards about the trunks of young trees. The guard should be placed a little below the surface soil to prevent the action of field mice. All weeds, suckers and water sprouts should be cleaned away from the base of the tree. The guard should be made stationary so as to prevent the upper rim girdling the tree. Tar paper makes a very satisfactory guard but should be removed in the spring. Mulch the surface soil with manure and straw where the feeding roots are thickest and where the water drips from the foliage. Mulching should be done after the steady frosts have come to stay.

**Strawberries** Mulch the strawberry bed after the foliage turns a reddish green. The soil should be frozen a little. This heavy straw mulch may be used next June to place under the fruit.

**Raspberries and Blackberries** This is the time to cut out all of the old wood. Also wire up the rows to prevent neglect next spring when the rush is on.

**Soil** Prepare your soil now. If you are troubled with quack grass, spade or plow the soil and leave the clods exposed to the elements. A little salt scattered on the soil will help to destroy this weed. Apply a heavy coating of stable manure but no commercial fertilizer. A little lime scattered on the surface after cultivation will keep the soil sweet.

# GETTING READY FOR NEXT YEAR

BY WILLIAM C. McCOLLOM

*Don't provide a home for insects*

**G**OOD gardens are primarily the result of properly constructed foundations. The garden's foundation is the soluble chemicals that the soil contains, and these soil chemicals are made by the disintegration of elements which we place into the soil, and which are made available for the use of the plants when properly neutralized by the action of the air and light. That is why successful gardening means the constant and deep working of the soil, as it brings in direct contact with the elements the greater body of earth.

A productive soil must be properly balanced. If it is too heavy in texture it contains an excess of water but not enough air. Soils of this character require deep and constant working, or in some cases it may be necessary to underdrain the land with open tile. For many reasons the fall is the best time of the year to prosecute such work. Digging is much easier than in spring, when the soil is wet and heavy. The ground has an opportunity to settle over the winter, and labor is always more plentiful at this season of the year.

Light soils that are porous and sandy, contain large quantities of air but do not retain moisture; this must be overcome by adding large quantities of manure or other forms of humus, which closes up the openings between the soil particles, helping to retain the moisture. No amount of artificial watering will offset this deficiency of humus, as the builders of the soil chemicals are minute organisms that must have sufficient decayed vegetation in the soil to exist.

Soils that are water logged become sour and acidulous. This condition is noticeable by a greenish scum on the soil surface, due to the accumulation of surface water which should percolate to the subsoil. Rains in spring and fall are warmer than the earth, encouraging growth; in summer the rains are cooler than the soil, having a tendency to harden the growth. The value of this

process of nature is lost if the rains don't penetrate properly.

In mild cases of soil acidity lime is the best means of correction, in fact it should be used on all soils at biennial periods; new soils of all kinds should be thoroly limed before starting to cultivate. Any grade of lime may be used, such as air slacked rock, or granular, special agricultural grades are preferable, as screened or hydrated; the latter is the best of all grades for land purposes. Lime is used in quantities of 100 pounds to 500 square feet of surface.

Land or unglazed tile properly installed is the best type of drainage; from 3 inch to 4 inch pipes are used placed in lateral rows from 4 feet to 20 feet apart according to the requirements. They should be placed from 2 to 3 feet below the surface so that they will not interfere with cultivation. The pipe should be laid with open joints only, using a tar paper collar over the joint to prevent the soil from working thru and clogging the pipes. The water is drained to a lower level, or a silt bed may be made of stone or cinders at the termination of each run of pipe. Where stones are abundant they may be used in preference to the tiles for drainage. The trenches should be not less than three feet deep and just as narrow as they can be made; about twelve inches of coarse stone is placed in the bottom. A little hay or coarse material placed over the stones before filling will retain the soil until it is properly settled.

Light soils are very quick in action; they produce earlier and are more responsive to treatment. The reason for this is that the soil is more open, heating and cooling much quicker than heavy soils. Light soils are very productive when fertilized frequently, as the rapid percolation of water dissolves the plant foods. Light soils are deficient in humus; that is, decayed vegetation that fills the openings between the soil particles. Any decayed vegetable or animal matter applied to the ground will increase the humus; leaves, manures, garbage from the house, or cover crops which may later be ploughed under, should be applied during the fall and winter months.

New land that is intended for cultivation next year should be ploughed now, lime should be used liberally, and the ground should be left fallow over winter, to start the natural decay of the surface growth which when rotted is a valuable fertilizer.

There are a great many of the more hardy types of vegetables that may be sown now with the idea of carrying them over the winter. Fall sown crops build up a tremendous rooting system which is certain to result in a more healthy, vigorous and productive growth than spring sown seed.

The common error with wintering crops is covering them too early; even the most hardy plants will winter kill if protected before the growth has been well ripened by exposure during cold weather. The proper time to cover them is when a thin crust is formed on the ground by the frosts. No mulching is necessary, just a light covering with salt hay or other light material

*That new field should be ploughed now*

It is a dangerous practise to allow vegetation of any kind to accumulate and decay in the garden, insects of all kinds naturally seek such shelter to hibernate or lay their eggs to be protected over the winter. The garden and surroundings should be thoroly cleaned, dry stalks of plants should be burned, those that decay quickly should be thrown on the compost heap.

The best gardens are trenched at least every third year; this practise destroys the pupae of various insects that hibernate in the soil. Its principal value, however, is that it brings to the surface the subsoils which are more abundant in soil chemicals than the surface soils, but require the action of air and light to make them available. The trenches should be the width of a spade, about two feet apart and eventually three feet deep. Gardens that have never been trenched should not be trenched more than two feet deep, gradually deepening with each succeeding operation.

It is by no means premature to start planning now for next year's garden while your mistakes are fresh in your mind. Quantities are a very important garden factor; if you make a few notes now of how your's worked out this year, it will save both time and money next season. Varieties vary with personal taste and requirements; this is the time to jot down those you prefer or intend to discard. Next summer, when dry weather cuts your garden dividends, you will wish you had installed an irrigation system in the garden, this is the time to study these problems.

A garden without a hedge or fence is lacking in individuality and is easy prey for your neighbors' chickens, dogs or other livestock. Why not overcome this now? Have you a trellis for the cane fruits? Successful gardening means thinking of the garden, and working for the garden at all seasons of the year and not for a very spasmodic spell in spring

*For soil acidity use lime liberally*

*This is the width to trench the garden*

# STENCILS AND HOW TO USE THEM

BY MAXWELL ARMFIELD

effective patterns will be found to be simple ones.

The next exercise might be a square repeated both ways with only a narrow strip

It is very much more amusing, as a number of people have already found out, to decorate one's own belongings than to buy them ready made. It is also much more individual, for no one else will think of just the same pattern used in just the same way as it is on one's own work. Many are held back by the thought that "it takes so long to do" and is so difficult; and still more by the argument that they know they "never could design anything." But neither of these is a good reason. Anyone with a little humility and perseverance can soon learn to make a simple pattern, and the stencil process enables him to work out rather elaborate patterns very speedily.

Stenciling is not difficult. It is, on the contrary, one of the easiest of all the crafts to learn and requires very few tools. It is far simpler than embroidery, for instance, as well as being so much quicker.

Stenciling is a form of printing, and its theory is really much the same as that of the photographic print. You can see the principle very clearly by looking at the leafy shadows on a sun-dappled lawn. The sunlight is, you may say, printed on the grass in shapes decided by the leaves—where there are no leaves it can come thru. The theory of the stencil is just this. The sunlight corresponds to the paint, and the leaves to the stencil-plate from which the pattern is cut out and which keeps the paint off the material to be decorated in the other parts.

Making the plate. The materials required for making the stencil are very simple—a sheet of glass or zinc to cut on, a sharp knife and paper. Knife and paper especially made for the purpose can be bought, and if possible this kind should be used. The paper is often sold in different thicknesses—the thickest for the largest patterns. It is easy to prepare one's own by taking a stout sheet of uncrumpled wrapping paper and coating it with spirit varnish on both sides.

Draw your design on the prepared paper, or trace it with carbon paper. Let us suppose it to be a row of squares, like this.

Place the paper on the glass and cut along each line, holding the knife like a pen if it is thin paper, and like a table-knife if the paper is very tough. (In this case you will need to have your seat higher than usual above the work to hold the knife at the proper angle.) If the knife is sharp, you should be able to cut each line quite cleanly into the corner (and not beyond), and the square of paper will fall out. You can do as many squares as you wish; it saves time in printing to have several repeats on the plate if your work is large. Also the plate wears longer. The plate is now finished. This is a very simple pattern, but the procedure is just as simple, however complex the pattern may be.

Anyone can do this, obviously, and a good-sized square or triangle of scarlet, for instance, repeated at intervals over a lavender ground, makes quite an effective cushion-cover, especially if it be bound or frilled with black silk. It is much better to begin with very simple patterns of this sort, until they become easy, than to discourage oneself trying to cut out elaborate patterns. Stenciling is a simple craft, and the most

*This design shows clearly the trellis-like nature of stencil patterning. It shows, too, what a striking effect may be obtained by printing the design on a dark ground*

between. If you rule your paper in parallel lines, alternately, the width of the square and the strip, and similar ones crosswise, you can then cut out just which ones you fancy. The design can be varied to any extent in this way, and nothing is more stimulating to the sense of design than to make a series of variations on a simple theme. Most of the best of medieval painting and music was invented in this way.

You will notice in this last design that the plate is kept together by the narrow strips between the squares. You should also notice that these are just as much a part of the design as are the squares themselves. These strips are the "ties" that teachers of design make such a bogey of. One need have no trouble at all with them, however, if two things are kept constantly in mind. First, that a stencil pattern is always a design in at least two tones—say black and white—both of which are important and often equally so; and second, in all-over patterns especially, that the pattern is a sort of trellis with the sky showing thru. The color of the material you are decorating is always the trellis, and the paint is always the sky. The people who talk a lot about "ties" are usually the ones who don't know how to use them, thinking of their design as a series of isolated identities that they are obliged to bind together somehow with strips that have nothing to do with the

pattern; and that is the reason one sees so many vulgar and uninteresting stencils. The basis of the design should be the relation of the sets of tones (at least two) to one another—the black tones and the white tones. Where one is not the other must be, for there is no vacant space. In some patterns one tone may be the pattern and the other the background, but in this case the different parts of the design should not give the sense of being strung together by irrelevant bands that merely interrupt the shapes. When you look at your pattern you should not be conscious that there are such things as "ties."

Printing the pattern. Having made your plate you now have to print it. For this, paint and brushes and the material to be decorated are required. Special brushes made of very short hair are necessary: hog, for most things, and some finer hair for very minute designs.

The paint may be of various kinds. No paint washes well. Oil paint will wash after a fashion, if it is not badly treated. For washing, dye is the only thing. For most things one can rely on dry cleaning, and then the paint put up in tubes as tempera will be found most convenient. Martini colors are good for the purpose, being moist and keeping moist. If the design is to be on a shiny or hard surface, the paint can be used as it comes out of the tube, but for softer things such as shantung or casement cotton, it should be diluted with a little water. Oil paint should be diluted with rectified petroleum.

To print the pattern, lay your plate flat on the material, seeing that there are no wrinkles on it, take the brush, charged with color, and dab it onto the plate wherever the pattern comes. The brush should be kept quite upright, and the motion should be straight up and down. If the paint spreads under the plate it is because it is too wet or because there is too much on the brush, or the plate was not kept flat down on the material. A large plate may be kept down with drawing-pins.

This finishes the very simple process.

In the case of two or more tones in addition to the ground, a separate plate must be made for each tone, and the one printed after the other exactly over the same place. To get the exact place, or "register," there are several devices in use. The best is to arrange the first plate so that a part of the pattern may be cut on the second plate but not printed. If two of these holes be cut and the second plate placed so that the

printed color exactly fits them, the rest of the second plate will also be in the right position. For simple patterns a key of this kind is not necessary. It was not used for the one on the preceding page. In this pattern the ovals are printed in solid gray, and the black plate is easily fitted over them by sight. It is always best to arrange so that the lightest color is printed first where there is another to be printed over it, otherwise the last color will not be clean.

To repeat a larger pattern regularly, such as the leaf pattern below, you may arrange it so that the size of the plate is the size of the repeat, or so that one edge of the plate just touches a point of the printed design when in position for the next repeat, or the material may be marked out by pencil lines, tacking, or by stretching cotton across a row of pins on either side.

Making the design. The examples given here of stencils actually made are graded from the simple to the more complex, but all are quite simple to cut and print. The material should always be allowed a large share in the making of a design, for the character of one's tools is the first consideration. A rose may be a very pretty thing, but it does not follow that it is a suitable shape to stencil over window-curtains, and it may have to be very much altered in order to translate it into a motif for a design.

The only way to become a good designer is to study good designs and copy them. Individual alterations will gradually suggest themselves until the old models are completely absorbed and part of one's mental makeup. It is obvious that, apart from stencils (which are curiously rare), the best things to study will be fretted patterns, pierced patterns and such things as drawn thread and bold lacework. Some of the most helpful designs are those severe leafy capitals and screens of Byzantine churches, especially those of Ravenna. Photographs of these are easily found.

Stenciled stuffs in the house. Stenciled decoration can be used in a great many ways in the home. As was remarked in a previous article on Mural Decoration, a plain wallpaper is sometimes much improved by a delicate border, either following the joints of the paper or forming panels for pictures or arranged in other ways in connection with the architectural features. In this work the paint must be used drier for smooth papers than for rough ones, to avoid blotting.

Other charming uses of the stencil are the decoration of boxes of all kinds, and even furniture and curtains. I have seen very delightful ribbon that had been stenciled and then used for the decoration of a clothing dress. One could not tell that the design was not printed in the usual way. After some masters of the craft have been gained, such dainty work as letter headings, seals and monograms may be added to the list.

Beautiful as the Flowery Kingdom  
will be your dreams on an

## OSTERMOOR

The Japanese are content with a hard pallet for a bed and a block of wood for a pillow—but in this country discerning folk demand an OSTERMOOR.

It is not stuffed in the old hit-or-miss way but is carefully built up, layer upon layer of soft resilience, so that the finished mattress has an elastic vitality that lasts for years. The OSTERMOOR won't get uneven and out of shape.

Let us send you our catalog, "The Test of Time," and samples of our ticking—both are free. We will also give you the name of our nearest dealer—or if you prefer we will ship OSTERMOOR mattresses direct to your home by express, prepaid, securely packed by leatherette paper and burlap. Their safe delivery is guaranteed.

# AERIAL MOTORING AFTER THE WAR

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

*Press Illustration*

*The big Caproni triplane carries a dozen passengers successfully. This Caproni, originally Italian, is now being made in America*

IT is doubtful whether twenty years of peace would have brought aerial motoring to the same point of advancement that four years of the war have done. Largely hidden beneath the veil of military secrecy is a story of aircraft achievement which shows that a new mode of transportation will be available, ready made, so to speak, when the war ends. Then the manufacturing facilities, the skill, and the experience, which are now devoted solely to making aircraft highly efficient instruments of warfare, will be directed into commercial and sporting channels, and the results will astound the lay mind.

Outside of the aerial mail services already established in this country as well as abroad, there is no flying except of a military nature anywhere in the world. A forecast of the after-war uses of aircraft must therefore be largely made from performances in military service. Not that the aerial mail services in themselves are insignificant, but rather that they are surpassed by military performances. However, at this writing, the Post Office Department has just announced that during the past week the air mail service between Washington and New York was one hundred per cent. In other words not a single trip was missed despite the rain and heavy winds which prevailed on three days, or fifty per cent of the time. A time record of two hours and ten minutes for the trip between the two cities was also set in the same week, which means, with the speedy light motor truck handling of the mails at either end, an average of less than six hours between the mailing of a letter in Washington and its delivery in New York, or vice versa. A similar service between New York and Chicago is already in operation and the same standard of reliability may shortly be expected on this route. These aerial mail services were inaugurated with army aviators, but recently a corps of civilians was employed, made up entirely of civilian aviators previously employed by the army to train men at the various army aviation camps, and some of the improvement can be attributed to the change, inasmuch as none of the present aerial mail carriers has had less than one thousand hours of flying, the equivalent of about 75,000 miles. Even better progress in this field of aviation has been made in France and Italy, while the British have long been operating both mail and passenger aerial services between their armies in France and different points in England.

Some idea of the capabilities of modern aircraft can be gained from the official

British and French reports of the tonnage of bombs being dropt regularly on railroad junctions, munition plants, etc., within the enemy lines, but these figures cover only the work of fleets and tell little or nothing about the performance possibilities of individual machines. One easily grasps the fact, however, that after the war these fleets can more readily carry an equal tonnage of freight in the line of commercial transportation. A few weeks ago the French brought down one of the new German aeroplanes, called by the Huns a Riesenflugzeugen and by the Allies a Zeppelin aeroplane, and a description of it has been published abroad. This machine is a biplane with a wing span of 135 feet, and is 72 feet long and 21 feet high. There are two smaller fuselages on either side of the main fuselage, each carrying two motors of 300 horse power, one driving a tractor propeller, the other a pusher propeller, giving a total of 1200 horse power. A crew of eight men is carried, four being gunners, and eight machine guns are mounted. In addition this machine has a weight carrying capacity of two tons, which is devoted to bombs. The aviation expert who gave this description stated that it should occasion no alarm because the Allies already had machines of equal capacity.

Since our Allies have secured, apparently for all time, aerial supremacy, it is not amiss to acknowledge the ascendancy which the Germans gained at the start of the war and held for a considerable time. In fact they began some time before the war started by going after every important record, which the French had largely held for years, with competition only from a coterie of Englishmen and from the Wrights and Glen Curtiss representing this country. Between June 24 and July 14, 1914, German aviators established new records for endurance, distance, and altitude, far surpassing the best performances of aviators of any other countries. These were 24 hours and 14 minutes for endurance or continuous flying, 1178 miles for distance on a single flight, and 25,725 feet for altitude. Thus the German air forces went into the war with all the prestige of aerial superiority. Then, too, they had their Zeppelins, which lost effectiveness as the Allies developed aeroplanes and anti-aircraft gun defenses. In fact the dirigible balloon, of which the Zeppelin represents the highest development, has failed by a wide margin to keep pace with the aeroplane and can virtually be ignored in discussing the after-war types of aircraft.

A year ago an Italian made a round trip between Turin and Naples,

without alighting, a distance of 1043 miles, and later flew from Turin to London, crossing the Alps at an altitude of 12,000 feet, a distance of 700 miles in seven hours. Shortly afterward a British machine flew from London to Salonika, making eight stops en route, a distance of 2000 miles, the longest point to point flight on record. The feature of this flight, especially in its bearing on the commercial possibilities of modern aircraft, is that this aeroplane carried two officers, four mechanics, a spare motor, three spare landing wheels, two reserve propellers, and a complete outfit of smaller repair parts and tools. This machine is twin motored, and two days after arriving at Salonika it made a bombing trip over Constantinople, where one motor was disabled by gunfire, the aeroplane returning successfully to Salonika with only one motor running.

In the matter of safety in aerial motoring, reports made to the British House of Commons show a loss of less than five per cent in bombing flights made over German territory by British aeroplanes. In considering this it must be remembered that these flights are largely made at night, with the hazards of hostile aircraft and anti-aircraft gun fire; also that part of the five per cent lost were merely obliged to land on German soil, both machines and crews escaping injury. The records of British training camps show only one fatality to every 75,000 miles of flying.

The principal factor in the after-war progress of aircraft will be the nature of the peace attained. If it brings general disarmament then the governments of the various nations will be only incidentally interested. If, on the other hand, military preparedness must be continued, then great fleets of highly developed aircraft will be essential. In this case in addition to direct ownership of special military machines, the governments will support aerial travel and transportation in order to have available both quality and quantity in aircraft in case of another war. In any event there will be thousands of machines with the facilities to maintain their numbers and improve their design and thousands of highly trained aviators, to inaugurate mail, passenger and freight services thruout the world. With the important centers in Europe served, the lines will extend southward to Cape Town, South Africa, eastward to Bombay, Hong Kong and Tokio, westward to America, and after connecting the principal points in the United States and Canada, will extend down thru Mexico and Central America to the end of South America.

THE POULTRY YARD  
IN OCTOBER

BY E. I. FARRINGTON

EARLY October should find the pullets in their permanent winter quarters. If they were hatched early, they should begin to lay this month, and to move them after that would be to set them back. Be sure that the laying house is given a good overhauling before the new flock goes into it. Sweep down all the cobwebs and clean out the litter. If the nests are portable, as they should be, take them outside and give them a thoro cleaning. If you can whitewash the interior walls, that will be a sanitary measure. Even spraying them with kerosene is a good plan. Two or three days before the pullets are put into the house, apply a coat of lice paint to the under side of the roosts. This will keep away red mites for several months. If the house has glass windows wash the glass so that the sunlight can enter freely. Don't make the mistake, tho, of having a tight house or keeping the windows closed. The freer the circulation of air, the better the hens will thrive, altho, of course, there must be no drafts. When pullets have been grown in open air houses, they will be in condition to go thru the winter in a house the windows of which are closed only on unusually cold nights.

Disturb the pullets as little as possible when you move them. It is best to do the work at night, and to make the evening meal a light one, so that the birds will be hungry in the morning. If intent upon scratching for grain, they will pay less attention to their new surroundings. Contentment on the part of the hen has much to do with egg production.

When the ordinary poultry keeper shifts his hens from one place to another, he grabs them by the feet and carries them several at a time, head downward, often for a considerable distance. This is not the proper plan, and is likely to have an injurious effect on the birds. A good way to move laying stock or pullets about to lay is to take two at a time, one under each arm, facing backward. The hands should grasp the legs of the birds, the body resting on the arm. Another way is to have the birds face toward the front, with the breast and body resting on the hands and wrists. When carried in this way the hens feel secure and are not frightened. If a considerable number of pullets must be moved, it is better to use a crate or coop. If the pullets find food and water at hand in their new homes, if the roosts are not too high, and the nests are filled with fresh lay, they will quickly adjust themselves to their changed surroundings.

It may be that the pullets have had wide range, but must be confined to yards from now on. That being the case, you must not fail to supply them with considerable green food, lessening the amount gradually. If they have been accustomed to forage, they will need a liberal green ration.

From now on feeding for eggs must be the rule. It is impossible to formulate any exact feeding system, for one must use whatever grain he can obtain in times like these. Good results have come from feeding a crumbly moist mash in the morning, with whole or cracked grain at night, a dry mash being kept before the birds all the time. A good mash can be made by using eight parts of moist feed or of bran alone, four parts of corn meal, and one part of beef scraps or fish meal. Be sure not to have this mash too wet.

If you can lay in a generous supply of

TRADE

YALE

MARK

### Your security is in your own hands

IT is for you alone to say whether you will have the proven security and enduring protection of Yale locks and hardware.

Your hardware dealer has "Yale." And he has the particular Yale product you *need* to best serve your particular purpose.

If you want the *better* products bearing the trade-mark "Yale," you can get them by simply asking for them. And then assuring yourself by seeing that what you buy bears the trade-mark "Yale."

Your problem of security and protection is no problem at all when you install "Yale." The *quality* and the *service* are built into every Yale product—into Yale Night Latches, Padlocks, Door Closers, Builders' Hardware, Cabinet Locks and the famous Yale Chain Blocks.

## Save Coal

by heating direct  
instead of by proxy

**T**HE very minute you start the Kelsey Warm Air Generator downstairs, that very minute heat starts heating upstairs.

With other systems where you convert the heat in your coal, into heat in water or steam; so it will heat the radiators; so they will in turn heat your room; you burn just that much more coal than you need to.

Not only does The Kelsey save all that lost heat necessary to first heat several other things, so your rooms can finally be heated; but it heats with *fresh* air, automatically mixed with just the right healthful amount of *mois-ture*.

Send for Saving Sense booklet.

Make us prove how much coal Kelseys save.

EYEGLASSES AND SPECTACLES

*Doubly Good*

Your vision is corrected and improved by Shur-on glasses; moreover Shur-ons are good to look at as well as through—and they cost no more.

The genuine, made only by Kirstein, bear the name Shur-on (or Shelltex, if shell-rimmed) in the mounting. Look for it at your dealer's.

**E. KIRSTEIN SONS CO.**  
253 Andrew St., Rochester, N. Y.

Shelltex-rimmed and rimless Shur-on eyeglasses and spectacles. Established 1864.

mangel wurzels or of common beets this fall, you will be fortunate. In some sections it is possible to buy these vegetables from farmers at a low price. Store them in boxes of sand in the cellar, if you have no other place to keep them. The free use of vegetables will help to reduce the grain bill. You can use cabbages, but they are more difficult to keep thru the winter. Sprouted oats are a little more expensive, but make a good ration if fed when the sprouts are about an inch long.

Get rid of the cockerels now. This doesn't mean that you will need to sell them, for they can be canned to advantage. In former times amateur poultry keepers often carried a considerable number of cockerels into the winter to be eaten from time to time. You can save much expense and conserve the grain supply by killing and canning these chickens as soon as they have come to weigh from four to six pounds. Very likely some of the pullets have failed to grow well, and give no promise of laying for several months. It will be better to use them for meat, too, unless you happen to have a lot of waste feed.

The pullets which begin to lay earliest should be marked. They will make the hens for you to use as breeders. It is a simple matter to slip a celluloid band on the leg of each bird which you find on the nest. If you can use different colored bands for those which start to lay in October, those which lay their first eggs in November, and those which do not lay until December or later, this simple plan will give you considerable valuable information later.

## THE COLLEGES AS WAR CAMPS

(Continued from page 12)

to a noncommissioned officers' training school.

(c) Transferred to a school for intensive work in a specified line.

(d) Transferred to a technical training school.

(e) Transferred to a cantonment to serve as a private.

A third motive of the Government is the saving of the colleges from disruption. The draft would have gone a long way toward the temporary dissolution of the colleges. No favoritism could or should have been shown by the Government to the academic class. These men could not and should not have been made the subjects of exemption, as medical students have been made. Most men of the college age would have declined to enter a college that thus exempted them. They would, with or without cause, have long felt the implied shame of cowardice. The men who enter the college are still open to conscription as men without the academic walls. They are allowed to stay in college for a time. Just how long that time will be, no one knows. It may be for a quarter, it may be for several quarters, but whether the time be long or short, many men will in this time get the college "touch." The college vision will have become theirs.

I have space left for one brief question. Will the General Government continue such generosity after the war? The question cannot, of course, be now answered. But, be it said, that if this or some similar method of the higher education should be brought to the door of every home in America, and if the requirements laid on the students for the great intellectual and ethical qualities of accuracy, thoroughness, promptness and obedience should be made equal to those now laid down, what a nation the American would ultimately be come!

# The New Books

## For Countryside Homes

**THE SMALL PLACE**, by Elsa Rehmman, gives wise and practical advice from the standpoint of landscape architecture to the people who are interested in making the most of moderate sized grounds. Fifteen places, varying in size from 90x100 to 250x400 feet, and representing the work of such of our landscape artists as Oglesby Paul, Harold Caparn, Warren Manning and Elizabeth Clark, are discussed as fifteen separate problems.

There are three considerations with which the landscape architect must concern himself chiefly—the house, the approach and the planting—none of which can be treated individually, as they are component parts of the whole, and mismanagement of any one will destroy the effect of the others. Warren Manning in problem VII proves to us that it is possible on a plot 100x275 feet to have a shrubbery-bounded lawn, a flower garden and a woods with a curving drive. The once popular idea of bare and uninterrupted views of houses has given way to something more akin to the English wall and hedge. Not only are the views from the street made more attractive by a judicious placing of vine-covered walls, fences and borders, but the owner is given a very desirable privacy.

Problem III tells of an innocent looking little piece of woods in which E. Gorton Davis has planted, in order to make possible its present beauty, Bloodroots, Dutchman's Breeches, Wild Bleeding Hearts, Solomon's Seals, Wild Ginger and many another eccentric plant. When we read this we realize the extent of the care and thought that goes into even the smallest detail of these seemingly natural wild-gardens.

The book has numerous illustrations and will prove immensely valuable to owners or prospective owners of small estates.

*The Small Place*, by Elsa Rehmman. G. P. Putnam's Sons. \$2.50.

## Indoors and Out

**HANDBOOK OF FURNITURE STYLES**, by Walter A. Dyer. (Century Co., \$1.50.) A practical handbook on period furniture explaining the salient features of each type and its present usefulness. There are numerous illustrations.

**THREE ACRES AND LIBERTY**, by Bolton Hall. (Macmillan, \$1.75.) This enthusiastic tract for life on the owned farm has been revised and republished.

**FARM ACCOUNTING**, by H. T. Scovill. (D. Appleton & Co., \$1.) Shows how to keep exact records of operations and how to analyze them to get the greatest benefit.

**FARM DIARY**, by E. H. Thompson. (World Book Company, Yonkers, N. Y., \$1.50.) An account book based on a study of various forms of farm bookkeeping invented by practical farmers. It has proved valuable in use.

**HOME AND FARM FOOD PRESERVATION**, by William V. Cruess. (Macmillan Company, \$1.50.) A clearly stated explanation of why food spoils, and directions and recipes for preserving meats, fruit and vegetables by various methods.

**FOOD POISONING**, by Prof. E. O. Jordan. (University of Chicago Press, \$1.) A scientific consideration of the extent of poisoning thru food. The volume, replete with cases, is a valuable addition to the science series.

**DEVELOPMENT OF TURKEY CIGARS**, by J. J. Taubenschlag, Ph.D. (E. P. Dutton & Co., \$5.) Cigars recently introduced by the title, giving the accurate records and valuable information, a study of which will save money and labor.

## What 15¢ will bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

Washington, the home of the Pathfinder, is the nerve center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of 15¢ in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 26th year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is serious, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly, honestly. Send 15¢ to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15¢ does not repay us, but we are glad to invest in new friends. The Pathfinder, Box 39, Washington, D. C.

**YOU** know the value of *Harmony* in interior decoration. Be it living room, library, dining room or kitchen, the walls and ceilings are the setting—and must remain quietly in the background. Quiet so that the furniture, hangings and rugs can be allowed full expression.

With **Liquid Velvet**—the washable flat enamel—harmonious walls and ceilings are assured. This, because Liquid Velvet is to be had in white and attractive colors. You are sure to find exactly the shade in keeping with the color scheme you wish to carry out. Liquid Velvet is an oil enamel that dries without lustre. Perfect cleanliness is assured because Liquid Velvet walls and ceilings may be washed repeatedly.

## BUSINESS AS USUAL VS. SAVE AND WORK

(Continued from page 14)

continue for us, while "business unusual" is superadded by the Government, we are perhaps going thru the forms of giving money to the Government, but by refusing to get out of the Government's way, are actually preventing it from carrying on its business.

We cannot have business as usual because, as Mr. Simmons, president of the Simmons Hardware Company, so well says, "What we spend for the war is a most unusual expenditure. If we blindly or stubbornly persist in our own expenditures for luxuries, wastes or detriments, which are worse than wastes, then we will be forced of necessity to take the cost of the war out of active industry or out of our wholesome living. There is no way for us to escape this alternative."

If the average man or woman doesn't set aside more than a third of his or her annual income and savings for taxes or loans to the Government, or make up the difference by working for it harder or more efficiently, or by getting the boys and girls and idle women to do something, what is going to happen?

The answer is simple. In the first place, Mr. McAdoo will still get his loans because people, out of patriotism (and quite properly, if they cannot do otherwise) will borrow in order to lend.

But if they are deceived by the money fallacy, and imagine that they can pay for the war by some kind of magic, and without the need of real sacrifices, they will find themselves greatly mistaken. We cannot supply new munitions by supplying new money any more than Robinson Crusoe could get bows and arrows with the gold he found in the ship.

We shall find that unless we all do our bit, of giving or lending a third of our income per annum it will be screwed out of us on the torturing rack of the high cost of living.

A rise in the cost of living is a sort of indirect war tax and it falls very inequitably. Some incomes are fixed while the cost of living is not fixed. Consequently their recipients will have less real purchasing power. Think of the school teacher. Suppose, as it may well be, that within a year or two prices are twice what they are now, and suppose school teachers' salaries remain the same. That means that the school teacher will be getting half as much as before for his money. Nominally his salary is the same; really it is half of what it was. He has been taxed 50 per cent of his income in order to help win this war. In effect, half his food and clothing and other supplies have been commandeered because the rest of us have not done our share.

This is not all. There is something more subtle and more terrible. When prices go up all creditors lose, including savings-bank depositors and bondholders, including small holders of Liberty Bonds. If the rise of prices is 4 per cent a year and a creditor gets 4 per cent interest, all of that interest, as measured in commodities, is taken away from him. This is nothing new, but has been going on for years as one of the evils of the high cost of living. Let me illustrate. A servant girl who put \$100 in the savings bank in 1896 getting 4 per cent would find in 1914 that she had \$200, or double what she put in. But when she tried to spend it she would not be able to buy as much with her entire \$200 as she could have bought for her \$100 eighteen years before. She was mulcted of all her interest

**Base and Floor**

thru the depreciation of the dollar. Like Alice in "Thru the Looking-glass," she had to run as fast as she could in order to stand still!

And the same is true of the bondholder. Suppose a bondholder in 1896 had left to his widow \$100,000 in bonds. He thought to put her in a safe position, and instead of investing in stocks, he invested his fortune in bonds. He left it to her, dying with the thought that she would have a sure income of \$4000. In that thought also she had been spending that \$4000 a year for eighteen years, and she still has the \$100,000 of bonds, the parent capital, unimpaired—apparently. But that \$100,000 of bonds, if she tried to cash it in now, would buy only half as much in commodities as eighteen years ago and, from now on, her \$4000 income will buy only what \$2000 would buy originally. Really, then, her principal is only half what it had been. She has been eating up her capital without knowing it. Had she set aside each year a sinking fund or depreciation fund to offset this loss of principal, she would have had to set aside her entire 4 per cent! She had therefore been virtually taxed 100 per cent on her income.

The war has greatly aggravated this injustice. If prices double in a year and stay double, the bondholder will be taxed in the year 50 per cent on his capital, or twelve and a half times his income. In other words, this is exactly as much a hardship as if during times of a stable price level, the bondholders were taxed 1250 per cent on their incomes. This is what the war may cost some people if we are afraid to take those measures which will make all share the burden equitably. Thousands of persons get all or mostly all their income from bonds—widows, orphans, hospitals, philanthropic foundations and endowed universities. Furthermore, millions of persons have all their savings in bonds, mortgages, notes, savings-bank accounts or other form the rights to which are express in a specific number of dollars. These persons suffer grievously by the depreciating of the dollar. Lastly, many millions of people are now putting their savings into Liberty Bonds and War Savings certificates. These subscriptions are supposedly not taxes but loans, and not forced contributions, but voluntary. To the extent, then, that the war is financed out of the high cost of living, we shall create grievous injustice. This will breed discontent, and, among other things, discontent with the war. All these evils can be avoided if we learn and practice true economics.

It is heartening to note that we are making great strides in this direction. Within the last year and especially within the last half-year there has been a partial revolution in sentiment on this subject. Many editors and publicists have been converted from the "business as usual" fallacy, which they first held, to the "save and work" principle, which they now advocate with all the fervor of new converts.

But much further effort is needed to complete the task. We shall do it most quickly if we go back to first principles.

Let us remember that business is not as usual in Belgium or France. It is not as usual for the millions of our men who are in the army and navy. These have sacrificed all but the necessities of life, and may at any time sacrifice life itself. What right have we to indulge ourselves?

With the sacrifices of our soldiers before our eyes, the very least that we can do is to contribute cheerfully our own share of the sacrifices which must be made at home. This means we must give up "business as usual" in non-essentials and instead "save and work" in essentials.

## Salt Mackerel

CODFISH, FRESH LOBSTER

RIGHT FROM THE FISHING BOATS TO YOU

**FAMILIES** who are fond of **FISH** can be supplied **DIRECT** from **GLOUCESTER, MASS.** by the **FRANK E. DAVIS COMPANY**, with newly caught, **KEEPABLE OCEAN FISH**, choicer than any inland dealer could possibly furnish.

We sell **ONLY TO THE CONSUMER DIRECT**, sending by **EXPRESS RIGHT TO YOUR HOME**. We **PREPAY** express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want **YOU** to try some, payment subject to your approval.

**SALT MACKEREL**, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

**CODFISH**, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

**FRESH LOBSTER** is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in **PARCHMENT LINED CANS**. They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

**FRIED CLAMS** is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

**FRESH MACKEREL**, perfect for frying, **SHRIMP** to cream on toast, **CRABMEAT** for Newburg or deviled, **SALMON** ready to serve, **SARDINES** of all kinds, **TUNNY** for salad, **SANDWICH FILLINGS** and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send **BOOK OF RECIPES** for preparing all our products. *Write for it.* Our list tells how each kind of fish is put up, with the delivered price so you can choose just what you will enjoy most. Send the coupon for it now.

## HAVE AN ORDERLY ATTIC

(Continued from page 20)

removed on special and infrequent occasions. Only when all objects and materials have thus been sorted out and classified can the construction of storage shelves or closets be intelligently planned. The commonest and likewise the least efficient storage receptacles are trunks and packing cases. Owing to their depth, only the top layer of their contents is readily accessible, and the innate perversity of things which invariably causes the object sought to lurk at the very bottom of the pile is familiar to all. In case, however, their employment should for any reason be unavoidable, their practical disadvantages can be partially overcome by filling each trunk or case with large, shallow boxes, plainly labeled with lists of their contents and tied with stout twine. These can easily be lifted out in turn until the one desired is reached.

That shelving should be built to the measure of the objects to be stored would seem too obvious to deserve mention but for the fact that the cupboards and closets in the average home constitute visible proof that it seldom is so built. Either strong cardboard boxes should be procured to hold the goods to be packed away, and the shelves made of corresponding depth and placed close enough together so that not more than two tiers of boxes can be placed on each, or the shelving may be enclosed at the back with wall board—which costs less than wood—and divided into compartments of suitable sizes, like giant pigeonholes, with fronts hinged at the bottom so as to drop down when opened.

Of course the highest efficiency demands that there be some sort of index to the contents of each bag, box, shelf and trunk. This may consist merely of a tag or label affixed to each receptacle and bearing an itemized list of the articles contained, but a greater ultimate time saving will be effected by supplementing the individual labels with a small card cabinet or loose leaf blankbook in which are entered in alphabetical order the names and descriptions of the various classes of goods stored, together with their location.

As a final measure of efficiency, special precautions should be taken against fire. At first blush it might appear that an attic, visited but seldom, and not usually provided with light or heat, should be practically immune, but in reality this is far from being the case.

The prevention of danger from this source begins with the weeding out of all worthless or useless objects, to prevent overcrowding. The second step is the orderly arrangement of stored materials in closed boxes or other convenient receptacles, as previously described. This facilitates dusting, which should be done at reasonably frequent intervals. The chimneys should be regularly inspected and repairs made promptly when needed; and under no circumstances should an open flame of any description be permitted in the attic. If the house is wired for electricity, the added cost of lighting the attic will be negligible in comparison with the increased safety and convenience thus assured. In homes where gas or kerosene is the only illuminant, an electric hand lamp, preferably of the lantern type which can be hung on a peg or set securely on the floor, thus leaving both hands free, is the only form of light which should be carried into the attic. In addition, a small chemical fire extinguisher, or two or three fire buckets kept constantly filled with water, should be hung at the head of the stairs.

## Music Lessons

UNDER MASTER TEACHERS

### At Home

**A Complete Conservatory Course By Mail** Wonderful home study music lessons under great American and European teachers. Endorsed by Paderewski. Master teachers guide and coach you. Lessons a marvel of simplicity and completeness.

**Any Instrument or Voice** Write telling us course you are interested in—Piano, Harmony, Voice, Public School Music, Violin, Cornet, Mandolin, Guitar, Banjo, or Reed Organ—and we will send our FREE CATALOG covering all instrumental and vocal courses. ## WHEN A ROOM NEEDS DOING OVER

(Continued from page 21)

side were two windows; on the north and south sides each, a door near the western wall; on the east side, opposite the windows, a fireplace banked by low, built-in bookcases. The woodwork was cream white, the paper a pinkish tan, the carpet green. For furniture the following: between the windows a handsome old Hepplewhite half round console table, above it a late Georgian mahogany and gilt mirror, a walnut rocking chair in brown corduroy at one window and a Moravian armchair painted French gray at the other. On the north side, beside the door, an oak Morris chair with green corduroy cushions and, farther along, a walnut lounge covered with brown leather. At one side of the fireplace an ugly, high-backed modern oak chair that ought to have been in a dark hall; at the other a little bent-wood rocker in green plush; above the mantel an old oval mirror, hung with its length horizontally and tipped out at an angle from the wall—an unsuitable shape for the place and badly hung. On the south side a handsome old walnut cabriole-legged wing chair in dark brown leather and, beside it, quite out of center with the pictures above, a fine Queen Anne drop-leaf walnut table with cabriole legs, club feet and shaped apron. In the center of the room a square Eastlake walnut table with a lamp and books and, besides this, a white wicker armchair and an old straight and high ladder-backed chair with turned legs.

Altogether it was an exceedingly ugly room. Making intelligent use of its potentialities, this is how it was transformed:

Paint and paper needed renewing so that it is hardly fair to count that item of cost against the work of remaking. The walls were scraped and painted a light, cream putty color with woodwork of a whiter tone than before. The carpet was dyed a rich brown, not too dark. The one hopeless piece of furniture, the Eastlake center table, was eliminated. The oval mirror, manifestly unsuitable in shape for its position, was replaced by an oblong mirror in a heavy gilt Empire frame, from another room, hung flat against the wall. The Morris chair's golden oak frame was painted black, as was also the ugly oak hall chair by the fireplace, its grotesque cresting, however, being first sawed off. All the old upholstery was replaced by coverings of tobacco brown velours with the exception of two chair seats that were not subjected to much wear. These were of champagne-colored rep, for the sake of a lighter note. The high, ladder-backed chair had its rush seat restored and its mate, an armchair of the same type, was brought into the room. For these two, and for the wicker chair, loose cushions were made and covered with printed linen of an old-fashioned polychrome flower design. The one wholly new purchase was enough printed linen to make hangings for the windows.

By rearrangement the center of the room was left free, the requisite lamps were placed on side tables where they gave more and better light, the small and insufficient chairs were moved from beside the fireplace and comfortable armchairs put there instead. Pictures were rehung.

The whole remaking of the room, barring the fresh painting, cost the price of linen for the window hangings and for three chair cushions, brown velours for a lounge and two chairs, \$5 for dyeing the carpet, \$2.50 for rehung a chair seat, a little black paint for two chair frames, rearrangement and elimination, consistent and orderly planning, and common sense.

## Can Rust be Invisible?

Yes—to the naked eye—just as germs are. Did you ever see a germ except through a microscope?

GERMS. Seen through Microscope

RAZOR EDGE. Seen through Microscope

Not so long ago people didn't believe in germs—because germs couldn't be seen. Some men still think a razor edge doesn't rust—because the rust is invisible to the naked eye.

One look through a microscope establishes a firm belief in the existence of germs—and razor rust. The powerful lens reveals a razor edge as it really is—not smooth but composed of irregular saw-like teeth.

Moisture collects between these tiny teeth. It can't be wiped off easily. Rust forms. That's what dulls the edge so soon—makes the blade "pull" and hurts the face. Regular use of

## 3-in-One

The High Quality Razor Oil

absolutely prevents rust—makes self-shaving quicker, easier, far pleasanter. Do this before and after each shave: Moisten thumb and forefinger with a drop or two of 3-in-One Oil—then draw the blade between them. That's all. Simple, isn't it? But it makes a world of difference in the shave.

Also rub a few drops on your face before lathering. Softens the stiffest beard. Makes the razor slip over the face easier. Keeps the soap from burning. Also apply 3-in-One to razor strops. Keeps them soft and pliable. 3-in-One is sold at all good stores in 50c, 25c and 15c bottles; also in Handy Oil Cans, 25c. Get some today.

**FREE**

If you prefer to try before you buy, write us and we will send you a generous sample of 3-in-One Oil and our razor Saver Circular—free.

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course has been reduced from three years to two years and six months. Every young woman who enters a training school for nursing to-day renders a patriotic service by releasing a part of trained hands for service "Over There."

For Information write to MISS AGNES S. WARD, Superintendent

## Important Books

### The Kaiser as I Know Him

By Arthur N. Davis

Vivid pictures of the Great Enemy of Democracy in action painted by a man who was for fifteen years the German Kaiser's personal dentist.

The book throws blinding light upon the question of the Kaiser's responsibility for the war upon his foreknowledge of the destruction of the "Lusitania," upon the part attributed by the German government in the Presidential election of 1916, upon the Kaiser's own idea that "America shall pay the bills for this war," upon the thousand and one vital questions to which Americans want the answer. *10 d. Crown 8vo. Cloth \$2.*

### From Berlin to Bagdad

By George Schreiner

Author of "The Iron Ration."

The vivid story of an eye-witness is revealed in this book. The events, mysterious and sinister, in the near East since the war began are told here for the first time. Captain Schreiner went to Turkey in the early stages of the conflict and was an eye-witness to the fiasco at the Dardanelles and the deportation horrors in Armenia.

*Maps. Crown 8vo. Cloth, \$2.*

### Sylvia Scarlett

By Compton Mackenzie

This is the big book that all the reading world has been expecting from Compton Mackenzie. Romance aplenty—adventures grave and gay—vivid pictures of sordid days in slums—of life among actors, dancers, artists—people desperately poor and hopelessly vulgar—people fine and beautiful and great-hearted—all these you will find in this tale of one girl's remarkable life—so full of color and passion and adventure—and yet so strangely empty. *\$1.60.*

### Boone Stop

By Homer Croy

Here is a book that is truly welcome—about a boy who can hold up his head and stand with those immortal boys, Tom Sawyer and Huckleberry Finn. We publish Mark Twain, and we know better than anyone else how marvellous he is. And we think that this book is a worthy successor. So to all lovers of Huck and Tom we say, "Buy this book."

Get it today and be a boy again.

*Frontispiece. Cloth, Post 8vo, \$1.50.*

### Land's End

By Wilbur Daniel Steele

Vivid pictures of the Portuguese fishermen and their families at Cape Cod. Sometimes with a haunted ship for a background, sometimes with the village itself or a small cottage, the stories of their lives are acted out. There was a strange woman who came to die within the sound of the buoy-bell on the rocks but she found her lover and so—lived. On every page is a brilliant picture of this fantastic people who are filled with the strangeness of their own country and who follow a trade that is as old as the world.

*Frontispiece. Post 8vo. Half Cloth, \$1.35.*

### How a Soldier May Succeed After the War

or The Corporal With The Book

By Russell H. Conwell

Author of "Acres of Diamonds," Etc.

Here are amazing true stories of many of our present-day great and successful men who were privates in the Civil War, who in camps and barracks laid the foundations of future success by using part of their time off duty for their improvement. Doctor Conwell himself was one of these privates. This little book should be sent to every American soldier in every camp in this country and in France.

*Frontispiece. 16mo. Half Cloth, 50 cents.*

**HARPER & BROTHERS**  
ESTABLISHED 1817

## KEEPING UP WITH THE FRONT

(Continued from page 19)

plies get down below the above requirements he can remedy the defect before the situation gets serious. "Then we have to hustle," he said. This necessity, however, is seldom likely to arise, for the chiefs of the front supply services are charged with keeping their supply station up to the standard. The colonel informed me that 90 per cent of the food for the army comes from the United States and the remaining 10 per cent consists mostly of vegetables bought in France. This is not the case, however, with the ordnance supplies, which, in order to save tonnage, are bought in France, tho even so we furnish much of the raw material for their manufacture.

Another one of Colonel Hilgard's duties is to keep these base hospitals supplied. Between the railroad center and the front we have eight of these colossal hospitals in addition to the numerous field hospitals directly behind the line. The base hospitals will eventually have some 20,000 beds. Today nearly 5000 are available.

At present the United States has erected at this railroad center three storehouses, each 50 feet wide by 300 feet long. When I visited them there were 1,230,000 balanced rations in each one. These colossal warehouses were built by the American engineers and more will be completed soon. The station was nothing but an openfield last October. But since then our engineers have put up thirty-five warehouses in various sections of our communicating lines. Colonel Hilgard hopes soon to have installed a model water supply system and an electric light plant. As we walked thru the warehouses we found them stacked to the roofs with conglomerations of oats and wheat and canned goods. What a feast for the hungry Germans if they should ever get their talons on them! The cow in the cornfield would be a feeble analogy.

We also visited the very interesting and mysterious balloon shop where America was assembling her stationary balloons. What fat, dumpy elephants they were. I poked my head thru the little round flap on the side of one to see what the inside looked like. What I saw can best be represented by a cipher without the ring around it. About the balloon shed and warehouses 100 negro troops were employed. Wherever two or three were gathered together one could hear them singing their native songs—I did not say whether plantation or rag. A Southerner could easily imagine himself back in "our beloved Southland."

In another part of this town is situated the famous bakery where all the bread needed for the United States army can be baked for a month ahead. Some people have criticized our Government for making so great an outlay, but it is only another evidence that the United States has planned "the overhead" of our army on a scale large enough to meet all possible eventualities.

After leaving this railroad center we come to the fringe of the war zone itself. The only large hospital I had an opportunity to visit in this section was Base Hospital No. 18, manned by the Johns Hopkins unit. It was one of the finest hospitals in all the Allied armies. It has a staff of 100 doctors, 63 trained nurses and about 200 enlisted men. Its capacity is 1000 patients and it was a quarter full when I was there. The most it has had at one time is 800. Every kind of a case is taken to it. I was told that 90 per cent of those who go to base hospitals are returned to the line. Most of the remaining 10 per cent are sent back home. There are comparative-

ly few deaths in these hospitals, for the men who are badly wounded generally die at the field hospitals.

Base Hospital 18, like all others I visited in Europe, was a series of oblong huts. It was constructed of wood and not brick like some of the ones nearer the coast. I noticed our convalescent soldiers wore black uniforms and that the blankets on all the beds in the wards were also black. This gave the whole hospital a decidedly gloomy air. It seems that these supplies were furnished by the French. They do things, however, much better in England. There the hospitals are provided with red blankets and red window curtains and the convalescents wear sky blue uniforms. The whole atmosphere of an English hospital is thus delightfully warm and cheery.

In some of the wards were wounded New England boys of the 26th Division, whose fight at Seicheprey I have already described in *The Independent* of August 3. Tho pretty badly "shot up," they were a cheerful lot and all seemed to be pleased to meet one who was a native of their own "neck of the woods."

After taking the names of the parents of some of the patients, whom I promised to write to on my return home, I visited the famous new hospital train of sixteen cars just built by the English Government for the use of our army in France. This train stood on a siding and whenever there was a call for it a French engine with engineer, fireman and two trainmen would take it to where the wounded were waiting to be brought back to one of the large base hospitals. All the cars are enameled on the inside. A separate heating plant keeps the whole train warm in cold weather. The first car I inspected was a staff car with a separate dining room each for the four medical officers and for the three trained nurses. The rooms where the nurses and the staff slept have tables, beds and closets on the English compartment plan. Next came the kitchen car. This has a large pantry with soup cauldrons, ice box, cubboards, electric fans and lights and quarters for the cooks. It also boasted of a sitting room for sick officers, equipt with a sterile water cooler and a real bathtub. The next eleven cars were ward cars. Each had three tiers of beds on either side of the center aisle, giving a capacity to each car of thirty-six patients. If the patients, however, were not badly wounded the lower beds could be converted into lounges by lowering the center berth and making it the back of the lower berth. I noticed such conveniences as ash trays and magazine racks at the head of each bed. At the end of each car was an orderlies' room with running water and an electric switch turning on both day and night lights. There was a medicine cabinet in each car, telephone service using the Morse code, two portable fans for gas cases, and also a fire extinguisher. Then came the car containing the pharmacy and the sterilizing room and after that the second kitchen car with food for the patients and the crew of thirty-two men. There was also on the train a storage car in which is kept all the time 1000 rations.

The whole train will run three days without revictualling. It has been in operation since the 24th of February and had already made three trips averaging twenty-four hours on each trip. So far it has been used only for American wounded, but, of course, it will be used whenever called upon by the Allies. The United States has six of these trains which are considered the best in the world. England has good

trains but nothing to compare with them. The French hospital trains are usually nothing but box cars.

I cannot conclude these three articles on my trip behind the American lines without a word about the American Motor Artillery School on the outskirts of Paris. Major A. S. James, the very efficient Assistant Chief of the Intelligence Department, took me out in his motor car one afternoon to visit it. It consisted of the usual row of barracks and then across the road a large flat field edged with wooded hills and ravines.

I have already described the American Artillery School west of Paris for the training of our officers and men in the theory and practise of artillery. In this school the technique of moving artillery was exclusively taught. As it was Sunday no practise was going on, but it was easy to see that actual battle conditions were reproduced as nearly as possible. Sometimes the boys would bring the artillery out in the middle of the night and set up their emplacements in the forest just as tho it was to be ready to be used at daybreak. As they could not, of course, use a lantern or light of any kind, being theoretically near the German trenches, everything had to be done in total darkness. Then I saw sloughs of slime thru which the men had to drag their heavy guns. They are taught how to use ropes and pulleys so that when they get into difficulties on the actual battle front they will know exactly how to extricate themselves. There were hills to climb and sand pits to negotiate and tree trunks to overcome. It must have been a real man's job to carry a 16 inch gun safely over the various obstacles in their path.

While we were admiring the hundreds of great cannon stored about the field, waiting to be taken to the front, the Big Bertha from across the German lines, 70 miles away, dropt one of her shells only a few blocks from where we stood. This monster gun had been going off intermittently all the time I was in Paris. But this was the first time I actually heard it. The report was not very loud, for the shell is of only moderate dimensions. I am glad to say that this gun made very little impression on the daily life of Paris while I was there, tho the first day it sent its shells into the capital with clock-like regularity every 15 minutes, it made a real sensation and many people left town. But after that the Parisians went about their daily tasks just as tho a shell might not burst from the sky at any moment dealing death and destruction wherever it exploded. Nobody is permitted to say that he has seen where the shell has landed, for the Germans must not know whether their range is good or bad.

Stupid Germany! Her calculated frightfulness has had just the contrary effect from what she intended. Instead of terrifying the Allies into a premature submission, it is the one thing above all others that will make us never give up until Germany is completely beaten and disarmed.

A bishop has suggested prayers for the war victims. Perhaps he agrees with us that a good many of the old ones are past praying for. *London Passing Show.*

He—And how are you getting on with your collecting for the soldiers?

She—Splendidly! I've had my name in the papers four times already. *Sydney Bulletin.*

Water—All right, Sir, all right. You'll get away in time.

Dinner—I dare say I shall, but I'm anxious to get thru that meal before the prices rise again! *London Passing Show.*

## Put these men to work for you

**I**F you could get such men as John D. Rockefeller, F. W. Woolworth, and John D. Ryan to sit down with you for an evening right in your own home and teach you their business methods, show you where your best opportunities are and help you to realize your ambitions, wouldn't you jump at the chance? You *can* have these men and forty-seven other business giants at your service for the asking.

You can learn the great and basic laws of success from those who have achieved it most. They will tell you the policies they adopted and followed in making their fortunes, they will show you how to handle men and how to put through big deals, and they will aid you in building your own future by applying their principles to your life and work.

What these men have done and are doing is fully told in Mr. Forbes' book, **MEN WHO ARE MAKING AMERICA**. How they accomplished their aims and the reasons behind their methods are explained in detail in a manner which is vitally interesting to every ambitious man and woman.

See what these Men Who Are Making America can do for you, without cost or obligation. Let them spend five evenings with you at our expense. Start them to work for you now by sending in the coupon below.

## DIVIDENDS

### UNITED FRUIT COMPANY DIVIDEND NO. 77

A quarterly dividend of two per cent (two dollars per share) on the capital stock of this Company has been declared, payable on October 15, 1918, to stockholders of record at the close of business September 20, 1918.

JOHN W. DAMON, Treasurer.

### UNITED STATES STEAMSHIP COMPANY.

A regular dividend of one per cent, and an extra dividend of one-half of one per cent, has been declared on the Capital Stock of this Company, payable November 1st, 1918, to stockholders of record at the close of business on October 15th, 1918.

N. H. CAMPBELL, Treasurer.

## Does Your Money Make You 10%?

An incorporated association of Christian workers desires to enlarge the scope of its work. Additional capital is required. If you have a hundred dollars or more that ought to bring you in 10 per cent to 12 per cent clear, here is a safe investment. Besides, you will help a very worthy activity of the Church. Only a limited sum will be accepted as a loan, when this amount is secured, all further offers will be rejected. Bond is given for payment of interest as well as principal. Loan must be made for six months, year, or eighteen months. For any further information, write the Pastor of the First Baptist Church of Cadiz, Kentucky. Lock Box 118.

For 36 years we have been paying our customers the highest returns consistent with conservative methods. First mortgage loans of \$200 and up which we can recommend after the most thorough personal investigation. Please ask for Loan List No. 710. \$25 Certificates of Deposit also for saving investors.  
**PERKINS & CO. Lawrence, Kans.**

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

##### I. The Aims of the War.

Every American should be able to talk intelligently about the history and progress of the war, the aims of the United States, the needs of the Nation, and the ways in which individuals may aid the Country.

##### A. Business as Usual.

1. Explain orally how you can use *The Independent* as an aid in helping people to realize the magnitude of our war task.
2. Give a one-minute talk designed to impress your hearers with the vast cost of the war.
3. You are speaking to an audience at a moving picture show. Present and explain the "money fallacy."
4. You are speaking to an audience of people who have lost work in a non-essential industry. Present and explain the "make-work" fallacy.
5. You are speaking to a general audience. Prove that a "transformation of industries" is absolutely necessary for the winning of the war.
6. Speak to your class in such a way that you will prove beyond doubt that no member of the class, and no person in the United States, should now spend money for unnecessary things.
7. Explain to a general audience how it is possible for any person to set aside one-third of his income and savings for Government use.
8. Give a spirited patriotic talk based on the six cartoons presented with the article.

##### B. Colleges as War Camps.

1. Explain, as if to your school assembly, the great change that has taken place in American education.
2. Give a talk, as if to the members of the senior class in your institution, explaining how the subjects now to be taught in colleges are related to the needs of the war.
3. Give a talk to your class explaining why the Government of the United States wishes all college students to study the aims of the war.
4. Prove to your class that the welfare of the United States depends upon the education of its people.

##### C. Keeping Up with the Front.

1. Give a one-minute talk on the general characteristics of the American officer and the American private soldier.
2. Give a talk in which you present the gigantic preparations of the United States.
3. Invent a series of imaginary experiences in connection with camouflage.
4. Give a talk, as if to your own physician, describing a hospital train in France.
5. Imagine that a friend has written to you of his life in an artillery school. Retell his experiences.

##### D. The Secrets of Bolsheviki.

1. Give a one-minute talk explaining the importance of the recently published Bolsheviki documents.
2. Prove, as if to a foreign-born audience, that no true American can in any way sympathize with the Bolsheviki.

##### E. The Story of the Week.

1. Tell the story of the conquest of Palestine. Use a blackboard map for the sake of clearness.
2. Explain the present situation on the western front.
3. Compare the Red Terror in Russia with the Reign of Terror in the French Revolution.
4. Draw a blackboard map to illustrate the campaign against the Bulgarians. Give a clear explanation of recent events in the campaign.
5. What is the importance of the loss of Baku?
6. Give a talk announcing the Fourth Liberty Loan.
7. Summarize recent important events in the United States.

##### II. Composition.

##### A. Have an Orderly Attic.

1. Prove that the article has, or does not have, the following: A good subject, a good introduction, clear development, coherence, a good conclusion.

##### B. When a Room Needs Doing Over.

1. Prove that the article has, or does not have, the following: Interest, good choice of words, good paragraph structure.

##### C. Write an original short story based on any picture, or any series of pictures in *The Independent*.

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

##### I. Progress of the War—"The Conquest of Palestine," "The Battle of Armageddon," "The Loss of Baku," "The Underground Gibraltar," "On the Kriemhild Front," "Driving Back the Bulgars."

1. What, in your judgment, is the most important military event discussed in this week's issue of *The Independent*?
  2. "Macedonia is again on the war map." How long since it was there before? Explain the "strategic significance of this new movement."
  3. Aside from the immediate effects of the British success in Palestine what permanent results may grow out of General Allenby's victory?
  4. Which is more important: the victory in Palestine or the loss of Baku?
- ##### II. Our Army in France—"Keeping Up with the Front."
1. Tabulate the various American military agencies described in this article.
  2. Which one of these establishments would you most like to see?

##### III. Organizing the Nation for War—"Loyalty as Camouflage," "Convicts in War Service," "Congress," "Fourth Liberty Loan," "Petroleum Supply," "Industrial Slackers."

1. Compare the attitude of our people toward the war today with their attitude a year and a half ago. What has brought about the change?
2. What are the advantages and the disadvantages of the scheme discussed in the second editorial?
3. What measures have thus far been taken for the purpose of financing the war? Explain the various tax schedules referred to in the paragraph in small print.
4. Give a brief summary of the conditions governing the Fourth Liberty Loan.
5. Why was the "gasless Sunday" order necessary? Mention other similar regulations which have been issued as a result of the war.

##### IV. The Russian Revolution—"The Secrets of Bolsheviki," "The Red Terror."

1. Explain the reference to the Lichnowsky memoir and the "secret treaties" of Petrograd.
2. What are some of the things which are proved by the documents published by the Committee on Public Information?
3. Do you see any relation between the conditions disclosed by these documents and present conditions in Russia?
4. "The Bolsheviki documents reveal the reasons for various acts of our Government," etc. What are some of these?

##### V. The Economic Basis of the War—"Business as Usual vs. Save and Work."

1. What is the "money fallacy" referred to in this article? the "make work" fallacy? Give one or more historical examples which show the error of the "money fallacy."
2. Prove that "this new credit currency is just as truly a dilution . . . as were the greenbacks in the Civil War."
3. Cite some of the examples which show the fallacy in the "Business as Usual" philosophy.
4. Prove that "what the country needs is not so much cessation as transformation of industries."
5. "If the average man or woman doesn't set aside more than a third of his or her annual income . . . what is going to happen?" Answer this question.
6. Prove that when prices go up all creditors and all people on fixed incomes lose.
7. Study the cartoon at the top of this article. Suggest other subjects which might be treated in the same way.

##### VI. Modern Transportation—"Aerial Motoring After the War."

1. Upon the basis of this article, indicate those uses of the aeroplane which will probably come into existence after the war.
2. In what respects does the development of aeroplane travel correspond to the development of motor car travel?
3. What are the present limits of practical aeroplane flight? Of aeroplane carrying capacity? Compare these with the limits which existed four years ago. Have you any ideas as to the probable limits of the future?

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. Incorporating The Countryside Magazine and Suburban Life. A monthly section devoted to sensible and efficient countryside living: better houses, better rooms, better gardens, better roads and better towns. Published in the first issue of The Independent each month

## THE NEW PLAYS

*The Walk-Offs.* Fair acting wasted on poor material. No action and plenty of stupid speeches. Uniformly dull thruout. (Morosco Theater.)

*An Ideal Husband.* by Oscar Wilde. Brilliant Victorian drawing room comedy without very strong appeal to this generation. Acceptably produced and acted. (Comedy Theater.)

*Daddies.* A delightfully humorous play of European war orphans adopted by a group of American bachelors. Presented with the usual completeness of a Belasco production, and decidedly worth while. (Belasco Theater.)

*Fiddlers Three.* Comic opera with the scene laid in Cremona, the violin city. Depends for its effect more upon the agility of the dancing and the brilliancy of the costumes than upon music or novelty. (Cort Theater.)

There is a "Gilbert and Sullivan" snap about *The Maid of the Mountains*, a really musical "musical comedy" from London, well played, well sung. William Courtenay stars as a pirate chief; Sidonie Espero is altogether charming as the Maid of the Mountains. (Casino Theater.)

## REMARKABLE REMARKS

KING ALBERT This is the decisive hour.  
MRS. CHARLES S. MELLER Most women are cats.

WALTER CAMP It is never too late to exercise.

HARRY KEMP Writing poetry is an essential industry.

JOHN GALESWORTHY Your hat must be worn tilted forward.

H. G. WELLS Cursing is a way of cheating one's own diet.

BLANCH BATES It is motherhood that hurls woman with heaven.

LOUIS LEE ARDS Friday is a good day to be left a million dollars.

QUEEN MARIE Rumania will never remain the vassal of Germany.

PREMIER CIEMENCHAK I do not like politicians. I like patriots.

BERTHA KALICH I dare to speak with authority about American audiences.

CHARLIE CHAPLIN Why cannot people designate an actor from his work?

SOCIALIST LEADER SCHNEIDERMAN This kang making business must terminate.

THE BELGIAN MINISTER TO THE UNITED STATES We are a small nation, but we gave what we had.

JOHN D. ROCKEFELLER, JR. Brother hood implies, yes involves, personal relations between men.

FLORA BICEFIDA GUEST We have most of us put money in the plate at church because we were afraid not to.

MRS. GERALDINE FARRAR TELLEGEN My Tellegen gripped my hand in a case since vice and without preface exclaimed

Here is a branch of Government service, inaugurated in New York, that ought to spread thruout the country. At information centers, convenient of access, bureaus are maintained to give free information to any one who wants to know more about food or fuel regulation, to find out why Johnny's pay allotment hasn't come, to join a class in naturalization or English, or to get legal assistance. In addition to the practical benefits it confers, such a bureau does much to bring Government and people together in the right way.

## THE COVER

Before he had even seen the painting of a camouflaged warship that we reproduce this week on the front cover, a contributor to The Independent wrote this dazzling description of it:

### THE CAMOUFLAGED SHIP

O blend of emerald wild and drunken amethyst,  
O wild, hysteric nightmare of psychoanalyst,  
O purple cow of Burgess, O blazing tiger of Blake,  
O neo-impressionist lily, O super Barnum-cular fake,  
What madman out of Potsdam, what loon from Blagovetschenskgeorgsknlintvoff,  
What Bolshevik or side-show freak or Greenwich village toff  
Told you that the way to hide was with vivid gobs of blue  
Cutting athwart green triangles and gray gridirons askew  
All done on a painted background of most unearthly hue  
Like a sunrise up at midnight dabbled with evening dew?

with vehemence and conviction, "I am going to marry you."

G. A. LEW—God helping me I will continue to throw inkstands at the devil until he is utterly vanquished and I blot out the belief in Eternal Hell from the minds of the people.

PREMIER LLOYD GEORGE There are people in many countries who regard any effort to make peace as dishonorable and treasonable. That attitude must be steadily discouraged.

# How We Improved Our Memory In One Evening

## The Amazing Experience of Victor Jones and His Wife

"Of course I place you! Mr. Addison Sims of Seattle.

"If I remember correctly—and I *do* remember correctly—Mr. Burroughs, the lumberman, introduced me to you at the luncheon of the Seattle Rotary Club three years ago in May. This is a pleasure indeed! I haven't laid eyes on you since that day. How is the grain business? And how did that amalgamation work out?"

The assurance of this speaker—in the crowded corridor of the Hotel McAlpin—compelled me to turn and look at him, though I must say it is not my usual habit to "listen in" even in a hotel lobby.

"He is David M. Roth, the most famous memory expert in the United States," said my friend Kennedy, answering my question before I could get it out. "He will show you a lot more wonderful things than that before the evening is over."

And he did.

As we went into the banquet room the toastmaster was introducing a long line of the guests to Mr. Roth. I got in line and when it came my turn Mr. Roth asked, "What are your initials, Mr. Jones, and your business connection and telephone number?" Why he asked this, I learned later, when he picked out from the crowd 60 men he had met two hours before and called each by name without a mistake. What is more, he named each man's business and telephone number, for good measure.

I won't tell you all the other amazing things this man did except to tell how he called back, without a minute's hesitation, long lists of numbers, bank clearings, prices, lot numbers, parcel post rates and anything else the guests gave him in rapid order.

\* \* \* \* \*

When I met Mr. Roth again—which you may be sure I did the first chance I got—he rather bowled me over by saying, in his quiet, modest way:

"There is nothing miraculous about my remembering anything I want to remember, whether it be names, faces, figures, facts or something I have read in a magazine.

"You can do this just as easily as I do. Anyone with an average mind can learn quickly to do exactly the same things which seem so miraculous when I do them.

"My own memory," continued Mr. Roth, "was originally very faulty. Yes, it was—a really poor memory. On meeting a man I would lose his name in thirty seconds, while now there are probably 10,000 men and women in the United States, many of whom I have met but once, whose names I can call instantly on meeting them."

"That is all right for you, Mr. Roth," I interrupted, "you have given years to it. But how about me?"

"Mr. Jones," he replied, "I can teach you the secret of a good memory in one evening. This is not a guess, because I have done it with thousands of pupils. In the first of seven simple lessons which I have prepared for home study I show you the basic principle of my whole system and you will find it not hard work as you might fear—but just like playing a fascinating game. I will prove it to you."

He didn't have to prove it. His Course did; I got it the very next day from his publishers, the Independent Corporation.

When I tackled the first lesson I was surprised to find that I had learned—in about one hour—how to remember a list of one hundred words so that I could call them off forward and back without a single mistake.

That first lesson *stuck*. So did the other six.

Read this letter from C. Louis Allen, who at 32 years became president of a million dollar corporation, the Pyrene Manufacturing Company of New York, makers of the famous fire extinguisher:

"Now that the Roth Memory Course is finished, I want to tell you how much I have enjoyed the study of this most fascinating subject. Usually these courses involve a great deal of drudgery, but this has been pure pleasure all the way through. I have derived much benefit from taking the course of instruction and feel that I shall continue to strengthen my memory. That is the best part of it. I shall be glad of an opportunity to recommend your work to my friends."

Mr. Allen didn't put it a bit too strong.

The Roth Course is priceless. I can absolutely count on my memory now. I can call the name of most any man I have met before—and I am getting better all the time. I can remember figures I wish to remember. Telephone numbers come to my mind instantly, once I have filed them by Mr. Roth's easy method. Street addresses are just as easy.

The old fear of forgetting (you know what that is) has vanished. I used to be "scared stiff" on my feet—because I wasn't sure. I couldn't remember what I wanted to say.

Now I am sure of myself, and confident, and "easy as an old shoe" when I get on my feet at the club, or at a banquet, or in a business meeting, or in any social gathering.

Perhaps the most enjoyable part of it all is that I have become a good conversationalist—and I used to be as silent as a sphinx when I got into a crowd of people who knew things.

Now I can call up like a flash of lightning most any fact I want right at the instant I need it most. I used to think a "hair trigger" memory belonged only to the prodigy and genius. Now I see that every man of us has that kind of a memory if he only knows how to make it work right.

I tell you it is a wonderful thing, after groping around in the dark for so many years, to be able to switch the big searchlight on your mind and see instantly everything you want to remember.

This Roth Course will do wonders in your office.

Since we took it up you never hear anyone in our office say "I guess" or "I think it was about so much" or "I forget that right now" or "I can't remember" or "I must look up his name." Now they are right there with the answer like a shot.

Have you ever heard of "Multigraph" Smith? Real name H. Q. Smith, Division Manager of the Multigraph Sales Company, Ltd., in Montreal. Here is just a bit from a letter of his that I saw last week:

"Here is the whole thing in a nutshell. Mr. Roth has a most remarkable Memory Course. It is simple, and easy as falling off a log. Yet with one hour a day of practice, anyone—I don't care who he is—can improve his memory 100% in a week and 1000% in six months."

My advice to you is don't wait another minute. Send to Independent Corporation for Mr. Roth's amazing course and see what a wonderful memory you have got. Your dividends in increased earning power will be enormous.

VICTOR JONES

### What the Course Did for Mrs. Jones

From what Mr. Jones tells us, the Roth Memory Course did just as wonderful things for Mrs. Jones. She became fascinated with the lessons

the first evening she could get them away from her husband, and he is forced to admit that not only did she learn the magic key words more quickly and easily than he did—but so did Genevieve, their twelve-year-old daughter.

But the fun of learning was only the beginning. In a few days Mrs. Jones was amazed to see how her newly acquired power to remember the countless things she had to remember simplified her life. The infinite details of housekeeping smoothed themselves out wonderfully. She was surprised how much more time she had for recreation—because she remembered easily and automatically her many duties at the time they should be remembered. And when evening came she missed much of the old "tired feeling" and was fresher than she had been in years.

At her club she became a leader because her fellow members could count on her to conduct club matters with a clear head and in orderly procedure.

In her social life Mrs. Jones began to win a popularity that she had never dreamed of attaining. The reason was easy to understand—because she never forgot a name or face once she was introduced—and this also made her a successful hostess—much to the wonder of her friends. In short, Mrs. Jones, in developing her own perfectly good memory, discovered a secret of success, not only in housekeeping, but in her social life.

Now we understand the Roth Memory Idea is going like wildfire among Mrs. Jones' friends—for she has let them into her secret.

Read the following letter from Mrs. Eleanor A. Phillips, State Chairman of the Tennessee Woman's Liberty Loan Committee:

"Enclosed please find check for \$5.00 for Memory Course forwarded me. This course, to my mind, is the most wonderful thing of its kind I have ever heard of, and comes to hand at a time when I need it greatly.

"As Chairman for the State of Tennessee for Woman's Liberty Loan Committee, it is very necessary for me to remember the names of thousands of women, and with the very little acquaintance I have had with your wonderful course, I find my memory greatly strengthened. I feel sure that after having completed the course I will be able to know my women and the counties they are from the minute I see them."

### Send No Money

So confident is the Independent Corporation, the publishers of the Roth Memory Course, that once you have an opportunity to see in your own home how easy it is to improve your memory power in a few short hours, that they are willing to send the course on free examination.

Don't send any money. Merely mail the coupon or write a letter and the complete course will be sent, all charges prepaid, at once. If you are not entirely satisfied send it back any time within five days after you receive it and you will owe nothing.

On the other hand, if you are as pleased as are the thousands of other men and women who have used the course, send only \$5 in full payment. You take no risk and you have everything to gain, so mail the coupon now before this remarkable offer is withdrawn.

### FREE EXAMINATION BLANK

## THE PRESIDENT VOICES THE WORLD'S DESIRE

**P**RESIDENT WILSON'S address in the Metropolitan Opera House at the opening of the Fourth Liberty Loan campaign sets forth in clear and convincing language the peace aims, not of America alone, not of the Allies alone, but of the entire world including those who are not with us and those who are against us. If this war should be followed, as we believe it will be, by the formation of a League of Nations, this address will rank with the English Magna Carta, the French Declaration of the Rights of Man and the American Declaration of Independence as milestones in the march of humanity toward liberty and law. That America is now listened to with such respect is not due merely to the fact that she commands the only unexhausted reservoir of men and money, but more because her President has spoken for a higher ideal and a broader justice than has been heard from the rulers of other lands. As we now know, the President's voice is listened to not only by the people of the Allied nations but also by a large and increasing portion of the people of enemy countries. As he says, the plain, workaday people are still demanding that the leaders of their governments declare exactly what it is that they are seeking in this war and they are not yet satisfied with what they have been told. The Liberty Loan speech will go far toward satisfying this popular demand for a statement of war aims commensurate with the sacrifices demanded. The Great War will not be won unless it results in a Great Peace.

The President's words will revive the fainting hopes of liberals the world over. For instance, we may quote from the last number of the *English Nation* received:

The cause of Liberalism passed from our keeping to America's. The war, as an agent for repelling a German supremacy of Europe, is essentially won. The task remains of restoring sanity and security to the society it has almost destroyed. What are to be the character and the cement of the new structure? If it is to be built up of the old scheme of Power balances, the conscription, the rivalry of armaments, and the rule of the Veiled Prophets of Cabinet and Embassy, then youth has been cruelly deceived, and the governments of Europe may yet sustain the utmost effort of their despair. Is there no danger of such an issue of the war? There is. We have much lip service at the altar of the League of Nations. But in every one of the combatant countries, save America, either the governments, or the men who move governments, have already taken steps to make a unitary, reconciled, international society impossible. Many powerful men have their projects for the reërection of freshly fortified zones of exclusive wealth and power.

It is against the evils here specified, the balance of power, conscription, armaments, secret diplomacy and entrenched interests, that President Wilson has spoken out. His plea will be received with concealed resentment by those whose plans it thwarts and they will do their best to bury it in oblivion. Contracts have already been made which control the greater part of the world's supply of raw material for years to come. The Non-Ferrous Metals Act passed by Parliament practically makes a close corporation of the British

Empire in regard to these metals. The Paris Economic Conference committed the Allied Powers to a policy of exclusion and discrimination. In accordance with that agreement France and Great Britain have denounced all their commercial conventions containing "the most favored nation" clause, which provides for equal trade rights to all nations. At the recent conference of the premiers of the British dominions with the English Cabinet a policy of imperial preference was decided upon, altho that involves throwing over the traditional English theory of free trade. Territorial arrangements and divisions of power are, as the President says, still the chief issues discussed. The secret treaties exposed by the Bolsheviki are still unrepudiated even where they are at variance with the principles laid down by the President or where they have been made impossible of fulfilment by the changed situation. Mr. Balfour, Secretary of State for Foreign Affairs, declares before Parliament that secret diplomacy is indispensable. In *The Independent* of August 24th we called attention to the danger of reckless signing of resolutions to boycott the products of our present enemies and we argued that this weapon, the most powerful in the armory of the Allies, should not be left to individuals but reserved for governmental use. Mr. Wilson goes still further and argues that the boycott cannot be entrusted safely to an individual government or group of governments, but must be reserved for the League of Nations. These are some of the points where President Wilson comes into conflict with ideas and plans current here and abroad. But "it will be necessary that all who sit down at the peace table shall come ready and willing to pay the price, the only price, that will procure a secure and lasting peace."

Earl Curzon, the spokesman of the British Government in the House of Lords, says that a League of Nations is already in existence, the Allies, and that it will be opposed by another League of Nations, composed of our enemies. But that is virtually the old, disastrous balance of power idea on a larger scale. The object of the League of Nations, as the President conceives it, is to prevent forever the formation of such rival aggregations. In France and England it is questioned whether Germany ought to be allowed to come into the League of Nations. The American idea is that Germany ought to be compelled to come into the League of Nations and we propose to fight until she does. Lord Curzon's plan implies an indecisive peace, a drawn game, a perpetual deadlock. America demands that Germany be beaten until she is ready to submit to the judgment of the world court or be outlawed by all civilized nations.

As in his former addresses the President insists that each question be decided upon its own merits and not be made a matter of bargaining, compromise and mutual concession. His wording is curious: "The impartial justice meted out must involve no discrimination between those to whom we

wish to be just and those to whom we do not wish to be just." This reminds us of the story of the Populist senator of a western state who said: "The trusts come to us asking for justice, but I tell you, gentlemen, the trusts don't deserve justice, and by Heaven they are not going to get it from us." It is this sentiment, commonly felt but rarely so frankly expressed, that the President would repudiate. We must confess that now in the heat of conflict and the fire of indignation we have little disposition to deal with our enemies as we would be done by, yet we must realize with the President that any settlements not made in a fair and impartial spirit will cause trouble for the future. The President's address may be regarded as a sermon preached from the text of Kant's categorical imperative: "I must act in such a way that I can at the same time will that my maxim should become a universal law."

## ONE FROM FOUR LEAVES TWO

THE surrender of Bulgaria means more than the elimination of the weakest of our four antagonists. It means also that Turkey is virtually out of the game. It means that the spinal cord of the enemy coalition, the Berlin-Bosphorus-Bagdad railroad, has been cut and that a new and vulnerable front of Austria-Hungary has been laid open to our attack. It opens the possibility of recovering Serbia, Montenegro and Albania and of bringing Rumania again into the war.

The armistice gives the Allies the right to use the railroads and rivers of Bulgaria for military purposes. This implies that Bulgaria not merely breaks with her old allies to become neutral as Russia and Rumania have nominally done, but that she has virtually come in on our side, for if she were neutral she would have no right to allow military operations to take place on her territory. Allied troops can now be transported from Salonica to the Tchatalga line and attack Constantinople from the land side. If such land operations could have been combined with the attempt to force the Dardanelles by the British navy, Constantinople would have speedily fallen and the Gallipoli disaster avoided. But thru some diplomatic fumbling, chiefly as we now know due to the incapacity and treachery of the Russian Government, the Allies failed in 1915 to win over either Bulgaria or Greece and in consequence lost Serbia, Montenegro, Albania, Rumania and Russia. Both Greece and Bulgaria were under pro-German kings, but the people of both were favorable toward the Entente Allies. It would have been difficult to have got both of them, but if the Allies had raised their bids a little higher and used a little more tact or pressure one if not both could have been won over and the war shortened by a year or so. But since their efforts in 1915 failed it became necessary to occupy Greece and conquer Bulgaria. King Constantine fled into exile and a Greek army is fighting in the ranks of the Allies. Now King Ferdinand has fled into exile and we should not be surprised to see before long a Bulgarian army fighting in the ranks of the Allies. A good many of them would have preferred that side on the start and some of them have voluntarily gone over to that side since.

The collapse of Bulgaria is not primarily due to the military victories of the Allies in Serbia or, to put it more accurately, the military victories were largely due to the internal collapse of Bulgaria. King Ferdinand has perceived for some time that he had "put his money on the wrong horse," to use Lord Salisbury's phrase about the Crimean War. His people were continually getting more restive and a revolution was imminent. America has always had a great influence in Bulgaria thru the emigration of Bulgars to this country and their return and thru the education of the leading men and women in the missionary schools. This influence, we may surmise, has not been inactive or fruitless during the past year. Fortunately Presi-

dent Wilson has been able to resist the pressure put upon him by certain senators to declare war with Bulgaria. Some days before the Bulgarian Government approached the Allies a despatch was sent to Stephen Panaretoff, the Bulgarian Minister at Washington, asking the good offices of the United States in favor of an armistice, and the American Consul General at Sofia, Mr. Murphy, accompanied the Bulgarian peace delegation to Sofia, altho purely as an observer and without authority from the Department of State. It is not known whether the President was consulted as to the terms of the armistice, tho he doubtless will be as to the final terms of peace.

Today we have received a belated letter from a distant subscriber calling us ignorant, prejudiced and pro-German because in *The Independent* of May 25 we said: "The Bulgarian people are now realizing that they are on the wrong side. Before many weeks they will realize that they are on the losing side. When they find that they are not bound to their present allies by bonds of sympathy or of interest or of fear, it will be hard to keep them even nominally numbered among our enemies." It will not be necessary to answer our irate correspondent. The event has answered him. The separate peace with Bulgaria which he regarded as a betrayal of the Allies has already been made by the Allies and it is their greatest victory so far.

It is fortunate that Bulgaria is the first to give up, for the Allies can grant her easier terms with a good conscience than they could to any of the others. The Allies and America are committed to the dismemberment of the Ottoman and Austrian empires, and the greater part of the territory of the German empire is claimed by Great Britain and France, but no considerable curtailment of Bulgaria has been authoritatively proposed. In fact, if the map of the Balkans is redrawn on racial lines, as the Allies propose, Bulgaria would be more likely to gain territory than to lose what she had in 1913, for the treaty of Bucharest was notoriously unfair to Bulgaria in this respect and was imposed as a penalty for her guilt in precipitating the second Balkan war. She deserves a still heavier punishment for her guilt in partaking in the present war, but it is difficult to see how she can be adequately penalized without violating our own principles. No indemnity could be extracted from her sufficient to cover her ruthless destruction of Serbian property and the expense of keeping an army of half a million on her frontier for three years. To depose her King would not be a penalty but a favor; nevertheless we ought not to shrink from it on that account. Bulgaria went into the war for her own advantage and she comes out of the war for the same reason. She has saved herself from invasion by unconditional surrender in the nick of time. She does not deserve gratitude, but the Allies do deserve congratulations. It gives us reason to hope that one of her late allies may soon see that it would be to its advantage to follow her example.

## GERMANY'S FATAL HANDICAP

SOMETIMES it is well to hold the war at arm's length and look at it as a whole in order to avoid being overwhelmed by details. Now, the broadest strategic factor of the present war is that it cannot be carried on at all without a mobilization of industry on a stupendous scale for the manufacture of war necessities. There are just three first class industrial areas in the world, besides, of course, several of the second rank. One is the northeastern quarter of the United States. Another is the manufacturing region of Great Britain. The third includes Belgium, northeastern France and a large part of western Germany on both banks of the Rhine: we may summarize this region, which is an economic unit, tho divided into several political divisions by national boundaries, as "Rhineland." Two of these major manufacturing centers are in the hands of the Allies; one

in the hands of the Germans. The American and British industrial areas can only be reached by an enemy who has command of the sea. But "Rhineland" lies directly behind the German trenches, indeed at Lens and in Lorraine the advancing armies of the Entente are already treading the edge of this region of maximum mining and manufacture. A few days' unobstructed march would bring the Germans to Paris; but without Paris the Allies could still continue the fight. A few days' march in the opposite direction would not, indeed, bring the Allies to Berlin, but it would bring them to a much more important city: Essen. Deprived of her biggest coal-iron-factory district Germany would be disarmed. That is why nothing but loss of sea-power (or loss of heart) can defeat the Allies, no matter what defeats they sustain, while a single disaster on the western front would lay the very heart of Germany open to the final blow.

## THE CRUEL GOVERNMENT

**W**HEN the Government takes over things the fur flies. But who would ever have expected to live to see all the American colleges and universities opening this week with the classics abandoned, the secret societies abolished, athletics reduced to recreation and the students made to study?

It all seems too sensible to be true.

## A HEARTENING TALK

**T**HE English are getting encouragement from President Wilson's speeches. We on our side can listen with advantage to the good counsel and wise warning that Premier Lloyd George gave in a recent speech when the country was jubilant over the greatest victory yet achieved by British arms:

It is not over. This country has got to depend on its resolution, on its courage. It has got to keep up its heart in the long struggle. It is the heart that tells in the long climb; it is the heart that tells going over rough country; it is the heart that tells in the long run. It is the heart that tells, and I want that heart to be steady; not a heart one moment throbbing wildly with excitement and the next moment you can barely feel its pulsations; not an intermittent heart, not an irregular heart, but a good steady heart, beating with hammer strokes—that is the heart that will go thru, that is the heart I want. We are now doing well. Do not get too excited over it. Keep steady. You will want your heart again, don't work it too much.

# OUR PRACTICAL PROGRAM FOR PEACE

From President Wilson's Address in New York, September 27, 1918

**A**T every turn of the war we gain a fresh consciousness of what we mean to accomplish by it. When our hope and expectation are most excited we think more definitely than before of the issues that hang upon it and of the purposes which must be realized by means of it. For it has positive and well defined purposes which we did not determine and which we cannot alter. No statesman or assembly created them; no statesman or assembly can alter them. They have arisen out of the very nature and circumstances of the war. The most that statesmen or assemblies can do is to carry them out or be false to them. They were perhaps not clear at the outset; but they are clear now.

The war has lasted more than four years and the whole world has been drawn into it. The common will of mankind has been substituted for the particular purposes of individual states. Individual statesmen may have started the conflict, but neither they nor their opponents can stop it as they please. It has become a peoples' war, and peoples of all sorts and races, of every degree of power and variety of fortune are involved in its sweeping processes of change

and settlement. We came into it when its character had become fully defined and it was plain that no nation could stand apart or be indifferent to its outcome. Its challenge drove to the heart of everything we cared for and lived for. The voice of the war had become clear and gripped our hearts. Our brothers from many lands, as well as our own murdered dead under the sea, were calling to us, and we responded, fiercely and of course.

The air was clear about us. We saw things in their full, convincing proportions as they were; and we have seen them with steady eyes and unchanging comprehension ever since. We accepted the issues of the war as facts, not as any group of men either here or elsewhere had defined them, and we can accept no outcome which does not squarely meet and settle them. These issues are these:

Shall the military power of any nation or group of nations be suffered to determine the fortunes of peoples over whom they have no right to rule except the right of force?

Shall strong nations be free to wrong

## IN A NUTSHELL

**T**HE wealth of the United States totals 250 billions. The national yearly income is 40 billions. The bank resources are 37 billions. One third of the wealth of the world belongs to this country. America is twice as wealthy as England and three times as wealthy as Germany. In the Civil War we raised 3 billions, altho our bank resources were only 1½ billions. On this basis we could now raise 74 billions. The Government asks for a loan—not a gift—of 6 billions. If each citizen will plan to devote one-third of his income this year to taxes and Liberty loans, there will be enough and to spare. It shall be done.

## BEHIND THE TIMES

**I**T is difficult to write patiently of the Senate's latest block against the progress of woman suffrage. In spite of President Wilson's special plea for the passage of the Anthony amendment for national woman suffrage as "a measure vital to the winning of the war and to the right solution of the great problems which we must settle, and settle immediately when the war is over"; in spite of the explicit pledge for woman suffrage in both the Republican and Democratic party platforms; in spite of the example already set by Great Britain and other nations supposedly more conservative than our own; in spite of the evidence of the people's will as expressed in our daily press; in spite of the fact that full woman suffrage has already been granted in twelve states of the Union and partial woman suffrage in eighteen more; in spite of the proof that women everywhere are giving of their ability and willingness to share equally in the work of winning the war—with resolute disregard of all these facts, another little group of wilful men, largely of the President's own party in the Senate, has succeeded in blocking the people's will to progress.

It goes without saying that the block is not for long. Already suffragists are planning to return to the Senate at the next election men who are not bound by the narrow traditions of outworn times.

## THEY THAT TAKE THE SWORD—

"As nature needs storms, as God has given beasts teeth and claws, man also needs the sword."—*Grand Admiral von Koester.*

weak nations and make them subject to their purpose and interest?

Shall peoples be ruled and dominated, even in their own internal affairs, by arbitrary and irresponsible force or by their own will and choice?

Shall there be a common standard of right and privilege for all peoples and nations or shall the strong do as they will and the weak suffer without redress?

Shall the assertion of right be haphazard and by casual alliance or shall there be a common concert to oblige the observance of common rights?

No man, no group of men, chose these to be the issues of the struggle. They *are* the issues of it; and they must be settled—by no arrangement or compromise or adjustment of interests, but definitely and once for all, and with a full and unequivocal acceptance of the principle that the interest of the weakest is as sacred as the interest of the strongest.

This is what we mean when we speak of

a permanent peace, if we speak sincerely, intelligently and with a real knowledge and comprehension of the matter we deal with.

We are all agreed that there can be no peace obtained by any kind of bargain or compromise with the governments of the Central Empires, because we have dealt with them already and have seen them deal with other governments that were parties to this struggle, at Brest-Litovsk and Bucharest. They have convinced us that they are without honor and do not intend justice. They observe no covenants, accept no principle but force and their own interest. We cannot "come to terms" with them. They have made it impossible. The German people must by this time be fully aware that we cannot accept the word of those who forced this war upon us. We do not think the same thoughts or speak the same language of agreement.

**I**T is of capital importance that we should also be explicitly agreed that no peace shall be obtained by any kind of compromise or abatement of the principles we have avowed as the principles for which we are fighting. There should exist no doubt about that. I am, therefore, going to take the liberty of speaking with the utmost frankness about the practical implications that are involved in it.

If it be in deed and in truth the common object of the governments associated against Germany and of the nations whom they govern, as I believe it to be, to achieve by the coming settlements a secure and lasting peace, it will be necessary that all who sit down at the peace table shall come ready and willing to pay the price, the only price, that will procure it; and ready and willing, also, to create in some virile fashion the only instrumentality by which it can be made certain that the agreements of the peace will be honored and fulfilled.

That price is impartial justice in every item of the settlement, no matter whose interest is crossed; and not only impartial justice, but also the satisfaction of the several peoples whose fortunes are dealt with. That indispensable instrumentality is a League of Nations formed under covenants that will be efficacious. Without such an instrumentality, by which the peace of the world can be guaranteed, peace will rest in part upon the word of outlaws and only upon that word. For Germany will have to redeem her character not by what happens at the peace table, but by what follows.

And, as I see it, the constitution of that League of Nations and the clear definition of its objects must be a part, in a sense the most essential part, of the peace settlement itself. It cannot be formed now. If formed now it would be merely a new alliance confined to the nations associated against a common enemy. It is not likely that it could be formed after the settlement. It is necessary to guarantee the peace; and the peace cannot be guaranteed as an afterthought. The reason, to speak in plain terms again, why it must be guaranteed is that there will be parties to the peace whose promises have proved untrustworthy, and means must be found in connection with the peace settlement itself to remove that source of insecurity. It would be folly to leave the guarantee to the subsequent voluntary action of the governments we have seen destroy Russia and deceive Rumania.

But these general terms do not disclose the whole matter. Some details are needed to make them sound less like a thesis and more like a practical program. These, then, are some of the particulars, and I state them with the greater confidence because I can state them authoritatively as representing this government's interpretation of its own duty with regard to peace:

First, the impartial justice meted out must involve no discrimination between those to whom we wish to be just and those to whom we do not wish to be just. It must be a justice that plays no favorites and knows no standard but

the equal rights of the several peoples concerned.

Second, no special or separate interest of any single nation or any group of nations can be made the basis of any part of the settlement which is not consistent with the common interest of all.

Third, there can be no leagues or alliances or special covenants and understandings within the general and common family of the League of Nations.

Fourth, and more specifically, there can be no special, selfish economic combinations within the league and no employment of any form of economic boycott or exclusion except as the power of economic penalty by exclusion from the markets of the world may be vested in the League of Nations itself as a means of discipline and control.

Fifth, all international agreements and treaties of every kind must be made known in their entirety to the rest of the world.

Special alliances and economic rivalries and hostilities have been the prolific source in the modern world of the plans and passions that produce war. It would be an insincere as well as an insecure peace that did not exclude them in definite and binding terms.

The confidence with which I venture to speak for our people in these matters does not spring from our traditions merely and the well known principles of international action which we have always professed and followed. In the same sentence in which I say that the United States will enter into no special arrangements or understandings with particular nations let me say also that the United States is prepared to assume its full share of responsibility for the maintenance of the common covenants and understandings upon which peace must henceforth rest. We still read Washington's immortal warning against "entangling alliances" with full comprehension and an answering purpose. But only special and limited alliances entangle; and we recognize and accept the duty of a new day in which we are permitted to hope for a general alliance which will avoid entanglements and clear the air of the world for common understandings and the maintenance of common rights.

**I** have made this analysis of the international situation which the war has created not, of course, because I doubted whether the leaders of the great nations and peoples with whom we are associated were of the same mind and entertained a like purpose, but because the air every now and again gets darkened by mists and groundless doubtings and mischievous perversions of counsel, and it is necessary once and again to sweep all the irresponsible talk about peace intrigues and weakening morale and doubtful purpose on the part of those in authority utterly, and if need be unceremoniously, aside and say things in the plainest words that can be found, even when it is only to say over again what has been said before quite as plainly if in less unvarnished terms.

As I have said, neither I nor any other man in governmental authority created or gave form to the issues of this war. I have simply responded to them with such vision as I could command. But I have responded gladly and with a resolution that has grown warmer and more confident as the issues have grown clearer and clearer. It is now plain that they are issues which no man can pervert unless it be wilfully. I am bound to fight for them, and happy to fight for them as time and circumstances have revealed them to me as to all the world. Our enthusiasm for them grows more and

more irresistible as they stand out in more and more vivid and unmistakable outline.

And the forces that fight for them draw into closer and closer array, organize their millions into more and more unconquerable might, as they become more and more distinct to the thought and purpose of the peoples engaged. It is the peculiarity of this great war that while statesmen have seemed to cast about for definitions of their purpose and have sometimes seemed to shift their ground and their point of view, the thought of the mass of men, whom statesmen are supposed to instruct and lead, has grown more and more unclouded, more and more certain of what it is that they are fighting for. National purposes have fallen more and more into the background and the common purpose of enlightened mankind has taken their place. The counsels of plain men have become on all hands more simple and straightforward and more unified than the counsels of sophisticated men of affairs, who still retain the impression that they are playing a game of power and playing for high stakes. That is why I have said that this is a peoples' war, not a statesmen's. Statesmen must follow the clarified common thought or be broken.

**I** take that to be the significance of the fact that assemblies and associations of many kinds made up of plain workaday people have demanded, almost every time they come together, and are still demanding that the leaders of their governments declare to them plainly what it is, exactly what it is, that they were seeking in this war, and what they think the items of the final settlement should be. They are not yet satisfied with what they have been told. They still seem to fear that they are getting what they ask for only in statesmen's terms—only in the terms of territorial arrangements and divisions of power, and not in terms of broad-visioned justice and mercy and peace and the satisfaction of those deep-seated longings of oppressed and distracted men and women and enslaved peoples that seem to them the only things worth fighting a war for that engulfs the world. Perhaps statesmen have not always recognized this changed aspect of the whole world of policy and action. Perhaps they have not always spoken in direct reply to the questions asked because they did not know how searching those questions were and what sort of answers they demanded.

But I, for one, am glad to attempt the answer again and again, in the hope that I may make it clearer and clearer that my one thought is to satisfy those who struggle in the ranks and are, perhaps above all others, entitled to a reply whose meaning no one can have any excuse for misunderstanding, if he understands the language in which it is spoken or can get some one to translate it correctly into his own. And I believe that the leaders of the governments with which we are associated will speak, as they have occasion, as plainly as I have tried to speak. I hope that they will feel free to say whether they think that I am in any degree mistaken in my interpretation of the issues involved or in my purpose with regard to the means by which a satisfactory settlement of those issues may be obtained.

**U**NITY of purpose and of counsel are as imperatively necessary in this war as was unity of command in the battlefield: and with perfect unity of purpose and counsel will come assurance of complete victory. It can be had in no other way. "Peace drives" can be effectively neutralized and silenced only by showing that every victory of the nations associated against Germany brings the nations nearer the sort of peace which will bring security and reassurance to all peoples and make the recurrence of another such struggle of pitiless force and bloodshed forever impossible, and that nothing else can. Germany is constantly intimating the "terms" she will accept; and always finds that the world does not want terms. It wishes the final triumph of justice and fair dealing.

# THE STORY OF THE WEEK

Kirby in The New York World

ALL IN ONE DAY

**Bulgaria Surrenders** Within ten days after the Allied offensive was started in Macedonia, September 14, the Bulgarian Government decided to capitulate. The French and Serbs gained the mountains beyond Monastir, swept on thru Serbia to Veles and Uskub, and crossed the Bulgarian frontier. At the same time the British and Greeks advanced up the Vardar River and took the Bulgarian town of Strumnitza.

Meanwhile Sofia was in a turmoil. Bolshevik propaganda had gained many converts even in the army. On September 22 the central committee of the Socialist party called upon Premier Malinoff to open peace parleys. At a cabinet council held on the following day it was decided to take this step, and a message was sent over the lines to General d'Esperey asking for a suspension of hostilities to permit of negotiations for an armistice. The French general declined to stop operations, but agreed to pass a delegation to the rear. Accordingly, three delegates, General Lonkoff, commander of the Bulgarian Second Army; Mr. Liapcheff, Finance Minister, and Mr. Radoff, a former cabinet minister, accompanied in an unofficial capacity by American Consul General Murphy, reached Salonica on September 28. The terms imposed by the Allies were stringent, involving not merely the withdrawal of Bulgaria from the war and her neutrality, but the occupation of her territory and the surrender of her munitions and transportation facilities without any conditions as to future peace terms. At noon on the following day, Sunday, the armistice was signed.

**Terms of the Armistice** The armistice signed at Salonica at noon, September 29, deals only with military matters and does not concern itself with territorial or political questions or the terms of perma-

rent peace. Bulgaria agrees to demobilize her army immediately and place all of her stores of arms and ammunition under the control of the Allies. All boats on the Danube and all railroads in Bulgaria are to be turned over to the Allies, who will have the right to occupy all strategic points and conduct military operations on Bulgarian soil. The territory of Greece and Serbia now occupied by the Bulgars will be evacuated by them and turned over to Greek and Serbian troops, but only British, French and Italian troops are permitted to enter Bulgaria proper.

The armistice is to continue in force until a final general peace is concluded.

Some move of this kind has been expected ever since June, when Radoslavoff, the pro-German Premier, was forced to give way to Malinoff, who opposed Bulgaria's entrance into the war in 1915. Premier Malinoff asserted his intention of making peace in the fall, independently if the Central Powers would not agree to it also. Germany tried all means to induce him to change his mind, but in vain. Kaiser Wilhelm talked with King Ferdinand in August and later the Kings of Saxony and Bavaria visited Sofia to try to prevent Bulgaria's secession. Talaat Bey, the Turkish Foreign Minister, was called to Berlin to see if he could not be induced to withdraw the Ottoman claims

to the Dobrudja which Rumania took from Bulgaria in 1913 and which Bulgaria now reclaims. Talaat Bey demanded as the price of this concession the possession of the Caucasian oil field of Baku and a loan of \$200,000,000 from Germany and a strip of Bulgarian territory in Thrace. This was agreed to by the Central Powers, and in return for it, Turkish troops were to be sent to Bulgaria's aid in Macedonia. But when Talaat returned to Constantinople his bargain was not confirmed by his colleagues, and Bulgaria received no reinforcements from Turkey. But the Turks took Baku just the same by driving out the British.

Berlin claims that the dispute with Turkey had been at last arranged on Bulgaria's terms and that a message to that effect and promising military aid was sent to Sofia, but that Premier Malinoff concealed the receipt of this telegram from the council which decided to make peace.

King Ferdinand of Bulgaria has taken refuge in Vienna. Whether he favored or consented to the peace negotiations or not is not known, but shortly before they were begun he issued a ukase pardoning former Minister Ghenadieff and Stambulivsky, leader of the Agrarian party, whom he had imprisoned for opposing him in 1915, when he proposed to take the side of Germany. Anti-dynastic and pro-Ally riots in Sofia threatened revolution if the King did not consent to peace.

THE KEY TO THE BALKANS

The surrender of Bulgaria gives to the Allies immediately the shaded area as well as an opportunity to regain all of Serbia, Montenegro, Albania and Rumania. The arrow shows the point of attack by the Serbs and French that forced the surrender.

Darling in New York Tribune

THE RATS ARE BEGINNING TO LEAVE

**British Take Damascus** General Allenby's victory in Palestine turns out to have been even more sweeping than was supposed last week. The Seventh and Eighth Turkish armies, which occupied Palestine west of the Jordan River, were completely encircled by the cavalry that came down from Nazareth thru the plain of Armageddon. The British took 50,000 captives and 350 guns, together with all the rolling stock and supplies. This also gave the British possession of the ports of Haifa and Akka (the ancient Acre).

But on the east side of the Jordan there was still the Fourth Turkish Army guarding the railroad that runs north to Damascus. This was attacked by the Arabs of King Hussein of the Hedjaz, who took 1500 prisoners at the Derat railroad junction. This cut off the remnant of the Fourth Army from retreating to Damascus and British

troops crossing the Jordan on the Jerusalem-Jericho road to Es-Salt. This brought them on the flank of the Turks at Amman railroad station (the Rab-bath Ammon of the Bible), and they were compelled to surrender. Ten thousand of them were captured east of the Jordan.

It was thought that Field Marshal Liman von Sanders, the German generalissimo, who escaped from Samaria six hours before the British net closed around his armies, would make a stand on the Damascus road with the remnants of his force, but the British cavalry swept on northward and took Damascus, while on the coast the French cavalry are approaching Beyrout. When the Australians and the Arabs entered Damascus they captured 7000 prisoners.

General Allenby's quick conquest of Palestine is one of the most brilliant exploits of the war considering the difficulty of campaign in a rough and arid region with so composite a force. He has under his command Englishmen, Australians, New Zealanders, Frenchmen, East Indians, West Indians, Arabs and a new national force, the Jewish troops, who are now fighting under the blue and white banner of Zion for the recovery of their ancient land.

Only by taking a wide survey of the week's progress can we appreciate the full scope of the gigantic strategy now being carried out. No commander ever before has been able to exercise immediate control over military forces in all parts of the world and to coördinate in one campaign armies on different continents. From the Pacific, the Arctic and the Caspian the troops of the Allies are entering Russia. The army from Salonica, composed of seven nationalities, has elim-

Foch's Battue

GENERAL D'ESPEREY, HERO OF THE BALKANS

Thru the success of his advance upon the Bulgarians, to General Franchet d'Esperey fell the honor of being the first commander to receive an enemy surrender in this war. General d'Esperey has won previous notable victories at Charleroi and on the Marne. He was made commander-in-chief last June of the Allied armies in the Balkans.

inated Bulgaria. The army from Suez, equally composite, has conquered Palestine. In France all the active Allies are engaged in a continuous battle that extends three hundred miles from Pont-a-Mousson on the Moselle to Nieuport on the North Sea. Of all the points of contact with the enemy only the Alsatian side and the Italian front are, for some unknown reason, comparatively quiescent. Hitherto Germany, tho inferior in total numbers, has been able to outnumber the Allies at any particular point, but she cannot withstand a general drive from all quarters. The rising tide flows and slackens here and there, but never ebbs.

The accompanying map shows the relation to one another of the various operations on the French front and why the resultant of all of them is greater than the sum of their individual achievements. Beginning at the top it will be seen that the drive from Ypres as a center is of peculiar importance and promise, for it offers the only opportunity of outflanking the German line. Here the Belgians under General de Golette have forced forward a salient toward Thourout and Roulers that if continued a few miles farther will compel the Germans to abandon Ostend and Zeebrugge, their only ports this side of Holland.

Directly east of Ypres the British under General Plumer have made an equal advance which not only supports the Belgian movement to the north but may compel the prompt evacuation of the three important towns just south of this new salient, Turcoing, Roubaix and Lille. These as well as Lens, La Bassée and Armentières, lie in a pocket formed by the advances of the Allies from Ypres above and Arras below. The Germans have stuck to these points with the utmost tenacity, but this, the only reentering angle remaining in the

Press Illustration

WHERE BULGARIA CHANGED HER MIND

The Allies' advance over this region and their capture of Strumitza, in Macedonia, were followed almost immediately by Bulgaria's plea for an armistice and her acceptance of a separate peace

Allied front, must soon become untenable and the line straightened.

The British and interrelated troops of other nationalities on the stretch between Ypres and St. Quentin are under the general command of Field Marshal Sir Douglas Haig and divided into four armies under Generals Plumer, Horne, Byng and Rawlinson. These forces have during the past week smashed up the Hindenburg line about and below Cambrai.

Next in the line come the French armies, all of which have achieved considerable successes during the week. General Debeney has entered St. Quentin. General Mangin has taken Fort de Malmaison. This puts pressure on the Laon salient from the north and south. On the Champagne front General Berthelot has started a drive from Reims and farther east General Gouraud has made an advance down the Aisne in coöperation with General Liggett, who with the American army has advanced down the Meuse.

These attacks by the French and Americans from the south coöordinate with the Belgian, British and French attacks from the west to put pressure on both sides of the right angle that the Germans thrust into France in 1914, and it shows signs of giving way altogether.

THE COORDINATED OFFENSIVE IN FRANCE

The black area is the territory gained by the Allies since July 15. The arrows indicate the chief points of attack

#### A Belgian Drive

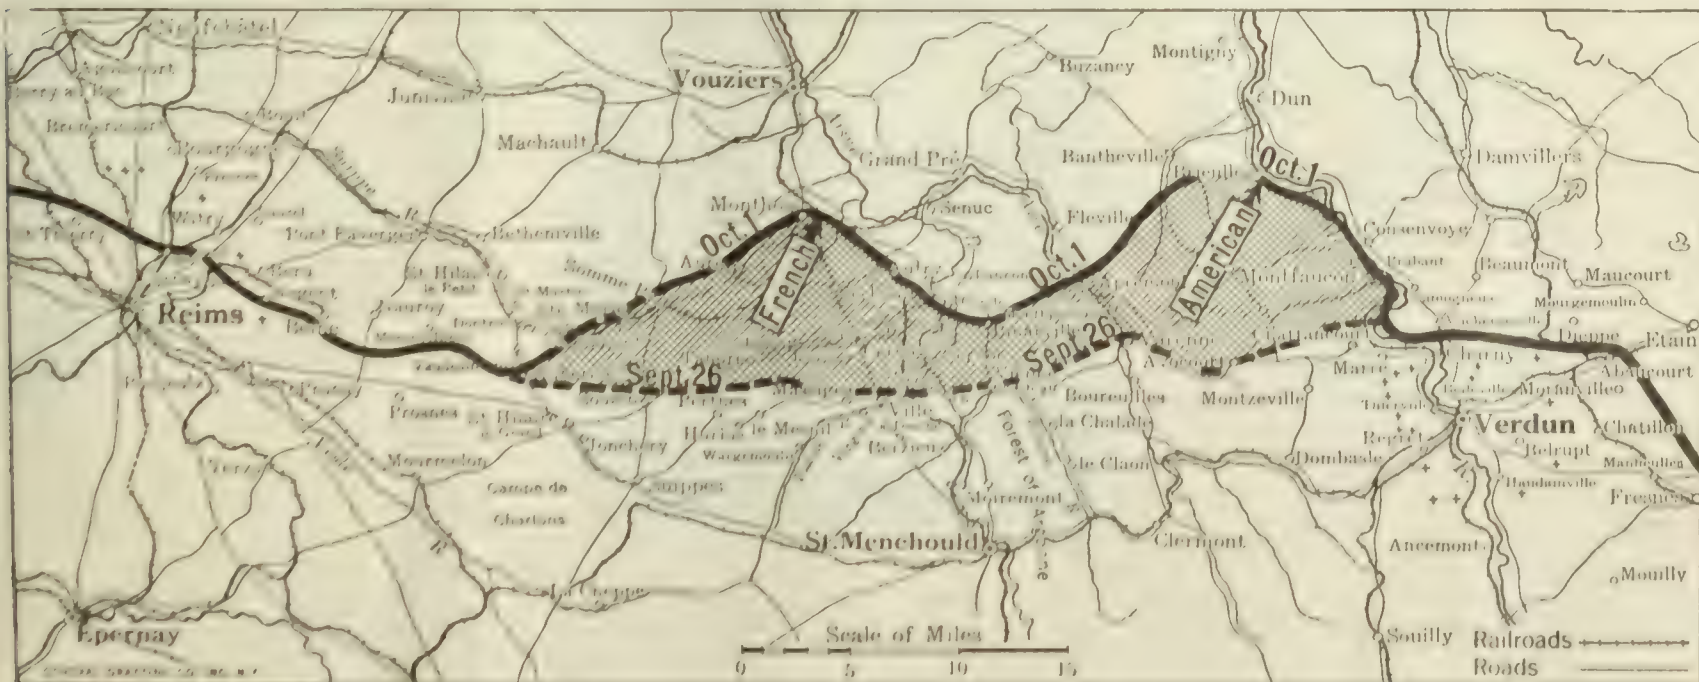

A new movement of great strategic importance was launched on September 28 against the northern end of the German line where it cuts across a corner of Belgium from Ypres to the sea. This sector has been the scene of continual skirmishing but no decisive operations since it was first occupied in the fall of 1914. The ground is flat and marshy, cut by streams and canals, and the adjacent waters are too shallow for naval maneuvers. There are no hights for artillery and the "trenches" have to be built up instead of being dug down. Just east of Ypres is the Passchendaele Ridge and just south of it is the Messines-Wytschaete Ridge, and these, because they are the only commanding

positions in this quarter, have been the bone of contention for the last four years. Last April the Germans swept forward from Armentières and gained the hights south of Ypres before they were halted. Now this ground has been fully recovered and new points gained which the Germans have held since 1914.

The line between Ypres and the coast has been held by the Belgians and now the army of King Albert, larger and better equipt than ever before, has started out to reconquer their native land. They swept forward swiftly and by the end of the second day had taken 6000 prisoners and 300

guns. What remains of the town of Dixmude was taken in spite of a stubborn defense of the Town Hall. Passchendaele Ridge was carried and before the end of the week the Belgians were close to Roulers, nine miles in front of their former positions. Houltulst Forest, which has in former wars been regarded as the key to Belgium, has been captured, and with it an entire battery of 150 millimeter guns.

South of Ypres the Second British Army under General Plummer joined in the Belgian advance with equal success. They have reached Menin, which, like Roulers, is an important station on

THE FRANCO-AMERICAN OFFENSIVE IN THE CHAMPAGNE

The Americans have made a strong drive between the Forest of Argonne and the hights of the Meuse, while on the west, toward Reims, the French are rivaling them

the railroad connecting Lille with the ports of Zeebrugge and Ostend. Unless the Germans can soon check the Belgian-British advance they will be cut off from the coast and lose these naval bases.

Closing in on Cambrai Between July 18 and September 30 the British have regained a thousand square miles of French soil, including 250 villages, and captured 120,000 prisoners. Of these prisoners 40,000 were taken in the last three days of the month. They have definitely broken thru the Hindenburg line in its strongest stretch between Cambrai and St. Quentin, and both these towns are closely encircled. In this sector the First Army under General Sir Henry Horne and the Third Army under General Sir Julian Byng have made big gains during the week all along a thirty-mile front. Cambrai was deemed sufficiently protected by the Canal du Nord and Boursillon Wood in front of it, but both these obstacles were overcome and the British brought to the northern suburbs of the town.

Half way between Cambrai and St. Quentin, at Le Catelet and Gouy, American troops, chiefly from New York, Tennessee, and North and South Carolina, under Major General G. W. Read, are coöperating with the Australian and New Zealand forces. On September 29 they were given a particularly hard piece of work to do, the capture of the tunnel thru which the Scheldt canal passes under a mountain. The galleries, tow paths and dug-outs of this tunnel formed a subterranean fortress of vast extent and well garrisoned. After the Americans had passed by the southern end of the tunnel the Germans emerged from it to attack them in the rear. The Americans and Australians met them and fought at the tunnel mouth from six in the evening till eight in the morning.

The Germans are making a hard fight to hold the Hindenburg line. The Canadians north of Cambrai have been confronted with eight fresh divisions, about 100,000 men.

**French Take St. Quentin** While the British, including Colonial and American troops, were breaking thru the Hindenburg line north of St. Quentin, the French were attacking that stronghold from the south. General Debeney entered St. Quentin on the afternoon of October 1.

In the salient south of Laon General Mangin continues his advance and as a reward for his previous hard fighting he took Fort de Malmaison without trouble. This fort, on a high bluff above the Aisne, dominates the Chemin des Dames, the highway running along the river on its northern side. The capture of Malmaison last year was one of the greatest and most difficult of the French exploits. General Mangin now commands half of the Chemin des Dames and on the Ailette River has come within plain sight of Laon, only six miles north.

## THE GREAT WAR

September 26—American drive in Argonne started. Serbs take Vele. British take Strumitza.

September 27—President states peace terms in Liberty Loan speech. Chile seizes German ships.

September 28—Germans evacuate Fort Malmaison. German Chancellor von Hertling resigns.

September 29—Bulgaria signs armistice at Salonica. French gain east and west of Reims.

September 30—Belgians take Dixmude and Passchendaele. Kei Hara replaces Terauchi as Japanese Premier.

October 1—French take St. Quentin. British take Damascus.

October 2—British reach Cambrai. Prussian Upper House votes franchise reform.

Between Laon and Reims the Germans still retain a foothold on the Vesle River, but on September 30 General Berthelot launched an attack against this salient, with the aim of driving the Germans back behind the Chemin des Dames on the eastern end and taking 2000 prisoners in two days.

Farther east the French under General Gouraud are attacking the middle of the line between Reims and Verdun, in coöperation with General Pershing on the Verdun end. The Americans have gained most ground, but the French have driven a deep dent in the front that formerly resisted their utmost efforts. In their first two days' advance they took 10,000 prisoners. At Somme-Py the Germans had occupied and fortified the railroad tunnel, but after carrying the ground beyond, the French cleared them out by charging one en-

trance with grenades and shelling the other with a trench mortar. By the end of the week the French had reached Monthois, seven miles from their starting line.

**Americans Gain in the Argonne** The Verdun salient, as we pointed out two weeks ago, affords the only opportunity of Foch for delivering a blow from one point in two directions, east and north. Last week the Americans struck eastward and brought the front out of the depths of the St. Mihiel salient one-half way to Metz. This week they have struck north and advanced a salient ten miles toward Sedan. This brings them over the old Hindenburg line and close to what the Germans call the *Kriemhilde-Stellung*. The Kriemhild line on this side of Verdun extends from Grand Pré on the Aire to Dun on the Meuse. Its construction was begun a year ago, but was not completed when the American advance in this direction began, and is now being hastily put into shape to resist our onslaught during the winter.

The Germans anticipated an American attack on the east side of the Meuse in the direction of Metz and were shifting guns and troops to this sector when General Pershing started his offensive northward on the west side of the Meuse. The bombardment opened at midnight and at 5:30 on the morning of September 26 the infantry started their advance. The line extended twenty miles, with the right on the Meuse and the left in the forest of Argonne. The ground is exceedingly difficult, consisting of rocky hills and wood, fortified with steel and concrete blockhouses, deep trenches and barbed wire barricades ten feet high. In this battle for the first time American-made and American-driven tanks and airplanes were used extensively. Secretary Baker watched the operations from a high near Fort de Marre.

The town of Varennes—famous as the place where the flight of Louis XVI was halted—was promptly taken by Pennsylvania, Kansas and Missouri boys. A five mile gain was made in five hours. The artillery fire had to be shut off because the infantry would go ahead of it. Malancourt, Forges, Montfaucon fell into our hands, and on the following day Brioules and Cierges. On the left the gain was not so great, for Vauquois in the Argonne forest was stoutly held by a division of Prussian Guards.

General Pershing reports the capture during the week of 120 guns of all calibers, 750 trench mortars, 300 machine guns and 100 heavy tank guns, with large amounts of ammunition.

**In Congress** In the House the Nolan Minimum Wage bill was passed on the 24th. This enacts that no Federal employees, outside of the military, postal and railway services, with certain exceptions, shall receive less than \$3 a day, or its equivalent, if they have been at least two years on the Government's pay roll. The Naval Committee ordered a favorable

### THE AVENUE OF THE ALLIES

Never was a city's patriotic enthusiasm more adequately expressed than in the inaugural celebration of the Fourth Liberty Loan in New York. Fifth Avenue was ablaze with the flags of all the Allies; banners and posters and colored lights added their decorative effects; and the first day's loan subscriptions for the district exceeded \$200,000,000.

report on the bill for the Government's purchase of a drydock under construction at Boston, at an estimated cost of \$4,450,000. The bill for Government control of the supply and distribution of metals essential to war work was passed and sent to the Senate; also a bill making offensives against Federal law of wire-tapping and other interferences with the operation of telegraphs, telephones, etc.

On the 28th and subsequently debate continued without result on the Emergency Power bill.

This bill gives the President authority to build power plants, to install new machinery in existing plants, to advance loans to power companies, to take over private plants, to build transmission lines, to suspend existing contracts held by power companies, and to fix the compensation of all employees of any plant that may be taken over by the Government.

Mr. Hurley appeared before the Appropriations Committee on October 1, asking for further appropriation of \$184,000,000 for the Shipping Board.

The Senate was engrossed from September 26 to October 1 in consideration of the Woman Suffrage Amendment to the Constitution. Meanwhile its Finance Committee studied the House Revenue bill, particularly those sections relating to income taxes and workers in shipyards. The conferees on the Food Emergency Agricultural bill failed to agree, except in part. The annual agricultural appropriation bill, carrying a total of \$28,000,000, was repassed late Saturday afternoon. This is the bill vetoed by the President because it contained a provision increasing the guaranteed price of wheat for the 1918 crop. As repassed, the objectionable item was eliminated.

**Woman Suffrage** The most conspicuous feature in Congress during the past week was the struggle in the Senate to obtain an affirmative two-thirds vote for the proposed amendment to the Constitution requiring submission of the question of woman suffrage in the states. Those in favor of it made a forceful attempt to bring the matter to a decision on September 26. Both that and the next day, however, were consumed in stormy de-

bate. Senator Pittman, of Nevada, asserted that his state would be lost to the Democratic party unless the amendment was carried, because the women would charge the failure to that party. Reed, of Missouri, made a long speech against the "petticoat brigade" that, he asserted, had captured Congress. Every one knew by that time how the Senate stood—32 Republicans and 31 Democrats pledged in favor of suffrage—that is, 63 for it and 34 against it. On Saturday a filibuster developed. All had returned. Suddenly Mr. Benet, of South Carolina, who had been counted on the suffragists' side, announced that he would vote against the amendment. This altered the status completely, and was commented on in a rapid fire of speeches and exchange of political reproaches until they were ended at 4.30 p. m. by a motion from the suffrage side to go into executive session.

The debate was renewed on Monday, the 30th, but was halted at noon by the appearance before the Senate of President Wilson with an appeal for a favorable vote on the grounds of democratic justice, and that the measure "was vitally essential to the prosecution of the great war of humanity." He declared that it was not in the least a matter of party politics, or even an exclusively American question, for peoples elsewhere, looking to the United States as an exemplar of democracy, deemed the inclusion of women a logical implication. "They have seen their own governments accept this interpretation of democracy," Mr. Wilson told his hearers, adding:

Are we alone to refuse to learn the lesson? Are we alone to ask and take the utmost that our women can give—service and sacrifice of every kind—and still say we do not see what title that gives them to stand by our sides in the guidance of the affairs of their nation and ours? We have made partners of the women in this war. Shall we admit them only to a partnership of suffering and sacrifice and toil, and not to a partnership of privilege and right? We shall not only be distrustful, but shall deserve to be distrustful, if we do not enfranchise them with the fullest possible enfranchisement, as it is now certain that the other great free nations will enfranchise them.

After extolling the services of women in the war, and the impetus enfranchisement would give to their further service, the President declared:

I tell you plainly, as the commander-in-chief of our armies and of the gallant men in our fleets, as the present spokesman of this people in our dealings with the men and women throughout the world who are now our partners, as the responsible head of a great Government which stands and is questioned day by day as to its purposes, its principles, its hopes, whether they be serviceable to men everywhere, or only to itself, and who must himself answer these questionings, or be shamed, as the guide and director of forces caught in the grip of war and by the same token in need of every material and spiritual resource this great nation possesses—I tell you plainly that this measure which I urge upon you is vital to the winning of the war and to the energies alike of preparation and of battle.

And not to the winning of the war only. It is vitally to the right solution of the great problems which we must settle, and settle immediately when the war is over. We shall need them in our vision of affairs, as we have never needed them before, the sympathy and insight and clear moral instinct of the women of the world.

As soon as Mr. Wilson departed the discussion was resumed. On Tuesday, a count was obtained, resulting in a rejection of the joint resolution by a vote of 54 to 30—two short of the requisite two-thirds.

**The Liberty Loan** The campaign for raising the fourth Liberty Loan began all over the country with an enthusiasm and rush that expressed the determination of the people to make it a quick success. The extraordinary preparations for the "launching" made by those who had them in charge were perfectly coordinated; and when thousands of whistles and other noise-making things "turned loose" at precisely nine o'clock on the morning of Saturday, September 28, a veritable army of workers charged on the pocketbooks of the people. President Wilson made it the occasion of a speech in New York which was among the most momentous of his utterances; and leaders in thought and action were heard on that day, and will continue to be heard on thousands of platforms throughout the land.

The response was instantaneous.

Money was poured out as if no previous call had ever been made. Alaska "cashed in" on the very first day, with a frontier flourish, by men in San Francisco, paying in the whole allotment to that territory, leaving the people up there to repay and add what they pleased. Iowa and South Dakota had filled their quotas by Saturday night, and Indiana, Wisconsin and Michigan were racing close behind. Many counties in the Middle West had exceeded their quotas, and some doubled them, by Monday. Dozens of cities and towns in New England reported over-subscriptions within twenty-four hours. The New York City district was given an allotment calling for \$100,000,000 a day, and began by giving twice that offhand. All the great cities have surpassed anything seen before in the extent and beauty of their decorations, parades, pageants and the like, as if the lending of money "to the utmost" was the most joyous of things.

**State Banks Admitted to the Reserve Board** The admission of state banks to the Bankers' Association was the most important action taken at the bankers' convention in Chicago in the last week of September. The holding of the meeting in a western city was in itself a notable departure from custom. The inclusion of state bankers in the membership had long been advocated by the Administration, because that carried with it the admission of their banks to the Reserve system, which was desired by the board. This fundamental change of policy had been opposed by the association, which has hitherto been confined to men controlling national banks; and this appeared in the discussions. The opposition was finally overcome and the association pledged itself to obtain the passage of state laws to make it desirable for state banks to join the Federal Reserve system.

A most gratifying report of accomplishment in this direction has been made by the association's committee on agriculture. This showed:

that in forty-two states there are State Committees of Bankers working constantly on agricultural problems, in ten states every county is organized under committee, 600,000 farmers have joined banker-farmer bureaus; 5,000,000 women and girls have enlisted for home demonstration work, banks have hired agricultural experts and demonstrators and formed clubs, classes, and contests in which 2,000,000 boys and girls are doing propaganda work.

**Enforced Economy** The steady development of the plans of the War Industries Board for the conservation of material, labor, fuel, transportation, etc., to the end that the maximum resources of the country shall be put forth in the winning of the war, is forcing itself on the attention of the public—which must help. The means for saving the chief of necessities, iron and steel, by diminishing the supply ordinarily consumed in industries outside of war work, is shown in a list of the articles that the board will permit to be made only in reduced quantities. Among those allowed only half or less as much iron, steel or brass as their

normal quantity, are passenger automobiles, pianos, corsets, metal beds, boilers and radiators, baby carriages, gas stoves and appliances.

Special effort is being made to overcome the serious shortage in tin, which is now almost as valuable as platinum, the use of which in jewelry is prohibited. Manufacturers are required to substitute other elements for this metal in alloys where it is customarily used, or quit making the articles—plated silverware, for example. The most fruitful method of saving here, however, is

BERLIN UNWITTINGLY SPEAKS TRUE  
"Damn it, I fear I shall arrive too late for the triumphal entry into Berlin," says Uncle Sam as he rushes to the front, in this cartoon from *Kladderadatsch*, a Berlin paper

the substitution of containers formed of paper or cardboard for those made of tinplate—a double conservation, since both iron and tin are saved at once. Hence the board is bringing into cooperation with it makers of cardboard, corrugated and packing papers, cartons, folding and other pasteboard boxes, fiber specialties, and so forth, who are devising with truly Yankee ingenuity substitutes for the tin boxes and cans so generally used and thrown away. On the hearty cooperation of the paper mills and the boxmakers will depend their allotments of coal and supplies during the coming season.

**Cotton Control** Committees have been appointed by the War Industries Board for the purpose of conserving the country's supply of cotton and regulating its disposal. The principal objects in view are: To broaden the channels of distribution and use of the great stock of low-grades now practically unmarketable; to eliminate hoarding and speculation; and to apportion the foreign orders. Thomas W. Page, vice-chairman of the United States Tariff Commission, was made chairman of the Cotton Committee, with eight associates representing planters, seed-growers, spinners, manufacturers, dealers and other phases of cotton production and utilization. A second group, styled Cotton Distribution Committee, has been appointed, whose chairman is Charles J. Brand, hitherto chief of the Bureau of Mar-

kets in the Department of Agriculture, and whose constituents have been cotton merchants of wide experience. This committee has authority to buy cotton for the Government and the Allies at prices to be approved by the President, and to allot cotton, as to quantity and grade, to all domestic and foreign consumers. It announced that it would begin service immediately, and plans to exercise its supervision thru customary channels, but will require every buyer to take an equitable proportion of the grades below middling.

In view of the fact that, according to the President, it might be a part of this committee's duty to recommend basic prices on cotton, and that if, after investigation, it be found necessary, a fair price would be fixed, the cotton men immediately took alarm. A dozen of the Southern Senators and Representatives in Congress thereupon, it is said, agreed to the formation of an "informal" committee, whose function it will be to protect as far as possible the cotton grower's rights. It was stated that it would prevent, if it could, any price fixing by the Government; yet interviewers report that the growers are prepared to yield patriotically if the President thinks that should be done.

**Influenza Epidemic** The visitation of what is called "Spanish influenza," but appears to be the same thing as the "grip" that afflicted the country twenty years ago, has proved alarmingly severe in New England and in the army cantonments along the eastern seaboard. It was reported on September 30th that 85,000 persons were ill with it in Massachusetts alone, and help was asked from elsewhere in the way of physicians and nurses to care for the cases in Boston. The western part of the state was only slightly affected. New York, despite its crowds attracted by daily celebrations of one kind or another, has so far escaped epidemic conditions and the health authorities reported the prospects not alarming. Philadelphia and its suburbs are harder hit. The interior of the country has had little experience of the trouble yet, but the danger of its spread was deemed so great that Congress appropriated a million dollars on the 29th to enable the Federal Health Service to do whatever it could to meet the situation.

The influenza by itself is not dangerous; but it leaves the patient particularly susceptible to lobar pneumonia, and most if not all of the deaths have resulted from this cause. It was therefore with great thankfulness that the country read the announcement that officers of the Army Medical School had approved of the use of a new serum which has been tested for some time in the camps as a preventive of pneumonia, and often is successful as a cure. A single injection is said to suffice. Reports from both Boston and New York describe the successful employment of a new serum that attacks the influenza itself and destroys the causative germs.

# THE MASTER BUILDER

BY DONALD WILHELM

Admiral Taylor, who, as Chief Constructor of the Navy, has charge of the building program calling for one and a half billion dollars

THE United States is now building superdreadnaughts that are to be the largest in the world. But the United States is building also battle cruisers that are much larger, much faster, much more costly and of considerably greater displacement than the world's largest superdreadnaught—battle cruisers carrying guns as huge as those carried by any vessel of any navy, capable of traveling more than forty miles an hour, carrying engines capable of 180,000 horsepower—horsepower as great as the combined power of more than a hundred locomotives, more than the combined power of a whole fleet of 10,000-ton merchant ships, greater than the combined horsepower of all the vessels of the American Navy in 1864, as great as that of six dreadnaughts of the type of the "Nevada" and the "Pennsylvania," which are the largest of their kind in the world.

Admiral David W. Taylor, Chief Constructor of the Navy, has charge of the Navy's building program. The superdreadnaughts and the battle cruisers constitute only part of that program, which calls for the expenditure of more than \$1,500,000,000. Some of the Washington bureaus that are spending not one-thousandth of that amount submitted to their chiefs on June 30, the end of the fiscal year, reports of many hundred pages. Admiral Taylor sent to Secretary Daniels a report of one page.

That laconic brevity of the Admiral, Chief Constructor of the Navy, Chief of the Bureau of Construction and Repair, is characteristic of him—and of the whole Navy, whose reply would be a cheerful and prompt "Aye, aye, sir!" if it were told to ride the Rhine.

As a midshipman at Annapolis Ad-

miral Taylor became a part of the *real* preparedness of the Navy, which goes down, as it were, thirty feet deep. He had been really prepared to render brilliant aid to his country before he entered the Academy—was a lineal descendant of distinguished soldiers and statesmen of the Revolutionary period, a Virginian who by home study and instruction was able to enter Randolph-Macon Col-

lege, as a mere boy of thirteen years, from which, after graduation, he was appointed to the Academy because he stood second in a competitive-at-large, examination among 130 applicants. This was the only time he ever took second honors in all his life, it seems. For, at Annapolis, he made such a record as had never been made there before and has never been made since. "You were in the same class with Taylor at the Naval Academy, weren't you?" some one asked an officer who has been the Admiral's lifelong friend. "No," was the reply. "I was there at the same time Taylor was, but not in the same class. Taylor was in a class by himself."

Then the British Government offered to receive in the Royal Naval College at Greenwich six graduates of Annapolis in a three-year post-graduate course in naval architecture. But the British Government has not done that since, perhaps because Ensign Taylor did such brilliant work in the first year that the Secretary of the Navy appointed him an assistant constructor with the rank of junior lieutenant, and at the end of the three-year course had not only taken the very highest honors of the whole college, but honors higher than had ever been attained before or have ever been attained since.

Some years later the British Institute of Naval Architects awarded him its medal for a paper called "On Ship-shaped Stream Forms," while another paper, "The Theoretical and Practical Methods of Balancing Marine Engines," won for its author the first prize in a competition of the American Society of Naval Architects and Marine Engineers. Then, among other marks of distinction,

among other "highest honors," he was awarded the highest honors, and a medal, by the Franklin Institute of Pennsylvania for achievement in science. Secretary Daniels, when expressing his regret at being unable to be present when the award was made, expressed his patent confidence in Admiral Taylor by telegraphing "No distinction has been awarded by any institution to a man who deserved it more." And the Institute itself pointed out "the Admiral's books on the 'Resistance of Ships and Screw Propulsion' and on 'The Speed and Power of Ships' have come to be universally recognized as

the standard works on these subjects. A surprisingly wide range of subjects has engaged his attention and many instances might be cited in illustration of his resourcefulness in formulating and experimentally attacking problems in subjects of which very little was known." A case in point is his experimental researches on "The Interaction Due to Suction Between Passing Vessels," a subject on which there was little or no reliable information, save for a few observations on cases of damage to ships by unexplained collisions. By his successfully conducted experiments he placed the subject on a scientific basis, and this work aroused such widespread interest that, at the time of the trial in England of the celebrated maritime case arising from the collision between the White Star liner "Olympic" and the British cruiser "Hawk," when the court refused to receive his papers as evidence, the two sides agreed to send across the Atlantic for this American Admiral. It was his expert testimony that turned the tide, for the Admiralty.

These are merely some of the Admiral's distinctions. Another is that he is one of the few seamen who likes to farm. He hies off to a farm "Somewhere in Virginia," sometimes. And he farms very well, it is said, for a seaman—at least he got four cuttings of alfalfa from some of his acreage last year. In fact, taken altogether, it is very much to be doubted if any individual in any field of American science, statesmanship, business, commerce or art has ever attained and held so uniformly such a remarkable knack of taking, distinctly, the highest honors. Certainly, in these days, [Continued on page 61]

# MY TRIP TO THE BELGIAN FRONT

BY HAMILTON HOLT

ON the evening of June 11th I left Paris for the Belgian front. My ticket read to "Boulogne," and while in times of peace the trip would have taken only about four hours, during the war it has lengthened out to an all night ride. We had hardly left the environs of Paris, however, when we ran into a blockade. From that moment till dawn we moved forward in little jerks of a few feet at a time. At six o'clock in the morning the young French officer who shared my compartment informed me that we were then eight hours late and only fifty miles beyond Paris. He said we would be lucky if we arrived at Boulogne at four or five in the afternoon. It seems that we were running on a side track, as the main line to Boulogne had been bombed by German aeroplanes during the night. All the morning we continued to proceed at a snail's pace, stopping every little while long enough to get out and walk about. We passed many freight trains going in the opposite direction, the majority of which looked as tho they ought to be sent to the salvage depot, so splintered and full of shell holes were they. We could get nothing to eat either on the train or at the stations, and had it not been for a bottle of wine my French friend managed to procure at one stopping place, we would have had neither food nor drink that day.

We eventually reached the coast and there struck the main line to Boulogne. We were now going thru the rear lines of the British zone of communications. The roads were crowded with Tommies strolling along swinging their dinky little sticks and immaculately dressed officers riding their supergroomed horses. We passed by many rest camps and hospitals which seemed to me to be kept in much better order than those of the French, Italians or Americans. In fact, the English at war exhibit a rather *de luxe* appearance. The officers keep their shoes and brass buttons polished in France as tho they were out for a walk on Piccadilly. The horses are all fat and glossy, and there is a general sense of prosperity and opulence and swagger about the British armies that suggested a fashionable sporting event. We finally arrived at Boulogne, where I was met by Captain W. P. Cresson, the very agreeable and efficient head of the American Military Mission of Belgium and my host for the next three days. Captain Cresson assured me he had found plenty to do while he was in Boulogne, so the eight hours he had to wait for me did not pass heavily

Captain Kurstead, in command of the squad to which Lieutenant Hickey belonged

on his hands. He had a new Winton car with "U. S. A." painted on the sides, and we lost no time whirling away over the great bare hills fronting the English Channel.

Our first stop was Calais, which we found swarming with English, Belgian and American soldiers. The American troops were fresh from home, and had evidently just crost the English Channel on their way to being brigaded in with the British. The narrow streets were so filled with promenading soldiers that our automobile could scarcely pass thru the crowd without continually honking. We stopt for supper at a little café filled with the officers of all nations and then proceeded on our way. As we left the outskirts of the city in the long evening twilight the hills grew flatter and flatter until by the time we reached Dunkirk we were in the "low country."

Poor Dunkirk has suffered grievously. It has been constantly bombed from the sea and from the air and from the land. There was one house we passed that had been hit from a submarine in the ocean, an aeroplane in the sky, and from the Big Bertha that generally shoots once a day from back of the German line near Ostend. Incidentally this house was occupied by the clergy of the Church of England. I was told

that the big German Bertha usually shoots at a definite hour in the evening, and when the people along the Belgian seashore hear its great shrill whirr as it goes hurtling thru the air ten or fifteen miles overhead they remark "There goes the Dunkirk express." Certain of the outposts on the Belgian line can see the flash of this gun when it comes out of its underground lair to fire, and then they instantly telephone the news to Dunkirk, where two long sirens are blown. Then the people have one minute and a half to dive into their cellars before the great shell arrives. It is said the lame, the halt, the blind, and even those who have been bedridden for years have little difficulty in getting underground in plenty of time.

We spun on until at last we came to the Belgian frontier, and then on to the little town not far back of the front line where Captain Cresson makes his headquarters. The town is one of Belgium's most attractive summer resorts, and the Captain had rented a pretty cottage from one of the Belgian artillery officers whom we later met out on the sand dunes at his gun emplacement. I noticed that a private bombproof room surrounded by sand bags had been built at the side of his house to which all hands could retire whenever the town was bombarded, as it frequently was.

Captain Cresson had with him as his aide Lieutenant George H. Pendleton, son of Judge Pendleton, of New York, and since decorated by the Belgian Government for "bravery, sang froid, intelligence and energy" in a raiding party with the Belgians in which he was wounded. These two American officers, together with a Belgian attaché, kept delightful bachelor quarters together.

I had time to take a walk along the seashore before bedtime. There I saw the Belgian soldiers in their most attractive uniforms and little tasseled caps all ready at their guns for any invaders from sea or land, while all along the beach were groups ready for instant action in case the enemy should come. I heard many aeroplanes go over my head, for we were on the direct

line between Dunkirk and Ostend. Whether they were enemy or Allied planes I could not tell, but if they were German they dropt no bombs as they passed over.

The next morning the head of the American Red Cross in Belgium called upon me and took me about to see some of the work in which he was interested. As we walked about

"Billie" is a Camel scout biplane, the machine Lieutenant Hickey drove in the air battle with the Huns that gave Mr. Holt "the three most exciting minutes of my life"

the shell battered town we saw hundreds of Belgian soldiers stripped to the waist washing their heads and bodies with soap and water at the faucets at the side of the houses where they were billeted. We visited the soldiers' baths in which the Queen takes a special interest. It is said when Her Majesty pays a visit all the occupants stand at attention, no matter in what state of deshabille. A sister of one of the Belgian senators runs a baby hospital and nursery near by in which she takes care of thirty-one children while their mothers are working elsewhere in the town. We saw one youngster named Georg Thierin asleep in the little white cot who was the twenty-fourth child of his mother, seven of his brothers and sisters still being alive. He looked a good deal like a chestnut worm. At night these children sleep twenty feet under the sand in a circular iron roofed bomb-proof cellar. In the day time they take their chances in a nursery on the surface of the ground. I did not have any further time to visit relief institutions, as Captain Cresson then took me over to headquarters, where arrangements had to be made to visit the Belgian lines that afternoon and Ypres the next day. The Belgians now hold all the historic Ypres battlefield directly north of the town, the English line having recently moved farther south. We passed thru many towns all of which showed the usual diabolical evidences of *Kultur*. I noticed especially the town of Furnes, which has some wonderful old medieval buildings erected by Spain when she held the country. Before the war it was a favorite tourist resort. Now out of pure wantonness it has been ruined. Captain Cresson told me that the destruction of the city could not possibly be of the slightest military advantage to the Germans. In fact there is not a square inch of Belgian territory that is not within range of the Hun shells. Of the thirty-two cities and villages in the three hundred square miles of territory still held by Belgium not one has escaped bombardment. It was pleasant to go along the road and see the Belgian cavalry officers riding their wonderful fat, glossy horses. The Belgians still have the best mounts of any of the Allies, and they are very proud of their horses. It was also odd to see that the Belgian trenches instead of being dug down below the surface were built with mounds of earth above the surface level. In the low countries one cannot go underground more than a foot or two without striking water.

The Belgian army is now larger than it has ever been before. This is because the Belgian men brave the electric fences that separate Belgium from Holland, crawl thru, go to England and thence come back to Belgium, where they joined the army.

Lieutenant Hickey drew this pencil sketch of his air battle with the Huns on a leaf of Mr. Holt's notebook while he explained to him the strategy of the fight. Remember in studying it out that the diagram is drawn from the point of view of the man in the air. A British straggler (left) delayed by engine trouble, was flying at a height of 14,000 feet, protected by five British scouts (right) flying behind and three thousand feet above it when three German planes, 18,000 feet up, saw it. Two dropt to attack; the other three went on, pursued by three of the British scouts detached for that purpose. The other two British scouts turned back to help the straggler and Lieutenant Hickey, who had the best diving plane, singled out one of the Huns and opened fire. After a short pursuit, during which the planes dropt over 10,000 feet, the German plane burst into flames and fell into the sea.

When we returned home for luncheon I found awaiting us my old friend Caspar Whitney, writer and sportsman, who is now a sort of European contributing editor to the New York *Tribune*. He was accompanied by a young English officer, who had been assigned to escort him from Ypres to the Belgian front. Captain Cresson had planned to take all of us that afternoon out along the seacoast to the Belgian front line. So, immediately after luncheon we started out in two cars, Captain Cresson, Lieutenant Pendleton, Caspar Whitney, the English officer, an escorting Belgian officer, and myself. There was also a photographer along to take our pictures as we squint-

Lieutenant Hickey, the young Canadian aviator who describes in this article how he brought down his third German plane

ed thru the periscopes at the Boches from the front line trenches. I am sorry these pictures have not come yet, for I would like to reproduce them with this article. As we motored toward the front we passed the inevitable military trains coming along the roads skirting the sand dunes. We could see the camouflaged batteries of the Belgians and the British ready to shoot inland or out to sea. We finally came to the spot where it was unsafe for our automobiles to go further, so we stopt and hid them under the shadow of a huge sand dune near by. We had hardly got out of the cars when we heard above us the popping of the anti-aircraft guns. Looking up we saw directly over our heads a flock of English aeroplanes wending their way toward our lines thru the cotton puffs of bursting shells. They looked for all the world like dragon flies, so far up in the

clouds were they. We watched them for four or five minutes, until all of a sudden our guns stopt firing and we thought they must have got safely over into our own lines again. When all of a sudden the British officer cried out: "Look! A fight is going on!" And there, almost directly over our heads, comparatively low down, were four aeroplanes encircling each other and gyrating around like eagles in an aerial fight. We had our six pairs of eyes glued on the encounter, and yet as an evidence of the unreliability of the eye witness, I have to record that when we compared notes afterward, no two of us saw the battle alike. But this is what I saw: It looked as tho three Boche planes were attacking one of ours which they had surrounded. After a number of sensational wheelings and counter wheelings one Boche machine got above its prey and started to dive at it. The English plane, however, just as I thought it was gone, stood straight up on its tail, fired several shots in the evolution on its pursuers, and then turned a complete letter S in the air. The German plane attacking evidently was hit, for it glided off to one side about 1000 yards, then burst into flames and fell into the ocean not 1000 yards from where we were standing. The plane that destroyed it made a great joyous sweeping circle over the place where the German had sunk beneath the waves as a race horse does after it has won the race and keeps going on around the track before it stops. Then in a great low curve it came flying back not 200 feet above our heads while we six men were dancing and shrieking with delight and hundreds of Belgian soldiers were running from all the neighboring sand dunes and cheering their heads off. The other two planes had in the meantime left for parts unknown.

That is what I saw. That evening I found out by [Continued on page 59]

# LIBERTY BONDS VS. SCRAPS OF PAPER

*It is as one of England's greatest modern poets that Alfred Noyes is best known in this country. He made an extensive tour here in 1913, lecturing and reading aloud "Tales of a Mermaid Tavern," "The Barrel-Organ," "The Highwayman" and other poetry of his.*

BY ALFRED NOYES

**L**IBERTY Bonds or—Scraps of Paper. That is the choice before us all today. Every man who buys a Liberty Bond today is, in fact, helping to draw up a great declaration, on behalf of the American people, that they intend to uphold the fabric of civilization. Fundamentally, the world war is being fought for every nation, even including Germany herself. It is being fought to decide whether, in the future, there is to be any bond of any kind, any binding pledge, any contract, any treaty, between nations or individuals that cannot be torn up at the will or caprice of one of the parties to such an agreement. If Germany wins, the war will be decided in favor of those who have openly stated that contracts are worth no more than the paper upon which they are written. If the Allies win, the war will be decided in favor of those who believe that men and nations can pledge their word and abide honorably by their agreements. The whole fabric of civilization rests upon this foundation. No business of any kind is possible without that foundation, no social system, not even a Bolshevik system is possible without that foundation. All activities of every kind would be reduced to chaos, for there is no ideal, no business, no traffic, in the streets, not even an athletic contest that could exist if the bond, the pledged word, the code of honor, the rules of the game are to be destroyed.

There are signs in Germany of a certain surprise that her "peace offensive" meets with no response. It is possible that a good deal of hard thinking might be started in some German heads, if the United States were to send her yet one more great message, consisting this time of a single question. It is a question that has often been asked in leading articles and in speeches, and, of course, it is implied in all the state documents that have been sent to her in the past. Germany has always been able to evade it hitherto, by concentrating on some other point. But what would she reply if the United States were to send out this great world-question:

*How does Germany suggest that any future contract or treaty is to be drawn up with her, in view of her openly professed belief that international contracts can be destroyed at the convenience of one party?*

If Germany ignored that question, her people would be forced to do some independent thinking; for it is the first step toward peace. If she did not ignore it, she would still be forced to look at herself in the mirror of truth as she has never yet done; and one imagines that she might be disturbed by her own appearance there, if by nothing else.

For this is the one question of the whole war, and it goes down to the very roots of civilization. Germany has consciously or unconsciously brought all the corrupt forces of modern life to a bend. Those forces existed to a certain extent in every nation. We found them in art and literature, preaching the doctrine of the "Scrap of Paper" to every perverse individual who wished to "develop" his own life at the expense of the others. We found them assailing all the standards of ethics, and finally declaring that only immorality was "interesting" and "vital." But Germany has been the first to declare as a nation that "right" is only a relative term; and that, in fact, it only exists in relation to her own interests. In the day when she openly proclaimed this theory, and spoke "proudly" of the "wrong" she was about to commit by the invasion of Belgium, she sealed her own doom; for tho it was a declaration that only Germany had the right to exist on this planet, it was a declaration that contained the seeds of her own destruction. It is impossible for any nation to hold together, it is impossible for even a gang of thieves to hold together, without some of those principles which she discarded. Her declaration automatically brought the United States into the war, without any need of a further declaration of war, but only a formal recognition by the United States that war had already begun. It rendered all contracts untrustworthy. It made it quite clear that the citizens of neutral countries might be murdered indiscriminately and "without trace," and that in the Kaiser's own words, there was for Germany no international law.

This condition of mind was a serious matter for Germany internally as well as externally, and it had been serious

long before the war broke out. In spite of the well-drilled police of her cities, her own official statistics prove that she was the most criminal of all nations. The officially recorded murders, rapes and crimes of robbery and violence in Germany during the last ten years are ten times the number of those committed in the United States or England, and, in the case of some particularly disgraceful crimes, more than a hundred times as numerous. But this was merely a symptom of the deeply rooted disease of the German spirit, which can be summed up in the one statement that she had openly discarded "right" in favor of "might."

Now, for the first time in the history of finance, the word "bond" has come to have a moral significance that illuminates the whole fabric of civilization, and the very phrase "Liberty Bond" has a precise application to the one great object of the war—to restore the world's credit, to restore the world's honor. We are fighting for both Liberty and Law; that Law in whose service is our perfect freedom; that bond of truth and honor dealings with one another, upon which all our civilization depends. The "scrap of paper" which the German Chancellor tore up destroyed the Liberty of Belgium. The principle, or lack of principle, upon which the German Chancellor then acted, must be defeated, or the bond which holds the United States together and holds all civilized states together will assuredly be destroyed too. Only a fool can accept a bond which he is told beforehand may be annulled at the pleasure of the other party, but the Liberty Bonds reassert the conviction of the United States that Liberty depends on nations keeping their word.

These bonds are not to be broken. They represent the pledged honor of the United States and, if that goes down, everything goes down. These Liberty Bonds are to be regarded, then, by every man as an insurance of that civilization upon which all lesser bonds depend.

A soldier, fresh from the front, was recently addressing a group of American undergraduates in the Reserve Officers' Training Corps. "There is not a man in this room," he said, "who would not willingly die for that flag." Then he crashed his fist down on the table and electrified his audience by crying, "But we don't want you to die. We want you to live."

And that is the reason, also, for subscribing to the Liberty Bonds. It is not a question of sacrifice. There has been far too much talk about the "beauty of sacrifice" in this war. Noble sacrifices have been made by thousands; but we are fighting and sacrificing for one great end—to make those sacrifices unnecessary in the future. The Liberty Bond is not a sacrifice, but a life preserved to the soldiers and sailors of the United States, and also to the men and women who buy it.

# WARTIME, THE PLACE AND THE GIRL

BY NORMA B. KASTL

Interested & Understood

Release the radio sailor for sea duty

As interviewing secretary at one of the biggest bureaus organized to place women of college or professional training in war jobs, Miss Kastl has helped to find the right place for thousands of women and girls who "want to do to war work."

"I want to do war work!" She was an attractive youngster, fresh from college, all agog to do something interesting and worth while, and no longer content with rolling bandages in the Red Cross rooms and knitting socks for the soldiers. She was so enthusiastic that she fairly sat on the edge of the chair by my desk, ready to start something on the spot, if I would only say what.

"And what kind of war work do you want to do?" I asked.

"Why—why—war work. You know what I mean. Something to help win the war." She seemed surprised that there should be any question about it. She little realized how innumerable are the kinds of war work that can be done. Of course she wanted to do something. Every one does; not only eager young college girls, but their mothers and grandmothers too, and all the company of war brides who must have something to fill their mind and time now that their husbands have gone across.

Most of them, however, are just as vague as to the things they can do as this girl of whom I speak.

War work is a term which covers a wide range. We can't all be nurses or canteen workers, but we can all find something to do and it is just as possible to specialize in war work as in anything else.

Perhaps you have worked in arts and crafts—wood carving, rug weaving—metals. Such things seem rather useless now, don't they, and not exactly connected with winning the war? But do you know that the new science of occupational therapy makes use of just these handicrafts in the rehabilitation of the wounded soldiers, especially those suffering from shell shock, who must regain their nervous and muscular control and who are taught to coördinate hand and brain by methods as rudimentary as the kindergarten teacher uses. Indeed, kindergarten methods are used at first and the more complex handwork later. I know a woman who has for years been the Northern agent for the woven rugs and homespun made in a certain mountain community in the South. She is a specialist in all sorts of handicrafts and an expert in her field. Now she has closed up her business and is going to one of the base hospitals to do work in occupational therapy. Not long ago General Pershing cabled for a thousand "reconstruction aides" for service in France and the opportunities for work in this country in base hospitals and convalescent homes are rapidly increasing.

The artist who can turn her art directly into war work is lucky—and rare. Most artists are finding it necessary to go into some occupation which is more nearly of the win-the-war variety, and, incidentally, more remunerative. The Government gas mask factory has proved a most interesting field for many artists, musicians and stage women. One well-known portrait painter is now spending her days in turning over little brass disks and carefully inspecting both sides. Another woman who has created several famous character parts on Broadway gets up every morning at half past five and takes the early commutation train into New York to get to the factory at eight o'clock opening hour. During the recent speeding-up period, caused by the urgent calls from

© Harris & Ewing, from Paul Thompson

Needed, a thousand "reconstruction aides"

our armies overseas, when a nine, ten and eleven hour day was in force, she reached home often as late as ten or eleven at night. But did she mind? Not she! "I would not have missed it for anything," she said. "It has been one of the richest experiences of my life—seeing factory work first hand—meeting all the wonderful women who are there, not only the professional women but the little seamstresses and factory girls who have given up their old work to do their bit for the Government—and all the time feeling that I was being really useful to the boys on the other side." She brought home to me also, as no one else had, the supreme importance of having women inspectors who are responsible and conscientious and patriotic. The slightest flaw in a mask, passed over by the inspector in a moment of carelessness, may mean an agonizing death for some soldier at the front.

The aircraft factories, too, seem to have an especial appeal to women. It may be because the sewing on the delicate wings of the aircraft is something that is distinctly woman's work. There may be other reasons, too. Over in an airplane factory in New Jersey is a gray-haired woman who works unremittingly during the [Continued on page 69]

Women's jobs are many in airplane factories

# Upstairs and Down

A portable, efficient little oven large enough to bake two loaves of bread simultaneously, or a small roast. Inside dimensions are 9x11x11 in. It has a three-heat switch and a thermometer

Does the school lunch problem trouble you? Perhaps it is solvable by using this compact light-weight case (filled, it weighs about 3½ pounds) in which warm soup and cool sandwiches and fruit can be carried and kept until lunch time

This motor is a real home labor saver. It will run the sewing machine, or the electric fan, will heat eggs, whip cream, polish the silver, sharpen the kitchen knives—and help to keep your disposition sweet. Easy and simple to manage

All the drudgery can be taken out of wash day by using an electric washing machine. It will work unattended while you are at breakfast—and the current is but two cents an hour. Saves work, time and wear in washing clothes

Can you cut only as much bread as you want, with no waste? This handy slicer, 5¼ inches wide by 7¼ long, may help you to a big saving. Thickness of slice is easily adjusted. The knife is good to have—the serrated edges cut evenly

Kerosene oil, fed under pressure and converted into gas, can be used instead of coal in your furnace. The generator illustrated here has had satisfactory tests in severe winter weather. This may be the best way for you to keep your house comfortable

Sifting ashes is an unpleasant but necessary bit of economy. We must save fuel. There is said to be 40 per cent of good coal in unsifted ashes. The combination ash can and sifter illustrated fits the kitchen range. There are three sizes

Cheery warmth and comfort, without dirt, dust, smoke or smell—and no hoarding of coal or ashes—are supplied quickly and continuously by this kind of gas burner. A saving of your coal is possible by using it during the cool autumn days

A necessity—when once you know it—is this flexible electric pad. It takes the place of the rubber bag. Will not grow cold, can be easily regulated as to amount of heat (even in the dark) and fits anywhere with comfort

# FROM GARDEN TO TABLE

BY ANNA BARROWS

INSTRUCTOR IN FOODS AND COOKERY IN TEACHERS' COLLEGE

## The Cabbage Family

The cabbage family has many members different enough to provide variety on our tables even if they are used often: Brussels sprouts, cabbage, cauliflower, collards, kohlrabi, mustard, radishes and turnips of many kinds.

All the cabbage race are better if cooked uncovered and, strange as it may seem, do not leave as disagreeable an odor in the house as when they are cooked closely covered.

The three principal types of Cabbage are the solid white heads, the wrinkled, curly green Savoy and the purple Dutch varieties which are excellent in salads and sweet pickles. Here, as with beans, you can get variety by using the different colors which also differ in flavor.

Uncooked cabbage is thought to be quite as digestible as cooked, certainly more so than when it is overcooked. Instead of cutting out one chunk for salad and cooking the rest, take the heart out of a cabbage head to serve raw and cook the tougher leaves.

Some characteristic Russian and Turkish dishes are combinations of meat and rice rolled and tied in the larger cabbage leaves and then cooked in broth or with tomato. Kolcannon is a dish said to be of Irish origin, where potatoes and cabbage are combined. It is most often made of the cooked vegetables chopped together and cooked with a little fat like any hash.

Sometimes a cabbage is stuffed, the outer leaves being rolled back from the stem, the inner part is then removed, chopped and seasoned and a few breadcrumbs and an egg added, the cabbage filled, tied or skewered together and steamed until it is tender.

**Cauliflower** The preparation of cauliflower is something like that of cabbage, and either may be cooked according to recipes given for the other. Where they have been stored for any length of time it is wise to cut off the stalk and put this fresh surface in water; if left there over night every tissue will be freshened. Insects are likely to be hidden in any of this group of plants, but plunging them in cold salt water for an hour will bring out such undesirable inhabitants.

The head of cauliflower is often boiled and served whole. In that case it should be placed stem down in the kettle, in enough salted boiling water to cover it, and cooked for about a half hour. It is better to divide a large cauliflower in portions suitable for individual serving before it is cooked. The midribs of the leaves and indeed all white leaves should be saved and cooked with the rest if gas is the fuel or separately where cost of fuel need not be considered. Such portions may be served with the rest, or, better yet, added to any left-over and the water in which it was cooked used for a soup or scallop.

For the variety which is desirable when one vegetable must appear often on the family table, add a sprinkle of grated cheese to the sauce or put crumbs with the cauliflower. The red pimientos also add to the flavor and color. Cauliflower is an addition to a vegetable salad, or it may be used in that way by itself.

Mustard pickle is usually better if it contains a large proportion of cauliflower. For this purpose the vegetable is first parboiled in salted water and then scalded in the mustard sauce until tender.

**Brussels Sprouts** Brussels sprouts are much like little cabbages, which grow above the leaves around the stalk of a tall plant. They vary in size but are

seldom as large as an English walnut. It is fairly hard work to trim them and be sure that they are free from insects, but they are delicate in flavor and give the effect of a garnish around meat. Or they may be served in the Swedish timbale cases.

After inspecting, trimming and soaking in cold salted water, cook uncovered, in rapidly boiling water for about twenty minutes, until tender but not until they lose their shape. Drain and, if desired to remove more of their flavor, rinse, but this of course means a loss of substance and seasoning. Cold sprouts may be added to any vegetable salad or prepared with French dressing and used to garnish cold meat.

**Turnips** Potatoes have so long occupied a prominent position in our diet that it is hard to realize that a century or more ago the turnip held a similar place. It was not until after the Revolution that potatoes were raised to any extent in the United States. A survival of the early Dutch housewives' custom of mashing turnips and potatoes together still prevails in the middle states, tho now the turnip is rather a despised vegetable, and many persons seem to pride themselves on not eating it at all. But there are turnips and turnips, and if the soil is of the right kind and the roots do not grow in misshapen forms with corky tissues, they are delicious, if properly cooked. They must be washed and pared, since the skin is much thicker than that of a potato or carrot. Then cut them in thin slices or dice them, removing corky portions and inspecting carefully for insects or their trails. Cook uncovered in boiling, salted water, until tender. The water will contain so much of the sweetness of the turnip that it should be saved to add to soups. A cream of turnip is not to be despised, or the juice may be added to a potato soup. A combination of turnip and potato is good in either soup or salad.

The yellow turnips, or rutabagas, are best mashed and seasoned with butter, salt and pepper like mashed potato. White turnips may be mashed or cut in cubes before cooking and served in a cream sauce. White turnip cubes are good in a vegetable salad with peas or string beans. To disguise the taste of the turnip for those who have not learned how good it is, the cooked slices or cubes may be accompanied by a tomato sauce or a white sauce highly flavored with peanut butter, or a sprinkle of any chopped nuts may be used as a garnish on the mashed turnips.

**Pumpkins** If the shell is very hard the pumpkin should be steamed and the pulp scraped out when tender, otherwise pare first and cook in as little water as possible without danger of burning. Finally uncover the kettle and let the water evaporate, leaving all the sweetness. The drier the prepared pumpkin the more milk it will take up and the less egg is required for a pie.

For all uses of the pumpkin, long, slow cooking seems an essential to secure the best flavor, tho some of the small modern varieties are good with less attention. Marmalade or "butter" was made from pumpkins, but perhaps only when other fruits failed, as additions of acids and spices are needed to overcome its sweetness.

The pumpkin seems to harmonize especially well with the corn meal, and there are many recipes for Johnnycake where about one-fourth as much sifted pumpkin as meal is used.

Farmers' Bulletin 565, "Corn Meal as a Food and Ways of Using It," contains a

good collection of recipes, and may be obtained free from the United States Department of Agriculture.

**Onions** The same plan that was suggested with cabbage may be followed in dividing an onion between two dishes; using the center raw for salads and the coarser outer portion for cooking. Often the outer layer of all is quite good for flavoring a soup, tho it would be tough if left on for boiled onions.

The coarser varieties of onions may be made more tender and less strong by par-boiling them in water to each quart of which one-fourth teaspoonful of soda has been added. This water is thrown away and of course with it is lost some of the vegetable food material of the bulb, but it is better to get people to eat even an attenuated onion than to refuse it altogether. It should be our endeavor, according to most dietitians, to get people to eat onions freely. They seem to possess an invigorating property for which even chemical analysis cannot wholly account.

**Squash** Split hard shell squashes, scrape out the seeds and steam; then when the pulp is soft scrape it away from the shell. This saves material and labor. Half an hour to an hour is ample for cooking squash. The soft pulp may then be put thru a ricer or simply mashed, and seasoned with salt, pepper and butter. This prepared squash may be put thru bag and tube, like potato, for a garnish. Sometimes the shell may be trimmed in the shape of a dish without removing its contents. Or it can be baked either in one large piece or in individual portions.

Cooked squash may be substituted for potato in hashes, croquettes or breads. A combination of cooked pumpkin or squash with cornmeal seems to have been devised by the early settlers to give variety to their corn bread. The soft pulp gave something the same texture as scalding the corn meal, and served to make the meal last longer. A cream of squash soup, if flavored with herbs or onion, is as satisfying as the popular "creams" of other vegetables.

**Peppers** Sweet peppers, green or ripe, have grown in popular favor very rapidly of late and will be found even in war gardens. They may be canned for use later like the pimientos. They are of value chiefly because they make more nutritious foods appetizing.

The seeds are rather hot and should be removed but may be saved to flavor soups. The "core" or little cushion on which the seeds rest, is a soft tender morsel and should be added to the stuffing of the pepper or chopped with it. A single pepper chopped fine makes a good flavoring for an omelet, a salad or hashed potatoes. The green peppers, when core and seeds are removed, have a large hollow space which seems to invite stuffing. Their attractive color, shape and flavor make them admirable vehicles to convey even hash to otherwise unwilling mouths. Rice and cheese served in peppers is a substantial meat substitute.

**Egg-plant** The standard ways of preparing this fruit are frying and baking. It is cut in quarter inch slices, pared and the slices cut in halves, or it may be cut in two inch strips like vegetables for Julienne soup.

To bake the "egg" cut it in cubes, put them in a dish with seasoning and alternate layers of crumbs, cover with hot water or milk and bake about an hour. Or use the skins of the egg plant for stuffing with a mixture of crumbs, seasoning, and the pulp, which is parboiled before mixing with the other ingredients.

## MY TRIP TO THE BELGIAN FRONT

(Continued from page 51)

chance that the aviator who had killed the German Boche belonged to a British aerodrome situated not five miles from where I was staying. So the next afternoon Lieutenant Pendleton and I decided to call upon the fellow who had given us the most exciting three minutes of our lives. We found the English aerodrome in the midst of a flat field some eight or ten miles back of the lines. We were directed to the officers' mess hall where we found a group of ten or fifteen young lieutenants holding a consultation. We told them we came to visit the man who shot the Boche the day before and asked if we could see him. A young fellow came forward who introduced himself to us as Lieutenant C. R. R. Hickey. He was a fine looking boy of about twenty-one years of age who turned out to be not an Englishman but a Canadian from Vancouver. He readily took us over to the aerodrome and there showed us the plane he drove when he killed the German. It was a Camel scout biplane named "Billie" and like all English machines was marked with the blue, white and red circles of the Allies. It was mounted with two Vickers machine guns which were capable of firing 450 rounds. Lieutenant Hickey let me stand up on the side of the machine with my foot on the step and look within while he explained how the whole thing worked. I asked him to tell me about the fight and, being a Canadian and not an Englishman, he consented. No Englishman can be got to talk about himself for love or money. I found out what was going on over my head the day before was very different from what I thought.

It seems that ten English bombing planes started out to bombard Ostend. They were escorted by ten scouts of which Lieutenant Hickey was one. The whole twenty of them went over the German lines, laid their eggs and then when they turned about to come home the scouts flying above and behind as is customary, one of the bombing machines got some engine trouble and straggled behind, five of the scouts staying behind to protect it. Five German fighting planes then happened to come along. They saw the backward bombing plane and proceeded to chase it. The five English scouts instantly went to the attack, but three of the Germans scooted for home followed by three of the English. The other two Germans evidently not seeing the English followed the bomber. Then the English airman dove for the two Germans. This was the fight of the four machines that I saw. It was not three Germans attacking one English plane, as I thought, but two English attacking two Germans. Lieutenant Hickey said he had the best diver and that he singled out his man the minute he caught sight of the German five and never turned from the pursuit. He thought he hit him the first time he fired because the German aviator did not try to maneuver as a pursued man does, but made a bee line for the German lines. Lieutenant Hickey opened fire when he was only 100 yards off. The German was apparently pointing for Nieuport and Hickey followed firing all the time and when about 1000 feet over the water the German burst into flames and dropped just over the pier that puts out over No Man's Land (or rather No Man's Water) between the German and the Belgian lines. The captain of the English scout plane in the meantime was the one who was attacking the other German and it was this German and not the English plane who made the wonderful somersaults and maneuvers and spirals that I so admired. [Continued on page 71]

## Try Butter on Puffed Rice

Many homes serve melted butter with Puffed Grains at breakfast. That in place of sugar and cream.

Some add a little butter first, then milk or cream. No sugar.

That's a good way to save sugar. And few confections are more enticing than these toasted bubbles buttered.

So for hungry children after school. They eat them like peanuts or pop corn. There was never a tid-bit so nut-like and flavory, yet so easy to digest.

Remember that. In Puffed Grains, every food cell is exploded. Every atom feeds.

## Make Pears Taste Like Shortcake

Mix Puffed Grains with your fruit. Puffed Rice or Corn Puffs is best suited for this purpose.

These airy, flimsy morsels add to fruit what crust adds to a shortcake. But never was a crust so flaky, so flavory.

Fruit without Puffed Grains is like pie without crust. Both stewed fruit and fresh fruit need them. Fruit goes farther this way. It tastes vastly better. And it doesn't require so much sugar.

Scatter Puffed Grains, also, on every dish of ice cream, as a fragile nut-like garnish.

**Puffed  
Rice**

FROM A LITHOGRAPH, DRAWN ON THE STONE BY GEORGE BELLOW'S

## *This is Kultur*

**T**HERE is no sharper contrast between German Kultur and the civilization that our forefathers died for, than the difference in the attitude of the two civilizations towards women and children.

Kultur in Belgium, and other devastated countries, is a tale so terrible that never yet has one dared more than whisper fragments of it. Yet the wrongs of Belgium, as a State outraged, pale beside the wrongs inflicted in savage, bestial revenge upon its defenceless women and children.

Such a civilization is not fit to live. And God willing, it shall be mended or ended. To this task America summons every loyal heart and hand. It is a Crusade,—not merely to re-win the tomb of Christ, but to bring back to earth the rule of right, the peace, good will to men and gentleness He taught.

To carry on this crusade of modern righteousness means not merely that our young men shall cross the seas to fight the Hun. It means that we at home shall uphold them. It means that we shall back them with all things spiritual and material. It means that we shall lend, not merely from our plenty, but that we shall save and serve. It means that we shall give up many things that are dear to us; sacrifice, that our Crusaders may save us and our children from the horrors that have come to the little ones of Belgium and of France.

## THE MASTER BUILDER

(Continued from page 49)

when naval architecture is one of the essential arts, much of its lore is, when the admiral is in, in his office. I peeped into the office that he had at the Washington Navy Yard, where he built and for more than a decade conducted all experiments in the United States Experimental Tank, the office in which, said one of the men who worked with him there, he "would sometimes lose himself in figures for days at a time"—a simple office, with little more than a desk, a planning board, and two oil paintings, of ships, of course! I peeped into the office that he had in the State, War and Navy Building, before he was moved to the more modern concrete new War-Navy Building, in which offices are more uniform. There I caught a glimpse, beginning at the right of the door and going round the room, of a steel filing case, a small white washstand, a mantel and grate in the far wall, a planning table in the far corner before the window thru which one sees the tall Washington Monument cleaving the sky; a cabinet with books, between the two windows facing the White House; a high desk in the corner at the left, and, on the red rug, facing a row of comfortable and distinctive wicker porch chairs, a small mahogany desk with a tanned, almost swarthy, tall, slender man sitting there, in navy white, facing rather easily, it seems, his great responsibilities.

The Admiral "loses himself" in the creation of ships—"the most honorable thing," as Ruskin insisted, "that man as a gregarious animal has ever produced. Into a ship man has put as much patience, common sense, forethought, experimental philosophy, self-control, habits of order and obedience, thoroly wrought handiwork, defiance of brute elements' careless courage, careful patriotism, and calm expectation of the judgment of God as can well be put into a space 200 feet long and 80 feet broad. I am thankful to have lived in an age when I can see this thing done." He loses himself in finding and superintending ways to make the American Navy by all odds the second, perhaps the first, navy in the world. It was he who demonstrated the theory of a center line of turrets on dreadnaughts, which made it possible for the biggest of them to fire a broadside—a broadside, by the way, with greater power than that of all the guns of the American Navy in 1864, the year in which the Admiral was born. The big ships of all the navies of the world are now planned in according with the Taylor principle of a center line. It was he who designed the high forward gun platform of the destroyer, which has permitted destroyer guns to wreak havoc on the submarine. The destroyer, with its perfections, is largely the product of his designing. He has reduced craft of the destroyer type to an exact science. He demonstrated that when, with his staff, he designed the American type of submarine chaser, which was soon sliding down the ways by the score and at the end of the year taking the water by the hundred. Then, in ten days, he designed the vessel that is midway between the destroyer and the chaser, which Mr. Ford is now manufacturing quantitatively. And then, one day, when the Secretary of the Navy sent for the small group of men, engine makers and ship and owners, who understood the intricacies of the destroyer, which is almost as delicate as a Swiss watch, and told them that he knew they were loaded to the gunwales with orders but that they could now proceed to double, treble, quad-

## Unarmed Arms of the Service

Men from the battle front who have been holding the line for months and years complain of the monotony of war. The soldier's life in the trenches soon ceases to be a novelty and becomes a tedious routine.

The morale of the army is of supreme importance and the greatest military authorities of the world are enthusiastic in their praise of the organizations which make it their business to keep the soldier in good spirits.

This work, like that of the Signal Corps, has been more highly developed in this war

than ever before. Huts for amusement, comfort and recuperation of the fighting men are in the trenches as well as behind the lines. The unarmed workers go about their duties under shell fire as coolly and as self-forgetfully as the telephone men of the Signal Corps who are frequently their neighbors, and who keep intact, often under a hail of bullets, the indispensable lines of communication.

It is for us who remain at home to support these unarmed heroes to the utmost, with our gifts, our labor, and our unbreakable morale.

## Journalism As An Aid to History Teaching

By EDWIN E. SLOSSON, Ph.D.

Literary Editor of The Independent. Associate in the School  
of Journalism, Columbia University

This address, which was given before the History Section of the New York State Teachers' Association at Rochester, has been published in pamphlet form and will be furnished free to teachers.—Write to The Independent, 119 West 40th St., New York.

## Our Human Machines

will win the war.

Is yours in condition to stand the tense mental and physical strain of the coming winter?

If you are not sure, make sure. Take a little recreation to smooth out and oil up its rough bearings. Forced effort weakens the heart—your "human" engine slows down. Give yourself an intelligent rest and have this most important "Human Machine" of yours set right.

It is your patriotic duty to keep supremely fit now.

and, in this connection—

## Ingram's Therapeutic Shaving Cream

This new shaving cream which is prepared with particular thought for the needs of the safety razor possesses medicinal qualities that keep the skin healthful. The rich, creamy lather it forms does not gum up between the guard and blade, helps the blade cut easily and evenly, prevents irritation of the skin and is a healing agent to small abrasions or scrapes. It is cooling and soothing to the skin.

Buy a jar of Ingram's Therapeutic Shaving Cream from your druggist for 50c. Mail us one carton, with his name, and receive free a 28c package of Ingram's Zedenta, for the teeth. If your druggist is not supplied, mail the 50c to us and receive the jar of Ingram's Therapeutic Shaving Cream with the Zedenta.

multiple. It does not matter which, the effect was the same—those orders, Admiral Taylor answered their customary query as to which one would build the first of the new type, which were of 35-knot speed instead of 30 knot, therefore required doubly as much engine power, by saying, "We won't finish any one of them first. We'll finish them all first," thereby undertaking to do what has in the last fifteen years not been done in our Navy, and probably not in any navy—i. e., to proceed to the manufacture of a large number of highly intricate vessels of new design without first resorting to the testing of one of them. But, as a matter of fact, the Admiral felt so sure of his science that he did not even have any of the new design tested in the United States experimental tank, in model form.

This departure may mean nothing to us landsmen. We must note, however, that a vessel is not at all, in its construction, like a building. Building, on land, is a science that is well established now. Building a naval vessel, especially a fighting vessel, is an art; there is much about its success that is dependent upon the individual judgment of the constructor in charge. Only contractors really understand the difficulties and disappointments attendant upon the erection of a land structure—a hotel, let us say. Nevertheless, the land contractor can console himself that he has the solid earth to rest his creation on, whereas the naval architect has only the sea. And tho the weight of a land structure may vary a great deal and it may remain safely standing, without going under, if the weight of a war vessel varies to the heavy side as much as ten per cent, the vessel will go under. And tho a building must be stable, of course, and in plumb, it does not have to confront elements so brutal and so variable as those of the sea.

"There is this about the problem," the Admiral said one day. "The man who is constructing a building knows exactly what the weights are going to be and the stress on the material. But a ship going to sea is stressed by the waves, and the force of the waves is variable. The strength and stability of ships should be such as to enable them to withstand, under all conditions, the waves of the sea, but the latter are infinite in variety. The best we can do is to make an approximation of the most severe condition, based on previous accumulated experience and observation. There have been many thousands of observations on sea waves, but there is as yet no complete agreement in regard to their limiting characteristics, such as length, height and the relation existing between these dimensions."

In other words, to no small extent, naval architecture, much more than land architecture, is an art, with much of the problematical left in it, with plenty of room for exercise of the personal equation.

"The introduction of iron and steel, in conjunction with the development of methods and mechanism for riveting," the Admiral says, "has made the modern ship possible. . . . Fifty or sixty years ago ship construction was something of a mystery. There were a few firms and individuals, in fact, that insisted they alone understood these mysteries, but now, when a modern ship is the product of the coöperation of almost all the trades that there are, ships and their building are projects far too large and complicated and important to be controlled by a few individuals. An indisputable tendency now, moreover, is for ships to become larger and larger."

The only limitation on the size of ships now, the Admiral said, is harbor draft. New York Harbor was deepened to thirty

## Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein,

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. Real teaching.

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, especially valuable for its full reports of the literary market. Besides our teaching service, we offer a manuscript criticism service.

feet—to illustrate—then to forty feet, now it would be a good thing, the Admiral said, if it were fifty or sixty feet, and if all other major harbors were of the same depth.

Another indisputable tendency is for ships—warships—to become faster. The Battle of Jutland, of itself, which was begun at a range of sixteen miles, demonstrated that the ship with the greater range, biggest guns, therefore, and greater speed, has the advantage of the ship deficient, comparatively, in either range or speed. The result is typified in the new battle cruisers, which have only sufficient small guns to repel torpedo attack, and none of intermediate size.

The Admiral has seen, intimately, and understood, clearly—so clearly that he has been for many years, and is now, the world's foremost authority on ship construction, the growth and progress of his art. Thru most of the years in which ships have reflected the marvelous achievements in science, he was in charge of the little body of water that has done almost as much for naval construction as all the moods of the broad Atlantic—the United States Experimental Tank. This little body of water can be narrowed, made deep or shallow, with water moving swiftly or not at all, with temperature variable, too. It has a movable bridge over it. One may imagine the Admiral, like a boy with his toy boats, towing models twenty feet long—precise models, in design, of gigantic vessels—studying the gages that indicate the speed of the towing crane, the horizontal weight or pull of the tiny craft, and drawing his conclusions in his office, where one hears easy discussions of "fifth-power parabolas" and "fourth-power parabolas," "coefficients in the vicinity of 0.7," etc.

He has seen, has planned, much that has been done, and knows quite all about all that has been done, and he is watching ship performance in the war, watching with an eye to the future, too. "As regards vessels used in this war," he said, "experience to date shows broadly that the art of naval architecture has provided ships which function as anticipated. The enormously destructive weapons of the day are able to destroy in time anything that floats, and without disparaging Mahan's dictum that 'Good men in poor ships have always won over poor men in good ships,' there is no doubt that good ships are essential even to the best men.

"Finally, one thought more: The progress of late years, which has seemed rapid and prophetic, will seem slow beside the progress, the development, which must and will be made during the years just ahead of us. Of that I feel sure."

Washington, D. C.

# THE NEW BOOKS

## What to Make for the Boys

**A**N American woman, severely injured while on war service in England in 1915, has spent the two and a half years of her convalescence compiling a book of carefully tested instructions in *Knitting and Sewing, How to Make Seventy Useful Articles for Men in the Army and Navy*. Helmets, mufflers, socks, pyjamas, mittens, sweaters, ties, leather waistcoats, mine-sweepers' gloves and ditty bags are some of the things that Mrs. Nicoll tells just how to make. Not only are all the variations of "knit two, purl two" accurately explained, but the kinds of yarn suited to each piece of work are described and illustrated. A picture, too, shows you how each finished article should look.

*Knitting and Sewing*, by Maud Churchill Nicoll. George H. Doran Co. \$1.50.

## The Joys of Being a Woman

**T**O those who love the informal essay, *The Joys of Being a Woman* affords a delightful treat, for here is a collection of papers written by a woman who has already proved her ability in this field to the readers of the *Atlantic Monthly*, and who has won wide recognition as the author of "The New Death." These papers cover a diversity of topics which appeal to the imagination; besides the title essay there are "A Man in the House," "Detached Thoughts on Boarding," "The Lady Alone at Night," "Some Difficulties in Doing Without Eternity" and seventeen others, all executed with the light, sure touch and kindly humor that admit Miss Kirkland to the small coterie of our best essayists.

The true essay, she tells us in her foreword, is "sheer chuckle" and pursuant to this definition, her collection is just one series of chuckles which warm the feminine heart and fill it with the gay spirit of camaraderie. These chuckles, however, are so provocatively one-woman-to-another and so tantalizingly significant with unsaid things, that the man reader is apt to become a bit uneasy. The biggest, most spontaneous chuckle of all is the title essay, in which Miss Kirkland fairly effervesces with the joys of being a woman and which, she affirms, far exceed those of being a man:

As to our mental mechanism, it is so much finer than man's that, out of pure pity for his clogging equipment, we let him think logic and reason better means of traveling from premise to conclusion than the air flights we encourage him to scorn as woman's intuition. Nothing is more painful to a woman than an argument

with a man, because he journeys from given fact to deduced truth by pockmule, and she by aeroplane. When he finds her at the destination, he is so irritated by the swiftness of her passage that he accuses her of not following the right direction, and demands as proof that she describe the weeds by the roadside, which he has amply studied—he calls this study his reasoning process. Of course no woman stops to botanize when the object is to get there. No man ever wants to be a woman. No man ever longs to exchange his ass for our airship. No man ever envies us the nimbleness by which we can elude logic and get at truth.

*The Joys of Being a Woman*, by Winifred Kirkland. Houghton, Mifflin Company. \$1.50.

## The Zeppelin's Passenger

**T**HE publishers of this hyper-imaginative tale state that this is Mr. Oppenheim's most audacious German spy story. Yes, it undoubtedly is, but heretofore this prolific author has entertained us with amazing plots and counter plots and led us to believe that secret service operatives of all the belligerents, and neutrals too, may be found in our kitchen or in our humdrum workshop. He has made us jump in the evening when the wicker chair creaks into its former repose, and we have actually been chilly when we retired.

He does all of that in this story. We expected that, because he is a raconteur of considerable craft and his psychology is sufficiently intelligent to know what to do to keep us up half the night because we can't sleep with suspense suspended.

But audacity is a well chosen superlative, because he goes so far as to weave into the story a most illogical case of love. One can really sense the author's beads of sweat as the swiftly moving infatuation of a loyal English wife for an admitted German spy taxes his ingenuity to defend.

The spy happens to be a Swedish nobleman of considerable grace and refinement, and he furthermore happens to be a college intimate of the lady's brother who has been captured and is interned in a dirty prison camp in Germany. It still happens that the spy has been able to ease the bodily and mental pain of the brother and brings via Zeppelin a message to the distracted sister.

Fiction certainly permits "happenings" to any exaggerated degree, but how this spy Raffles overcomes the loathing of the wife and gets her to admit she loves him even to the point of preparing to leave her older English husband who is doing wonderful work on the quiet for his own Government, is all told in the book.

Audacious certainly, interesting yes, but let us suggest that future Oppenheim books will be far more readable if involved developments of human admiration be left to Amelie Rives, so that the real reason we buy Oppenheim whenever we hear of his "new one" be not changed.

*The Zeppelin's Passenger*, by E. Phillips Oppenheim. Little, Brown & Co., Boston. \$1.50.

## Troublesome Children

**F**OLLOWING very much the case method of his earlier writings, Dr. Healy offers in his latest book, *Mental Conflicts and Misconduct*, a valuable summary of types of misconduct due to repressed thoughts and conflicting impulses in children brought to his attention while connected with the Juvenile Court in Chicago. The final purpose of such studies is to educate parents and teachers to train young people who have gone astray in self-direction toward desirable habits.

Dr. Augusta Bronner, Dr. Healy's assistant, has gathered another set of cases from the Chicago experience under the title *The Psychology of Special Abilities and Disabilities*. Here we have the cases of children who in spite of failure to adjust themselves "normally" in school, or in vocational relations, were found to possess normal or superior capacities in some direction. The chief defects treated are those in number work, in language ability, in mental control and in special mental processes, as in memories, imagery, abstraction and so on. There is included an account of the methods used in testing the children, with an appendix giving the scores for each test; this will be of special value to psychologists and educators.

*Mental Conflicts and Misconduct*, by William Healy. Little, Brown & Co., Boston. \$2.50.  
*The Psychology of Special Abilities and Disabilities*, by Augusta F. Bronner. Little, Brown & Co., Boston. \$1.75.

## A Girl Named Mary

**A** pleasant story for a rainy afternoon is Juliet Wilbor Tompkins's latest novel, *A Girl Named Mary*. Mrs. Jaffrey, the mother of Mary, lost her little girl when she was three years old and in the search to find her spent half a lifetime of friendliness for every girl named Mary, establishing thereby an interesting philosophy of workable democracy. The right Mary, found at last, is an invigorating surprise and the most interesting person in the story.

*A Girl Named Mary*, by Juliet Wilbor Tompkins. Bobbs-Merrill Co., Indianapolis. \$1.50.

## The Why and How of Voting

**W**HAT is a Republican? What is a Democrat? What's it all about?" asked Anna, proud in her possession of a newly acquired vote and keen to live up to its responsibilities.

But her husband, experienced in voting tho he was, couldn't answer all her questions. In fact he began to get curious to know the answers to some of them himself. So they gave a party—it developed later into a series of parties—at which their friends, the politician, the ex-Congressman, the Washington correspondent and the lawyer, stimulated by a good dinner, faced a rapid fire of questions on all matters of government and politics. The business woman and the college girl supplemented

Kodak & Herbert

Mrs. Nicoll tells how to make knitted garments that mean comfort for our soldiers

Anna's questions and they all eight argued together over some points. The result of the experiment, written down in conversational style, is a mine of concise, practical information, valuable to any one who wants to learn more about the powers, methods and responsibilities of a voter—and that means most of us nowadays.

*The New Voter*, by Charles Willis Thompson. Putnam's Sons. \$1.50.

## Saved! A New England Spinster

DO you remember "Bobby, General Manager," and "The Fifth Wheel"? *The Star in the Window*, Olive Higgins Prouty's latest novel, has the same wholesome charm as her earlier books, tho worn just a bit into ready-made molds. Reba, the heroine, is a New England girl brought up in a household of stern repression where a miserly father, a querulous invalid mother and a domineering aunt forbade her any natural development of her own. At the end of twenty-five monotonous, bloodless years came an epoch-making visit from Cousin Pattie that woke Reba up.

You're like a pool of water. Stuck up here all alone on your New England hill-top—no inlet, no outlet, and if you don't do something about it you'll dry up, as sure as preaching. There won't be anything left of you but the shallow impression of your shape and size.

When I was your age I made up my mind I wouldn't go and get meek and submissive, even tho I was born in New England. I wouldn't go and crawl underneath my cross, and stay there, calling myself good and pious, like half the women I've been seeing today, when all the time they're too weak and scared to go out and fight the difficult circumstances heaven has sent them.

Reba took the talk to heart and braving unknown dangers went to live in the home of the Women's New England Alliance in Boston. There life did find her, bringing her work and friends and a husband. Mrs. Prouty makes the most of an author's privilege as *deus ex machina* to bring the happy ending out of a long series of vicissitudes, provided as the necessary calisthenics for Reba's soul.

*The Star in the Window*, by Olive Higgins Prouty. F. A. Stokes, \$1.50.

## Stories of All Kinds

*FORTUNE*, by Albert Payson Terhune. (Doubleday, Page & Co., \$1.40.) A love story of poverty glorified and riches thrown away. Entertaining, altogether improbable.

*YOU'RE ONLY YOUNG ONCE*, by Margaret Wilder. (Henry Holt & Co., \$1.50.) Eight separate love stories concerning the members of one family, and each one romantic.

*THE BOOMERANG*, by David Gray. (Century Co., \$1.40.) Novelization of last season's most popular play—an entertaining story of a young American doctor who plays at curing love.

*JOSHLYN'S WIFE*, by Kathleen Norris. (Doubleday, Page & Co., \$1.40.) Another entertaining story of a wife's vicissitudes in the upper classes, by the author of "The Heart of Rachel."

*FURTHER INDULGENCES*, by a Woman of No Importance. (E. P. Dutton & Co., \$5.) Rapid fire of reminiscences concerning the great and the near great. The volume is profusely illustrated with sketches and photographs.

*REMEMBER OF A THIRTY-ONE YEAR*, by Mabel Wagner. (Lane & Wagner, 75 cents.) An original and exceedingly well told half hour story of an artist's model who turns saint, and finds the second part more outlandish than the first.

*DISCOVERER OF THE LAND*, by Gene Stratton Porter. (Doubleday, Page & Co., \$1.40.) Story of an American family whose passion is land ownership, and of a heroine whose grit exceed her common sense. Cannot rank with earlier books by the same author.

*WITH ANITA*, by the author of "The Straight Road." (George H. Doran Co., \$1.50.) A California love story with man, poor girl, hard-boiled mother, scheming father, trouble, romance, seduction, interception letter, accidental meeting, reconciliation, and happy ending.

*LOVERS OF LOUISIANA*, by George Cable. (Scribner, \$1.50.) Another of the charming Creole love stories in which Mr. Cable is at his best. Weaves into it some modern detail—the negro question, southern politics and the world war.

# Notable New Doran Books

The longer you delay the more you will have to pay. Subscriptions may be either new or renewal or extension on all magazines mentioned above. All subscriptions are for one year. Extra postage required only on Canadian and foreign orders.

If you don't find the club you want, we will quote you the rock-bottom price on any list of magazines you desire. This places you under no obligation whatever.

Address all orders or inquiries to

**TODAY'S HOUSEWIFE**

**463 Fourth Avenue, New York City**

but in essence it is young love pictured against the ever-romantic background of New Orleans.

**THE GOLDEN BIRD**, by Maria Thompson Daviess. (Century Co., \$1.35.) Fiction at its lightest. Another romance with a Southern heroine—but a romance lacking that appealing spontaneity which characterized "The Melting of Molly."

**THE WHIRLWIND**, by Edna Worthley Underwood. (Small, Maynard & Co., \$1.50.) Historical romance of Russian court intrigue centering about Catherine the Great. A story rich with colorful descriptions of events and characters.

**WILLOW, THE WISP**, by Archie P. McKishnie. (Houghton, Mifflin Co., \$1.35.) In Old Creation Hills two women and a man work out the eternal problem in geometry. It is the girl of the wilderness who writes "Q. E. D." at the end.

**SALT, OR THE EDUCATION OF GRIFFITH ADAMS**, by Charles G. Norris. (E. P. Dutton & Co., \$1.50.) The story of an average youth of good character, who after much wandering in the wrong direction realizes that nothing worth while is gained without working for it.

**JOHN O' MAY, AND OTHER STORIES**, by Maxwell Struthers Burt. (Charles Scribner's Sons, \$1.35.) Notable adventure stories told with rare insight into the minds of men. The insouciant poses of an Irish soldier of fortune, the weakness of a man of power, the mysticism of a lover are some of the subjects set forth with unforgettable charm.

**LAZARUS**, by Andreyer, and **GENTLEMAN FROM SAN FRANCISCO**, by Buin. (Stratford Company, Boston, 25 cents.) The Stratford Company deserve the best wishes of all readers whose literary taste runs higher than their pocketbooks. The publishers have more attractive things upon the list of their Universal Library than these two intensely gloomy and very Russian plays.

**THE SILENT LEGION**, by J. E. Buckrose. (George H. Doran Co., \$1.50.) An English story of the homely, everyday bravery of the ordinary folks who "keep the home fires burning."

**THE BELOVED CAPTAIN**, by Donald Hankey. (E. P. Dutton & Co., 50 cents.) A beautiful tribute from one soldier to another. The little volume also contains two other stories by the same author.

**DRUMS APEAR**, by John Murray Gibbon. (John Lane Company, \$1.50.) A story that begins at Oxford and ends in a hospital in Blighty. The comparative viewpoints of Englishmen and Americans in 1914 are interestingly presented. A Chicago girl as heroine keeps the plot moving.

**THE DIARY OF A GIRL IN FRANCE IN 1821**, by Mary Browne. (Dutton & Co., \$3.) A charming, naive record by a girl of fourteen, English and gently bred, of a most unhappy holiday in France. The writer's quaint drawings add to the effect of old-world charm and prejudice delicately mingled.

**THE WAR EAGLE**, by W. J. Dawson. (John Lane Co., \$1.50.) "A contemporary novel" beginning with the summer of 1914 and ending with the sinking of the "Lusitania," which put an end to the irresolution of a man who had been wavering between the desire to pursue a successful literary career and the insistent call of patriotism.

**THE INFERNO**, by Henri Barbusse. (Boni & Liveright, \$1.50.) A man who looks thru a crack into the next room of his boarding house sees many painful and indecent things and Barbusse makes the most of them as in his later book, "Under Fire," he dealt with greater skill the horrors and filth of war.

## Six Years Old to Sixteen

**THE WONDER OF WAR ON LAND**, by Rolt-Wheeler. (Lothrop, Lee & Shepard, \$1.35.) Juvenile war fiction as near to reality and probability as the average run of such publications.

**EVERYDAY HEROES**. Retold from *St. Nicholas*. (Century Co., 15 cents.) Selected tales of bravery and daring, some absolute fact, some pure fiction, all calculated to thrill the real American boy.

**GRIT A-PLenty**, by Dillon Wallace. (Fleming H. Revell Co., \$1.25.) An adventure-filled tale of footstepping in Labrador, exciting enough to fire the blood and delight the hearts of boy-ten to sixteen.

**CAMERON ISLAND**, by Edwin C. Ruffin. (Fleming H. Revell Co., \$1.25.) Adventures including a shipwreck and a volcanic eruption of a group of boy scouts in the South Seas. Real thrills for boys of eight to sixteen.

**STORIES FOR EVERY HOLIDAY**, by Carolyn Sherwin Bailey. (Abingdon Press, \$1.25.) The spirit behind each of our holidays is crystallized in such a way that children from ten to sixteen will understand and appreciate.

**INDIAN HEROES AND GREAT CHIEFTAINS**, by Charles A. Eastman. (Little, Brown & Co., \$1.25.) True stories of fifteen brave Indian chiefs told by "Ojibwa," a full-blooded Sioux. A splendid book for boys ten to sixteen.

**OUR CROW AND HIS FRIENDS**, by Katharine B. Anderson. (Little, Brown & Co., \$1.25.) Animal stories based on Indian myths, many concerned with the delicious taming of Rabbit, "tender in

# GOOD BOOKS

SOME books take more out of the reader than they put into him. Not so the books of THE ABINGDON PRESS which "always give one a mental and moral nudge," as Lowell said of Emerson. And now, that vacation is over, you need this kind of stimulus. Send for the catalog.

## PHILOSOPHY AND THE WAR

By RALPH TYLER FLEWELLING

Professor of Philosophy, University of Southern California

A strong arraignment of the German Philosophy which precipitated the World War. The worship of power and the over-emphasis upon things are traced to their proper source—*the Denial of Personalism*.

18mo. 74 pages.

Cloth. Net, 60 cents, postpaid.

## AMERICA—HERE AND OVER THERE

By BISHOP LUTHER B. WILSON

Bishop Wilson's experience in Y. M. C. A. war work on the other side makes one realize, perhaps as never before, what America, at home and in France, is doing to bring about the great victory for which the world is hoping and praying. He visited the camps, talked with our boys, lived with them, spoke to hundreds of soldiers at great meetings within the war zone, and brought back to America a personal message from General Pershing. His book contains much that will come very close to the hearts of those who have loved ones "over there."

16mo. Frontispiece.

108 pages. Cloth. Net, 75 cents, postpaid.

## THE OREGON MISSIONS

The Story of How the Line Was Run Between Canada and the United States

By BISHOP JAMES W. BASHFORD

The story of the founding of the Oregon Missions, together with a study of related history, the details concerning the running of the line between Canada and the United States being of special interest. Dealing as it does with matters of denominational and governmental moment, the book is an historical study of great value.

12mo. 312 pages.

Cloth. Net, \$1.25, postpaid.

## THE ABINGDON WAR-FOOD BOOK

Foreword by HERBERT HOOVER

The World Food Problem

By VERNON KELLOGG

of the U. S. Food Administration

Thoughts on the Present Scarcity of Provisions by the late REV. JOHN WESLEY

War Time Recipes and Menus

By CHARLOTTE HEPBURN ORMOND

Since food will win the war everything that helps to conserve food is of highest value. Here we have the words of Wesley, Hoover and Kellogg on food conservation and here are recipes in harmony with their words.

16mo. 58 pages.

Cloth. Net, 25 cents, postpaid.

## THE CLEAN SWORD

By LYNN HAROLD HOUGH

A book which gets down to the fundamental principles involved in the use of force, and to their relation to Christianity. History, philosophy, theology, Biblical interpretation and the whole field of human struggle in the progress of civilization are brought to bear on the elucidation of this theme.

12mo. 224 pages.

Cloth. Net, \$1.00, postpaid.

## RELIGION AND WAR

By WILLIAM HERBERT PERRY FAUNCE

President of Brown University

Virile in style and constructive in purpose. A book of special timeliness and value—at once a revelation and an emphasis of Christianity's supreme opportunity in the world's new day.

12mo. 188 pages.

Cloth. Net, \$1.00, postpaid.

NEW YORK THE ABINGDON PRESS CINCINNATI

CHICAGO BOSTON PITTSBURGH DETROIT KANSAS CITY SAN FRANCISCO PORTLAND, ORE.

VICTOR JONES and his wife tell on page 38 their amazing experiences in improving their memories.

## What 15¢ will bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of 15¢ in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation—a paper that prints all the news of the world and tells the truth and only the truth, now in its 26th year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which gives you the news of the world, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly before you, send 15¢ to show that you might like to have a paper, and we will send the Pathfinder on probation 13 weeks. The 13¢ does not repay us, but we are glad to invest in new friends. The Pathfinder, Box 39, Washington, D. C.

AT ALL BOOKSELLERS

## BATTLES ROYAL DOWN NORTH

Norman Duncan's  
Final  
Labrador Tales

represent him in both the moods in which he made his name as a writer. "Battles Royal Down North" is powerful, rugged, almost fearsome in its tragic intensity; the other, "Harbor Tales Down North," is tender, quaint, and marked by that supreme quality of the story teller's art—unaffected simplicity. Both books contain an appreciation by Dr. Wilfred T. Grenfell of The Labrador.

## HARBOR TALES DOWN NORTH

Honore Willsie, in the *New York Times Magazine*: "We lost the best short story writer in the country when Norman Duncan died."

Two vols., each illustrated. Net \$1.35.

## IT HAPPENED "OVER THERE"

Burris A. Jenkins

author of "The Hindenburg Line," is here with a thrilling "rapid-fire" romance of an American aviator and an English "lady of high degree." A book permeated with the atmosphere of these thrilling heart-searching days.

Illustrated. Net \$1.25.

## UNCLE JOE'S LINCOLN

Edward A. Steiner

author of "On the Trail of the Immigrant," etc., gives us a delightful story of the influence of the life of Abraham Lincoln upon the boys of a far-away land. Will move every patriotic American to greater zeal and greater service to-day.

Illustrated. Net \$1.00.

## THE SECOND LINE OF DEFENCE

Margaret Slattery's

new book is a Plea for Men and Women of Tomorrow. "A clarion call to those who, left at home while the fighting men are overseas, have a duty toward the boys and girls of adolescent years."—*Baptist World*.

Net \$1.00.

THREE GREAT BOOKS FOR BOYS

## GRIT-A-PLenty

Dillon Wallace

author of "UngavaBob," etc., is to the front with a new Tale of the Labrador Wild. For adventure and realism of the most healthful sort boys will find it difficult indeed to beat this latest story from the surviving companion of Leonidas Hubbard, Jr., the Labrador explorer.

Illustrated. Net \$1.25.

## AT HIS COUNTRY'S CALL

Albert Lee

has written the first big Tale of the Great War for Boys. Lieut. Gen. Sir R. Baden-Powell says: "It is a most exciting yarn for boys which should arouse their spirit of patriotic adoration." Illustrated. Net \$1.25.

## CAMERON ISLAND

Edwin C. Burritt

the author of "The Boy Scout Crusoes," presents a new sheaf of Adventures in the South Seas. The success of "Boy Scout Crusoes" has furnished the incentive for a fascinating story of adventures which will keep the reader spellbound until the last page is reached.

Illustrated. Net \$1.25.

mischief," and all told with an insight into that which is most appealing to boys and girls six to twelve.

**CAPTAIN ZITOK**, by Roy J. Snell. (Little, Brown & Co., \$1.35.) A stirring tale of the frozen North, adventures of an Eskimo lad brave and "square" enough to prove a real inspiration to virile American boys.

**GIRLS OF OLD GLORY**, by Mary Constance Du Bois. (Century Co., \$1.35.) The familiar boarding school story has wrapped the American flag around itself and assumed a patriotic setting. This story adds a girl of mystery.

**SCOUT DRAKE IN WAR TIME**, by Isabel Hornbrook. (Little, Brown & Co., \$1.35.) A Boy Scout story for boys and girls twelve to sixteen in which the fire of patriotic youth is satisfactorily blended with the charm of out-of-doors.

**LONE BULL'S MISTAKE**, by James Willard Schultz. (Houghton, Mifflin Co., \$1.35.) A tale of American Indian life to which the author has imparted in a rare degree the flavor of woods and plains. For boys ten to sixteen.

**THE BROWNIES AND PRINCE FLORIMEL**, by Palmer Cox. (Century Co., \$1.50.) Reappearance of the inimitable Brownies; this time to play their parts in a connected narrative centering around the adventures of Florimel and Queen Titania.

**PATRIOTISM AND THE FLAG**. Retold from *St. Nicholas*. (Century Co., 75 cents.) A thoughtful selection of articles, speeches and stories, all entertaining and all to be commended as calculated to stimulate in young readers an intelligent love of country.

**LITTLE CUBA LIBRE**, by Jane Prichard Duggan. (Little, Brown & Co., \$1.35.) The inspiration of real patriotism and stirring action lend a glamour to this tale of a little heroine of the Cuban rebellion against Spanish rule. For girls ten to sixteen.

**THE OUTDOOR STORY BOOK**, by Carolyn Sherwin Bailey. (Pilgrim Press, \$1.) Children from four to eleven will enjoy learning nature study from these entertaining stories of "Whirling Beetle," "Frowsy Weed," "Why the Beaver Wore Old Clothes," etc.

**THE SILVER CACHE OF THE PAWNEE**, by D. Lange. (Lothrop, Lee & Shepard Co., \$1.25.) A story of the old Santa-Fe Trail with thrills aplenty in the shape of buffalo stampedes, attacks by Indians and the discovery of hidden treasures. For boys ten to sixteen.

**ABRAHAM LINCOLN**, by Wilbur F. Gordy. (Charles Scribner's Sons, \$1.) Sympathetic study of Lincoln prepared for young readers and treating with commendable simplicity his life as boy, man and president. First in series called "Heroes and Leaders in American History."

**THE MYSTERY OF RAM ISLAND**, by Joseph Bushnell Ames. (Century Co., \$1.35.) A rich man's son sent to a summer camp of "Boy Scouts" to reduce the periphery of his hatband. A wholesome lot of sports mixt with some real adventure brings out the real worth of the boy.

**STORY-HOUR FAVORITES**, compiled by Wilhelmina Harper. (Century Co., \$1.25.) Miss Harper is a successful story-teller in a big New York public library. In this collection of the best stories to tell children she has included "Brer Rabbit," "The Happy Prince," fairy tales and legends.

**AMERICA'S DAUGHTER**, by Rena L. Halsey. (Lothrop, Lee & Shepard Co., \$1.35.) Wholesome, joyous story of the efforts of a group of schoolgirls to make themselves worthy "Daughters of America." A thread of mystery and plenty of dash to insure its appeal to girls twelve to eighteen.

## Winning the War in the Kitchen

**CAMOUFLAGE COOKERY**, by Helen Watkeys Moore. (Duffield & Co., \$1.) Supplies a war time demand for substitute or mock dishes. Recipes include soups, fish, meats, salads and sweets.

**THE EAT LESS MEAT BOOK**, by Mrs. C. S. Peel. (John Lane Co., \$1.25.) Inexpensive and practical directions for war economy cooking. Recipes include soups, vegetables, sauces, cheese, cereals and semi-meatless dishes.

**HOUSEHOLD MANAGEMENT**, by Florence Nesbit. (Russell Sage Foundation, 75 cents.) Helpful information needed by the social worker, nurse or neighborhood visitor among the small wage earners living in cramped quarters.

**ECONOMICAL COOKERY**, by Marion Harris Neil. (Little, Brown & Co., Boston, \$1.50.) A valuable volume of tested recipes of all kinds, with introductory chapters on how to choose foods, and general directions for cooking.

**MANUAL OF HOUSEHOLD ACCOUNTS**, by J. C. and M. F. Crandell. (Whitcomb-Barrows, Boston, \$2.) Describes a system of household accounts based on modern accounting principles and provides ruled pages for actual use.

**FOOD GUIDE FOR WAR SERVICE AT HOME**, prepared under the direction of the U. S. Food Administration. (Charles Scribner's Sons, 25 cents.) A clear statement of the food situation here and abroad, with special emphasis on wheat and meat, with an introduction by Herbert Hoover.

## A Remarkable and Timely Work

SIMON LAKE

Of international fame as an inventor especially along submarine lines, tells the wonderful story of—

## The Submarine in War and Peace

Its Development and Possibilities

By SIMON LAKE, M.I.N.A.

71 illustrations and a chart. \$3.00 net.

Important and authoritative

*NEW YORK TRIBUNE*: "With German submarines prowling about the entrance to New York harbor and destroying vessels along the neighboring coast, there is peculiar timeliness in this fine volume by one of the chief inventors of that style of craft. . . . The lay reader will find the narrative and descriptions of fascinating interest. A multitude of admirable illustrations add to the value of this important and authoritative work."

## Modern Shipbuilding Terms

Defined and Illustrated

By F. FORREST PEASE

72 illustrations. \$2.00 net.

This is almost an encyclopedia of the shipbuilding industry. All words and phrases now used in connection with shipbuilding are thoroughly defined. The 72 illustrations show the tools, machines and installations which are used. A series of special photographs show the progressive steps in the construction of ships. Subjects such as Electric Welding are treated especially in the appendix. Every worker needs this book.

## The Business of The Household

By C. W. TABER

Illustrated. \$2.00 net.

Household finance and management handled with expert skill based upon actual experience, and solving the problem of making ends meet while getting right results.

## Home and Community Hygiene

By JEAN BROADHURST

118 illustrations. \$2.00 net.

A text-book of personal and public health, from the standpoint of the homemaker, the individual and the good citizen. A text for school or home of great value.

## WAR TIME, THE PLACE AND THE GIRL

(Continued from page 56)

long factory day, which begins at seven in the morning. She is serene of face and poised in manner, but to look at her one knows that her motive for being there is not a usual one. We asked her if she minded the long hours and the hard work. She straightened up proudly and said: "Mind? Why should I mind? My boy is in the aviation service on the other side, and this is a very small thing for me to be doing here." No wonder that we are seeing such wonderful results from the going of women into industry, if they go, animated by a spirit such as this.

As yet we have not come to the point of needing many women in our munitions factories, but, undoubtedly, as we face the problem of labor dilution, made more acute by the new draft, war industry is going to need women not only for inspectional work but as operatives. This influx into industry of women who are unprepared by anything in their former experience for the factory conditions which they must now meet presents many new problems to factory managers. Careful and scientific supervision is necessary if the women are to do their best work, and this supervision is now being undertaken in almost all of the large plants by the woman service manager, who employs the women workers, fits them into their jobs and generally looks after their welfare. Her task is an important one and requires a rare combination of tact, judgment and the comprehension of the viewpoint of the worker. Many women who have the personality and background for this service work are going into the factories as operatives and getting the point of view which is so essential. In fact the Government courses for training industrial service and employment managers have as part of the course an apprentice period of machine work.

The housing of women workers is another war problem which should appeal strongly to women. Specialists may be needed to plan schemes in the beginning but there is much that can be done later by the many women whose only asset for war work is their genius for home making. The living problems faced by the girls who have gone to Washington have shown the need for a different solution in other centers of women workers. Many a girl who went to Washington, fired by patriotism, and more than ready to help out the Government, has come home again because she could not stand the sheer loneliness which faced her in her leisure hours. Here was a need for home-makers, indeed, and now, prompted by this lesson, we are calling upon the home making women to help out in the big problem of keeping the workers happy and contented, and, therefore, more efficient.

Home making, or more especially, home keeping, is something that is being done on a large scale by the Red Cross in its home service work. I know an interesting woman, an artist in her own particular and unusual field, that of making exhibits, who has just finished a home service exhibit to be used in enlisting interest and spreading information about the work. She says that home service is just plain neighborliness and being kind and friendly to people who need you. Surely this is something that every woman can have a share in. Most of us know less about the home service than we do about the Red Cross work overseas, but it is no less essential than the work abroad, because it builds up the second line of defense here at home and looks forward to after war days. Cooperating with the Government, the Red Cross looks after the families of the soldiers. If the Government

## "Most Frequently Useful"

When it comes to the selection of an encyclopædia, no one can better solve your problem than the librarians of the country, for it is their special business to know about books.

24 VOLUMES  
80,000 ARTICLES

Made in America;  
it covers the world

They know from actual study which sets of books are of the best type, most authoritative, best illustrated, most useful and especially which are most used.

And there is just one general reference work to whose credit the Nation's librarians place all these and other excellent and essential qualifications. That work is

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is a historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course has been reduced from three years to two years and six months. Every young woman who enters a training school for nursing to-day renders a patriotic service by releasing a pair of trained hands for service "Over There."

For Information write to MISS AGNES S. WARD, Superintendent

## THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York  
FIFTY-SECOND YEAR

A School in the Heart of the Open Country. For Boys from 9 to 19.

**LOCATION:** 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.

**WORK:** Preparation for College or Business Life: recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every seven boys.

**ATHLETICS:** Two fields with excellent facilities for all sports, under supervision: hiking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

## HARTFORD THEOLOGICAL SEMINARY

Scientific methods with practical training for the ministry. Large faculty and library.

Graduate fellowships, both foreign and resident. Open to college graduates of all churches. Associated with Hartford School of Religious Pedagogy Training Sunday School and other lay workers. Kennedy School of Missions, fitting for foreign service. Address M. W. JACOBUS, Dean of Seminary Hartford, Conn.

## Union Theological Seminary

Broadway at 120th St., New York City

The charter requires that "Equal privileges of admission and instruction, with all the advantages of the Institution, shall be allowed to Students of every denomination of Christians." Eighty-third year began September 25th, 1918. For Catalogue, address THE DEAN OF STUDENTS.

## HOME STUDY

(27th Year)

Business Communication, Forms of Public Address—and more than 400 other Academic and professional courses are offered by correspondence. Address:

The University of Chicago  
Division 6, Chicago, Ill.

## NEW OPPORTUNITIES

are opening daily for trained men and women. Never has the demand been so great and the pay so large. Our free booklet explains how, in your spare time at home, you may become a Certified Public Accountant, Cost Accountant, Banker, Broker, Corporate Secretary, Business Organizer, Advertiser, Salesman and Real Estate Expert by our easy system. Send for booklet and state which course interests you.  
Universal Business Institute  
182 Pullman Bldg.  
New York

allotment is delayed and there is no money to buy the new pair of shoes that Johnny must have to wear to school, the Red Cross advances the money to Johnny's mother, and lets her pay it back when she can. If Susie has a cold and her mother is too busy running elevators or ringing up fares to have time to take her to the doctor, the home service worker volunteers her aid and Susie is properly taken care of. The most important as well as the most interesting aspect of home service is where it touches the foreign population. In many cases, the first actual contact with the United States as a Government and a nation has come to these foreign families thru the drafting of the men of the family into service. Home service work with these families is Americanization work of a most essential and vital sort.

Ship building is something which appeals to every one as having a very close connection with war activities. It is something, too, which is enlisting the services of women in every possible phase of the work. The drafting room of the shipyard has an open door for the woman who knows drafting or even drawing. It even looks with favor upon the artist who is beginning to feel useless these days. One of the large shipyards near New York called up my office the other day and demanded two hundred girls and women immediately. This particular shipyard is replacing every man in its office staff with a woman, and the president assures me that the wage scale will remain the same. One of the big plants of the Emergency Fleet Corporation is trying out the interesting scheme of a woman paymaster, whose chief qualification must be the ability to hold her own when the laborers in the yard complain about the state of their pay envelopes. It would seem strange, however, that any laborer should have cause to complain of the amount of money in his pay envelope in these days of inflated wages.

Another field, more highly specialized, in which women are replacing men as far as possible is chemistry. So desperate is the need for women chemists that one of the largest manufacturing plants in the country is actually offering to take on college girls who know nothing of chemistry and train them along the lines of the rather specialized methods employed in its factory.

In the realm of sciences, psychology is also among those much in evidence at the present time. It links up in a most interesting fashion with all sorts of war work. Psychiatry—the application of psychological methods to the rehabilitation of shell-shocked soldiers—is another phase of occupational therapy, in which the knowledge of abnormal psychology is not only valuable but necessary. Simple psychological tests are used by the officers who examine men for military service and the factory employment managers use similar tests in determining the fitness of workers for their jobs.

Wireless telegraphy is attracting many women who have the necessary background of physics and mathematics for the special training in radio work. The navy is taking on women as yeomen to do shore duty at the wireless stations. Being a yeoman is not so merely picturesque as the newspapers would have us believe. To be sure you can wear a navy uniform, but you also work seven days a week and enlist for the duration of the war. Definite war service it is, however, and every girl who becomes a yeoman can have the satisfaction of knowing that she is releasing, as from prison, some sailor who has been fuming with impatience and disappointment because he had to spend his days in an office instead of on the deck of a destroyer somewhere on the Atlantic.

INDEPENDENT CORPORATION

Division of Business Education

119 West 40th Street New York

If I were asked what I considered the one thing most in demand at the present time—indeed what seems often to be the most essential thing—I should almost be inclined to say, stenography. That sounds very mundane and uninteresting, I know, but the fact remains that it is true. Everywhere they are calling for stenographers. There was a time once when Washington had our office on the long distance wire every day fairly pleading with us to send them good stenographers. Army units of fifty and a hundred girls for stenographic work in Government offices overseas are being constantly recruited. The big business houses and manufacturing plants engaged in essential Government work, having lent all their former stenographers for service in Washington, are now calling for others to take their places. It would almost seem that the war will be won by stenographers!

Finally in your search for a war job, always remember one thing. Any essential work is war work. You don't have to be enlisted in the Red Cross or the navy or in Government service. Wherever you are and whatever you are doing, if your job is necessary to any person or anything that is contributing, even indirectly, toward winning the war, then your job is a war job.

## MY TRIP TO THE BELGIAN FRONT

(Continued from page 59)

Lieutenant Hickey said, "I am mighty glad I got that German. He is my third, tho I think I have got six others that came down in their own lines. But I am particularly gratified that I got this one because, three weeks ago, I wounded a German biplane with a pilot and observer aboard and forced them to land. They reached the earth two minutes ahead of me and by the time I had landed they had left their machine and walked a couple of hundred feet away. Thinking that they would be sportsmen I immediately went over to them and asked them to shake hands with me. One of the Germans refused point blank and the other finally did so tho in a shamefaced manner. I returned to look at the trophy I had captured and stood with my hand resting on the machine talking to a Belgian officer not three feet from me who had in the meantime rushed up. Belgian soldiers had also come running up from all sides and they stood in a circle about us. All of a sudden a terrific explosion occurred, the Belgian officer three feet away from me was blown into bits, eight Belgian soldiers were killed outright and ten others were wounded. How I escaped I cannot to this day understand altho my face as you see was covered with powder and the stain has not come out yet. That my life was saved is nothing less than a miracle."

It seems that the Germans had left a time bomb in the aeroplane and that was the thing that had exploded. It was also the reason why the Germans had walked away before Hickey landed.

"Before we could stop them," continued Lieutenant Hickey, "the Belgians took out their pocket knives and slashed both the Germans to pieces."

Lieutenant Hickey then took me to his little cubby hole of a bunk in the officers' headquarters and showed me all the various pictures and souvenirs on his wall. He also as a parting memento presented me with the photograph of himself and "Billie," which I herewith reproduce, and also a signal shell which he carried with him in the machine on the previous day when he killed the Roche, the signal giving a green light by night and emitting a puff ball of green smoke by day.

## Worth-While Books

### Our Admirable Betty

By JEFFERY FARNOL

Author of "The Broad Highway"

A joyous and vigorous romance of the period of "The Broad Highway."

\$1.60 net.

### The Zeppelin's Passenger

By E. PHILLIPS OPPENHEIM

Author of

"The Kingdom of the Blind"

"The Pawns Count"

LITTLE, BROWN & CO., BOSTON

STATEMENT OF THE OWNERSHIP MAN-  
AGEMENT, as required by the Act of Con-  
gress of August 24, 1912, of The Independent  
With Which Is Incorporated Harper's Weekly,  
published weekly at New York, N. Y., for  
October 1, 1918.

City of New York,  
County of New York, ss.

Before me, a notary public in and for the  
State and County aforesaid, personally ap-  
peared Frederic E. Dickinson, who having  
been duly sworn according to law, deposes  
and says that he is the Secretary of Inde-  
pendent Corporation, owner of The Inde-  
pendent With Which Is Incorporated Harper's  
Weekly, and that the following is, to the best  
of his knowledge and belief, a true statement  
of the ownership, management, etc., of the  
aforesaid publication for the date shown in  
the above caption, required by the Act of  
August 24, 1912, embodied in section 433,  
Postal Laws and Regulations, printed on the  
reverse of this form, to wit:

1. That the names and addresses of the  
publisher, editor, managing editor, and busi-  
ness manager are: Publisher, Karl V. S. How-  
land, Editor, Hamilton Holt, Associate Edi-  
tor, Harold I. Howland, Managing Editor,  
none, Business Manager, none, all of 119 West  
Fortieth street, New York, N. Y.

2. That the owner is Independent Corpora-  
tion, 119 West Fortieth street, New York,  
N. Y. Names and addresses of stockholders  
holding 1 per cent. or more of total amount  
of stock: Charles B. Alexander, 165 Broad-  
way, New York, N. Y.; James Douglas, 99  
John street, New York, N. Y.; Hamilton Holt,  
119 West Fortieth street, New York, N. Y.;  
Estate of William B. Howland, 119 West  
Fortieth street, New York, N. Y.; Madeline  
Howland, 107 Harrison avenue, Montclair, N.  
J.; Karl V. S. Howland, 119 West Fortieth  
street, New York, N. Y.

3. That the known bondholders, mortgagees,  
and other security holders owning or holding 1  
per cent. or more of total amount of bonds,  
mortgages, or other securities are: none.

4. That the two paragraphs next above, giv-  
ing the names of the owners, stockholders and  
security holders, if any, contain not only the  
list of stockholders and security holders as  
they appear upon the books of the company,  
but also in cases where the stockholder or  
security holder appears upon the books of the  
company as trustee or in any other fiduciary  
relation, the name of the person or corpora-  
tion for whom such trustee is acting, is given;  
also that the said two paragraphs contain  
statements embracing affiant's full knowledge  
and belief as to the circumstances and condi-  
tions under which stockholders and security  
holders who do not appear upon the books of  
the company as trustees hold stock and securi-  
ties in a capacity other than that of a bona  
fide owner; and this affiant has no reason to  
believe that any other person, association, or  
corporation has any interest direct or indirect  
in the said stock, bonds, or other securities  
than as so stated by him.

INDEPENDENT CORPORATION,

FREDERIC E. DICKINSON, Secretary.

Sworn to and subscribed before me this 26th  
day of September, 1918.

JOSEPH J. KOELBEL,

Notary Public, N. Y. County No. 318 New  
York County Register's No. 10,225.

(My commission expires March 30, 1920.)

## DIVIDENDS

### WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY.

A quarterly dividend of 1½% (87½ cents per  
share), on the PREFERRED stock of this Com-  
pany will be paid October 15, 1918.

A dividend of 1½% (87½ cents per share) on  
the COMMON stock of this Company for the  
quarter ending September 30, 1918, will be paid  
October 31, 1918.

Both dividends are payable to stockholders of  
record as of October 4, 1918.

H. F. BAETZ, Treasurer.  
New York, September 25, 1918.

## DIVIDEND NOTICE OF AMERICAN LIGHT & TRACTION COMPANY

The Board of Directors of the above Com-  
pany, at a meeting held October 1st, 1918, de-  
clared a CASH dividend of 1½% on the Pre-  
ferred Stock, a CASH dividend of 2½% on the  
Common Stock, and a dividend at the rate of  
2½% shares of Common Stock on every one hun-  
dred (100) shares of Common Stock outstanding,  
all payable November 1st, 1918.

The Transfer Books will close at 3.00 o'clock  
P. M. on October 11th, 1918, and will reopen at  
10.00 o'clock A. M. on October 28th, 1918.

C. N. JELLIFFE, Secretary.

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT  
HIGH SCHOOL, NEW YORK CITY

#### I. Liberty Bonds or Scraps of Paper. By Alfred Noyes.

1. Ask your teacher to read aloud to your  
class Alfred Noyes's poems, "The Barrel-  
Organ" and "The Highwayman." After the  
reading, express your own opinion of the  
worth of Alfred Noyes as a poet.
2. What manly characteristics of Alfred Noyes  
are made evident in the article?
3. Give a speech in which you apply the prin-  
ciple of thought of the article to the conduct  
of inter-school athletics.
4. Write a letter to one who has pro-German  
tendencies, showing him that the war is  
being fought "for every nation, even includ-  
ing Germany."
5. Write a paragraph of specific instance on  
"Perverse Individuals Who Wish to Develop  
Life at the Expense of Others."
6. Write the concluding paragraph of an ora-  
tion on "Law, in Whose Service Is Perfect  
Freedom."
7. Write a paragraph of cause and effect on  
"Why Germany Is the Most Criminal of All  
Nations."
8. Give your class a spirited talk, based on the  
article, urging your fellow students to assist  
in the sale of Liberty Bonds.

#### II. Our Practical Program for Peace. By President Wilson.

1. Write clear, expository paragraphs on the  
following: (a) This Is a People's War. (b)  
The Real Issues of the War. (c) Why There  
Can Be No Peace by Compromise. (d) Im-  
partial Justice. (e) The Need of a League  
of Nations.
2. Select five strikingly emphatic, and remark-  
ably well-worded sentences. Explain the sen-  
tences you select.

#### III. My Trip to the Belgian Front. By Hamilton Holt.

1. How does Mr. Holt make the article per-  
sonal instead of formal?
2. Show how Mr. Holt combines narration, de-  
scription, and exposition.
3. Write short paragraphs, or give short talks,  
on the following: (a) British Officers in  
War Time. (b) The Character of the Bel-  
gian Soldiers. (c) A Battle in the Air. (d)  
German Treachery.

#### IV. Wartime, the Place and the Girl. By Norma B. Kastl.

1. Present, in the form of a synopsis, the vari-  
ous kinds of war work open to women.
2. Write a somewhat similar article in which  
you show what kinds of war work are open,  
in your community, to the members of your  
class.

#### V. The Master Builder. By Donald Wilhelm.

1. How does the introduction awaken interest  
in the subject of the article?
2. Point out the steps by which the author  
proves that Admiral Taylor has unusual  
merit.
3. How does the conclusion open up the sub-  
ject?
4. By what means does the author make the  
presentation of technical facts interesting?
5. Write a paragraph showing that the article  
makes one proud of the people of the United  
States.

#### VI. Editorial Articles.

1. For every editorial article write a single  
sentence that will express the principal  
thought of the article.
2. Write somewhat similar sentences that  
might be used as topic sentences for editorial  
articles concerning your school and its work.

#### VII. The Story of the Week.

1. Write an imaginary conversation between  
two men, one well-informed and one ignor-  
ant, concerning the importance of the col-  
lapse of Bulgaria.
2. Combine an account of the recent events on  
the Western Front with an appeal for the  
purchase of Liberty Bonds.
3. Write a letter to a friend of yours in a  
remote place, telling him of recent impor-  
tant events.
4. Prepare a large map of Palestine and the  
neighboring lands. Exhibit your map, and  
give a talk to your class explaining the im-  
portance of General Allenby's work.
5. Prepare a map to illustrate the recent vic-  
tories on the Western Front. Give a talk  
explaining their importance.
6. Give a Four Minute Talk showing what  
news of the week makes us all proud to be  
Americans.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,  
NEW YORK CITY

#### I. Why We Continue to Fight—"The Pres- ident Voices the World's Desire." "Our Practical Program for Peace," "Liberty Bonds vs. Scraps of Paper."

1. On what grounds may it be said that the  
President's address "sets forth . . . the  
peace aims, not of America alone, not of  
the Allies alone, but of the entire world"?
2. Show that: "It is against the evil here  
specified, the balance of power, conscription,  
armaments, secret diplomacy and entrenched  
interests, that President Wilson has spoken  
out."
3. What evidence is given in the editorial that  
our allies have not yet advanced to a plane  
of purposes as high and as unselfish as  
ours?
4. What are the issues of the war as stated by  
the President? What settlement of these  
issues does he demand?
5. Upon what ground does the President as-  
sert: "We still read Washington's immortal  
warning . . . with full comprehension and  
an answering purpose"?
6. How does the President justify his rejection  
of the various Teutonic "peace offensives"?
7. Show that Mr. Noyes's article is based on  
the same underlying idea as the President's  
address. Quote one or more sentences which  
express this idea.

#### II. The Assault on the Hindenburg Line—"Foch's Battue," "A Belgian Drive," "Closing In on Cambrai," "French Take St. Quentin," "Americans Gain in the Argonne," "Germany's Fatal Handicap."

1. Indicate on the map (a) the battle line as  
it was drawn last spring, (b) the extent of  
the three German offensives, (c) the terri-  
tory reconquered between July 18 and Sep-  
tember 12, (d) the points at which the Al-  
lied armies are directing their present attack.
2. Discuss the strategic significance of one or  
more of the points mentioned in the news  
items of this week.
3. What are the chances that the Germans  
will retire to a new line east of the French  
border before next spring? In this connec-  
tion study the editorial, "Germany's Fatal  
Handicap."

#### III. The Bulgarian Armistice—"One from Four Leaves Two," "Bulgaria Surren- ders," "Terms of the Armistice," "How It Happened."

1. What does the title of the editorial mean?  
Indicate on a map the conditions which  
justify the writer's conclusions.
2. Why is "the Berlin-Bosphorus-Bagdad rail-  
road" called "the spinal cord of the enemy  
coalition"?
3. What are the military and political condi-  
tions which led the Bulgars to withdraw  
from the war? What steps are still neces-  
sary before the Near Eastern question may  
be said to be settled?
4. "It is fortunate that Bulgaria is the first  
to give up," etc. Why?

#### IV. The War Over Here—"Enforced Econ- omy," "Cotton Control."

1. What means is the War Industries Board  
using to conserve material, labor, fuel,  
transportation? How are the regulations of  
the Board affecting your family? Your  
community?
2. Why should the cotton growers' right be  
protected in a way different from the pro-  
tection accorded to the producers of wheat,  
sugar, coal or any other essential com-  
modity?

#### V. Women and the War—"Behind the Times," "Wartime, the Place and the Girl," "Woman Suffrage."

1. Do you see any connection between the  
statements in this article and the statement  
of President Wilson that the granting of  
suffrage to women is a measure necessary  
for winning the war?
2. Tabulate the occupations suggested as es-  
pecially adapted to women. Add such others  
as occur to you as a result of your reading  
or of previous discussions.
3. If you know any woman engaged in war  
work ask her to give you her impressions  
so that you may retell them to the class.
4. If you were allowed to make the choice,  
which one of the suggested occupations  
would you select?

## HARPER'S WEEKLY

119 WEST FORTIETH STREET, NEW YORK

PUBLISHED EVERY SATURDAY BY

### INDEPENDENT CORPORATION

Karl V. S. Howland, President  
Frederic E. Dickinson, Secretary Wesley W. Ferrin, Treasurer

**NATIONAL EFFICIENCY**  
A monthly section devoted to business, personal and national efficiency. Official organ of the National Efficiency Society. Published in the third issue of The Independent each month

**THE COUNTRYSIDE**  
Incorporating The Countryside Magazine and Suburban Life. A monthly section devoted to sensible and efficient countryside living: better houses, better rooms, better gardens, better roads and better towns. Published in the first issue of The Independent each month

## REMARKABLE REMARKS

**C. C. REX**—The best Germany can do is to prepare for the worst.

**H. G. WELLS**—The British mind has never really tolerated electricity.

**PAUL ROHRBACH**—Are Hindenburg and Ludendorff gods? Can they do no wrong?

**THEODORE ROOSEVELT**—I would register the young women just as much as the young men.

**GERTRUDE ATHERTON**—It is the private ambition of every good American to catch a spy.

**PREMIER CLEMENCEAU**—This is no time to talk. "Yes" and "No" cover all essentials.

**JOHN D. ROCKEFELLER, JR.**—No longer can any man live to himself alone nor any nation.

**GENERAL MARCH**—There is a little bit too much of obeying superior officers without question.

**BIDE DUDLEY**—Mary Pickford's name before she went into the movies was Gladys Marie Smith.

**H. L. BRAILSFORD**—Ideal justice is a moral dynamite which would wreck any human society.

**JOHN GALSWORTHY**—It is manner rather than matter which divides the hearts of American and Briton.

**LUKE MCLUKE**—You have often met a married woman who is afraid to open her husband's mail. Neither have we.

**ED. HOWE**—Now that the railroads are in control of the Government why have we an Interstate Commerce Commission?

**THOMAS NELSON PAGE**—Italy feels that what she has borne and accomplished in the war has not been fully appreciated outside.

**DR. FRIEDBERG**—We are convinced that the German sword will win the victory and we share the view that this victory is not far distant.

**GENERAL PERSHING**—We rely on the churches at home to keep the people white hot with patriotism and courage until victory is won.

**DR. FRANK CRANE**—I have seen all kinds of wives, and by far the greatest number of successful ones were those that married poor.

**PRINCE MAXIMILIAN**—We must get against the world disorder of Trotsky, which destroys freedom, a world order which protects freedom.

**MAYOR COWGILL**—I know of no other city in the United States where citizens are so everlastingly swindled by the public service corporations as in Kansas City.

**R. K. MOLLTON**—We may look for a big influx of Germans who will give themselves up when Mary Pickford and Charley Chaplin get over there to entertain the Yanks.

**MARSHAL FOCH**—The way to surprise the enemy's morale is surprise in every sense of the word. It deprives him of the power to reflect and consequently to discuss.

**MAYOR LEWIS**—Women admire the male sex but are condescending to the individual whereas men admire individual women but are condescending toward the sex.

## THE NEW PLAYS

**Nothing But Lies.** The most delightfully foolish and humorous play of the season. Willie Collier surpasses himself. Go to it. (Longacre Theater.)

**The Saving Grace.** Wholesome and mirthful character comedy delightfully played by Cyril Maude and excellent company. Decidedly worth while. (Empire Theater.)

**The Awakening.** A strange mixture of five acts, an epilog and a vision with little action. A translation from the Russian, featuring Wilton Lackaye. (Criterion Theater.)

**Lightnin.** A novel and exhilarating comedy which has nothing to do with the war and in which the "worst liar in the West" turns out to be a "good fixer." (Gaiety Theater.)

**Everything** is the mammoth musical spectacle that the Hippodrome offers this year. With patriotism as the keynote, the show still maintains its reputation as being the best thing of its kind on earth. (The Hippodrome.)

**The Girl Behind the Gun.** "Pep" is the word that best describes this typically American musical comedy, starring Donald Brian and John E. Hazzard. Lots of snap in music and dialog. Not a dull moment. (New Amsterdam Theater.)

**Tea for Three.** A teapot tragedy of the eternal triangle: the jealous husband, played by Frederick Perry, the wife (Margaret Lawrence) and the third angle of the triangle (Arthur Byron). The dialog is clever and the dramatic situation sufficiently tense to keep the audience interested and rather more sympathetic than they ought to be with the wife and the Other Man. (Maxine Elliott Theater.)

## WILSON'S RIPOST

THE President's counter-query to Germany is a brilliant stroke of statesmanship. With one blow he cuts thru the camouflage and forces the enemy to reveal his real intentions. The question he put to the German Chancellor is likely to prove as famous in history as the question Lincoln put to Douglas which wrecked his political future.

The President occupies a position of unprecedented responsibility. No human being in the history of the world has had such personal power of decision in a question involving such momentous interests. The President had laid down on various occasions and in great detail what he regarded as the essential conditions of peace, conditions so far-reaching and exacting that they seemed Utopian to some of the Allies. The Chancellor unconditionally declares Germany's acceptance of everything the President said as a basis of peace negotiations. What could America's answer be? Should we throw up our hats and shout "Hurrah! We've won. The war's over." Certainly not, for various reasons, chief among which were the well-warranted distrust of German sincerity and the justifiable suspicion that this move was merely a trick to gain time for the German armies to escape Foch's nippers. Should we then dismiss it curtly as was quite properly done with the Austrian note? Certainly not, for the Austrian note merely asked for "a confidential and non-binding discussion of the basic principles for the conclusion of peace," while the German note purported to be a public and unreserved acceptance of the American terms. The Allies have officially declared their willingness to consider any genuine peace proposals at any time. To have refused absolutely to listen to such a fair-seeming plea would have put us in a wrong position before the outside world and strengthened the resistance of Germany. One of the chief grounds for the general execration of Austria is that when in July, 1914, she laid down her terms to Serbia and Serbia declared her virtual acceptance of them Austria nevertheless made war upon her just as if Serbia had not complied. If after a specious acceptance of our terms we should continue the war we should lay ourselves liable to misjudgment.

So the President did not take either of these two obvious courses, but adopted another measure that avoided both horns of the dilemma. He demanded that Germany prove both the authenticity and the sincerity of her proposals, the first by showing that the ostensible democratization of the German Government was genuine, and the second by declaring definitely whether his terms were really "accepted" or only "as a basis of negotiation."

The German Chancellor asked for an immediate armistice and a discussion of peace terms, two very different things, tho often confused in the popular mind. The President properly distinguished between them by refusing the first and

granting the second. In doing so he followed the same tactics that the Allies have just proved so successful in the case of Bulgaria. When the Bulgarian envoys appeared at the front and asked for an armistice to arrange the terms of peace they were told by the French commandant that no armistice would be granted, but peace negotiations could be opened at any time. So while the Bulgarian and Allied plenipotentiaries were discussing peace terms at Salonica the French, British and Serbian forces were rapidly approaching Sofia. Under such circumstances the usually dilatory habits of diplomats were speeded up and the treaty was signed within twenty-four hours. We may surmise that the document was not even engrossed but was dashed off on a typewriter. The Bulgars agreed to evacuate all conquered territory immediately and leave minor matters to be settled later. President Wilson now makes the same proposition to Germany and it is greatly to be hoped that she will accept it. No doubt we can this fall or next spring drive the Germans back to their own frontier, but that would necessarily involve not only heavy sacrifices of our own and the Allies' forces, but also the destruction of life and property in northern France, Belgium and Luxemburg, for which no victory could completely compensate. It is better to rescue these towns than to ruin them. If then any further fighting were necessary to gain our own terms it would be carried on in the territory of our enemies instead of that of our friends, just what the Kaiser has been most anxious to avoid. The question of when an armistice is to be granted is a purely military one which no one outside the General Staff is competent to decide. But peace discussions can be carried on without interfering with military operations and without impairing military efficiency. Our greatest victory in the war of 1812, the battle of New Orleans, was for lack of a telegraph fought after the treaty of peace had been signed in Belgium.

As a matter of fact peace discussions between the belligerents have been going on ever since the war began, both openly and secretly, both officially and unofficially, thru newspapers, periodicals and books, thru parliamentary debates, thru the resolutions of commercial and political bodies, thru the researches of scholarly organizations, thru the programs of labor parties, thru the intermediary of the Pope and neutral Powers, thru the declarations of opposing chancellories, thru the exchange of notes like the present and thru innumerable private channels by authorized and unauthorized individuals. The Nederlandsche Anti-Oolog Raad of The Hague publishes every week in *Holland News* forty or fifty pages of quotations from the discussions of peace terms in English, French and German. It was revealed not long ago that for ten months past active peace negotiations were carried on in private between the Emperor of Austria, the President of France, the Premiers of

England, France and Italy and various other important personages. Such secret negotiations President Wilson wants to stop and to substitute for them such open and free statements of demands and opinions as he has himself delivered. It is hard to teach old diplomats new tricks, but now even Germany seems disposed to follow his example.

Now all this public discussion of peace terms has not weakened the nerve of any belligerent and there is no reason to fear that its continuance will have an injurious effect. The present exchange of views does not differ essentially from the former except that Germany professes a willingness to make more considerable concessions. In 1916 Germany asked for a peace conference and in 1917 both the German and Austrian Governments declared an acceptance in general of the President's principles. These proposals were publicly discussed without in the least causing a relaxation in the fighting spirit of soldiers or civilians on either side. Nobody proposes a cessation of effort. Nobody proposes to trust Germany or to take her word or to risk anything on her good faith. That is why it is necessary to take every occasion to find out what she really means and means to do.

## PRECEDENTS OF TWO PRESIDENTS

**I**F the war continues till 1920, Woodrow Wilson should be nominated by all political parties to succeed himself. Lincoln's advice against swapping horses while crossing a stream would be the reason.

If the war is over before the next Presidential campaign, Woodrow Wilson should refuse to accept the renomination of the Democratic party if tendered to him. Washington's advice against a third term would be the reason.

## AMERICA'S FIELD MARSHAL

**T**HE American Expeditionary Force in France is under the absolute command of General John J. Pershing. But General Pershing is under the command of Field Marshal Foch. Marshal Foch is therefore America's supreme military leader in Europe. It is time that Congress should properly recognize this relationship in some suitable and substantial way. Why not grant the Allied Generalissimo a liberal honorarium? And why should not Secretary Baker, who is now in France, bestow on him one of America's war medals? The thanks of Congress and the conferring of American citizenship can come later.

We have the most appropriate precedent for such action. Congress voted Lafayette a grant of \$200,000 and a township of land for his services in securing the freedom of America. The United States has now more land and more wealth than it had then and Foch is our leader in a greater war.

## THE HEAD DEVILS

**I**N our first editorial written at the outbreak of the war in August, 1914, we declared what we regarded as the main issue of the coming conflict in these words:

Whom the gods wish to destroy they first make mad. Mad with the lust of power, drunk with their own egotism, the Head Devils have signed their own doom. Their days are numbered. The monarchs must go—and they will.

Since these words were penned fifty months have gone by, the most eventful months in the world's history. The war has widened and lengthened beyond our anticipation. New issues have arisen; old issues have dropt out of sight. But this issue, the irreconcilable conflict between democracy and autocracy, is seen more and more clearly to be the vital question.

President Wilson in his address of September 27 stated as one of the five issues of the great struggle:

Shall peoples be ruled and dominated, even in their own internal affairs, by arbitrary and irresponsible force or by their own will and choice?

The President declares that the present governments of the four Central Empires are untrustworthy and that we cannot bargain or come to terms with them. "The German people," he says, "must by this time be fully aware that we cannot accept the word of those who forced this war upon us." This puts it squarely up to the German people whether they will still continue to submit to a ruler claiming autocratic power by divine right. So long as they do they must bear the blame for all that is done in their name by their rulers. It is seventy years since the German people made any effort to shake off the kings and overlords who treated them with such contempt. During this time most of the other nations have got rid of royalty or reduced it to innocuous desuetude.

Every nation is really a democracy, only some of them do not know it yet. All power lies in the people, whether they use it or not. So it is absurd to absolve the German people of their guilt by throwing it upon the shoulders of their rulers. We hear it said: "The Hohenzollerns were to blame for the war." Very well. But the German people were to blame for the Hohenzollerns. It is so easy to get rid of a king if you do not like him. He can be disposed of in various ways. He can be shot like Nicholas II of Russia, Carlos of Portugal and Humbert of Italy; he can be stabbed like Julius Cæsar, Henri IV of France and Alexander of Serbia; he can be blown up with a bomb like Alexander II of Russia; he can be tried and beheaded like Charles I of England and Louis XVI of France; he can be tried and shot like Maximilian of Mexico; he can be induced to commit suicide like Abdul Aziz of Turkey; he can be poisoned like Mohammed II of Turkey and Charles III of Naples; he can be declared insane like Louis of Bavaria and George III of England; he can be imprisoned like Abdul Hamid of Turkey; he can be exiled like Napoleon Bonaparte and Manuel of Portugal; he can be persuaded to resign like Charles V of Spain and Louis Philippe of France; he can be deposed like Queen Liliuokalani of Hawaii and the Emperor of China.

Any way is a good way to get rid of a king, deposition, execution, assassination, exile; preferably the last, for then they don't die in the house. We do not recommend killing kings, for the crown prince is often worse. If the old stump is left in the ground it is liable to send up a new sprout any time. It is not necessary to take any violent action, any forcible action, any illegal action, any legal action, any action whatsoever. All a people needs to do is to stop taking off their hats to the king and forthwith the king vanishes and a common man stands in his place, perhaps even a useful citizen, who can mend shoes or chop down trees. It is a magic transformation, a miracle of unbelief. For centuries men tried to exterminate witches by hanging and burning them; still the witches multiplied. But the moment men ceased to believe in witchcraft all the witches mounted their broomstick hobbies and disappeared into thin air. The moment men cease to believe in kingcraft kings likewise will disappear forever from the face of the earth. You do not have to wave a wand or recite a spell. You need not even shake your head. All you need to do is to stop bowing it. Nothing in the world is so easy to do and few things are so well worth doing.

But because the Germans decline to do this the world rightly holds them guilty of all the crimes their kings commit. A monarch who rules by divine right is not responsible to his people. But his people are responsible for him. It does not matter whether they elected him or not. So long as his rule depends upon their obedience their ruler is their subject.

We need not go back in history for precedents. Three of the rulers of 1914 have lost their crowns: Constantine

of Greece, who prevented his people from joining the Allies and gave the Rupel forts to the Bulgars; Ferdinand of Bulgaria, who forced his people to join the Central Powers in the devastation of Serbia and Rumania; Nicholas of Russia, who oppressed his people and betrayed his allies. William of Prussia and Charles of Austria may profit by their example.

But to substitute one king for another, or one dynasty for another, does little good. A king is only a symptom. Royalism is a disease of the mind, epidemic in certain countries, and until it is cured there is no use in removing the excrescence either by a surgical operation or painlessly.

It may not be politic, it may not be possible, for the United States to start out on a crusade to rid the world of kings. To make war upon a peaceful people to compel them to conform their government to what we think is right would be a violation of the principle of democracy. A true democrat must sometimes acquiesce even in the perversion of the popular will just as the tolerant man must tolerate intolerance. But we must stick to what we think is right and say it even tho it offends our friends as well as our enemies. And we should make this one thing certain, that the forces of the American republic shall never be used to overthrow another republic or to put back upon the throne a ruler who has been ousted from it by his own people. We should further make it plain that the sympathy and support of the American people will now, as it always has during the last 140 years, be given to any people striving to free itself from autocratic rule and establish a real republic.

## A CITY A DAY

SUPPOSE every day the United States should take up one of its cities of 10,000 inhabitants and transplant it bodily to France. Suppose we picked out, for instance, the following thirty cities: Bisbee, Arizona; Redlands, California; Trinidad, Colorado; Brunswick, Georgia; Huntington, Indiana; Iowa City, Iowa; Fort Scott, Kansas; Frankfort, Kentucky; Bath, Maine; Albuquerque, New Mexico; Johnstown, New York; Grand Forks, North Dakota; Eugene, Oregon; Carlisle, Pennsylvania; Aberdeen, South Dakota; Clarksville, Tennessee; Annapolis, Maryland; Greenfield, Massachusetts; Adrian, Michigan; St. Cloud, Minnesota; Natchez, Mississippi; Columbia, Missouri; Anaconda, Montana; Beatrice, Nebraska; Reno, Nevada; Keene, New Hampshire; Asbury Park, New Jersey; Barre, Vermont; Martinsburg, West Virginia; Cheyenne, Wyoming.

Well, this is substantially what we are doing now. Every day an army of 10,000 American citizens lands in France. Every month the equivalent of all these thirty cities is added to the American Expeditionary Force.

## THE UNITED PEOPLE OF THE UNITED STATES

A gentleman responsible for the success of an important war activity writing from Washington says that American society in two years has become "single purposed, highly controlled, and standardized." The description is as true as the phrasing is terse. Five years ago we were all talking about the insidious progress of centralization in our industrial and in our political life. Looking back to those days of peace we realize that even in industry and in government the possibilities of centralization had hardly been touched, while as for our habits, our personal interests and our miscellaneous purposes we were a highly individualistic population, enjoying almost unlimited liberties.

For two years after the war began also we were far from being single purposed. We were, indeed, divided into two great hosts, one of which strongly felt that the United

States should get into the war and with unstinted effort back up the Entente Allies in resistance to the deadliest menace which had threatened civilization, while the other, holding by the traditions of isolation and avoidance of entangling alliances, worked actively to "keep us out of war."

When the time comes to review and analyze the influences that broke down opposition and committed this nation to "force to the utmost" it will probably be agreed that two were paramount, namely, the persistent invasion of American rights by the German Government gone mad in its thinking, and the cumulative infamy of German atrocity by land and sea.

There were, however, other causes at work upon the public mind, and since our entry into the war the unity of purpose which made decision has enormously been strengthened and extended by the demands which war effort has made upon every individual. Nothing creates such solidarity of thought and purpose as actual coöperative effort, and when the effort involves sacrifice an entire people rapidly becomes "single purposed."

Next to the unifying effects of the draft and the sending of our young men overseas, the financial demand probably has been and will continue to be most potent; and perhaps the Liberty Loans are even more effective in this particular than the income tax is. Unprecedented in magnitude, the loans have appealed as no previous public debt ever did to every element in the population—the well-to-do and the poor, the urbanites and the farmers, men and women, the old and the young. By issuing bonds of low denominations and by supplementing them by savings stamps everybody, including the school boy and the school girl, has been given a property interest in the democratic civilization for which the soldiers on the battle fields and in the trenches are offering their lives.

How important this circumstance is we probably do not yet realize. Its consequences will not end with the war. It has always been the theory of our democracy that a broad diffusion of wealth and a multiplicity of small property owners have assured the stability of our political conduct and of our institutions. The assumption is sound. Hitherto cheap land, which the Preëmption and Homestead Acts put within the reach of multitudes has been our chief instrumentality in democratizing property. The Liberty Loans may easily prove to be of equal importance.

After the Civil War and especially in the ten years from 1876 to 1886 there was a good deal of class antagonism to bondholders. It was alleged that the bonded indebtedness incurred in the war had become an obligation payable to a relatively small, unproductive class of bondholders. That was the era of the resumption of specie payments. The value of gold was rising, prices were falling, and there had been a long, hard period of industrial depression with extensive unemployment. Farmers were not prospering, and farms were mortgaged. It was not strange, therefore, that "idle bondholders" were an especial object of objugation. So far, therefore, from uniting the people the Civil War debt seriously threatened another disruption.

A similar danger need not now be feared. The Civil War loans were bought and held almost exclusively by the well-to-do. The Liberty Loans will have been bought and held by the entire people. It would be a misfortune if thru any development of economic circumstances a strong tendency should show itself after the war to concentrate the holdings. Every artificial incentive to such a result should be resisted. The Civil War loans were made the basis of the note circulation of the national banks. The device served a financial purpose, but it was politically unfortunate. The people should now realize the immense psychological and practical value of the universal holding of the Liberty Loans, and by all proper means endeavor to maintain the widest possible diffusion of this property interest in a democratic civilization.

# THE STORY OF THE WEEK

## Germany Accepts Wilson's Terms

The Liberty Loan address of President Wilson of September 27 was published in full in German papers and was received more favorably than any previous utterance of the President by all parties except the imperialists. The new Chancellor promptly declared his acceptance of it as a basis for peace negotiations and sent a note to Washington thru the Swiss Legation asking the President to arrange for an armistice and a peace congress.

In his first address to the Reichstag as Chancellor, on October 5, Prince Maximilian declared:

I have taken this step not only for the salvation of Germany and its allies but of all humanity, which has been suffering for years thru the war. I have taken it also because I believe the thoughts regarding the future well being of the nation which were proclaimed by Mr. Wilson are in accord with the general ideas cherished by the new German Government and with it the overwhelming majority of our people.

The program of the majority parties on which the new Chancellor takes his stand accepts as its fundamental principles the reply of the Imperial Government to the Pope's peace plea of August 1, 1916, and the Reichstag resolutions of July 19. "It further declares willingness to join a general league of nations based on a foundation of equal rights for all, both strong and weak."

The declaration in regard to Belgium goes farther toward meeting the wishes of the Allies than any previous official utterance:

It considers this solution of the Belgian question to lie in the complete rehabilitation of Belgium, particularly of its independence and territorial integrity. An effort shall also be made to reach an understanding on the question of indemnity.

The greatest improvement in the German terms is, however, the willingness to cancel the treaties concluded by the Central Powers with Russia and Rumania and to grant real self government to the border provinces taken from Russia:

The program will not permit the peace treaties hitherto concluded to be a hindrance to the conclusion of a general peace. Its particular aim is that popular representative bodies shall be formed immediately on a broad basis in the Baltic provinces, in Lithuania and Poland. We will promote the realization of necessary preliminary conditions therefore without delay by the introduction of civilian rule. All these lands shall regulate their constitutions and their relations with neighboring peoples without external interference.

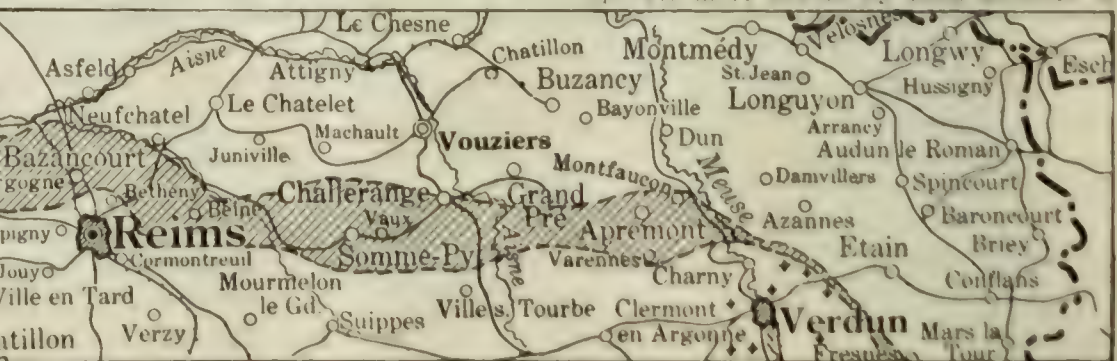

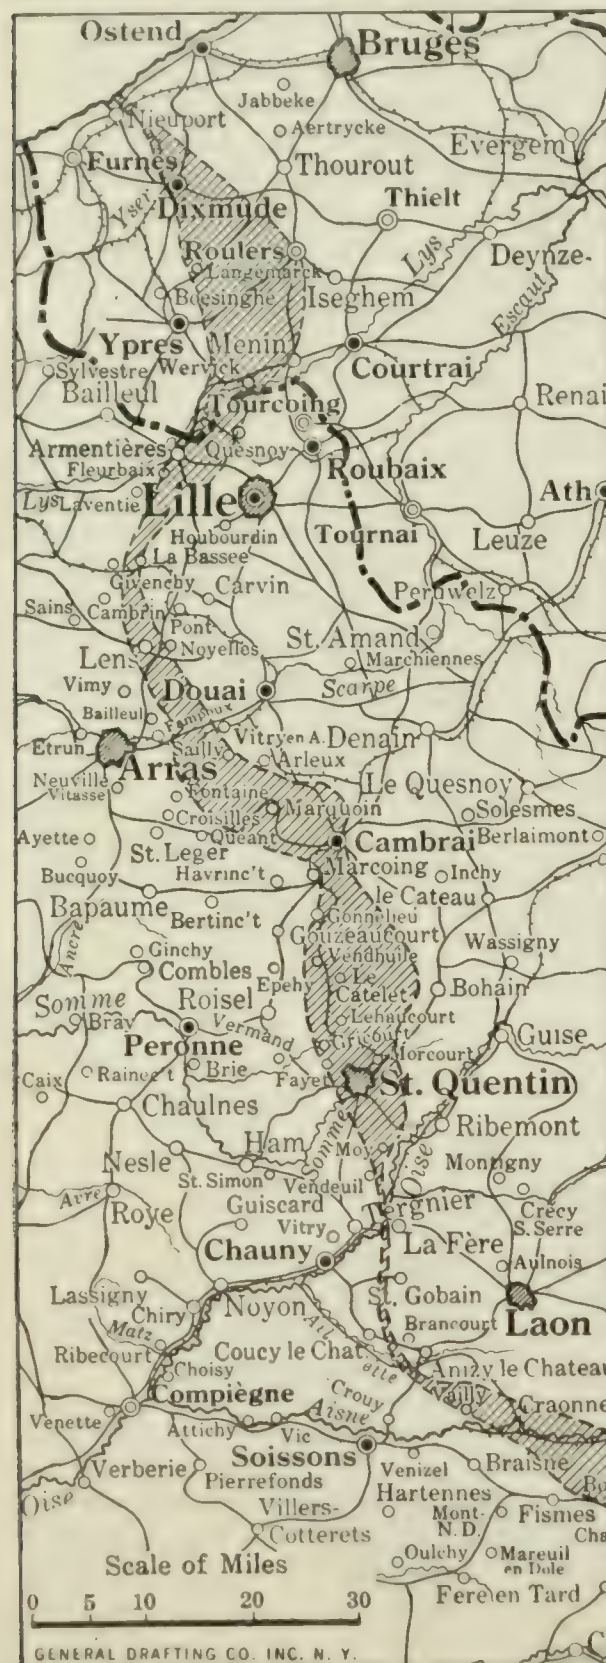

German Government To meet the present crisis a new Reorganized Government has been formed of various parties with Prince Maximilian of Baden at the head of it. Prince Maximilian is an opponent of the Pan-German and military party, and in an interview published early in the year he defended

the justice of President Wilson and the American war aims. Ambassador Gerard when in Germany tried to have him put in charge of the American prison camps. The new cabinet will include Scheidemann, the leader of the Majority Socialists, who have supported the war, and Adolf Gröber and Mathias Erzberger as representatives of the Center or Clerical party, who have been appointed secretaries of state without portfolio. The support of the Progressives and National Liberals has also been secured. This leaves outside the coalition only two parties, the Minority Socialists, who have opposed the war all thru and are still unreconciled to the Government, and the Conservative or Pan-German party, which is furious at the idea of democratizing the administration and making peace. The *Berliner Nachrichten*, a Krupp organ, says:

The Imperial standard has been hauled down and the red flag of the Socialists has been put up. On October 2 came the virtual end of Kaiserdom.

The radicals and liberals only consented to support and enter the new ministry on condition that it should be actually responsible to the Reichstag. This involves a democratic suffrage, the admission of Reichstag members to the cabinet, and the abolition of Article IX of the constitution, which permits the members of the Bundesrat (the German Senate) to appear at any time in the Reichstag. If these reforms are carried out in good faith it means that the German Empire, that has really been ruled by an oligarchy under autocratic control, would be transformed into a genuine parliamentary government on a democratic basis. Over a year ago the Kaiser declared his intention of reforming the Prussian franchise so that every man should have an equal vote, but this measure has never been carried out in spite of the reiteration by Chancellor von Hertling that it was necessary for the preservation of the dynasty. In his decree of September 30 accepting the resignation of Chancellor von Hertling the German Emperor declared his determination of inaugurating representative government in these words:

I desire that the German people shall cooperate more effectively than hitherto in

DRIVING BACK THE GERMANS ALL ALONG THE LINE

The shaded area shows the gains of the last few weeks as compared with the old line held by the Allies up to the beginning of 1918. During the past week the British have taken Lens and Cambrai and cut thru the Hindenburg line to Bohain. The Germans have been driven back from Reims by the French and back from Verdun by the Americans.

deciding the fate of the fatherland. It is therefore my will that the men who have been borne up by the people's trust shall in a wide extent coöperate in the right and duties of government.

It will be observed that the Kaiser adheres to the autocratic form even in the decree which purports to limit his powers.

**The Relief of Reims** The noose which encircled Reims is at last relaxed and for the first time in four years the city is free from German fire. A farewell shot brought down a few more stones from a shattered arch of the famous cathedral. Most of the buildings have been demolished by the long bombardment.

The Reims salient was wiped out by the application of Foch's pincers tactics. Beginning on October 3, General Gouraud advanced on the east side of Reims and General Berthelot on the west side. Both reached the Suippe River, so the German commander, General von Mudra, evacuated the forts in between from which Reims has been shelled. The Germans have now retired ten miles from the city and it is doubtful whether they can hold their new lines on the Suippe and the Arnes. Americans in the Foreign Legion fired their first shots of the war before Reims in 1914, and in the final clearance of the Germans from this region the Americans who fought at Chateau Thierry participated.

**Americans on the Meuse** Pershing has widened his offensive on October 8 by attacking on the east as well as on the west side of the Meuse River, which runs thru Verdun. Here the Americans, with the aid of the French troops, under Pershing's command, took half a dozen villages and brought the number of prisoners up to a total of 3000 for the day.

The western flank of the American line rests on the Aisne River, where it joins the French line at Lancon and Senuc. Here the French and Americans together are advancing on the railway junction of Grand Pré. The Germans were cleared out of the last corner of the Argonne forest on October 7 by the Americans in bloody battle during a heavy rain and hail storm. This rescued the "lost battalion" of American soldiers, which had got separated from the rest during the fight in the forest four days before and had been completely surrounded by the Germans. This unit was composed of three or four hundred infantrymen under Major Charles Whitney, and, since they had advanced without their packs, they had no blankets to protect them from the cold and storm. When their food was exhausted they tried to live on oak leaves. Attempts were made to drop chocolate and cartridges from airplane flying over, but the wind carried the parachutes into the German lines. Altho weakened by privation and almost out of ammunition, they managed to hold off the enemy until relief came.

Advices from the front are now endeavoring to eradicate the popular impression instigated by earlier reports

Press Illustration

#### KING BORIS OF BULGARIA

The crown prince succeeded to the throne abdicated by his father, Ferdinand, when Bulgaria asked the Allies for an armistice.

that the German soldiers generally are demoralized by adversity and weakened by privations, an impression likely to lead to wrong conclusions as well as derogatory to American valor. Major Moorehead, in charge of a base hospital on the Meuse receiving the German and American wounded, is quoted as saying:

Taking the Americans and Germans as two general classes, experience has gone to show that the German soldier is tougher physically. He shows no depreciation in vitality that can be noticed and is up to the standard physical specimen. Our men have found no evidence of debilitation because of lack of food in the last four years.

E. L. James, the *New York Times* correspondent, writes:

The fighting is as bloody and difficult as any the war has seen. It should put an end to the present talk about German morale. Their machine gunners fight generally until they are killed and effect a formidable barrier to any advance. Despite the protection of the ravines, hills and woods being to their advantage, the German losses have in two days in the Argonne been terrific.

**Boris of Bulgaria** Ferdinand, who for thirty-two years has been ruler of Bulgaria, abdicated the throne on October 3 in favor of his eldest son, Prince Boris of Tirovno. The new sovereign is said to have received an enthusiastic reception from Parliament and people. He is twenty-four years old and has been brought up in the Orthodox faith, which is the state religion of Bulgaria, instead of the Roman Catholic, which is the faith of his father. Ferdinand has returned to Austria, whence he came, and will devote himself to botany, which has always been his favorite pursuit.

The Bulgarian Socialists have announced their intention of supporting the Government on condition that it makes peace with the Allies and undertakes to reestablish the Balkan League of 1912.

The first act of Boris III, Czar of the Bulgars, was to sign a decree demobilizing the Bulgarian army in accordance with the armistice. German and Austrian troops and civilians are ordered to leave Bulgaria within a month. Apparently they are complying,

but there are rumors that General Mackensen with 250,000 troops has occupied Sofia, the Bulgarian capital, and intends to defend Nish, the war capital of Serbia, and the railroad to Constantinople.

The Austrians are withdrawing from Albania, burning their depots of supplies to prevent them from falling into the hands of the Italians, who are following closely. The French and Serbs have advanced northward thru Serbia so rapidly that they have overtaken 1500 Austrians and captured a dozen big guns. The Greeks have reoccupied Seres and all the Macedonian territory that King Constantine ceded to the Bulgars three years ago.

**The War in the North** The joint expedition which entered Russia from the Arctic continues to advance, altho against considerable opposition. The American units under Colonel Stewart have taken a leading part in the operations and have suffered some losses thru being ambushed by the Bolsheviki. The expeditionary force comprises contingents of British, American, French and Russian forces altogether under the command of the British General Poole. The movement into the interior is being carried on in two lines. The aim of the first is to gain possession of the railroad starting from

#### THE NEW GERMAN CHANCELLOR

Prince Maximilian of Baden, who takes the place of Count von Hertling as German Chancellor, is a younger and more progressive man. He was born in 1867 and married Marie Louise, Princess Royal of Great Britain and Ireland. He is heir presumptive to the Grand Duchy of Baden, one of the smaller and more liberal German states, and it has been suggested that he might replace the King of Prussia as German Emperor in case the Hohenzollerns were deprived of imperial power and Prussia lost its hegemony. On December 15, 1917, he created a sensation by declaring the necessity of peace negotiations and saying: "Power alone can never secure our position, and our sword alone will never be able to tear down the opposition to us." Ambassador Gerard says: "The Prince is a man who knows English perfectly, and is one of the high Germans who seem to be able to think like an ordinary human being."

Kola on the Murman coast and running south along the Karelian coast on the western side of the White Sea. This line is threatened by attack from the Finnish frontier, which parallels it on the west. By working down the railroad thru the forests in armored cars, rebuilding the bridges and relaying the track, the Allied troops reached the town of Ukhtinskaya, which had been fortified under German supervision. This was captured after a hard fight and the Bolsheviks driven out of southern Karelia.

The second branch of the expeditionary force started from Archangel and is following up the Dvina River and its tributaries. The Bolsheviks, when they retreated from Archangel into the interior, took with them the fast river steamers of the Mississippi type, leaving the Allies to follow them with such various craft as they could pick up. The expedition left Archangel on September 14 and by the end of the month had advanced over three hundred miles up the Dvina and Vaga rivers. The Bolsheviks had sunk barges and sown mines in the channel. They also sent out gunboats from their bases at Kotlas on the Dvina and Velsk on the Vaga. But with the aid of a British monitor and river boats armored for the occasion the expeditionary troops overcame these obstacles and inflicted heavy losses on the enemy. At last accounts the Americans were lodged in the Cossack barracks at Shenkursk on the Vaga.

The Bolsheviks are said to be steadily losing power among the people in spite of their desperate efforts to crush opposition by the wholesale slaughter of their enemies. Their main dependence has hitherto been the Letts, who, because of their years of oppression from German landlords and Russian officials, were zealous revolutionists. The Lettish troops maintained their discipline and organization when the Russian army went to pieces. This force numbered about 17,000 and most of them were kept in Moscow as a sort of "Swiss Guard" to protect the Bolshevik leaders from assassination and counter-revolution. But when the Czech menace became serious an attempt was made to employ them in putting down this movement. The Letts, however, disliked to fight the Czechs and when the Czechs attacked Kazan the Lettish troops surrendered to them in a body.

**Various Russian Governments** The Allied expeditions entering Russia from the north, south and east for the purpose of aiding the reestablishment of law and order are having difficulty in finding any stable elements to build upon. The Government of the North, headed by Nikolai Tschaikevsky, which invited the Allies to the Murman coast, could not maintain itself even with the support of the Allied forces. At Vladivostok the population is divided into various factions mostly hostile to the Japanese and their allies.

Two points appear as possible nuclei on which a future government may

Darting in New York Tribune

LET'S THOROLY UNDERSTAND EACH OTHER, WILHELM

crystallize. One is Omsk in Asiatic Russia and the other is Ufa in European Russia. At Omsk three governments have been set up in succession, but none of them have shown sufficient stability to command respect for its authority. The latest government was upset by Minister of War Mikaelov, who arrested and imprisoned his colleagues of the Cabinet and ordered the dissolution of the Duma or assembly. Minister Novikov, who refused to resign, was shot. But the Duma declined to dissolve and called in the Czecho-Slovak forces, who released the Cabinet and reinstated the old government. The Omsk Government will soon have a force of its own, for it has conscripted the 1918 and 1919 classes of young men and is having these trained by the military academy of Tomsk. More than 200,000 youths responded to the call to the colors and more than 30,000 officers are available for their training.

The new Provisional Government that has started up at Ufa claims dictatorial power as the successor of the

Kerensky Government of 1917. It was organized by a National Convention composed of representatives of all parties except the Bolsheviks. This convention unanimously elected five men who are to be irremovable and irresponsible and authorized to exercise supreme power over the whole territory of Russia until the Constituent Assembly meets. These five men are N. Tschaikevsky, of the Archangel Government of the North; V. Volodski, of the Western Government of Siberia; N. Astrov, former mayor of Moscow and a member of the Constitutional Democratic party; General Vassili Boldyrev and N. D. Avksentiev.

The aims of the Ufa Government are the overthrow of the Bolsheviks, the reintegration of Russia, the repudiation of the Brest-Litovsk treaties, the restoration of the treaties with the Allies, and the continuation of the war against Germany. The program does not specify whether the future Russian Government is to be a republic or a monarchy, and it is equally ambiguous on the vital question of land ownership. In contradistinction to the Bolsheviks it welcomes foreign capital and private initiative in the development of the productive resources of the country.

#### The Demolition of Durazzo

While the Italian forces are driving the Austrian troops back thru Albania the Allied warships are clearing out the Austrian naval bases on the coast. On October 2 Italian and British cruisers forced their way thru the mine fields and entered Durazzo harbor, where they bombarded the Austrian shipping there. Twelve American submarine chasers assisted similar craft of the Allies in protecting the cruisers from torpedo attack. The American chasers destroyed two of the Austrian submarines. An Austrian destroyer was torpedoed by the Italians. A hospital ship, which was allowed to leave the harbor, was taken charge of by the warships waiting outside. There was no damage done to our side except that one of the British cruisers was struck by a torpedo and slightly injured.

#### Shotguns

The American correspondents reported long ago that the American troops had found the sawed-off shotgun of the Wild West, the most effective weapon in trench warfare. The Germans having captured some of our patrols so armed declared it a violation of The Hague rule against the employment of "arms or projectiles of a nature to cause superfluous injury," and the following ultimatum was despatched to Washington thru the Swiss Minister:

The German Government protests against the use of shotguns by the American army and calls attention to the fact, according to the law of war every prisoner of war found to have in his possession such guns or ammunition belonging thereto forfeits his life. This protest is based upon Article 23 (E) of The Hague convention respecting laws and customs of war on land. Reply by cable is required before October 1, 1918.

On the day before the date named

#### THE GREAT WAR

October 3—Lens evacuated. Austrian naval base at Durazzo, Albania, destroyed by British, Italian and American warships.

October 4—German Chancellor asks for armistice and peace negotiations. Ferdinand, King of the Bulgars, abdicates.

October 5—Prince Maximilian states peace terms to Reichstag. Gouraud clears Germans from around Reims.

October 6—Tewfik takes place of Talaat as Grand Vizier of Turkey. Explosion in munition plant at Morgan, New Jersey.

October 7—French fleet takes Beirut, Syria. French take Berry-au-Bac, near Reims.

October 8—Great British and American drive breaks thru Hindenburg line between Cambrai and St. Quentin. Cambrai taken. President asks meaning of German note.

October 9—Americans advance on both sides of Meuse. Anti-war socialist Liebknecht pardoned by Kaiser.

### THE CONQUEST OF PALESTINE

The British troops under Allenby defeated the Turks in the battle of Armageddon, took the ports of Acre and Haifa, and advanced beyond Damascus. The French fleet has taken Beirut

Secretary Lansing returned this answer:

In reply to the German protest the Government of the United States has to say that the provision of The Hague convention cited in the protest does not in its opinion forbid the use of this kind of weapon. Moreover, in view of the history of the shotgun as a weapon of warfare, and in view of the well known effects of its present use, and in the light of a comparison of it with other weapons approved in warfare, the shotgun now in use by the American army cannot be the subject of legitimate or reasonable protest.

The Government of the United States notes the threat of the German Government to execute every prisoner of war found to have in his possession shotguns or shotgun ammunition. Notwithstanding this threat, inasmuch as the weapon is lawful and may be rightfully used, its use will not be abandoned by the American army. Moreover, if the German Government should carry out its threat in a single instance it will be the right and duty of the Government of the United States to make such reprisal as will best protect the American forces, and notice is hereby given of the intention of the Government of the United States to make such reprisals.

It is pointed out by the Washington authorities that shot is no worse than shrapnel and that the Germans in their use of poison gas, flame throwers and saw-tooth bayonets are themselves violating the article to which they appeal.

**The Capture of Cambrai** Two of the main points in the Hindenburg line were the cities of St. Quentin and Cambrai. The former fell into the hands of the French last week. The latter has fallen into the hands of the English this week. The event had been anticipated by the Germans, who began to deport the population of Cambrai on September 7 at the rate of 15,000 a day. The homes and shops have been looted and a large part of the city destroyed by fire and bombardment, but the Cathedral and the Gothic Town Hall are still standing.

On October 8 a new offensive was launched against a twenty-mile sector of the Hindenburg line between Cambrai and St. Quentin, with the British on the left, the Americans in the center and the French on the right. A gain of three miles on the average was made during the day and 8000 prisoners were taken. The Americans engaged were chiefly men from Tennessee and the Carolinas in the Thirtieth Division, under General Lewis. In outflanking the valley south of Premont

the Americans took two complete field batteries and one of heavy artillery. Eight hours after the signal to charge was given the Americans and British had reached points beyond the limits of the plan of operations.

The attack was started in the middle of the night by gun fire of unparalleled intensity. The British cannon were drawn up wheel to wheel along the front. At one o'clock the Welsh troops

Press Illustrating

**LOOKING OUT FOR THE ARMY'S HEALTH** Surgeon-General Merritte W. Ireland, formerly Surgeon-General of the A. E. F., is now in charge of the health of all our troops. His appointment as Surgeon-General followed the resignation of Surgeon-General Gorzas

went over the top. At 4:30 the New Zealanders started out, and half an hour later the Americans. The first German lines were taken in complete darkness and long after sunrise the fog and smoke screened the advance. The Germans who sought refuge from the barrage in their dugouts were taken by surprise and surrendered. They had been told by their officers the day before that Germany, Austria and Turkey had asked for peace on President Wilson's terms and they expected the war would soon be over. Some of the American officers heard for the first time of the peace negotiations from their prisoners.

By the end of the second day the point of the wedge had been driven ten miles forward and practically thru the Hindenburg system of defenses. To the east is open country, where the enemy will have no protection until he falls back to the new line that he has constructed a considerable distance in the rear, probably between Valen-

ciennes and Sedan. Combined with the push of the French north from Reims and of the Americans north from Verdun this movement has put the enemy in a position from which he cannot extricate himself without serious losses and possibly disaster.

**Congress** While waiting for the preparation of the Revenue bill, now being revised by the Finance Committee of the Senate, Congress is "marking time." The Treasury has urged on the committee the need of the utmost haste, and its chairman has increased the number of hours devoted to its study. In the Senate the proposed investigation of the connection between the brewery interests and certain newspapers has been laid aside for a time. On October 3 Senator Overman introduced the post-bellum reconstruction bill elsewhere described, and Senator Ashurst presented a bill for Federal control of all war charities. The session on the 8th was largely devoted to vigorous speeches on Germany's peace plea, received on the 7th, and its unequivocal rejection was advocated.

The House, instead of taking an election-day vacation, agreed to take an informal recess from day to day until October 14, when a demand will be made for a quorum to begin consideration of the \$7,000,000,000 Army deficiency appropriation bill. Until then it is disposing of minor business on the calendar, the most important action thus far being the appropriation on October 8 of \$4,900,000 for the purchase and completion of a new drydock in Massachusetts.

**The New Draft** President Wilson was the chief actor in an impressive ceremony on September 30 at the Senate Office Building in Washington, to signalize the drawing of numbers that would indicate the order in which men included in the new draft would be called to service. The big room was crowded with officials, army and navy officers, and civilians, when President and Mrs. Wilson arrived; and at exactly noon the President was blindfolded, placed his hand in the big glass bowl, and drew out one of the 17,000 capsules containing the order numbers. The number he drew was 322, low enough to have a registrant representing it in

virtually every draft district of the country. Subsequent numbers were drawn by Cabinet members, Senators and high officers of the military forces for an hour or two, after which soldiers continued the task until it was completed at eight o'clock next morning. The lists were sent out on October 3 to the draft boards thruout the country, by which they were immediately published.

**Planning Reconstruction** Plans for restoring normal social and political conditions, or even improving them, following the close of the war, are engaging the attention of many publicists. Senator Weeks of Massachusetts, a Republican, introduced in the Senate on September 27th a resolution providing for the creation of a joint Congressional committee, strictly non-partizan, to study after-the-war problems and devise means of solving them. Problems affecting labor, capital and credit, public utilities, the demobilization of industrial and military war resources, foreign trade, new industries, the tariff, fuel production and distribution, housing, shipping, disposition of war legislation, "and in general all matters necessarily arising during the change from the activities of war to the pursuits of peace" would be taken up by this committee if created. Representative Madden introduced an identical resolution in the House.

A week later Senator Overman of North Carolina presented a bill expressing the Democratic idea of how these problems should be handled—not by a Congressional committee but by a Federal commission of five, to be appointed by the President, to contain three members of the President's party and two of the opposition, and to continue until at least two years after demobilization of the military forces.

With the same object in view, the

Mid-European Union has lately been organized in Washington. It combines representatives of almost all the races and linguistic stocks between France and old Russia, who have come together for a united effort to assist Non-Germanic Europe to get upon its feet after the weight of war has been lifted from it. The organization includes Czecho-Slovaks, Poles, Ukrainians, Jugoslavs, Lithuanians, Finns, Rumanians and Italians, and is open to any other group that wants to join. Its president is Professor Masaryk, President of the Czecho-Slovak nation, and the Union has received the encouragement of the Entente Governments.

Meanwhile the Union purposes to carry on a preparatory work of education in this country, and among its own peoples abroad, much after the methods of the Pan-American Union. It explains:

Differences of religion, of language, and of customs have been used to keep the various peoples composing the Union apart. Now these things are no longer to serve such ends. Both for the military need of preserving a strong front against the Central Powers, and to meet conditions in peace-making, and afterward, it is necessary that union replace dissension.

The Government has determined **Coal** that there shall be no lack of coal during the coming cold months despite the fact that the requirements for the Navy and for war-work have lifted the amount needed far above ordinary figures. Dr. H. A. Garfield, the Fuel Administrator, therefore issued an order that a definite amount of both bituminous and anthracite coal should be mined weekly during the next six months, under what he calls the individual responsibility plan. This plan is to assign to every mine in the country a quota to be produced weekly, based on its performances in the past (and the last three months have seen a far greater produc-

tion than any three months before ever made) and on present conditions. These local quotas determined, the Government puts it up to every district manager, every operator, every superintendent and boss, and, perhaps more important than all, to every miner, to see that the expectation is fulfilled. Dr. Garfield in his message tells the men that these quotas can be assured only by the "definite pledging of each miner to assume his equitable portion of his mine's allotment," which, he is reminded, represents "his proper individual contribution toward the winning of the war." The weekly bituminous production from now until mid-spring

must average 12,234,000 tons per week, and the anthracite tonnage 2,030,000 tons per week. During the same period last year the weekly production of bituminous was 10,503,000 tons and of anthracite 1,909,000 tons.

**Munitions Destroyed** The Gillespie shell filling establishment at Morgan, New Jersey, was partly destroyed during the night of October 5. This vast plant, consisting of scores of buildings and magazines widely separated, covered several square miles of territory south of South Amboy, and was devoted entirely to loading cannon shells with TNT (trinitrotoluol) and other explosives. An explosion at 7:40 p. m. in one of the buildings caused explosions in others near by, and set fires that threatened to spread thruout the whole establishment, and finally destroyed thirty-five buildings; yet large piles of loaded shells remained unexploded. Ninety men were killed at once and fifty more were seriously injured. Two or three adjacent villages were wrecked, a hasty exodus of inhabitants was ordered, and a military guard was placed about the field of danger, regardless of the bursting shells. Fires raged with occasional explosions until the next afternoon. Some of these jarred the country for several miles around, and caused the tall buildings in lower New York to rock alarmingly. The subways and tunnels under the Hudson and East rivers were closed for a few hours in fear that the big magazines might be reached by the fire, and that the consequent earthquakes would disturb these subterranean passageways.

By Saturday afternoon aeroplane observers reported the danger past.

**The Fish Supply Improved** The matter of a national fish supply has not been much in the minds of Americans in the past, except, perhaps, at a few ports in New England or on the Northwest Coast where salmon abound. Since the opening of the war, however, far more fish has been eaten than before, and many kinds not ordinarily seen in markets are now offered for sale—not to mention the whale flesh that may be bought almost any day in eastern cities at 25 cents a pound. The raiding of the fishing fleet on the Grand Banks of Newfoundland a few weeks ago by German submarines called everybody's

#### THE YANKS ARE COMING—SEVEN EVERY MINUTE

Three hundred thousand American troops are landed in France each month. Do you realize that that means seven more soldiers in France every minute of every day? This diagram may help you to picture the achievement more vividly. The editorial on another page "A City a Day" presents it in still another way

attention to the danger of losing the supply of this cheap and nutritious food. Its cheapness, however, is believed to have been diminished for a long time past by a restrictive combination of dealers in Boston, which has been under Federal and state investigation for several weeks. The men regarded as responsible for the monopolistic conditions complained of will soon be brought into the United States Court, charged with having conspired to control the fish market east of Buffalo and fixed prices that held good on certain important varieties as far south as Cape Hatteras.

Meanwhile an independent company of capitalists has completed arrangements at Gloucester, Massachusetts, and at Rockport, Maine, for active competition with Boston in catching and selling sea fish. It plans the immediate construction of a fleet of steam

trawlers, and of a large relay steamer equipt with facilities for receiving the catch at sea, and barreling it on the trip to the wharves, so that the fish can be rolled on the freight cars within a few minutes after the steamer is in.

Another part of the plan is the establishment of a fast freight service from the coast ports to distributing centers in the Middle West.

**Influenza Still Serious** The ravages of influenza, leading to pneumonia, continued thru the past week, with increasing fatalities in the West. All thru New England, schools and colleges were closed early in the week, factories crippled and business disorganized. New York City and its vicinity continued to suffer less than was to have been expected, thanks to the watchfulness of the port and municipal authorities and despite the crowds

formed about Liberty Loan centers. An order to open and close certain classes of stores, factories and offices at varying hours, so as to diminish the crowded condition of transportation lines in rush hours, helped the situation. In and about Philadelphia the danger was so great that schools, theaters, churches, saloons, and all public assemblages were closed, and this order was extended on October 3rd to cover all Pennsylvania. Similar precautions were taken at Indianapolis and elsewhere. Washington was hard hit, and the galleries of Congress were closed to visitors, and indoor church services prohibited on Sunday. In Chicago and other western and southern cities increase of new cases was reported daily, and on October 4th the Government announced that forty-three states were infected. The worst effect has been in the military cantonments east of the Plains.

## THE GERMAN PEACE PLEA

October 4, 1918.

*The German Government requests the President of the United States to take in hand the restoration of peace, acquaint all the belligerent states of this request and invite them to send plenipotentiaries for the purpose of opening negotiations.*

*It accepts the program set forth by the President of the United States in his message to Congress on*

*January 8 and in his later pronouncements, especially his speech of September 27, as a basis for peace negotiations.*

*With a view to avoiding further bloodshed the German Government requests the immediate conclusion of an armistice on land and water and in the air.*

## PRESIDENT WILSON'S ANSWER

October 8, 1918.

*Before making reply to the request of the Imperial German Government, and in order that that reply shall be as candid and straightforward as the momentous interests involved require, the President of the United States deems it necessary to assure himself of the exact meaning of the note of the Imperial Chancellor. Does the Imperial Chancellor mean that the Imperial German Government accepts the terms laid down by the President in his address to the Congress of the United States on the 8th of January last and in subsequent addresses, and that its object in entering into discussions would be only to agree upon the practical details of their application?*

*The President feels bound to say with regard to*

*the suggestion of an armistice that he would not feel at liberty to propose a cessation of arms to the Governments with which the Government of the United States is associated against the Central Powers so long as the armies of those Powers are upon their soil. The good faith of any discussion would manifestly depend upon the consent of the Central Powers immediately to withdraw their forces everywhere from invaded territory.*

*The President also feels that he is justified in asking whether the Imperial Chancellor is speaking merely for the constituted authorities of the Empire who have so far conducted the war. He deems the answer to these questions vital from every point of view.*

## GERMANY'S REPLY TO WILSON

This is the unofficial text as given out to the press:

October 12, 1918.

*In reply to the questions of the President of the United States of America the German Government hereby declares:*

*The German Government has accepted the terms laid down by President Wilson in his address of January the eighth and in his subsequent addresses on the foundation of a permanent peace of justice. Consequently, its object in entering into discussions would be only to agree upon practical details of the application of these terms. The German Government believes that the governments of the Powers associated with the Government of the United States also take the position taken by President Wilson in his address.*

*The German Government, in accordance with the Austro-Hungarian Government, for the purpose of bringing about an armistice, declares itself ready to comply with the propositions of the President in regard to evacuation. The German Government suggests that the President may occasion the meeting of a mixt commission for making the necessary arrangements concerning evacuation.*

*The present German Government, which has undertaken the responsibility for this step towards peace, has been formed by conferences and in agreement with the great majority of the Reichstag. The Chancellor, supported in all of his actions by the will of this majority, speaks in the name of the German Government and of the German people.*

An American destroyer and a British speeding together to answer the call of the balloon that has sighted something suspicious

## HOW WE BEAT THE U-BOATS

BY HERMAN WHITAKER

CORRESPONDENT OF THE INDEPENDENT  
AT THE BATTLEFRONT

A certain picture at the Royal Academy this year shows English fishermen on gaze at a long line of American destroyers emerging from a background of mist and rain. I am sure that no American can view that picture without experiencing a swelling in his throat. I should imagine that it might excite equal emotion in an Englishman. For that starry banner, streaming out in the mist, waves over a closed breach; signifies the healing of an old sore; stands for the concord of the Anglo-Saxon peoples, at last full and complete.

This brief account of the American Fleet's work during the past year may well begin with a review of the situation which the first units depicted in that picture found on their arrival in British waters last year. For the last two days of the voyage they cruised amidst the wreckage of torpedoed ships—boxes, barrels, crates; smashed boats, often with dead and dying men in them; drowned animals; alas! far too often, dead men and women, still upheld by life preservers.

Far better, however, than by any pen picture, the situation is set forth in the map on the opposite page, which approximately gives the sinkings of Allied ships during April, 1917. Each of the black dots and circles that surround the Allied coasts with a mourning border represents the ships sunk by torpedo, mine, or gunfire. But now, one year later, the month of April shows a happy reduction in sinkings of 70 per cent.

This striking change appears still more remarkable when we remember the tremendous volume of transport tonnage which was added to the normal merchant trade during the year. Troop and supply ships aggregating two and a quarter millions of tons streamed in a gigantic ferry across the Atlantic, carrying a million American soldiers to France. These ships had to be and were securely convoyed—so securely that even Hindenburg acknowledged the other day that it was suicide for a U-boat to attack them—and this extra service drew from the English and American fleets a large number of de-

stroyers which would otherwise have been used to protect merchant shipping and hunt down U-boats. It goes without saying, therefore, that but for this paramount necessity, the number of merchant sinkings would have been still less; the number of U-boats sunk, still more.

As it is, we may rest satisfied; for the most gratifying feature is found in the fact that during the last three months the two great curves that represent U-boats sunk and new ships built, show a remarkable acceleration. In the first year of the war the U-boat curve was little better than horizontal.

© Hadel & Herbert

Herman Whitaker on board a United States destroyer working in British waters

It really began to curve late in the following year, and has gone on bending upward more and more steeply, until, in the last few months, it threatens to become vertical. We are now sinking U-boats faster than the Germans can build them. We are building ships far faster than the U-boats can sink them. In the sense of a contest in which the issue is still at stake, the underseas war is over. Henceforth it descends to the level of privateering and sporadic raids, which will become fewer as the months go by.

This remarkable showing is, of course, the product of many factors—the introduction and extension of the convoy system; improved methods of hunting U-boats by depth-mine barrages; the perfection of listening devices; the use of Allied submarines to hunt down U-boats; the extension of the Naval Aviation Service, both American and English; the closing of Zeebrügge and Ostend; and blocking of other U-boat routes by new mine-fields; in all of which the American Fleet has assisted.

Before touching on its work, a word on its composition. Battleships, dreadnaughts, destroyers, scouts, cruisers, submarines, armed yachts, coast guard vessels, mine layers, and repair ships, make up the main body, which is manned by a personnel of more than 40,000 men. To this now has to be added over a hundred "chasers" and their crews; many thousands of men serving on troop and supply ships, naval transports, as armed guards, radio and signal men; naval gun crews furnished to merchant vessels; lastly, ten thousand men of the American Naval Aviation Service. Lumping them all together, a hundred thousand men would be a conservative estimate of the American naval forces, either serving directly under the command of Admiral Sims or coming and going in the transport service.

Judged by any standard, this is a large fleet, and one of the most satisfactory things about it—to an American, at least—is found in the fact that its upkeep has laid no additional burden on England—already over-weighted

with her own war costs and those of weaker allies. The American Fleet is practically self-sustaining. All its food and supplies have been brought from the United States. Excepting major operations that require a dry dock, it makes its own repairs. It manufactures its own torpedoes; provides its own hospitals; and as sailors, like other men, cannot live by bread alone, it has established numerous recreation buildings, with cinema theaters, dormitories, dining, reading, writing, and bath rooms, the quality of which may be gaged from the fact that one single establishment cost \$30,000.

For convenience in operations, the Fleet is divided into five principal units. The first to come over, a flotilla of crack destroyers, operated in Irish waters, and made good in both offensive and defensive warfare against the submarines. Two vessels of this flotilla steamed sixty-four thousand miles apiece during the year—a distance equal to a voyage from Liverpool to New York and return—each month. Thirty of them steamed one million, five hundred thousand miles on convoy duty.

The record of the armed yachts and destroyers in French waters is equally good. In conjunction with the French and English fleets and their sister flotilla in Irish waters, they have handled the American transport trade, also many coastal convoys, with a remarkably small loss in sinkings.

Credit for this has to be shared with the American Naval Aviation Service, which has established many stations in France. For there is nothing the U-boat dreads more than the seaplanes—great hawks of the sea, which come booming out from the land to find and strike their steel prey.

This service also operates some stations in England, Ireland and Italy. Some of its men were in the big seaplane fight in Heligoland Bight, when nine Allied planes engaged seventeen Huns. Others have fought frequent engagements. Summing up the service, one may say that its work is invaluable.

A third American division operates in the Mediterranean, under severe handicaps, for the geographical features of that long and narrow sea render it

an ideal ground for U-boat operations. Operating from their bases at Pola and Cattaro, on the Adriatic Sea, the U-boats get two fine chances, coming and going, at every ship. The neutrality of Spain is also in their favor, providing a city of refuge to which they can fly when hard pressed or too badly damaged to keep the seas. In spite, however, of these handicaps, sinkings in the Mediterranean have been cut down 65 per cent during the year.

The small circles and dots on the map stand for Allied ships sunk by torpedo, mine or gunfire during the month of April, 1917. The number was lessened by 70 per cent in April, 1918, reducing the undersea war to privateering

Next come the submarines, two units of which operate on bases wide apart. One holds a group of islands, which might otherwise serve as a U-boat base, while the other actively hunts them thru British waters. Their work is extremely valuable, for it has increased the hardships of U-boat life several hundred per cent. Thanks to the Allied submarines, Fritz can no longer bask in the sunlight till the masts of a convoy poke up from behind the horizon; for he never knows when a torpedo may land on his solar plexus.

Having just returned from an eight-day cruise in an American submarine, I am in a position to know exactly what increased submergence means. Fritz's life—never a happy one—has thru the operations of Allied submarines become insupportable. Dogged by patrols, bombed by seaplanes, voyaging always thru a maze of nets and mines, he is now hunted underseas by huge steel sharks of his own kind.

Lastly, a battleship division operates with the British Grand Fleet in the North Sea, assisting in the work of keeping the German High Seas Fleet bottled up in harbor. While cruising recently, this division narrowly missed contact with the enemy, and the disappointment of the entire personnel thereat is beyond my power in words.

This, then, briefly sums the operations for a year of the American Fleet. Space does not permit description of the real hardships and dangers of the work.

This result was not accomplished without an inevitable price in lives. Having done its duty according to its lights, the Fleet asks no higher praise than that freely accorded by the man who—next to its own Admiral

Sims—knows it better than any other man alive, Admiral Sir Lewis Bayley, Commander-in-Chief of the American Flotilla in Irish waters:

I want to express my deep gratitude to the United States officers and ratings for the skill, energy, and unfailing good nature which they have constantly shown; qualities that have materially assisted the war by enabling the ships of the Allied Powers to cross the ocean in comparative freedom.

To command you is an honor; to work with you a pleasure; to know you is to know the best traits of the Anglo-Saxon people.

## POET AND HARLEQUIN

BY ALTER BRODY

Out of my ache of heart  
Shape I the songs I sing;  
Out of my buried loves  
Out of my stifled selves  
Out of my pent-up tears  
Cunningly stringing  
Tear unto tear;  
Out of my baffled hopes  
Out of my shattered dreams  
Mold I my melodies—  
Carving a sepulcher  
Out of my life!

Poet and Harlequin,  
Jester and Seer,—  
Sobbing most tenderly  
Sighing most sweetly;  
Crying naively  
Dancing most gracefully  
Unto the tune of my  
Rhythmical woes;  
Onward thru Life I go  
Making of Truth a phrase  
Making of Love a rime—  
Coining my soul!

So many cents per line  
So many lines per song  
So many dollars—  
So much of soul per song  
So much of ache per song—  
Some time my heart will break  
Singing and sighing!

# THE INFLUENZA PANDEMIC AGAIN

BY JAMES J. WALSH, M. D., Ph. D.

**I**NFLUENZA is with us once again as a pandemic disease, that is, as an infection which spreads throughout the world, affecting every people, especially in the routes of commerce. We say *once again* because the affection has occurred as a pandemic frequently since the sixteenth century, that is, as long as the records of such diseases have been kept. There is evidence of outbreaks of it before that time, but without printing facilities, definite records are lacking. There were no less than four pandemic influenza periods in the nineteenth century, 1830-33, 1836-37, 1847-48, and the one that is recalled best, that of 1889-90. Most of these later epidemics, if not all, have originated in the East, usually being noted first in some European country, where it raged with virulence, and receiving the name of that country for a time. The epidemic before this, beginning in Russia, was at first called Russian influenza; this one is called for a similar reason Spanish influenza.

The duration of an epidemic in any one locality is usually under two months. During the time that it is particularly virulent, however, there is probably no disease which attacks so large a proportion of the inhabitants of a region. Some have suggested that as high as 50 per cent of the inhabitants of affected localities as likely to catch the disease and the conservative estimate is 40 per cent. Fortunately, the mortality rate is very low. In adult life, below fifty years of age, probably not more than one-tenth of one per cent die. In the general population, because of the number of weaklings and the old, the death rate is higher and yet it is estimated to be less than one-half of one per cent. Most of the deaths are due to a pneumonia complication.

The disease is probably always due to a specific bacillus of a microbe family described by Pfeiffer, some strains of which are much more virulent than others. Apparently, the bacillus gathers vigor and virulence among some Eastern people who are of lower resistive

vitality, or who for some special reason, war, famine, or a particularly hard winter, are run down in health, and then this particular strain of bacilli which have gathered strength in the weak subjects attacked, prove capable of overcoming whatever immunity may be present in even very healthy individuals.

The disease does not travel thru the

© Underwood & Underwood

*Masks protect those who aid the sufferers*

air, but is conveyed directly from one individual to another and is a true contagion requiring contact, direct or indirect. The bacillus exists in the secretions of the nose, throat and lungs, and may be scattered thru the air by sneezing or coughing. Hence the necessity for all during an influenza epidemic, using their handkerchiefs to cover mouth and nose whenever they cough or sneeze and avoid expectoration except under conditions where the sputum cannot be a medium for the communication of the disease. There is no doubt in the minds of physicians now that

many of these respiratory diseases are caught not thru the respiratory tract but thru the digestive tract. This is surely true of tuberculosis in a great many cases. Hence the necessity for all in time of influenza epidemic washing the hands carefully before eating.

A great many people look around for medicaments that may protect them from the affection, but there are none. The mouth should be kept thoroly clean, but this should be done gently, for such hard rubbing of the gums as produces bleeding would rather predispose to the affection. Only very mild antiseptics should be used in the mouth and for gargling and the nose, otherwise the cells of the mucous membrane may be injured sufficiently to make them less capable of resisting invasion. Good, healthy living, plenty of outdoor air, especially in the sunlight, a sufficient amount but not too much sleep, for that is relaxing, the avoidance of crowds and careful cleansing, these are the best preventives that we have.

The attack usually begins with fever, some pains in the bones and usually some nasal catarrh. Just as soon as fever declares itself, the patient should get to bed and stay in bed until the fever comes down. There is always grave danger of severe complications setting up unless this rule is faithfully observed. The pains in the bones, which occur very often at an early stage of the disease, are an index of a special call being made on the blood making organs, of which the bone marrow is one of the most important. This tendency of the disease to impoverish the blood, predisposes to heart and other complications. It emphasizes the need for rest which should be continued until the extreme feeling of prostration, often associated with the disease, is relieved. The affection does not as a rule, even in its pandemic form, much increase the general mortality. It carries off those who would be taken by other affections during the season and a few more. With care it can be entirely avoided.

## VILLAGE ART

**F**OR a quiet, restful place, where life will not intrude and upset the even tenor of my ways by presenting me with novel situations which must be met, give me the city every time. When we are tired and our vitality is low, the place to go is where there are so many people that one doesn't have to pay attention to any of them. It is a curious assumption that to see life and broaden our experience we must go to a place where there are 200,000 people instead of 200—which is very much like saying that a janitor who spends his days dusting the volumes in a Carnegie library has an advantage over the youth who owns, loves and has mastered a few.

Even the amusements in the city are

restful. They call for no more effort than buying a ticket. We pay somebody else for singing, acting, dancing for us and making us laugh. The multiplicity of opportunities for being amused has created a glare which is mistakenly identified with life. True; Pavlova doesn't dance in the village opera house, but then, the village itself dances; David Warfield hasn't heard of Smith's Corners, but the village provides its own drama; Sousa's Band has never put up at Jake's Hotel, but where is the village that hasn't its own band?

So, too, the village church has no paid quartet, but when it feels like praising God, it sings itself and doesn't delegate its thanksgiving to others. Its art may be execrable and provoke the

visitor from town to tears or mirth. Its art, however, is genuine, the result of effort; while the visitor expresses his joy in life by proxy. He compares the village actress with Maud Adams; he should compare her with himself, not forgetting that his own superiority is confined to warming a seat.

Where is the bred-in-the-soul villager who has not been an actor, cornetist, singer, dancer and minstrel, besides attending to his regular calling. Your metropolitan takes his fun in a seat letting others amuse him; your villager knows that if people are to have enjoyment, somebody must give it. So the village digs it out of itself, and it discovers that it gets more fun, as well as experience, in giving rather than receiving.

## A TASTE OF WAR OVER HERE

A fire and explosions at the Gillespie shell-loading plant October 5 destroyed about \$20,000,000 worth of property, drove fifty thousand people from their homes and killed about one hundred men

© Underwood & Underwood

### TWO MILES FROM THE FIRST EXPLOSION

This is one of the thousands of homes destroyed with the Gillespie plant. Practically the whole district within a two mile radius of the plant was devastated by fire or explosions. The Gillespie plant was devoted wholly to filling cannon shells with TNT, the heaviest known explosive. It was the firing of the TNT magazines that caused most of the destruction. The first explosion occurred Friday night, October 4, and on Monday morning, October 7, the work of rebuilding the plant on a larger scale was started

### FIFTY THOUSAND REFUGEES

The roads were jammed with homeless families looking for shelter. Soldiers, sailors, policemen and the Women's Motor Corps did valiant service

### "YOU DON'T HAVE TO GO TO BELGIUM FOR SAMPLES OF FORTITUDE"

The man who made that remark was Policeman Mury, "the Battery traffic cop," who watched the crowds of refugees coming into New York. There were many

instances of heroism: a plucky telephone operator stuck to her switchboard, plugging in calls for assistance while shell fragments and larger debris

rained about her hut. A train filled with explosives was on a siding at the plant. A railroad foreman coupled an engine to the train and started to pull it out. After he had got the cars in motion a shell fragment drove thru the engine cab killing him.

### IN THE PIT BEHIND THE TARGETS

Here is a rear view of the photograph at the top on this page. Men are stationed at each one of these targets to raise and lower it. The sailor at the right is repainting one of the targets that was badly shot up

THE front from which was started last week the Belgian drive which threatens to cut off the Germans from the coast, I visited last June. At that time I was told by the Belgian officers that no offensive was possible by either side in this region, for the country could be flooded with water four or five feet deep for many miles along the coast and many miles inland. There had been little fighting here for a long time except aeroplane duels like the one I described in my last week's article. The English had tried to get over the year before, but after two divisions had crost the Yser Canal the enemy turned on the water and then before they could get back proceeded to annihilate them. The Belgians and English knew that they could do the same thing if the enemy tried to advance, so they had brought up their heavy batteries several miles nearer the line than they dared elsewhere. For big guns cannot be moved quickly, and if the Allies had been compelled to retreat the guns would have had to be blown up. But now the Belgians have made a drive and dislodged the Germans on the Ypres side.

After we had witnessed the fall of the enemy aeroplane we proceeded forward to inspect the Belgian front trenches. We walked along a broad, white shore road until we came to a little clump of houses. In one of these, which had several shell holes showing daylight clear thru, we climbed up some rickety stairs to the top story in order to get a better view of the German lines across the Yser. On the third landing was a cage full of carrier pigeons. It had a sign on the outside to the effect that to touch one of the pigeons was an offense punishable by death. It was a very shaky observation post, but thru the periscope we got a splendid view of the English Channel, No Man's Land and the German trenches beyond. After watching the shells from our guns exploding in

the Boche flat land beyond, we came down and walked along the camouflaged road and when within a thousand yards of our lines descended into the cellar of a partly demolished house and then walked fully half a mile thru the most wonderful underground trench system I have ever seen. It was built along the side of the dunes next to the sea beach. Its floor was concrete and the two sides and top were of planks. But it was not quite high enough for me, so that as I walked along my steel helmet would occasionally hit the top of some lowering cross-beam and my head got a severe bump. Every little while there would be an angle in the trench. There a machine gun would be mounted so that it could rake any Germans approaching long before they could get to grips with it. As we walked along we passed occasional slit holes on our left which gave us a view of the seashore. One time we looked out and saw a wrecked English aeroplane which had fallen into the sea and had been washed half way up the beach by the tide. I should have liked to have gone out and ripped off the canvas on which the three red, white and blue circles were painted. It would have made a fine souvenir to have taken home and have framed. But that of course was impossible, as it was daylight and we were only a few hundred yards from the German outposts.

After what seemed an interminable tramp we came at last to the first line trenches. We were then so close to the Germans that we were cautioned not even to speak to each other lest they hear us. Our photographer, who had already taken a picture of us craning our necks at the aeroplane fight, now took Mr. Whitney, Captain Cresson, myself and the rest of our party in various groupings and attitudes peering thru periscopes, etc. But the censor will evidently not let them thru, for I have not yet received them. The Germans were shelling our back lines and

*A plain of weeds and mud with bits of rusty iron*

## MY TRIP TO THE BY HAM

a flock of English and Belgian fighting planes were buzzing over our heads. The German anti-aircraft guns, which are said to be better mounted and more dangerous than ours, were trying to get them. After walking about till our curiosity was appeased we started for the rear, but on the way back took a spur trench to the northernmost point of the Allied defense in Europe. We were at the corner where No Man's Land runs into the North Sea. The German lines were only a few feet away. We walked back, crouching low thru the long wooden underground passage, thru the cellars to the little watering place on the top of the hill and then back along the main road to the spot where we had witnessed the aerial battle. Our machines were waiting for us and in a jiffy we were on our way home. We were so fortunate as to pick up a handsome Belgian artillery officer, Major Niessens, whom we found in command of one of the big sand dune batteries, and we took him back to dinner with us. Captain Cresson said he was one of the best artillery officers in the Allied armies, and I took occasion to ask him some questions. The Major said that the French artillery is much better than the English. He had served in units adjoining both armies. No one, he said, could die like an English soldier, but the French soldier was on the whole the better fighter, especially on the defensive. Moreover, the French officers and soldiers were better comrades than the English. This would not hold true, however, of the Canadians and Anzacs, where the English class distinctions do not prevail. Having been told that it takes some \$50,000 to kill a man in this war, I asked the Major how many shots it would take to destroy a battery of four guns. He said it depended on the kind of gun I had in mind. If it was a battery of four 75mm. guns it would require at least 300 shots from a similar battery. If it was a battery of 105mm. howitzers it would take 500 shots, because the trajectory of the

*A Tommy standing guard at Ypres, "the greatest battlefield of the war save Verdun"*

German shells still dropt and overturned graves

## BELGIAN FRONT ON HOLT

howitzer is higher than that of the 75mm. gun and it is therefore more difficult to make a direct hit with it.

After dinner we took Major Niessens back to his dugout in the sand dunes and on the way back stopped at another hole in the sand, this time occupied by the officers of two enormous English marine gun batteries which are used for the long distance shelling of important positions back of the German lines. The Britishers were living in one of those corrugated circular iron huts which are especially adapted to the sand dunes. An enormous amount of sand can be piled on top of them and an almost bomb proof abode within is thus assured. We found the English officers at home. They were enjoying all the luxuries of the season, for they had taken beds, easy chairs, lamps and looking glasses and even porcelain bath tubs out of the houses abandoned in the neighborhood to furnish their den. The comparison cannot be pushed too far, but I could not help thinking that their abode must have looked something like Pegotty's family boat in "David Copperfield."

Right cordial and warm was the genuine British greeting that they gave us. In talking to these splendid fellows I seemed to see the English army officer made so familiar in Kipling's books. The commandant was the finest type of the English gentleman. His mate was an old-time regular army sergeant who had been in the service for a dozen years or more. If ever I have met a real man on this earth, that sergeant was one. The third was a young boy, handsome and clear eyed. They insisted upon drinking our health and having us drink theirs in the most approved old English fashion and in the most approved old English liquor. We sat up late into the night conversing and telling stories. I am especially pleased to report that these Englishmen were high in their praise of Belgium and thought the Belgian soldiers showed as fine a spirit as there was in the entire Allied army I found in London and Paris

some disposition to criticize the Belgians, but not at the front by anybody who ever served with them. Before we departed the commandant took me out to see his great guns hidden a few hundred yards away in a camouflaged emplacement in the sand. And what monsters they were, and what colossal breeches and what elongated snouts they had! He thought the Germans had "got their number," for occasionally a shot landed almost on top of them, but they were so well protected by sand coverings that they have not yet been severely hurt.

The next day we visited Ypres, the greatest battlefield of the war save Verdun. When the British Government invited me to go "over there" as their guest I knew that Ypres was their *piece de resistance* on all the battlefield. But when I arrived in London I found that permission was withdrawn to all civilians to go to the English front, even members of Parliament, so I had to go to the French, Italian, American and Belgian fronts instead. But just before I arrived in Belgium the Belgians had extended their lines south and taken over a large part of the battlefield of Ypres, where England had so gloriously fought and died. Tho the English still hold Ypres itself, the Belgian lines come straight down to the edge of the city. The Belgians therefore occupied the vast sector north of the city, from which they have just advanced, taking Paschendale and Poelcappelle, ground drenched with British blood. It was a long ride down to Ypres and as we skirted the back lines we passed great fleets of lorries standing along the roadside. They were packed with extra emergency ammunition and their chauffeurs were sitting along the roadside waiting for the summons to proceed to the front. We dismounted about two

miles east of the city and walked over the old battlefield. In 1915 and 1916 we would have been a dozen miles back of the line. Now the Germans had moved forward to the very edge of the old English camp ground so it was no longer possible for the Belgians to live where the English had lived for the first three years of the war. The British camp that we walked over, once the smiling garden spot of Flanders, was now, next to Verdun, the most desolate region in Europe. With its wrecked ammunition depots, old dugouts blown to bits, roads and paths overgrown with brambles and gashed with innumerable shell holes, the battlefield looked as I imagine all the battlefields will look two or three years after the war is over when the earth begins to heal and the rank vegetation comes to cover the soil again. Everywhere little white crosses marked the graves where England's sons lay beneath. Everywhere was the sickening odor of putrefying human flesh, for the German shells were still dropping in this sector and overturning the graves. Save for an occasionally lonely charred and splintered stump there was not a tree to be seen for miles around. But as far as the eye could see stretched a plain of weeds with here and there a clump of smashed skelton huts with rusty broken iron roofs. It was fascinating to see, however, how wonderfully the English had planned that camp. Originally it must have been the most complete and perfect camp on the battlefield. I noticed on every side signs telling the name of that particular spot and giving directions where to go. Some of the camps were named after American places. I recollect there was a California and a Kansas Camp, which probably indicated that the American volunteers who had enlisted in the Canadian army had something to say in the matter. One of the signs over an abandoned ammunition hut reads:

Save it now.  
Each round of 18 P. ammunition costs  
4 pounds.  
9-2 howitzer costs 23.  
Put it in a safe place.  
Save yourself future taxation.

We proceeded along this flat undulating country up to the very front line trenches. Our Belgian guide was reckless enough to walk along the top of a ridge in plain view of the German lines not 200 yards away. We followed behind in a [Continued on page 104]

"They showed me how the great anti-aircraft gun worked. At night they fire by sound"

**T**HE big man follows the program of the clean desk in his work and life; the small man does not. The clean desk is first aid to clean work, clean profit, clean reputation. If you want to "come clean" your work must travel on the clean desk.

The term should be defined. A clean desk signifies not merely a piece of furniture but more a mental process and a moral principle. A clear brain is back of a clean desk and an open heart is back of the clear brain. The dominance of a clean desk in a man's office argues that the man is prompt, neat, accurate, thoro and scientific; that his work is organized properly and fully; that his equipment is modern and complete; that his helpers are willing, deft and pains-taking; that the policy, method and spirit of the whole establishment are up to the highest professional standards of aim and achievement. From the desk of the office man radiate all of the lines of influence upon the employee and the patron. A clean desk provides the clean start and the clean finish for every day's work. It will pay you richly to analyze and organize your desk with relation to its purpose, plan, procedure. The *finality* of your desk is that it must be clean—or be closed.

No matter what your business or profession is, your most powerful rival is working on the clean desk principle. Nobody now can expect to take the lead otherwise. If you could search the private offices of the men who are setting the pace in your line, and if you could watch them at their daily work, you would discover that one of

*Neat in appearance with its contents readily accessible, this compact filing cabinet saves space and gives you the assurance of knowing just where your letters are*

the big secrets of their power, speed, energy, continuity, clarity and coördination is the reliance they put in the daily, hourly and momentary operation of the clean desk. Physical or mental confusion, delay or disappointment cannot exist where the clean desk predominates.

Before the development of the new science of efficiency engineering, the medieval business or professional man who never got anywhere much was likely to have a

# THE CLEAN DESK

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

desk that looked about thus: Papers, letters and bits of half-finished jobs were scattered in all directions without relation to each other or to the work of the day. People came in at all hours and dumped more papers on the desk without rime or reason. Elbow-room was out of the question, so the man had to be a contortionist to do his work at all. When a certain paper was wanted, the only way to get it was to search thru the desk, which was an old-fashioned roll-top with a dozen drawers and cubby-holes to catch the papers that dropt out of sight in confusion and disgrace. Hunting for lost articles took so much time that the man didn't have a chance to earn a living. He never caught up with his work. He was reliable and regular as a rabbit. He took his business cares home with him, because he did not clean them up in the office, and to the poverty inflicted on his wife he added misery also. When a client or customer wanted immediate action or report, everybody in the office was seized with consternation.

Among the total impossibilities of life was an exact knowledge of how the business was going. The only way to hide the man's inefficiency was to put a screen around the desk, which was done when a high official or a visitor threatened to approach and find out the shameful condition of the man's desk. Each bit of work had to be gone over several times, because when the man laid it down for a little while it got buried in a pile of papers and had to be resurrected. Often the atmosphere was rent with sharp words, because when the man lost something he blamed it, as men do, on somebody else.

The clean desk has a mental value. It makes you alert, steady, poised. It improves coördination of mind and muscle. It leaves no place in the brain for doubt, speculation, recrimination, or other kind of mental cobwebs. It conveys to you and thru you a consciousness of mastery of your job, that is equally good for you, your employees and your customers.

The clean desk has a financial value. It hastens production. It lessens spoilage. It reduces waste of time and money caused by needless mistakes. It helps to fix responsibility and thus to increase personal pride in achievement. It stands always on the side of progress, which in turn always favors financial reward.

The clean desk has a social value. It sets a good example. It raises you in the estimation of your fellows. It proves and demonstrates the superiority of modern business methods. It gives an air of execu-

*Executives who wish to work with card files right at hand for immediate reference should investigate this new type of filing desk, illustrated at the left, which has a number of labor and space saving devices*

tion, and reliability to the whole place.

The clean desk has a moral value. It substitutes backbone for wishbone. It blends conscience, intelligence and science. It is firm as a rock, because it stands on the principle that the only way to do anything is the right way. No man ever made for himself a clean desk without being made thereby a stronger, better man.

It is the wandering mind that collects

foolish notions, and a wandering mind has no place to wander in a room with a clean desk. And it is certain that hundreds of

*A steel file of this kind placed in the desk drawer makes it easy to keep several different letterheads in a quickly findable place—and they are always clean and smooth*

thousands of people who are driven, hurried, worried, perplexed without avail and without excuse would find relief by adoption of the same salutary method.

We will describe the clean desk by telling you how to secure one for yourself. This, we believe, is the best way to describe anything worth having. The essentials and characteristics of the clean desk are as follows:

1. Elimination. The first move is to clear everything off your desk and out of it. Have it entirely empty. Renew it with a good cleansing oil, dry thoroly and polish well. Take off spots and stains. Open drawers and expose to the direct sunlight a few hours if possible. Ask a furniture dealer or cabinet maker how to have the desk look like new. Keep it empty while you

*The glass desk pad keeps always before you such records as you refer too most constantly—dates, prices, sizes, of many kinds. The divided desk drawer shows the comfort of having places for small desk articles and keeping them there. These two devices do a great deal toward keeping the desk always ready and clear for action*

*It's a bother to have the divisions of the drawer immovable. You can change them at will, to suit any new need, if you get these division fasteners. They come in proper sizes for both deep and shallow drawers*

read the paragraphs below, then put back your papers, tools and supplies according to the directions here given. Don't let a single article go on the desk or into it before you know where the item belongs and whether it belongs in the desk at all. Most of the trouble in a desk proceeds from articles that never should have been there.

2. Adaptation. Your desk should be suitable to your work in height, width, length, shape, number and extent of compartments. If your desk is not suitable to your job and your personality, get another. You can order from more than a hundred different styles now offered by the various national desk manufacturers. Your work must be measured for your desk to fit as your body is measured for your coat to fit. Your desk is for usage and not for storage. It is a workbench, not a warehouse. Therefore it should accommodate only the tools, implements and supplies that your daily work demands, with no space left for holding letters, papers, half-done jobs or other items that should be filed away promptly. Never lay away in your desk a piece of work either finished or unfinished. Don't allow room for this. A flat-top desk is preferable to a roll-top nine times out of ten, because the flat-top is easy to keep clean, gives a larger surface to work on, hides nothing from the gaze of the public, and cannot tempt you to tuck things away in corners and cubby-holes when they should be placed immediately where they belong.

*A telephone holder that will not sag and that will come forward or retreat on slight pressure—is another factor making for an unencumbered and handy working desk*

The desk should be large enough to give you plenty of space to work freely and rapidly. It should be noiseless in operation. It should match, if possible, the furniture and wood-work in the room. It should be supplied with an exclusive lock and two keys, one key remaining in your possession, the other being kept in safe deposit by the secretary or treasurer of your company.

3. System. A place for everything and everything in its place should be the rule. Don't leave a thing outside its own compartment, or drop it into some other. If necessary put labels on all the drawers and follow the labels in using the drawers. Even the top of the desk should be kept in order, papers should be deposited only by certain persons at certain places on the desk in line with the work operation, which should go from left to right; your unfinished

work will thus be always on your left, finished work on the right, and a clear space between. All papers should be classified before being placed on the desk with large clips, rubber bands or desk baskets to hold each classification. There should be no piling of unassorted papers on the desk and no filing of papers or anything else in the desk.

4. Arrangement. Give yourself room enough to breathe; allow not less than three feet on all sides between you and the next person. If other workers are seated near you, do not have your desk facing theirs directly but have the desk placed side by side or back to back, the only violation of this rule being when you pass work frequently to or from another desk. Choose the location of your desk with regard to the most air and light available. If your work demands concentration of thought, be as far away as possible from the road frequently traveled by employees or merchandise.

5. Collocation. We include under this term the filing, clipping and memorandum systems by which your work is organized and the finished product stored. These systems should be apart from the desk, which must always be considered a work-bench only, but they should be grouped as near the desk as may be desired. The moment a piece of work leaves the desk it should be filed in the proper receptacle. Nothing

*—any papers (from 2 to 6 sheets) so that they will stay together and not get lost*

*A handy efficient little punch that will at once and without metal clips of any kind fasten bills, letters, statements*

should lie around loose. The foundation of a clean desk is a personal filing system that combines accuracy, thoroughness, simplicity, durability and speed. The importance of this cannot be overemphasized.

6. Completion. Every particle of work not finished and ready to file should go in a desk basket or other temporary holder with a memorandum of time of completion. No bit of half-done work should stay loose on the desk. Nor should it be filed away in a permanent receptacle, or tucked away in a desk drawer. Work to be completed, if unavoidably interrupted, should be kept in view but not in disorder. A wire, wood or wicker basket should be designated for this purpose. And it should not be used for any other purpose. Half-done jobs lying around in a forlorn, helpless manner do perhaps most to derange a desk. Train your hand to sort your work as you drop it.

7. Classification. Prepare a complete list of all materials and supplies that go naturally in keeping with the desk. These would include, besides your vocational, technical implements, the ordinary desk articles such as pens and pencils, blotters, clips, rubber bands, mucilage, pins, labels, rulers, scissors, erasers, knife, and so forth.

8. Organization. When your catalog of tools, appliances and materials is complete, go over list and check those used regularly, with double check on those needed most often. Place all checked items in the desk, with the double-checked ones for quickest handling in the drawers or other compartments of the desk nearest you. Have regard also to the side

of the desk on which you will employ the various items in your work, placing in the right-hand drawers those to be used on the right-hand side of the surface of the desk. A little careful thought in the disposal of each item will enable you to clip a fraction of a minute from the time usually taken to withdraw it and replace it.

9. Ownership. Two workers ought never to share the same desk, unless the nature of the work demands that two or more people do it together. Individuality under-

*For temporary filing and distributing, a file of this sort, with sliding trays, accessible at either end, is a big convenience—in fact something of the kind is indispensable*

lies progress, and the joint control of a desk hampers individuality. The cost of a desk is immaterial so far as this point is concerned, but the sense of personal ownership is vital to success. A person should no more be deprived of his own desk in business than his own dresser at home. The personality even of a routine worker must be developed before the routine is handled in a superior manner.

10. Cooperation. All the desks in your room or department must be as clean as your own, if the full effect of yours is to be gained. If one person in a room has grippe or measles, others are almost sure to get the same disease. One neat-looking desk in a room will demoralize the others. Don't be satisfied merely to have a clean desk yourself, plan how to make it the possession and habit of everybody else.

11. Duplication. The mental and material key to your filing system should be in the possession of at least two persons—one other besides yourself. The requirements of the clean desk forbid that any matter be filed in the desk; hence both you and your assistant should know exactly where to find all matter preserved outside the desk; otherwise in the absence of either of you the work of the day would be held up. If you have a secretary or other close helper, you should also keep on file a memorandum of instructions for [Continued on page 98]

*Fire danger is ever present—in every building. A cabinet that by its tested construction is shown to be successfully fire resistant, means an easy mind when things are stored and locked up for the night*

# WHY FACTORY CLASSES PAY

BY CHARLTON EDHOLM

FOR NATIONAL AMERICANIZATION  
COMMITTEE

**A**T this time when the draft has called so many workers from industry and set them busy filling a "Rush order for Berlin," it is necessary that the workers who remain should be more efficient than ever before.

They must take the place of the trained men, the first choice of our nation's manhood, and they must fill this place so well that production will not slacken, but on the contrary will expand enormously to meet the call for supplies at the front and to meet the needs of our home population.

Many practical methods have been developed in order to strengthen the nation's man-power reserve. The constantly increasing use of women in industry is the most conspicuous method of replacement, and the bringing back into harness of men who had retired, either because of age or because they had made sufficient money to meet their future needs, served to close another gap in the industrial defense line. The development of unskilled workers or idlers into effective producers thru shop schools is another method of getting results.

But still another system of increasing the efficiency of those who supply the nation's needs is extending thru industry, and as it has been tried out sufficiently to prove its merit, it may be regarded as no mere theory but a practical working program.

That is Industrial Americanization.

By Americanization is meant something very definite and concrete. An excellent definition of its fundamental principles is as follows:

The interpretation of American ideals, traditions and standards and institutions to foreign-born peoples.

The acquirement of a common language for the entire nation.

The universal desire of all peoples in America to unite in a common citizenship under one flag.

The combating of anti-American propaganda activities and schemes and the stamping out of sedition and disloyalty wherever found.

The elimination of causes of disorder, unrest and disloyalty which make fruitful soil for un-American propagandists and disloyal agitators.

The abolition of racial prejudices, barriers and discriminations, of colonies and immigrant sections, which keep people in America apart.

The maintenance of an American standard of living, including the use of American foods, preparation of foods, and care of children.

The discontinuance of discrimin-

tions in housing, care, protection and treatment of aliens.

The creation of an understanding of and love for America and the desire of immigrants to remain in America, have a home here and support American institutions and laws.

The telling of the story of why America is at war to foreign-born people and why we must all stand together to win it.

The entering edge of the wedge, that will split the foreign-born who live here from Old World allegiance, is the language of our country.

To cause the foreigners among us to *desire* to learn the English language is the first act. To provide facilities for learning our language is the second.

When these people can understand us and talk to us, when they can read our newspapers and magazines, when they can listen to our "Four-Minute Men" without the need of interpreters; then it is comparatively easy to impress upon them the need of *their* help in winning this war for their own sake and that of their families. Then it is possible to show them their duty of putting in a day's work for Victory at the bench or machine, just as the soldier who protects them puts in today's work in France—just as he will put in tomorrow's work in Germany. The same fighting spirit is needed here, as there.

It is to that end that some of the largest industries in America have put thru a program of instruction in English, of which the school conducted in the Ford plant is a notable example.

Classes have been established in factories, and in some cases the pupils are paid full time while learning the American language and American ideals and institutions. In other cases, they receive half time. In others, the employer contributes only the factory space for a class room and in still other instances the night school is the medium of instruction, with teachers supplied at the expense of the employer.

Among the most thoroly convinced employers are those who have acted with the greatest generosity in the matter of paying for time while learning. A progressive New York manufacturer of muslin goods has kept records on a factory class which he established in 1913 and which is still in operation as a profitable detail of his business. The records demonstrate that fact. An extract from the report of C. G. Hill, Service Director, D. E. Sicher & Co., states this as a straight business proposition in unmistakable terms.

To determine as accurately as possible the immediate economic benefit derived from the simple instruction given in the school, a comparison of the average earnings per hour of the ten girls enrolled in the class (illiterate at the beginning of the school), was made with the average earnings of the literate girls not enrolled. This comparison covered a period of thirty-two weeks preceding and sixteen weeks subsequent to the opening of the school.

The average earnings per hour of the ten literate girls exceeded the average earnings per hour of the ten illiterate girls by 3.7 cents per hour during the thirty-two weeks preceding the opening of school. Each four-week period of the school showed an increase in the earnings of the girls attending school, while the earnings of the other girls remained stationary. During the last four-week period of the sixteen weeks of school, the earnings of the literate girls exceeded the earnings of the girls attending school by only .9 cents per hour. If the average earnings during the thirty-two weeks preceding the opening of school be compared with the average earnings during the last four-week period, the increase in earnings for those attending school average 2.7 cents per hour, which amounts to approximately \$70 per year. The profit to the employer is obvious.

If the girls remained in the industry an average period of seven years, the aggregate increase in earnings for the girls amounts to \$560. The employer's profit on the work represented by this increase in earning is probably not less than ten per cent, or \$560, four-fifths of the total cost, \$670, of providing school for forty-two girls during a period of forty weeks. The cost to the employer for sixteen weeks' schooling for ten girls on this basis amounts to \$64, or less than one-eighth of the profit

which he may reasonably expect to derive from the increased efficiency of the workers. If the data had embraced a larger number of girls, a greater or less immediate economic benefit might have been shown, but the margin of profit, both to employer and employee, is sufficiently great to warrant the conclusion that the factory school is a paying investment.

The total cost of this experi- [Continued on page 107]

An example of Americanization is this class in English for foreign-born factory workers

# GMC Trucks Are Keeping Up The Supply of Motor Fuels

*Today's Short Cut Between Supply and Demand*

**L**IKE sentinels set to guard the source of supply, gaunt derricks dot the great oil fields; they mark the starting points of many transport trails that lead from producer to consumer.

From the well the pipe line leads to the refinery; the tank car and the marine tanker cover the next stage.

Next come the sturdy wheeled land fleets to cover the last lap of the journey—motor trucks, the true agents of distribution.

Supplanting horse-drawn equipment, motor trucks in small numbers have indeed grown to veritable fleets by virtue of their fitness for oil delivery.

And, now, with the greater impulse given to every agency contributing to the war

program has come a decided impetus in the distribution of petroleum products.

GMC Trucks, both in government and industrial service, are doing their share toward providing more rapid and more dependable distribution of gasoline and kerosene for motor fuels.

GMC Trucks have helped build up a great traffic auxiliary to meet a pertinent need.

GMC Trucks are built to meet the severest demand of every emergency.

Every GMC is road tested.

# GMC TRUCKS

**M**OTOR transport has long since proved its military value under the conditions of modern warfare. There is no better proof of this value than the tremendous scale on which the new American army has been motorized in the past eighteen months, yet there are writers who seem to believe that military motor transport dates from our entry into the war. As a matter of fact automobiles, and especially motor trucks, performed creditably in the first Balkan War and in the Italian campaign in Tripoli; sufficiently so for the Germans and the French to extend greatly their plans for the employment of motor vehicles in any future war. As the struggle between

the Balkan nations and Turkey furnished a test under actual fighting conditions of the relative merits of French and German field artillery so did it serve to try out the new method of transportation by automobiles. The great drive thru Belgium and northern France with which Germany inaugurated this war, with its vast and varied motor transport facilities, was only a counterpart on a tremendous scale of the rapid and successful advance which the Bulgarians made in the former war thru Adrianople and on toward Constantinople, when motor vehicles had their first real military test.

The invaluable work which fleets of American motor trucks performed in bringing our marines quickly to the front at Chateau Thierry at the crucial point in the Second Battle of the Marne, and again when the Germans were about to escape our trap at St. Mihiel, can hardly be too highly praised, but neither can it be justly compared with the work of motor transport in saving Verdun to the French in the late winter and early spring of 1916. For two and a half months after the Germans launched their attack on Verdun there was only one avenue of transportation to and from that fortress, the highway leading up from Bar le Duc, and only one type of road vehicle permitted to operate over it, the automobile. Three quarters of a million reserve troops, countless tens of thousands of tons of shells and other ammunition, heavy and light artillery by the hundreds of pieces, engineers' supplies almost unlimited, all went forward to Verdun by motor transport, and the civilian population, the wounded, and the wreckage of battle came back in the same way. Some eight thousand motor trucks were operated continuously and at certain times as high as fifteen thousand automobiles of all types were using this single highway in aiding the defense of Verdun. The average traffic during the two and a half months until railroad service was restored was figured to be just over four thousand motor trucks each twenty-four hours. No wonder the French renamed the road from Bar le Duc to Verdun the "Sacred Way."

# OUR SIXTY THOUSAND MOTOR TRUCKS IN FRANCE

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

© Underwood & Underwood

*Half way, those who rode in the transport exchange places with those who marched*

However, the United States army promises to become the most completely, if not actually the best, motor equipt of all. Already there are some sixty thousand motor trucks serving with our troops in France, most of which were shipped from this country, which at least equals the number employed by either the French or British in the same theater of the war. Some idea of our future plans in this direction may be gained from the recent announcements concerning the formation of the Motor Transport Corps, a new branch of the United States Army which will take over the operation of most of the motor vehicle equipment. The personnel of this corps for each field army will be 154,747, of which 4298 will be commissioned officers and 30,090 non-commissioned officers. The motor equipment will comprize 40,803 motor trucks, 7905 passenger cars, 6590 ambulances, and 24,250 motorcycles. In addition there will be a complement of motor tanks, the Tank Corps being a separate branch and likely to remain so, and probably the motor equipment of the Ordnance Department as well. The War Department seems not to have settled the latter point as yet, but as the motor equipment of the Ordnance Department largely comprizes track laying tractors and special four-wheel driven trucks (described at some length in this department of The Independent a month ago) which types are about as foreign to regular transport motor trucks as the tanks are, it is logical that they be separately operated. At any rate the equipment of the Ordnance Department will make a considerable addition to the number of motor vehicles attached to a field army, the track laying tractors alone being built in this country now at the rate of 1200 each month.

According to the foregoing figures the personnel of the Motor Transport Corps in France will be approximately one-eighth of the total number of troops we have there. In other words with four million men in France, five hundred thousand of them will be in this one branch, a fact which attests the high importance of motor transport in military service. This total includes in ad-

dition to the officers and men attached to the different field armies, 679 officers and 3122 men at the headquarters staff of the Motor Transport Corps, and 34,319 mechanics stationed at the various repair depots. The recent organization of the Motor Transport Corps is in itself a rather belated recognition of the proper method of employing motor vehicles in modern warfare. The French army entered the war with motor transport a separate branch and the British army adopted a similar policy about six months later, facts which were brought to the attention of the War Department by authorities in this country at the time we entered the war, and which went the

way of almost all unsolicited expert advice. However, a year ago General Pershing practically took the operation of motor vehicles away from the Quartermaster's Corps, as far as the army in France was concerned.

At this writing the daily newspapers contain extracts from an article by a military expert in one of the German papers of recent date. In it this expert attributes much of the Allies' recent successes on the western front to the work of unlimited fleets of motor trucks which quickly carry troops and artillery from one point to another of the long battle line. "Unfortunately," as he is quoted, "we have not this wealth in motor vehicles, and can only meet these attacks by correctly anticipating their location and having reserves on hand there to meet them." As results are showing, anticipation is a poor substitute for motor equipment.

And it is largely because of the full development of military motor transport, with vehicles practically unlimited in numbers and variety, including tanks both large and small, that the allied forces in France are able to reap the full measure of their man power and artillery superiority. It is an old story now of how fleets of motor trucks brought up the reserve troops which stopped in turn each of the three German drives which began this season's fighting. There is an incident, however, in connection with the successful elimination of the St. Mihiel salient by the First American Army, that will be news to most people. After the fight had been started it was found necessary to bring additional strength to one flank in order to close the top of the bag and trap the Germans within. To accomplish this an entire division was transported 185 miles in sixteen hours by motor trucks and unloaded practically on the battle field. In order to make this speed the motor governors were detached on the trucks. Not only were the soldiers carried by this means but the entire fighting equipment of the division as well, including artillery, the guns being towed by motor trucks which also carried the artillery horses.

# It Always Shows In Their Looks

The Outward Signs—As Plain As Day—That Reveal Character at a Glance. A Simple Knack That Anyone Can Learn Quickly. How It Helped John Cogan Win New Friends and More Business.

LIKE most others, I have always been interested in trying to get an insight into the people I meet from what I can see on the outside. And also like most others, I played at it in a dabbling, random sort of way, sometimes being successful but more often making big mistakes.

As I have since discovered, it is a simple enough thing—when you know how—to look at a man you never saw before and tell at a glance just what manner of man he is. To-day the outward indications are an open book to me. I can tell at sight a man's temperament, mental workings and capabilities the first time I lay eyes on him—can see at a glance just how to handle him.

This isn't any special gift or tendency-of-mind on my part. I have no more natural talent for judging people than any other average man or woman of normal intelligence. There is nothing magical or mysterious about it. It is purely a matter of knowing how to read the outward signs—signs that are always there, plain as the nose on a man's face. Let me tell you my story, then judge for yourself.

## Why Most People Get Mixed

The reason most men and women go astray in trying to "size people up" is because they merely guess at things, merely jump to hasty conclusions. We go by "hunches." We depend on our instincts and intuition instead of on any real knowledge of the signs that reveal character. We are guided by our likes and dislikes, entirely ignoring the fact that a likable man or woman isn't always a capable person; ignoring the fact that a man who happens to be affable and approachable may not be sincere.

## How He Boosted His Sales

One evening a few months ago, I happened to be on the Twentieth Century hotel for Chicago. In the club car after dinner, when should I run into but my old friend John Cogan. Naturally we held a little reunion.

Our talk gradually veered around to business, as usually happens between business men. John had always been a mighty good salesman. But he told me that he had learned more about selling in the last few months than in all his previous years at it.

I asked him how. "By learning more about people and how to judge them," was his answer. "Harry," he said, "I've been at this business a long time. I have always worked on the theory of attempting to sell to everybody in about the same way. I sort of standardized my methods, but they didn't fit every prospect or customer, but they failed often enough to get pretty fair results. I thought there was nothing in this theory of trying to size up each individual and figure out how to approach him. They say you can't teach an old dog new tricks. But a man never gets too old to learn something new, that is, if he wants to."

## Paid Her A Record Fee

Maybe you've heard of Doctor Katherine M. H. Blackford. Every once in a while some magazine or newspaper says, "Five years ago we made a business of choosing character from appearance. One of the big international replacement companies paid her a large fee for putting employees that way, because of her ability to tell from an applicant's looks whether he had the stuff to make good, and what kind of a job he would fit into best. Instead of being misled by an applicant's

record, or experience, or references, Dr. Blackford judged his good points and bad points, his ability and dependability, entirely from what she could see of him while taking his application. Other big firms have also paid her big fees for doing similar work."

## In Dealing With People

"I had read and heard enough about Dr. Blackford's work to convince me that she had learned something I wanted to learn. I did a little sleuthing. I found that she had taught the knack of judging people to thousands of men and women—all the way from ambitious clerks up to heads of million dollar corporations.

"I made up my mind that I could get the knack if they could. It was easier than I ever dreamed possible. You know lots of things that look hard at first turn out to be very simple when some one who knows shows you how. I took this up only two months ago. What I have learned about judging people has already added 25% to my sales—and you know I've always done fairly well. I sell to men now that I used to fall down on—simply because I can tell almost at sight just how to go at them—whether to get right down to business or open up in a roundabout way—what their weak points are—what angle of talk will make the best appeal to each man—and what facts or arguments will 'clinch' him. It is all as clear as a book when you know the simple alphabet of signs that spell out a man's character and his mental 'slants.' From a strictly business standpoint, I consider this knack of judging people at sight about the biggest thing I ever picked up in my life."

I have known John Cogan for years. He isn't a man who lets mere enthusiasm run away with him. Results are the only things that count with him. But there was one point I didn't get—how as busy a man as John Cogan had found time to go to school to Dr. Blackford or anyone else.

## In Seven Easy Lessons

"Nothing of the sort," he explained when I asked him. "I found that Dr. Blackford has recently boiled the whole thing down into 7 simple, quick and easy lessons in printed form—a sort of vest pocket course for busy people that you can read and study after dinner at home, on the train, or any other time or place that happens handy. The lessons are so simple and interesting that they are more like a pastime than a study. My first evening on those lessons was more fun than going to a show. And the practical results began to show immediately—that first evening gave me pointers that I began to cash in on the very next day. The rest was merely a matter of a little more study and a little more practice."

And here is another thing that makes it easy—a mere request to the publishers of Dr. Blackford's lessons will bring them for 5 days' free examination. If they don't sell themselves to you

when you look them over, send them back and they cost you nothing. If you think you are getting value received, a \$5 bill pays for them. That's all. And I can honestly say, Harry, that I wouldn't trade what I got from those lessons for any \$5,000 check ever signed, let alone a \$5 bill."

## I Can Now Say "Ditto"

One of the best moves I ever made in my life was to take John Cogan's suggestion and follow suit. That was about three months ago. Now that I'm in on the real *How* of reading people from the outward signs—of telling what a man or woman is like from what they *look* like—I can say "ditto" to everything John Cogan said.

He didn't paint it a bit too strong—either the simplicity of it, or the practical day after day value of knowing how to *judge* people, instead of relying on mere haphazard *impressions* about them.

Thanks to those 7 easy lessons, I can now tell almost the minute I lay eyes on people how to make them my friends, in either a business or social way—how to talk to them, how to influence them to the best advantage. Also I can tell at a glance whom I can trust and whom I can't. The first time I see a man—or woman either—I can get a better line on him than many of his friends have after years of acquaintance. On top of all this, those lessons have taught me more about *myself* than I ever knew before—and when you come right down to it, mighty few of us ever really know ourselves, to say nothing of others. To my mind, those two points are two of the biggest factors in any kind of work or business—knowing yourself and knowing others. No wonder Mr. L. E. Hawley, of Grand Rapids, wrote the Independent Corporation as follows:

"If I had known years ago what I have learned already from Dr. Blackford's Course, the knowledge would have been worth a thousand times the price of these lessons to me."

## Free Examination—Send No Money

I don't say that every one will find these lessons as helpful as I did. But what you can get from them is certainly worth many times \$5 to any one who will take the trouble to send for them and read them.

And remember that you don't have to pay a cent until you see the lessons, and then only if you are satisfied with your bargain.

You can see them 5 days before deciding. Then if you can't see \$5 worth in them, return them to the publishers and they cost you nothing. No matter what you think of the lessons after you look them over, you can't lose on a see-for-yourself offer like this. Merely mail the coupon at the bottom of this page, same as I did—no money necessary, nothing but your name and address.

Publishers of The Independent (and Harper's Weekly)

Please send me Dr. Blackford's Course of seven lessons called Reading Character at Sight. I will either return the Course to you within five days after its receipt or send you \$5.

Name .....

Address .....

..... Ind. 10-19-18

## Has Been Doing This For Years

Dr. Blackford's unerring ability to judge people at sight is amply evidenced by her remarkable record in the selection of employees for such firms as the Westinghouse Electric and Manufacturing Company, Phoenix Mutual Life Insurance Company, Hercules Powder Company, and others. In passing on thousands of applicants each year, Dr. Blackford estimated the character and capabilities of each entirely from the outward signs. The accuracy of her instantaneous judgment is proved by the fact that 98% of her selections—regardless of their previous experience—made good at the jobs in which she placed them. Her 7 lesson course now makes it easy for anyone to learn and apply the simple principles which she has been using for years.

# You've got to have the right pencil

If your pencil work is to be always up to top speed, top efficiency, you've got to have a pencil not only of the best quality but of the degree of lead exactly suited to your work.

## DIXON'S ELDORADO

*"the master drawing pencil"*

is proclaimed by artists, architects, engineers, business men and other connoisseurs, as a real American achievement. The strong, long-wearing leads do not easily break or wear down quickly. Their responsiveness makes your work less tiring, and quicker. First of all specify the Eldorado; then be sure you are getting the right grade.

**How to find your grade.** Note in the chart below that 6B is the softest, 9H the hardest and HB is medium (the degree most used in general work). Select the degree you think will suit your work and your liking. If not exactly right, next time choose a grade harder or softer. When you have thus found your degree, specify it every time and you will always have pencil satisfaction.

Send us 16c in stamps now, specifying the degrees you want and we will send you full-length samples worth double the money.

the day's work that might be carried out by a substitute secretary fairly well.

12. Standardization. All utensils, materials and supplies for desk work should be standardized; if they are not, the effect of an unknown product bought in emergency may delay you or impair your work. Every article in your desk should measure up to certain well defined standards of performance. You should know what these standards are, and how to apply them. Being satisfied that you have the best work materials and appliances on the market, you should then order ahead in large quantities, first to obtain the advantages of wholesale prices, second, to guarantee you against shortage.

13. Renewal. To make certain that your desk equipment is always complete, arrange to have your stock clerk visit your desk and take inventory about once a month.

14. Care. Tools and supplies should be kept in order by a clerk or the office boy. It is a rule in some concerns for an employee thus delegated to make the rounds of the desks once a day, for the purpose of sharpening knives and pencils, refilling fountain pens and ink-bottles, replenishing stocks that are low and otherwise keeping desk materials in good shape.

15. Schedule. Work of the day must be planned ahead by the calendar and the clock so that each general class of office routine may come at the same time each day. A list of work items covering all these classifications should be kept by you, and another by your secretary, if you have one, or by your employer if you are a secretary.

16. Regularity. The stream of work should be steady, should follow the same route right along, and should be originally planned according to scientific time-and-motion-study. The law of averages taken over a few days or weeks should establish the period of time that each job or set of jobs will probably consume.

17. Continuity. Form the habit of completing every job before starting another, and of completing it in the order specified on your schedule. One of the principle sources of confusion, error, haste, waste and ill temper in a business concern or in a household is the pernicious and insidious habit of dropping one piece of work, taking up another, going back to the first, snatching up the second, taking on a third, and so mixing and mangling the whole performance that nothing gets finished right. Make it a rule never even to think about two series or kinds of work at the same time, think only of what you are doing, get that work finished and cleared away before allowing another matter to enter your consciousness.

18. Variation. Monotony of desk labor should be avoided, otherwise brain fog, eye strain, body fatigue, nerve exhaustion, may result. Concentration must be offset by relaxation. Different sets of nerves, muscles and brain cells should be exercised in turn, that others may be rested. If most of your work is of one special kind, whether manual or mental, you should create natural or arbitrary divisions of time effort by which the consecutive periods of work for hand, eye or brain are made short enough to prevent fatigue, loss of interest or growth of irritability. The men who keep young and strong and can turn out the largest amount of work frequently get up from their desk, move around, relax and rest by doing something different.

19. Speed. This does not mean hurry—the man who hastens never hurries. Rather it means the adoption of the new short cut methods of handling desk and office work,

## THE CLEAN DESK

(Continued from page 93)

the right combination of which for your particular needs would reduce and simplify your working day. Among these helps for the saving of time are the following: Machine computation and tabulation to lift routine burdens of both head and hand; printed office and desk forms wherever possible to save typing and writing; use of different colored standardized stationary for instructions, records and reports to be distinguished at a glance; improved methods of speedier typewriting and dictating; pneumatic tubes and other automatic systems of carriers for quick delivery of messages; telephone and interphone schemes of conferences and memoranda to take the place of personal interviews when possible; code of symbols and abbreviations worked out among helpers in handling correspondence, filing system, records and memoranda. Details of such plans, implements and devices should be secured from a national efficiency organization.

20. Records. As each item on your daily desk program is completed and cleared away, it should be checked off on the memorandum containing your schedule. Thus you will know at any hour of the day just where you stand in relation to the schedule, with a record of the finished jobs and a statement of the unfinished. A good plan for a desk worker is to have several hundred copies of a standardized schedule form sheet printed in two columns, the left-hand vertical column showing hours, half-hours or shorter periods during the day for each appointment, job or group of jobs, with the latter specified on the sheet opposite the time scheduled for it, and the vertical right-hand column consisting of horizontal dotted lines for additional work or special memoranda relating to any certain days; at the bottom of the sheet also blank space is left for notes and comments, while at the top a blank line appears for the date which is filled in by a pen or typewriter. This blank program of industry when carried out and checked off may be filed away as a record of the work of the day, week, month or year. The first move toward increasing the output of tomorrow is to measure the output of today.

21. Clean-up. The last item on your daily schedule should be a memorandum to clear everything off your desk, leaving it for the night as bare of work as tho it were never used. A clean desk in the morning is just as important as a clean face.

22. Comfort. It is a sign of rare wisdom for a man to specialize in comfort and contentment while at work. See that your desk chair fits your desk and your body, so that you naturally sit straight without effort and do your work without strain. Plan your work so that extreme mental or physical activity does not come right after a heavy meal. Wear clothing designed to promote, not impair, the functions of respiration, circulation, digestion. Why should a factory worker be comfortable and a desk worker not? The powerful, prodigious desk workers are.

23. Consultation. The suggestions here made, with any others that may occur to you in studying the matter out, should of course be discussed and approved by the heads of your company or department or any other superior officials to whom you are responsible, in advance of adoption by yourself. You may find that objections or modifications have to be considered. You will certainly find that the operation of your desk is too closely connected with other employees and departments for you to make radical changes on your own responsibility. Likely as not a few of your

44th St., and Madison Ave.  
New York

business associates have technical books or magazines with valuable ideas along the lines here mapped out. Other men you know may have improved on these improvements. Before starting innovations, get all the knowledge you can from all the sources available.

24. Coördination. There are but two alternatives for a man with a clean desk to regard as possible; he must either co-ordinate the schedules of all his co-workers with his own daily program, or he must be independent of them all. Every item on your list of daily accomplishment which is a required factor in the establishment and maintenance of a clean desk is almost sure to be tied up with somebody else's mode, manner and time of performance. Your moves must articulate with all others on which the result of your work depends. Before you fix the new standards of the clean desk as your infallible guide, you should learn how far your associates and subordinates are able and willing to help you to put your new program into effect. Whoever wins in a ball game, a battle or a business does it finally by team work.

25. Education. All new methods of work have to be explained, illustrated, demonstrated, over and over until each employee knows by heart the how of the method and why of the principle. You may wisely take an empty desk, or choose that of one of your employees, and make it a model for teaching desk efficiency. When you have it properly organized and equipt, you may spend to advantage an hour or two a week in showing all your desk workers how the clean desk should be operated. To reform a man's method you must inform the man's mind. To improve the work you must educate the worker. National societies now having such matters in charge may profitably be consulted as to the training of office helpers in relation to the clean desk and to other approved methods and systems of better office work.

*Your desk is the face of your business organism.* People see it first and by its looks judge the nature and character of your business. Also by the cleanness, order, contentment and cheer it radiates will be measured the influence you exert for good on employees, clients or customers, and visitors. Both office industry and office hospitality require this rule: Keep your desk as clean as your face. Your desk should smile as cordially as your face, and only a clean desk wears a smile of welcome.

## Capital Copy

The woolen mills of the country are asked to stop making fancy "Indian" blankets.

Altho the public has responded patriotically to the request for magazines for soldiers, the Post Office Department reports that more current reading matter is wanted at the various camps, and urges subscribers to mail their magazines promptly when they have finished with them.

Arrangements are being made to provide farms for our returned soldiers. Secretary Lane has announced that there will be a job at good pay for every soldier who returns from France, and that while at work he can be making a home for himself for which he can pay the Government in forty years' time.

Stenographers and typewriters are urged as a patriotic duty to enter the Government service at Washington for important war work. Those who have not the required training are encouraged to undergo instruction at once. Examinations are given in 550 cities every Tuesday. Information and application blanks may be obtained at the post office or custom house in any important city.

# Handkerchiefs for Christmas at McCutcheon's

This year, in spite of War conditions, our stock of Pure Linen Handkerchiefs for the Holidays is larger than ever before because we ordered very heavily two years ago, in anticipation of the present Linen shortage, and before the price of Linen advanced so sharply.

We are, therefore, in a position to offer our patrons *unusual values* in Holiday Handkerchiefs. All are of *pure Linen*, as McCutcheon Handkerchiefs have been for the past 63 years.

We counsel early selection while stocks are complete.

## Initialed Handkerchiefs

**For Women**—\$3.00, 4.00, 6.00 to 12.00 the dozen.

**For Men**—\$6.00, 7.80, 9.00, 12.00 and 15.00 the dozen.

**For Children**—3 for 65 cents.

## Embroidered Handkerchiefs

From France, Ireland, Switzerland, Spain and Madeira. We have never had a more beautiful assortment, and the values have never been better.

**For Children**—All white, and white with colored borders, 25c., 50c., 75c. and \$1.00 each, and up.

**For Women**—All white, and with colored borders, 25c., 35c., 50c., 75c. and \$1.00 each, and up.

## Khaki Handkerchiefs

Pure Linen, of good serviceable quality and generous in size, 65c. and 75c. each.

McCutcheon Pure Linen Hand-Embroidered Handkerchiefs \$1.00 each, postpaid

## Orders by mail filled promptly

Handkerchief purchases are delivered in dainty McCutcheon boxes suitable for presentation purposes.

**We respectfully suggest that in so far as possible you act on the Government's request that Christmas shopping be done in October and November this year.**

Our illustrated Fall and Winter Catalogue, which will be sent gladly on request, is full of sensible Christmas Gift suggestions.

# THE NEW BOOKS

## Problems of Policy

THE reader who seeks a survey of all the territorial problems which will probably come up for discussion at the peace conference, and who cannot afford the time to delve in the encyclopedias and histories to get this information, will find *Stakes of the War*, by Lothrop Stoddard and Glenn Frank, a most convenient manual. This book considers each disputed province in turn; gives a brief account of its political and economic condition; states the political, economic, strategic, racial, cultural and religious interests of each claimant nation in the area considered; and briefly discusses the advantages and disadvantages of various solutions which have been proposed. There is a brief introduction by ex-President Taft.

On the whole there is little to criticize as to the accuracy of the facts given or the perspective in which they are placed. The authors aim with marked success to be impartial; it may fairly be claimed for the book that it is as free from bias as if it had been published in 1913. On the other hand, there is perhaps too much tendency to ignore the changes which war has made and which must certainly be reckoned with at the peace settlement. Thus Russia is treated thruout the book as if it were still a powerful and imperialistic Empire dominating the diplomacy of continental Europe. It is strange to read in a book dated 1918 that an independent Czecho-Slovak State "could survive only by grace of the constant support of Russia" when every newspaper is telling us how Russia now survives only by grace of the activity of the Czecho-Slovak army!

The suggestions for the peace settlement are not insisted on, as the aim of the authors is to impart information rather than to inculcate opinion. But some of these suggestions are well worth attention. Thus on Constantinople:

The method of international control may be either that of administration by an international commission dealing with the Constantinople problem alone, or that of administration by a league of nations, which shall be a central organ of administration for all such international concerns. . . . Here again international control will succeed in the degree that it avoids becoming a rigid preserver of the *status quo* in the face of shifting needs and inevitable growth. It remains to be seen whether the political creativeness of the world can evolve a system of international regulation and control that will mete out a justice flexible enough to do away with the heretofore inevitable readjustments thru war.

*Stakes of the War*, by Lothrop Stoddard and Glenn Frank. Century Co. \$2.50.

## America's Big Job

France became consciously and tragically heroic when war commenced. England became unwontedly cheerful because life was moving on grander levels. In America there was no outward change. The old habit of feverish industry still persisted, but was intensified and applied in unselfish directions. "We've got four years to do this job. We've got four years to do this job" is the American soldier's chant.

Lieutenant Coningsby Dawson, commissioned by the British Government to visit the American army in France, has written in *Out to Win* an inspiring account of the place we hold with our Allies on the firing line. Lieutenant Dawson has been fighting with the British troops since 1914—with time out for wounds—and he has previously written two

Press Illustration

Coningsby Dawson, author of "Out to Win"

stirring messages from the men up front in "The Glory of the Trenches" and "Carry On." In *Out to Win* he pays enthusiastic tribute to the fighting vigor and efficiency of the Americans and challenges again the great secondary army of civilians in all Allied countries to keep up a like morale.

Only one doubt as to ultimate victory ever assails the Western Front: that it may be attacked in the rear by premature peace negotiations of the civil populations it defends. Should that ever happen, the Western Front would cease to be a mixture of French, Americans, Canadians, Australians, British and Belgians; it would become a nation by itself, pledged to fight on till the ideals for which it set out to fight are definitely established.

*Out to Win*, by Coningsby Dawson. John Lane Co. \$1.25.

## With the First Yanks Overseas

THE voyage across on the first American transport, the weeks of training behind the lines and our first fighting at the front lose nothing of the thrill they gave our boys in the retelling by Heywood Broun in *The A. E. F.* Without belittling in the least the serious purpose underlying our work over there, Mr. Broun has played up the American tendency to turn work into play and presented generously the humor and good fellowship of the A. E. F. There is nothing of involved strategical problems in the picture of war as he saw it; there is much of human incidentals such as this:

Some officers had tried to teach their men a little French on the trip across, but not much seemed to stick. The men were not over curious as to this strange language. One o'd sergeant went to his lieutenant and said: "You know, sir, I've served in China and the Philippines and Cuba. I've been up against this foreign language proposition before and I know just what I need. If you'll write down a few words for me and tell me how they're pronounced I won't have to bother you any more. I want 'Give me a plate of ham and eggs.' 'How much?' 'What's your name?' and 'Do you love me, kid?'"

*The A. E. F.*, by Heywood Broun. D. Appleton & Co. \$1.50.

## Military Materials

HANDBOOKS for officers and enlisted men are being published rapidly in response to the great demand that naturally follows the change from a civilian to a military career for so many young men.

Colonel James A. Moss's *Manual of Military*

tary Training, which has been officially adopted by 105 military schools and colleges, is intended primarily for use in instruction of cadets in such schools, and is of great value to company officers both in the Regular Army and the Reserve Corps. The Manual is well illustrated with helpful diagrams.

By the same author are the *Officers' Manual* and *Privates' Manual*. The former is a compilation of customs of the service, and other matters of value to the inexperienced officer.

The latter gives in a simple, direct manner information dealing with equipment, military courtesy, health, first aid, guard duty and rifle practise, and has, in addition, a valuable detailed index.

In the *Origin and Significance of Military Customs*, Major Moss explains military terms, uniforms and insignia in a manner interesting to men in the service and to civilians.

*Manual of Military Training*, \$2.25; *Officers' Manual*, \$2.50; *Privates' Manual*, \$1; *Origin and Significance of Military Customs*, 50 cents, by Colonel James A. Moss, George Banta, Menasha, Wisconsin.

## Aviation—German Style

CAPTAIN MANFRED FREIHERR VON RICHTHOFEN, foremost among German aces, with eighty aerial victories to his credit, was killed in action in April of the present year. After a large amount of censoring which has not robbed it of many interesting revelations, his own story comes to us in a translation, and it is good to get the point of view of this man whom we may take as an example of the finest among German aviators.

Captain Richthofen is not of fighting stock but he shows the latent love of things military when he says, in speaking of obtaining his commission, "It was a fine feeling, the most glorious I have ever experienced, when people called me Lieutenant." His first Solo-Flight, that tremendous event in the life of an airman, was disastrous, and with descriptions of this, and his first flight in a storm, as well as of "Richthofen's Flying Circus," his book furnishes thrilling reading.

It is curious, tho hardly surprizing, to find the book utterly lacking in any spiritual feeling, or suggestion that the act of killing is repellent, tho he does take time to applaud his victims. He writes:

One can become enthusiastic over anything. For a time I was delighted with bomb throwing. It gave me a tremendous pleasure to bomb those fellows from above. Frequently I took part in two expeditions on a single day.

This is the "C'est la guerre" spirit in a different way and with a vengeance! And not less so in the following statement:

My father came on a visit to our aerodrome. We just happened to have returned from an expedition. My brother was the first to climb out of his machine, and he greeted the old gentleman with the words: "Good day, Father. I have just shot down an Englishman." Immediately I also climbed out of mine and greeted him: "Good day, Father, I have just shot down an Englishman." The old gentleman felt very uneasy and he was delighted. He is not one of those fathers who are afraid for their sons.

This is vastly different from the literature of our own fighting men—surely, and worth reading for the very contrast.

*The Red Battle Flag*, by Captain Manfred von Richthofen, Robert M. McBride & Co. \$1.25.

## Japan or Germany

FREDERIC COLEMAN has written more than one notable book on the war. His *Japan or Germany* is of special timely interest. Mr. Coleman discloses at first hand the peculiar predicament in which Japan finds herself in fearing that after the war she may be bereft of the sym-

Costing  
12c to 13c  
Contains 2490  
Calories

## It Looks Big When You Figure Its Food Value Meat Costs 8 Times as Much per Calory

The small package of Quaker Oats contains 2490 calories of food. It costs 12 to 13 cents.

The calory is the energy unit used to measure food.

Quaker Oats equals in food value—approximately—the following amounts of other staple foods.

### Measured by Calories

(One 13c Package Quaker Oats Equals

3 lbs. Round Steak	3 1/2 qts. Milk
3 lbs. Leg of Lamb	2 lbs. White Bread
5 lbs. Young Chicken	7 lbs. Potatoes

Figure what you pay for these foods. You will find that meat foods—for the same calories—cost 8 to 14 times as much as Quaker Oats. Then compare them.

### Calories Per Pound

Round Steak	890	Eggs	720
Young Chicken	505	Quaker Oats	1810

Thus Quaker Oats, the food of food, has from 2 to 3 times the calory value. Yet all are good foods, and some are indispensable.

Use Quaker Oats to bring down the food-cost average. Make it your breakfast. Serve it fried. Mix it with your flour foods to add flavor and save wheat. Each dollar's worth used to displace meat saves you about \$8, measured by the calories supplied.

# Quaker Oats

## The Extra-Flavorly Flakes

The reason for Quaker Oats' superior flavor. They are baked from green grain, and are not the dry, starchy cereals.

We get but ten pounds from a bushel. When such a grade sells at no extra price, it is due to yourself that you get it.

12 to 13c and 30 to 32c Per Package

Except in Far West and South

(2003)

## "The Book of the Dead"

This is the title of the Egyptian Bible. The oldest known papyrus scroll of this book was written about 3000 B. C.

If writing paper today were as indestructible as papyrus, pen written manuscript and records made with Carter's Writing Fluid would last forever. This ink writes a beautiful, easy-to-read bright blue and dries a permanent black that fairly becomes a part of the paper.

*Carter's rich, snappy blue color has been distinctive among inks for forty years. Today when colors are weak and unreliable "Carter's Writing Fluid" with its pre-war blue is especially desirable.*

There are more than thirty different kinds of

# Carter Inx

for pen and fountain pen use and a hundred others for various commercial purposes.

**CICO** Paste, Carter Typewriter Ribbonz and Carter Carbonz are other famous members of the Carter family. At any stationer's shop.

thetic accord of the Allies she positively needs. Mainly, it would seem, for a reason stated by the author:

This is a war, we say, for democracy. Count Terauchi, the able Premier of Japan, said not long ago that democracy is one of the greatest dangers of the age. Terauchi, whom I admire sincerely and who has proved himself to be a strong man indeed during the past year and a half, is no democrat. He might be an even stronger man if he was a democrat, but he could not, then, be Premier of Japan.

For all this the author shows Japan is absolutely loyal to the Allies as against Germany. Regarding Siberia, Mr. Coleman has given us a remarkably illuminating account, emphasizing the separateness of progressive viewpoint east and west of the Ural Mountains. It is the more truly democratic spirit among the Siberians which Mr. Coleman believes should make their country the rallying ground for a rehabilitation of Russia proper, but set against this is their ingrained distrust of Japan.

*Japan or Germany*, by Frederic Coleman.  
George H. Doran Co. \$1.35.

## Tredick Wakes Up

We know now that Khaki is no mere color and weave, but a living, precious thing. It is the symbol of service, which is Life itself. Whoever shall wear Khaki, in mind or on the body, cannot die. It is the very spirit of that selflessness which "conquers death, strips it of fear, and makes it almost beloved."

This is the closing paragraph of Freeman Tilden's story of how a little Middle Western village, asleep at the beginning of the war, yawned, stretched, tried to go back to sleep but couldn't keep from waking up in the end. "Tredick said to Europe, in its heart, 'Don't be foolish! But if you must be foolish, don't disturb Tredick.'" And then it proceeded to do all the things it had considered most insane with the least possible loss of time.

Prudence Perkins, a hardened old spinster, had never seemed heroic; Tom Gilstar, her nephew, was commonly supposed to be "chicken hearted" and his brother, Sherry, had fallen into evil ways, but the war is bigger than the individual and you wouldn't have known any of them after Sergeant Gillis had been in town a few days. The boys couldn't enlist fast enough and Aunt Prudence started for France on a ship that was blown up. There are two girls to make it a love story and furnish the Red Cross nurses without which no story is complete.

Mr. Tilden has given a very good idea of how the war affected our small towns.

*Khaki, How Tredick Got Into the War*, by Freeman Tilden. Macmillan Co. \$1.25.

## The Hive

READERS of *The Hive* will be divided into three classes, those who think they don't understand what it is all about, those who think they do, and those who think that it isn't about anything. The last will be the astute readers.

In the good old days before the war, before Will Levington Comfort felt the "spell of the mystical adventure," he used to be a good novelist but he has turned into a thinker and his thoughts are not coherent, which does not mean that there is any lack of ability, but simply that he has got into the wrong room. We cannot but regret the loss of a good novelist and we are not recompensed by the mystical inner selves and cosmic forces which Mr. Comfort gives us in place of stories. Gerald Stanley Lee has set the pace and "books of eager vision" follow as birds their mates.

The only people who will derive any pleasure from *The Hive* will be those who read into it their own ideas. It is hard pulling for a person to get any meaning, unless he has one of his own, from such a passage as this:

A WASTE basket is either a nuisance or it is the most serviceable friend an office man can have. The Victor is the serviceable kind. It is made of metal, finished in Olive Green, Oak or Mahogany. It is heavy enough to remain exactly where you want it. It is so well balanced that it will not tip over even if tipped at a 45 degree angle.

It is fire proof and eliminates all danger if a lighted match, cigar or cigarette is thrown into the basket. It is indestructible and because of its long service it is the most economical basket to buy.

Ask Your Dealer for a Victor

When you need a waste basket for your home, office or store, insist upon getting the Victor. It is serviceable, attractive and practical. It is the best basket you can buy.

Write for the Catalog

Our booklet, "Furniture of Steel for the Bank and Office" shows our complete line of metal baskets, desks, safes, bond boxes, tables, etc. Every office should have this booklet on file. It will be mailed free to any one who writes for it.

**METAL OFFICE FURNITURE COMPANY**  
GRAND RAPIDS, MICHIGAN

## The English Speaking Peoples

## THE ENGLISH SPEAKING WORLD

8 Mortimer Ave., Rutherford, N. J.

A 32-page illustrated monthly. One dollar a year; ten cents a copy.

Write for price per thousand for patriotic distribution

First passion, then dispassion, then compassion-conquest of pairs of opposites until night and day are seen as separate sides of the same globe. So with pain and pleasure and all fluctuations.

There is much said of democracy and cosmic forces and when they meet there is trouble ahead for the reader. In quite a different vein are letters from children who are growing up at the author's colony at Stone Study and learning to express such thoughts as these, of John's:

Comrad has meant a lot the last four days to me. Comrad is everything in the New Race. Masters will be comrads with every one. Their thoughts never go apart. They are always pulling together. We are held together. The pull of the world is nothing to us.

When these children grow older, if they follow their master, they will not write so simply as this. Thoughts concerning the New Race and Comrades there will be, and in large measure, but the treatment will make them unintelligible.

It's all in synthesis. The end of bulk possession is pain. . . . We started in with many flowers. We ended with roses. It's all in the tea-rose. By careful selection of thoughts over a period, we can come into the joy of flowers in other people's gardens. There are brave men who allow you to walk in their orchards; and there are many who work hard to raise fruits for a price.

Verily, all is vanity, and the vainest of all things is trying to find a concrete meaning for these flights.

*The Hive*, by Will Levington Comfort. George H. Doran Co. \$1.50.

## Tang of Life

WRITTEN by a man with several Western stories already to his credit the charm of *Tang of Life* comes from the author's thoro knowledge and love of his locality. But this book has an appeal wider than that of just a rousing cowboy yarn, mainly because of its very excellent character work. There are a great many persons directly and indirectly involved in the plot and all of them are real, flesh and blood people.

Jim Waring, gunman and hunter of bad men, is the hero for a while, but gradually his son, Lorry, a chip off the old block, takes the center of the stage. When Lorry applies for work at the Forestry Office, Torrance decides "that a young man who could capture a holdup man, best the notorious High Chin in a fight, repair a broken automobile, turn a prisoner loose, and make his own escape all within the short compass of forty-eight hours, was a rather capable person in a way."

When Jim Waring sets out to "get" the man who killed his pal in an unfair fight and when Lorry helps run the I. W. W. out of the town of Sterling, there is action galore. The book closes with the news of our entrance into the war and the call for young men to enlist. So Lorry "sets his face toward the High Trail."

*Tang of Life*, by Henry Herbert Knibbs. Houghton, Mifflin Co. \$1.50.

## Old Friends

A new book by Edna Ferber can be sure of a spontaneous welcome from high-brows and low-brows alike. The people in her stories are real folks: "Sophy as she might have been," "the gay old dog," "the woman who tried to be good," "the tough guy" and "the self-complacent young cub" are all alike in one chief characteristic—they are predominantly human. In *Cheerful—By Request* these folks, and others, enliven a dozen of Edna Ferber's latest stories with their triumphs and their trials. The dozen are all good stories—that goes without saying—but they are more than that, they are stories it will do you good to read.

*Cheerful—By Request*, by Edna Ferber. Doubleday, Page & Co. \$1.45.

### METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course has been reduced from three years to two years and six months. Every young woman who enters a training school for nursing to-day renders a patriotic service by releasing a pair of trained hands for service "Over There."

For Information write to MISS AGNES S. WARD, Superintendent

## MY TRIP TO THE BELGIAN FRONT

(Continued from page 91)

ditch by the side of the road. But even so, our heads and shoulders were exposed to the German observation posts. As we trudged along I noticed the ground was covered with shot and broken shell. I picked up many pieces of shrapnel and also a splinter from a wrecked German aeroplane. We could see the smoking city of Ypres only a few hundred yards ahead. The Germans were still shelling it. We walked into our front trenches at this spot, but they seemed to be most inadequately made and manned. I should have supposed that the Germans could have penetrated them if they had wanted to without very much trouble. There seemed to be few men on the front lines defending the salient, but no doubt there were plenty in the rear ready in case of an attack. We walked back out of range of the enemy observation posts and visited the Belgian batteries situated on the banks of the canal. They were firing away at frequent intervals. In the faint distance we could see Mt. Kummel, which Germany got in her last drive, but now happily is ours again. We then left the battlefield but the odor, the horror and the desolation was something that can never be obliterated from the mind.

Half way back to Captain Cresson's hospitable home we visited an English anti-aircraft battery. I was impressed again with how luxuriously the English take their fighting. In the trim enclosure where the battery was placed they had a little out-house fitted up with a porcelain bathtub taken from some deserted house near by. Flowers were growing in the well-tended flower beds, little pebbled walks wound in and out among the shrubbery and everything was in apple pie order. They showed me how the great anti-aircraft gun worked. It is placed on a revolving stand. One officer sits on a saddle alongside the gun and sights it while the crew do the adjusting and firing. At night, when they cannot see the aeroplanes overhead, they have to fire at the sound. As it is most difficult to score a hit in the daytime, it is next to impossible to bring down a plane at night. As we stood there talking a friendly aeroplane came over our heads and I asked the officer, without looking, to point his gun at the plane above him. He "drew a bead" exactly on it, so keen had his ear been trained.

We next visited the great gun that returns the salute every time that the "Dunkirk Express" is fired from Sengenboom. It was hidden in an astounding bit of camouflage in the form of a large hay barn. The colonel in command told me that the concussion of the gun was almost sure to split the ear drums of any one near it unless they were stuffed completely with cotton and even then sometimes they would burst. The gun was the largest I have ever seen. Its camel-like neck looked a mile long—figuratively speaking. Its huge breach was big enough for a man to crawl in to. It costs over a thousand dollars to fire, and it requires three Daimler tractors of 40 horse power each to drag it into position. It fires a shell with a velocity of 17,000 feet per second and the shell weighs 750 pounds and explodes by percussion when it hits. It can shoot twenty or thirty miles and Ostend is within its range. It once fired twenty-two rounds in sixty minutes. This gun, of course, is solidly erected and if the Germans had ever come over quickly it would have had to be blown up as it could not be quickly moved.

We got home pretty tired after the day's experiences and I went to bed early. The

last thing I remember before going to sleep was hearing three bombs explode with a terrific detonation near by. They were dropt by German aeroplanes as they flew over town on their way to Dunkirk and Calais. And the first thing that greeted my attention at five o'clock the next morning as I drew the curtains of my bedroom was an English plane evidently coming home from the German lines and flying low over the sea. I was soon downstairs where our car was waiting to take me to the Belgian headquarters where I changed to the official automobile that carries dispatches from the Belgian front to the Belgian capital at Havre.

After a wonderful all day's ride thru northern France, where I passed thru many towns filled with English and American troops, I arrived at Havre. There I had a few hours to look about before I took the boat that evening for Southampton. I went out to the camp where the American troops are first sent when they come over from England. Our boys were then arriving at the rate of three to five thousand a day. Altho the British had loaned us their largest camp the men were packed in it like steers in the Chicago stockyards. They slept at times twelve in a tent so I imagine they had to "turn over" all together on command of the sergeant. When I arrived they were having their dinner. The men formed in long lines and as they passed the cooks each was given bread, meat, butter, cheese and coffee. The camp held 6000 men and it looked as tho 10,000 were there. To show how wary the boys were of strangers, I remember that several of the newly arrived Americans would not answer my greetings altho I was accompanied by an American officer. They had been told to beware of friendly strangers and they evidently thought I might be a spy. At all events they were going to take no chances.

In this connection one of the Intelligence Officers of the American army stationed at Havre told me a very interesting story which shows the insidious side of German propaganda. It seems that when the American soldiers landed in England, the rumor got about that they were to have their guns taken away and were to be given British equipment and to be commanded by British officers. This was so generally believed that some of the soldiers actually sent a cable of protest to President Wilson. The reports were traced to Liverpool, where the English Secret Service caught certain Irishmen spreading this falsehood. Whether the Germans inspired the Irish or not my informant did not know, but that was the supposition. An official statement was therefore prepared and is now read to our boys when they land in Europe telling them not to believe what they hear unless it comes from their own officers.

Before returning to our hotel I called on our Minister, Brand Whitlock, to thank him for all he did to facilitate my movements in Belgium, and then, after dinner, boarded our little ship and the next morning found me safely back to Mother England.

# How to End Film On Your Teeth

*All Statements Approved by High Dental Authorities*

## It Must Be Done

Brushing teeth without ending the film is pretty nearly useless. Millions of people know that. They find that brushed teeth still discolor, still decay. And statistics show that tooth troubles are constantly increasing.

A slimy film which you feel on your teeth is the cause of most tooth troubles. It gets into crevices and stays, resisting the tooth brush.

That film is what discolors, not your teeth. It hardens into tartar. It holds food which ferments and forms acid.

It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So it is that film which wrecks the teeth.

Science has now found a way to daily combat that film. Able authorities have proved it by clinical tests. It is embodied in a dentifrice called Pepsodent, which countless dentists are now urging. It is bound to supersede old methods with everyone who knows it.

## A Week Will Show

The results of Pepsodent are so evident, so quick, that a week's use is convincing. And we offer that test at our cost.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to constantly prevent its accumulation.

Ordinary pepsin will not serve this purpose. It must be activated, and the usual agent is an acid harmful to the teeth.

But science has discovered a harmless activating method. Five governments have already granted patents. It is that method—used only in Pepsodent—which makes possible this efficient application.

After a great many tests made by dental authorities, Pepsodent is recognized as the way

to fight this film. And now we urge everyone to prove it in their homes.

Send the coupon for a One-Week tube. Use it like any tooth paste and watch results. Note how clean your teeth feel after using. Mark the absence of that slimy film. See how your teeth whiten as the fixed film disappears.

Stop your inefficient methods for one week. See how much more Pepsodent accomplishes. Then judge for yourself what to do in the future.

Cut out the coupon now.

# What We Did for One Investor

328 MAIN ST. S., MUNCY, PA.

To the Magazine of Wall Street:

In an idle moment, while carelessly turning over the pages of an unfamiliar magazine, my eyes caught the following words in large type: TO SLEEPING INVESTORS!

All day those words were before me, they would fade away, then return, they appeared in my dreams that night; then as in a flash my brain grasped the truth.

Those words meant to me: I was a sleeping investor, not only sleeping but so wrapped up in my egotism that I was even snoring.

In my ignorance, like thousands of others, I had bought the stocks of corporations about which I knew absolutely nothing; so long as dividends arrived my confidence was complete, never questioning whether these dividends were honestly earned or honestly paid, whether the money invested was in safe hands or not.

Enough; that was nine months ago.

Detail would be tedious, suffice it that my first act was to subscribe for "The Magazine of Wall Street" in which I had seen the words which had aroused me.

Each issue of the magazine, upon its arrival, was carefully studied, gradually my brain responded to its teachings and today my money is in practically safe corporations, the principal is doubled and the dividends a little more than double.

In my heart is a deep and sincere feeling of gratitude towards those who have made it possible for others to awake and profit by the awakening.

M. R. R.

23 Sept. 1917.

The Magazine of Wall Street, New York City:

DEAR SIR—Your very kind letter of 20th Sept. is before me and I feel that an explanation is due you.

It has always been my custom to use my initials in all business transactions, therefore, upon receiving your courteous request to use my letter as a whole, I realize that the views of an "old maid" may not have the same weight with you as those of a man.

However, this does not alter the truth of my statement; the pity of it is that your remarkable publication, with all that it teaches, is not in the hands of thousands of women who are constantly losing large sums of money simply because they do not know where or how to invest it properly.

My confidence in your integrity is such that I feel honored to place the modest expression of my thoughts absolutely in your hands, well knowing that you will use it for the good of others.

Respectfully,

(Miss) M. R. ROBB.

## Pebbles

Recent definition of poetry: "The art of arranging words in the order of least commercial value."—*Brooklyn Life*.

Harassed Porter—You blinking Scotchmen gives us more trouble than anybody.

Jack—Ay. That's what the Germans say!—*London Opinion*.

It is estimated that since April 6, 1917, 483,000 poems have been written bearing the line "sadder and wiser" to rhyme with "Kaiser."—*Kansas City Star*.

Burglary is increasing at an appalling rate in Germany, according to the *Frankfurter Zeitung*. The national policy is being individualized, as it were.—*Minneapolis Journal*.

Kaiser—Our future, my dear boy, lies in the east!

Crown Prince—Well, father, from what I've seen of the west, I think you may be right.—*Punch, London*.

"I see ye have a new hired man, Ezry. How is he doing?"

"Resting considerable easier than the other one did, thank ye!" a trifle grimly replied honest Farmer Hornbeak.—*Kansas City Star*.

Hun Prisoner—Der Americans haf not der gun as big as ours.

Sammy—Ho, say? D'you know we are building one over the other side so big that every time they fire it they will hev to give the crew a week's leave to wait for the recoil?

Now that we are launched into the Siberian campaign, an attractive prize should be offered to the genius who can devise some short, snappy, pronounceable nickname for our new Allies, the Czechoslovaks.—*Nashville Southern Lumberman*

Dogs' combings having been utilized, Baroness Hélène Gingold suggests that men should now be asked to sacrifice their beards, for stuffing pillows, and so on. Can't you hear Bernard Shaw asking, "Is thy servant a dog that he should do this thing?"—*London Opinion*.

Officer—The ground was simply shocking after the rain: we thought the "push" would have to be postponed.

Lady—Well, do you know, we were in the same predicament the day of our Red Cross Fête, but we had the foresight to cover the ground with straw.—*London Opinion*.

Two negroes were discussing the possibilities of being drafted.

"Tain't gwine do 'em any good to pick on me," said Lemuel sulkily. "Ah certainly ain't gwine do any fightin'. Ah ain't lost nothin' oveh in France. Ah ain't got any quarrel with a-n-y-body, and Uncle Sam kain't make me fight."

Jim pondered over this statement for a moment. "You right," he said at length. "Uncle Sam kain't make you fight. But he can take you where de fightin' is, and after that you kin use you' own judgment."—*Everybody's Magazine*.

"There is a feller here who owns a queer animal," said the landlord of the Petunia tavern. "It has a head like a turtle and a body like a colt. There is a tin along its spine. It has feathers on its body, fur on its legs, and a spike or stick on the end of its tail. It whistles up to 10 o'clock in the morning, and then brays till noon. Afterward—" "Nonsense!" said the guest whose countenance was shaped considerably like that of a rare old fiddle. "You don't expect me to believe a fantastic tale like that, do you?" "Well, I heard you saying a little while ago that you feared we could never whip the Huns and might eventually be compelled to conclude a German peace. Of course, if you believe that you will believe anything."—*New York Globe*.

## VICTORY

Victory is a matter of "Human Machines." Your share in winning depends on your mental and physical fitness to do your utmost. Your country calls for no less.

Will power, alone, may carry your "Human Machine" over these tense times—but afterward?

Don't wreck so beautiful a mechanism! At least give your own "Human Machine" the care you never refuse your car. Rest—timely taken, under intelligent direction, to make sure that your Heart engine is all right, will bring you through strong to the Victory.

and, in this connection—

## WHY FACTORY CLASSES PAY

(Continued from page 94.)

ment to the firm, inclusive of space, heat, light, and janitor service, and loss of workers' time, amounted to \$672 for the entire school year. The cost to the Board of Education for instruction and materials used, amounted to \$560, making a total of \$1,232 for the instruction of forty-two employees during a period of forty weeks.

The earning capacity of the girls attending the school increased steadily thruout the school year. As wages were paid by the piece, this increase can be taken as a fair indication of increased efficiency. It pays the employer to cooperate with the school authorities for providing instruction for illiterate workers.

There are other points of value besides the increased efficiency of the employees. The industrial accidents which can be ascribed to ignorance of the language would make an interesting study for the statistician. The Semet-Solvay Company reports a case of a \$2000 machine wrecked because some worker did not understand the instructions given in English, and many stories of damaged machines and spoiled goods from the same cause could be produced, no doubt. Loss of life and personal injuries can easily result from inability to read danger signs or to understand a spoken warning.

But most important of all the benefits derived from a knowledge of our language by all our workers is the improvement of the morale.

The man who is indifferent to the causes of the war and who has not the desire to help America win, is a dangerous person to have in mine or mill. If he is indifferent because of ignorance, he can be reached by enemy-alien propagandists, with the result that production can be delayed, or sabotage may result or labor troubles arise that will seriously lessen the output.

The industrial slacker, the absentee, the floater (sometimes called "labor tourist") and the disturber of industrial peace are men who have not the success of our armies in their hearts, and the way to get the message of America to them is to teach them the language of America.

The school courses should include the lesson of patriotism from the start, and the ideals of Washington, Lincoln and Wilson should be inculcated, together with a clear-cut statement as to why we are at war, why we must win, and why the daily work of each man and woman in America is needed in this crisis.

The need of a common language in our army, which is composed of men of every race and tongue, has been emphasized by a recent letter from Provost Marshal General Crowder to the selective draft boards. In this communication, their cooperation with the local boards of education is requested in order that our language may be taught to non-English speaking men enrolled in September before they are called to the colors.

If it is essential that an army should have a common language so that orders may be understood and the morale strengthened, it is no less essential that industries should be able to direct workers in a common language to the same end.

The result in each case is the hastening of our day of victory.

The methods of establishing English classes in industrial plants are described at length in the *Efficiency Quarterly* for November, where the work done in Bethlehem, Pennsylvania, and in New York City is detailed. In the first case, the work is done by the Bethlehem Steel Company and in the latter by the local Bureau of Education under the direction of Miss Sarah Elkus, supervisor of continuation classes.

## Salt Mackerel

### CODFISH, FRESH LOBSTER

RIGHT FROM THE FISHING BOATS TO YOU

FAMILIES who are fond of FISH can be supplied DIRECT from GLOUCESTER, MASS. by the FRANK E. DAVIS COMPANY, with newly caught, KEEPABLE OCEAN FISH, choicer than any inland dealer could possibly furnish.

We sell ONLY TO THE CONSUMER DIRECT, sending by EXPRESS RIGHT TO YOUR HOME. We PREPAY express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want YOU to try some, payment subject to your approval.

SALT MACKEREL, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in PARCHMENT LINED CANS. They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying, SHRIMP to cream on toast, CRABMEAT for Newburg or deviled, SALMON ready to serve, SARDINES of all kinds, TUNNY for salad, SANDWICH FILLINGS and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send BOOK OF RECIPES for preparing all our products. Write for it. Our list tells how each kind of fish is put up, with the delivered price so you can choose just what you will enjoy most. Send the coupon for it now.

## How to Use the Independent in the Teaching of English

This brochure prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address The Independent, 119 West 40th St., New York.

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. My Trip to the Belgian Front. By Hamilton Holt.

1. Imagine that the article is a letter you have received from a personal friend. What characteristics of the personal letter would it illustrate?
2. Show exactly how the author has gained coherence between paragraphs thruout the article.
3. Show in what ways the article is like, or unlike, any one of Irving's personal accounts in "The Sketch Book."
4. Show in what ways the article is like, or unlike, Stevenson's "Inland Voyage," or "Travels with a Donkey."
5. How does a personal narrative differ from the literary type known as "The Essay"?
6. Write an interesting letter in which you narrate some of your own unusual experiences.
7. Explain the allusion to "David Copperfield" in the sentence: "Their abode looked something like Peggotty's family boat in 'David Copperfield.'"
8. Explain the allusion in the sentence: "I seemed to see the English army officer made so familiar in Kipling's books."
9. Explain the methods employed for maintaining comfort at the front.
10. Prove conclusively that Ypres and Verdun are thus far the greatest battlefields of the war.

#### II. How We Beat the U-Boats. By Herman Whitaker.

1. Give a Four Minute Speech in which you triumphantly outline the progress of warfare against the U-boats.
2. Give a patriotic talk in which you explain our reasons for pride in the American fleet.

#### III. Poet and Harlequin. By Alter Brody.

1. Define the following words: Poet, harlequin, jester, seer, naively.
2. Show in what ways the poem is related to Wamba in "Ivanhoe," and Touchstone in "As You Like It."
3. How does the poem somewhat illustrate the life of Robert Burns? of Edgar Allan Poe?
4. What part of Tennyson's work is brought to mind by the first seven lines?
5. Give a full explanation of the meaning of the entire poem.
6. Prove that the verse form is appropriate to the thought of the poem.

#### IV. Why Factory Classes Pay. By Charlton Edholm.

1. Give a spirited talk in which you explain what is meant by Industrial Americanization.
2. Explain why English must be the one language of the United States.
3. Write an original composition on "The Effect of Foreign Language Publications in the United States."

#### V. The Influenza Pandemic Again. By James J. Walsh.

1. Write a brief of the article.
2. Define the following words: pandemic, infection, epidemic, virulent, mortality, bacillus, antiseptics, complications.

#### VI. Our Sixty Thousand Motor Trucks in France. By John R. Eustis.

1. Write a paragraph of detail on "The Motor Equipment of the United States Army."

#### VII. The Clean Desk. By Edward Earle Purinton.

1. Write an outline for a somewhat similar article on some subject with which you are familiar.

#### VIII. The Story of the Week.

1. Explain in full the recent correspondence between the warring nations.
2. Give a talk explaining the present situation along the entire western front.
3. Write a short composition in which you point out the indications of total defeat for Germany and Austria.
4. Give a clear exposition of the present political situation in Germany.
5. Give an oral résumé of the important events of the week.

#### IX. Editorial Articles.

1. Express, in a single sentence, the principal thought of every editorial article.
2. Which editorial article do you consider most forceful? Why?
3. Which editorial article do you consider most original? Why?

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. The Possibilities of Peace—"Wilson's Ripost," "The German Peace Plea," "President Wilson's Answer," "Germany Accepts Wilson's Terms."

1. Why did the Central Powers make their appeal for peace to President Wilson instead of to the Allied governments as a group?
2. What is the program of the President referred to in the German note?
3. What would have been the effect if the President had accepted the proposal of Prince Maximilian as made?
4. What are the conditions upon which the President insists before he is willing to discuss peace terms with the Central Powers?
5. What further moves will the Germans and Austrians probably make to bring about peace?
6. Do you see any evidence that Germany and Austria as nations are coming round to the President's point of view?

#### II. Political Reconstruction of Europe—"The Head Devils," "Reorganized German Government," "Boris of Bulgaria," "The War in the North," "Various Russian Governments."

1. Show that the editorial writer's statement, "New issues have arisen; old issues have dropped out of sight," is correct.
2. "It is seventy years since the German people made any effort to shake off the kings and overlords," etc. To what movement does this refer?
3. Make a list of the rulers mentioned in the fourth paragraph of the editorial of whom you have heard before. Describe the circumstances which led to the death or deposition of one or more of them.
4. What changes in political organization have taken place in Russia as a result of the war?
5. What changes are proposed in Germany? in Austria?

#### III. American Organization and Reorganization—"The United People of the United States," "Congress," "Planning Reconstruction," "Coal."

1. Discuss one of the three propositions: "American society in two years has become 'single purposed, highly controlled, and standardized.'"
2. What are the influences which have tended to unify the people of the United States? Why will these influences probably persist after the war?
3. What are some of the reconstruction problems indicated for solution by Senator Overman and Senator Weeks.

#### IV. The Armies at the Front—"My Trip to the Belgian Front," "The Relief of Reims," "Capture of Cambrai," "Americans on the Meuse."

1. As a result of reading the article, what impressions do you get of the character of the fighting on the Belgian front? How does this fighting differ from that (a) in Champagne, (b) in the region south of Verdun?
2. What impressions do you get of the Belgian army, the British army, the French?
3. Why does Mr. Holt call Ypres "the greatest battlefield of the war save Verdun"?

#### V. The War at Sea—"How We Beat the U-Boats."

1. Compare the activities of the sea forces in this war with the activities of the sea forces in the Russo-Japanese war, the Civil war, the war of 1812, the Napoleonic wars.
2. "This remarkable showing [the success of the navy] is . . . the product of many factors." Describe the various activities referred to.

#### VI. Business Efficiency—"The Clean Desk."

1. The first sentence of this article is a figure of speech. What does this figure mean?
2. Do you know any office to which the paragraph beginning: "Before the development of the new science of efficiency engineering," might refer? If so, describe what goes on in that office.
3. Discuss one or more of the propositions: The clean desk has a mental value, a financial value, a social value, a moral value.
4. In what way can you profit in your present or your future work from the twenty-five essentials of the clean desk described by the author?

## REMARKABLE REMARKS

**DOROTHY DIX**—You cannot feed a woman's heart on banknotes.

**PREMIER CLEMENCEAU**—I make no more speeches. It is time to work.

**JOHN GALSWORTHY**—You must not go out with your umbrella rolled.

**CAPTAIN PERSIUS**—There has been no rationing of tall talk in Germany.

**GENERAL VON STEIN**—In propaganda the enemy is undoubtedly our superior.

**CARL SANDBURG**—I shall ask the next banana pedler the who and why of it.

**PROF. L. P. JACKS**—The Germans are a people in whom cruelty is an instinct.

**ED. HOWE**—I have toyed with forbidden fruit only about as much as is common.

**SECRETARY DANIELS**—An autocracy has an army but a democracy is an army.

**THEODORE ROOSEVELT**—Let us strive to make our lives a little nearer the ideal.

**HELEN KELLER**—The air is tremulous with the soundless feet of the new day.

**PRINCE MAX**—The whole history of spiritual Germany's feelings shines like a beacon.

**LAURETTE TAYLOR**—Just as every cloud has a silver lining I am sure every hair shirt has a bald spot.

**MARY E. RICHMOND**—Not all the hasty and ill-advised marriages of wartime can be charged to the war.

**PREMIER LLOYD GEORGE**—Marshal Foch is one of those rare men who has a telescope at the back of his eye.

**HERR ERZBERGER**—The longer the war lasts the more surely will World-Bolshevism come in one form or another.

**HERR BUGMEISTER**—Are we not perhaps giving our lives only for capitalism which is now enjoying such wild orgies?

**THE KAISER**—President Wilson is trying to overthrow me and my family from the throne of Germany by his notes.

**UNITED STATES SURGEON-GENERAL**—Your nose, not your mouth, was made to breathe thru. Get the habit.

**MRS. CHARLES S. MELLER**—If the women only stuck together like the men there would not be so many heartaches.

**J. H. THOMAS, M.P.**—Let the message go forth that labor will not spend a penny to add to the power of kings and emperors.

**COUNT YORCK VON WARTENBURG**—It is only by fighting that the nations win life so we shall do well to renounce moral conquests.

**H. G. WELLS**—Amidst the other politicians and statesmen of the world President Wilson towers up with an effect almost divine.

**COUNT OKUMA**—Tho all other thrones in the world should totter and fall, you may be sure that the Imperial House of Japan would survive.

**VICENTE BLASCO IBANEZ**—A Swiss living in his wooden chalet and considering himself the equal of the other men of his country, is more civilized than the Herr Professor who gives precedence to a lieutenant or to a Hamburg millionaire who,

in turn, bends his neck like a lackey before those whose names are prefixed by a von.

**VICE PRESIDENT MARSHALL**—I want the Senate of the United States to remove the ban of secrecy from the discussion of the peace question.

**ROY L. FRENCH**, now somewhere in France—Being the only Theta Delta I know of who is a rear rank private, I am trying to be a good one.

**MARSHAL FOCH**—In every lottery there are fortunate men who win a prize, yet no sensible person depends on lotteries as a means to fortune.

**VICE-CHANCELLOR VAN PAYER**—The Central Powers' primary condition for peace is that all territory we possess on August 1, 1914, should be restored.

**DR. BORCHERS**—Do not become sentimental; show a hard face to your enemies, and say plainly to them that you need this and need that, and therefore will keep that much of what you have taken from them, because you are the conquerors.

## JUST A WORD

In The Independent next week the man who knows most about Germany's internal affairs will discuss the revolution that seems to be brewing there now and the conditions that dictated Germany's last note. The man, of course, is ex-Ambassador James W. Gerard; he was in Germany from 1913 to 1917 when we entered the war, and thru his position as chief neutral representative there he gained an intimate knowledge of conflicting German viewpoints toward international questions. Ex-Ambassador Gerard's book, "My Four Years in Germany," is one of the most interesting as well as the most authentic accounts of what has gone on inside the German Empire during the war.

Henry Morgenthau, ex-Ambassador of the United States to Turkey, will write for an early issue of The Independent his explanation of "Why Turkey Must Surrender." Mr. Morgenthau was in Turkey during the first part of the war and as representative of the United States he was virtually head of a widespread organization of relief for refugees. Since his return to this country Mr. Morgenthau has been frequently called in consultation with the Administration on questions of our policy in the Near East.

### A RED CROSS SHOP

In Los Angeles has originated the Red Cross shop, which estimates its minimum monthly returns at \$1000. The shop has for sale a great variety of useful articles donated by the community; it maintains an attractive tea room; it provides entertainments and is devoting part of its interest to salvaging waste products.

In an attractive booklet the Los Angeles shop states the organization required for carrying on such work as it is doing and gives the result of its experience to other communities desiring to establish war work along similar lines.

### CORRESPONDENCE WITH FRENCH PUPILS

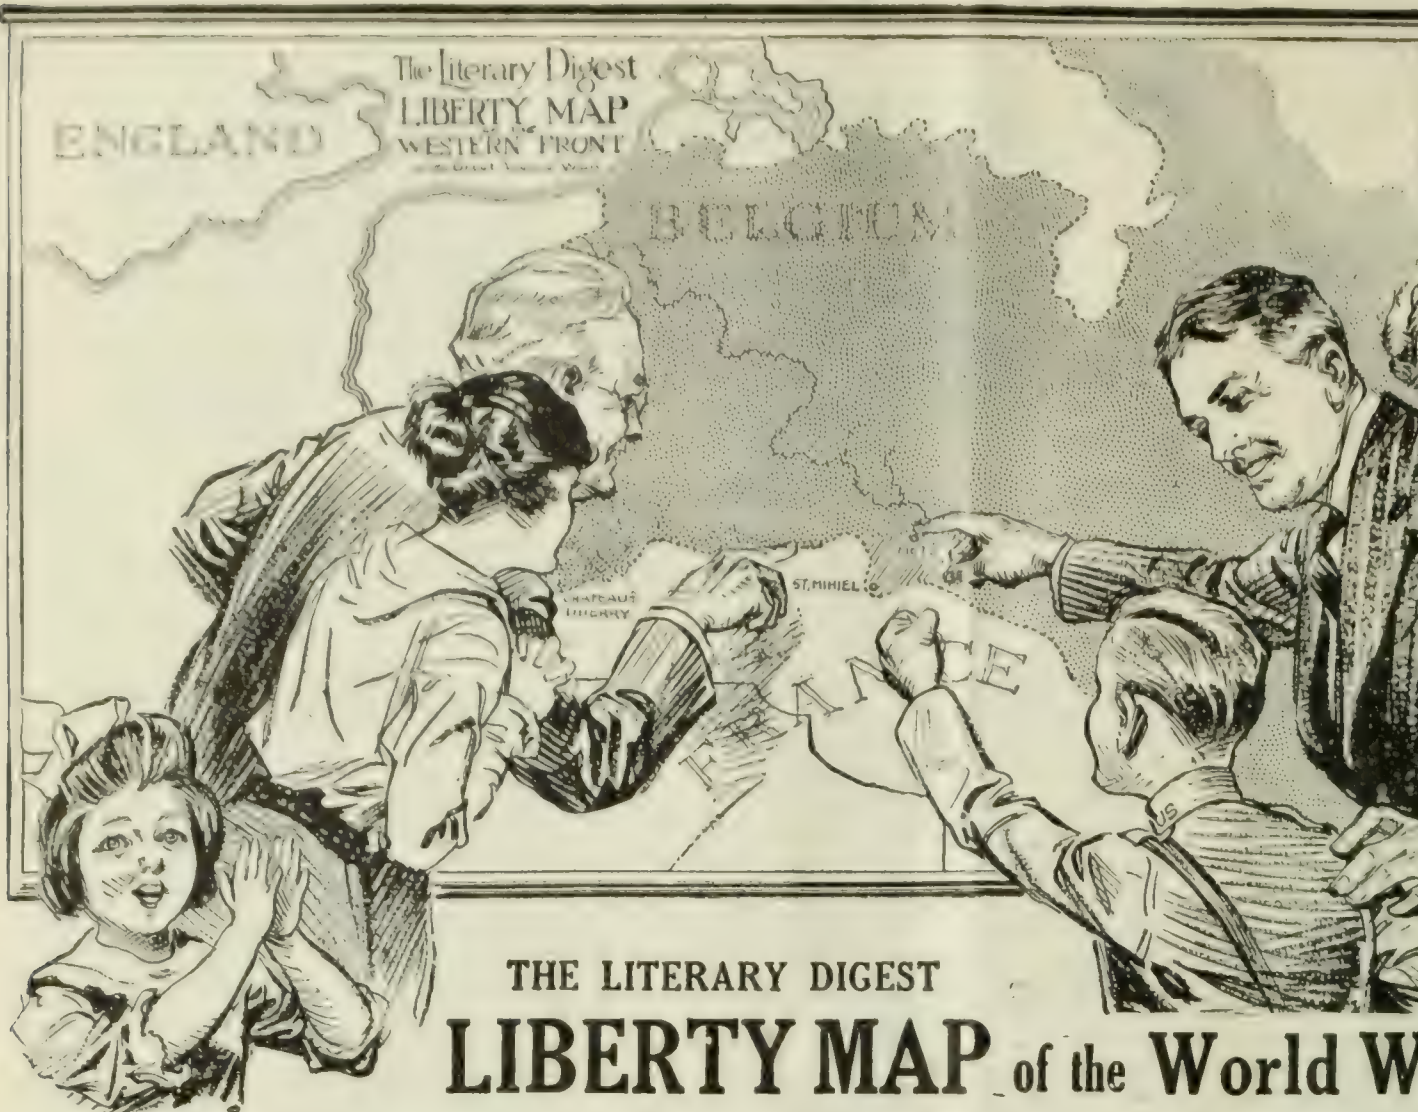

The French Public Board of Education is gathering together a large list of French boys and girls of about high school age who would like to correspond with American boys and girls. The plan is official and Mlle. Marguerite Clement, who lectured in this country last year as the accredited representative from the University of Paris to American universities and who will return to America again in November, will bring this list with her.

Teachers of French in American high schools and private schools can suggest this idea to their pupils and will have opportunity to make the exchange of addresses when Mlle. Clement arrives about November 1. Her address then will be, care of Miss Mabel Cry, 26 Pemberton Square, Boston.

## LOOK!

**There's Where Our Boys Are Driving the Germans Back!**

**THE LITERARY DIGEST  
LIBERTY MAP of the World War** (4 ft. 4 in. Wide)  
(3 ft. 6 in. High)

### All Arms of the Service Commend It

On account of its remarkable qualities it has been enthusiastically approved by the highest officials of the Army and Navy. The Inspector General of the Army, Major General John L. Chamberlain, describes it as "an excellent map" which conveys a very clear idea of the situation." Rear-Admiral H. P. Huse, President of the Naval Examining Board, terms it "the most satisfactory thing of the kind" he has seen, and adds that he does not know "how it can be improved upon."

### "It Will Be of Immense Value to Me"

writes Charles S. Sloane, Secretary of the U. S. Geographic Board, Washington, D. C., who praises its size and scale particularly. The Aide to Brigadier-General Enoch H. Crowder, the Provost Marshal General characterizes it as "an interesting and helpful map" and expects to "find it very useful" in his office.

### "Its Publication Is a Real Service to the Country"

declares Daniel C. Roper, Commissioner of Internal Revenue; and Captain Roger Welles, U. S. N., Director of Naval Intelligence, speaks of its as "complete to the minutest detail." Vice-President Marshall has given it "a prominent position in his private office where he may consult it from day to day."

### America's Highest Map Authority Endorses It

Chief Geographer B. B. Marshall, U. S. Geological Survey, Washington, D. C., styles it "a fine piece of work in every respect and by all odds the best that I have seen. The shading scheme is graphic indeed, showing at a glance the track of the Hun in his effort to crush civilization under his cruel, inhuman control. Each home from which has gone a father, a son, a husband, or a brother, would certainly appreciate a copy of your Liberty Map, as would those who can not go. By all means try to put one in each home."

### A Clear and Thrilling Picture

The wonderful LITERARY DIGEST LIBERTY MAP shows at a glance how far the Huns have advanced, how much territory they occupy, the area of their latest "drives"; where our own American Armies, shoulder to shoulder with our Allies, are fighting on the great **Battle Line of Liberty**, and makes plain the mighty task which confronts America.

### An Index of More Than 12,000 Places

is supplied with each map. It is bound in a separate booklet with handsome war covers, and is packed with the folded map, in a strong square envelop pouch which can be used as a permanent container for both.

### In Addition to the Western War Area

is a complete insert map of the whole field of operations, showing Russia, the British Isles, Spain, the Balkans, the Italian Front, the whole Mediterranean, and the Mesopotamian campaign.

### Railroads and Highways

and thousands of cities, towns, fortresses, hills, and other places of military importance are shown with special care to secure completeness, convenience and legibility.

### The Limits of the Submarine Blockade

are shown as well as the routs of the **Air Raids** which will be increasing rapidly in number and importance as the great new fleets of airplanes, now building, go into action.

### Coal and Iron Areas

A special insert map is provided, showing the coal and iron areas in the countries included in the large map, and their relation to the abilities of the opposing nations to carry on the war.

### The Coloring of the Liberty Map

is strikingly graphic and significant. The countries are clearly differentiated and all boundaries are made very plain. The great **Battle Line of Liberty**, marking the positions of the American and Allied armies, is shown in Red, White and Blue.

### It Will Be a Great Satisfaction to You

and an inspiration to your family, or to those who are working in your place of business, or to those who call at your office, to see, day by day, this unusual and eloquent LITERARY DIGEST LIBERTY MAP displayed conspicuously on your wall telling its wonderful story of the great fight for freedom.

### Size 4 ft. 4 in. wide; 3 ft. 6 in. high

It is the **only map** which gives the American people a vivid visualization of the great war, and thus is calculated to rouse their patriotism to a still higher pitch and intensify their determination to see the war through to a victorious conclusion. **It shows how a black cloud of frightfulness and terror has been thrust across Europe by the savage Hun;** how it has swept over whole nations, scattering death and ruin in its wake. But now, from all the ends of the earth where men are still free, **the Armies of Liberty have gathered at the "Frontier of Freedom,"** and are battling, driving back the savage hordes.

## PEACE ON OUR OWN TERMS

**A** GAIN the President's diplomatic skill has foiled a peace offensive. Again his enemies at home and abroad have been disappointed. He kept clear the distinction between a truce of arms and a discussion of the terms of peace. The former is a military question and he leaves it to the experts. The latter is a political question and he is attending to it. Evidently the Kaiser cannot depend upon the President to extricate his armies from between the jaws of Foch's gigantic pincers. If the lines were frozen stiff as they have been most of the time for the last four years, it would do no harm to have an armistice, for the American army is arriving in France at the rate of 250,000 a month while the German army has reached its limit. But now, when the Hindenburg line is crushed and the Allies are gaining ground faster than ever before, it is no time to call a halt unless in the opinion of the General Staff the Germans in evacuating the occupied territory concede us positions at least as advantageous as we are likely to gain by continuing the campaign.

But, however the experts may decide the armistice question, the peace discussion can and will be carried on to the end. Those who say that if an armistice is granted it would be impossible to renew the fighting, show a very short memory. In 1912 the Balkan war was interrupted by the Conference of London and when this failed of agreement the Serbs and Greeks pitched in harder than ever and soon forced the Bulgars to surrender.

The more discussion of peace terms the better for us, provided it is carried on publicly as Wilson wants and not secretly as Austria proposed. This is the American way. This is the right of democracy and we want to get the Germans in the habit of it. The more the American war aims are talked about, the more clearly will their justice appear. The spirit of our people will be strengthened and the spirit of the enemy will be weakened. In spite of the ban recently imposed on foreign newspapers the President's words cannot be kept from the German people. Besides we are not relying merely upon the mails. According to Hindenburg ten thousand peace pamphlets are sown behind the German lines every day by the Allied airmen and they are demoralizing the spirit of soldiers and civilians. Consequently he threatens to shoot any airmen discovered in so seducing the German soul. Hindenburg only knows of the ten thousand pieces of propaganda literature that have been obediently turned in to the authorities, presumably without previous perusal. He does not know how many thousand have been secretly read and smuggled to the folks at home. Some of the ablest writers in America have long been engaged in this propaganda and from the Italian front D'Annunzio, mounted on a mechanical Pegasus, has showered Vienna with his prose and poetry. Whether the pen is mightier than the sword is a debatable question, but undoubtedly the two weapons are

more effective than either alone. The crumbling of the Hindenburg line and the fall of the old regime in Germany is not solely a military victory, but like the collapse of Bulgaria, due to a combination of war and peace offensives. This combined effort should be continued more actively than ever.

President Wilson in his note of October 14 makes two stipulations of Germany as a condition preliminary to the consideration of peace proposals: new management and new methods, a genuine and permanent democratic government and an abandonment of barbarous warfare on land and sea. The Kaiser has decreed a responsible ministry, but what is to prevent him from changing his mind any time and issuing another decree countermanding the first? As we show in another editorial much is needed to make the German constitution as democratic as it seems to be. This has become, thru the President's insistence, the most prominent issue, altho before America's entrance into the war it was hardly considered. The regeneration of Germany, the regeneration of Russia, these are distinctively American war aims.

As the President points out, we cannot trust the Germans. Their promises and professions are utterly worthless. This would apply particularly to any professions of repentance and acknowledgments of guilt that they may be moved to make under pressure of defeat and in the hope of mitigating punishment. We know that some Germans were sorry when their country went into the war; we know that more of them are sorrier now. But that has nothing to do with the case. If the German people should sincerely and unfeignedly repent of all the crimes which they individually or collectively have committed, that might save their souls from hell. But somehow we do not feel as much interested in that as good Christians should. On the contrary, realizing the inadequacy of any earthly chastisement, we must confess that we should be disappointed if they did. But we are not so wicked as to wish them to add another lie to their score by professing a contrition that they do not feel.

A forced apology would be a lie and the victory of the Allies can never convince the Germans that they were wrong. No belligerent was ever more thoroly beaten than the Serbs in 1389, the Prussians in 1807, the Mexicans in 1847, the Confederates in 1865, the French in 1871, and the Boers in 1902, yet any traveler among these people may convince himself that the justice of their lost causes is still maintained. A country can be conquered by force of arms, but it cannot be convinced.

It is necessary to speak plainly on this point because there is an insidious pro-German propaganda in England and even here to the effect that an official confession of wrongdoing and assurance of repentance should be exacted from the German Government as one of the conditions of

Kirby in New York World

TO WHICH WILL HE SURRENDER?

TWO VIEWS OF THE GERMAN PLEA FOR PEACE

peace. We call it "pro-German" for two reasons. First, because it would cheat the Allies by having them accept a worthless document in lieu of something more substantial. Second, because it betrays the Teutonic psychology. It is just the sort of thing the Germans would do, for it is just the sort of thing they did do in China. After the Boxer riots in which the German Ambassador von Ketteler was killed the German Government insisted that the Chinese erect an expiatory monument on the spot humbly expressing contrition for the crime—with the result that every coolie who passes thru the Peking street spits in hatred of the German name. A statement of regret and reform signed by the Kaiser, Kronprinz Reichskanzler, Bundesrat, Reichstag and all the rest of the gang would be a waste of paper at a time when paper is too scarce to waste. Any proffer of reparation should be gladly accepted. Any proffer of repentance should be contemptuously rejected.

President Wilson is more concerned with the future than with the past. He is not planning to put things back where they were; he wants to put them forward where they ought to be. He has no regard for the *status quo ante bellum* which to the conservative seems sacred. His aim is not so much to correct the mistakes of history as to prevent such mistakes being made in time to come. He does not care so much about the causes of the war as he does about its outcome. He does not talk so much about punishment as about prevention. In this attitude he undoubtedly expresses the American spirit as distinguished from the European. The contrast can be seen by any one who compares his utterances with those of the Allied Governments before America's entrance into the war. The Allied and American war aims are not in conflict on any material points, but there is a great difference in the emphasis we put upon certain issues. Germany has appealed to the United States rather than to the Allies and it is upon our own terms that peace will be ultimately made.

## PRINCETON'S GIFT TO THE WORLD

**W**HEN Woodrow Wilson tried to democratize Princeton University he was promptly kicked upstairs into politics. He was right but he tried to go ahead too fast.

Many people predicted that this lack of statesmanship boded ill for his future leadership in the Democratic party. But he had evidently learned his lesson, for he united the Democratic party as it had not been united in a generation. It was the Republican party that split in two.

Stimson in Dayton Daily News

"GOTT, HOW I LOVE PEACE"

And now on a world scale the same great problem confronts him. His task is to lead our allies along the paths of democracy without precipitating internal dissension and revolution. This is the touchstone of his statesmanship and he is making a marvelous success of it! Now the common people in all lands hear him gladly, even tho the Tories in England, the Bourbons in France and the Machiavellis of Italy curse him under their breath. We have to thank Princeton University for our President's present perspicacity.

## DEMOCRATIZING GERMANY

**M**ORE and more the possibility of an early peace appears to turn on the question of the internal organization of Germany. Is the voice which comes from Germany the authentic voice of the people? If so, is this voice to speak for the present emergency only or will it prevail in the future councils of the Imperial Government? These are the topics most earnestly discussed at present not only here and among the Entente Allies but (what is most encouraging) in Germany itself. Upon the answer everything depends.

The German constitution is a structure too little studied, for it is the masterpiece of the most powerfully sinister intelligence that ever dominated Europe, Prince Bismarck. Nothing is easier than to give the Imperial constitution a fresh coat of paint and exhibit it to the world as "The People's Germany," while leaving the essential machinery undisturbed. Or the constitution may be compared to the combination lock to a safe. In a moment of seeming generosity the owner of the safe—the German oligarchy—may give to the German people a long and complex formula, from which only one turning has been omitted, and bid them open the safe and enrich themselves with the treasures therein contained. The parts of that constitution are so interdependent that unless they are reformed in *all* essential points *no* progress has been made.

The formula now proposed by the German Government is the responsibility of the Chancellor to the Reichstag, and there can be no question that this is the right formula, provided always that it is carried out in the right way. The Chancellor is the mainspring of the constitution and the Reichstag is the nearest approximation to democracy to be found in any part of the German political machinery. Of course, it is absurd to talk, as German apologists do, of the Reichstag as "the most democratic legislative body in Europe." Owing to its gerrymandered election districts it

is almost the least democratic of European parliamentary bodies. But thru it the will of the German masses even now finds, if not expression in laws, at least expression in words. It is, then, most desirable that the Reichstag become the ruling power in Germany, as the House of Commons is the ruling power in England and the Chamber of Deputies in France.

But how many and how great are the obstacles which prevent such a reform or endanger its continuance if once established! Responsible government is not a word, it is a fact; and it must have deeper guarantees than a scrap-of-paper constitutional promise. At present the Reichstag is a fifth wheel of the coach, a semi-popular institution appended to a constitution which would run almost as smoothly without it. Germany is ruled, at least in normal times, by a Bundesrat or Federal Council. This body is appointed by the governments of the several German states. If Germany is to be democratized, then, the first step must be either the abolition of the Bundesrat or its transformation into a popular Senate, which latter can only be done by revolutionizing the government of each state in the empire.

It would be essential in any case to revolutionize Prussia, since this kingdom, occupying two-thirds of Germany, must of necessity dominate the policy of the whole empire. In Prussia there is no vestige of popular rule. There is a

King-Emperor, an irresponsible Ministry, a "Herrenhaus" (which might be translated "House of Junkers") and an elective assembly chosen by an Alice-in-Wonderland franchise which gives to the vote of a single rich man the weight of thousands of votes of his poorer fellow-subjects. This whole constitution must be swept away before Germany can plant foot on the first rung of the ladder of political progress.

German state constitutions vary greatly, they have not the monotonous repetition which characterizes the political machinery of our states. But the best of them are very far removed from anything that an Italian or a Belgian or a Dane would call popular government; and in the worst instance (Mecklenburg) there is no constitution at all. It is probable, however, that a revolutionary change in Prussia would bring into line the lesser states since the Prussian constitution is much worse than the German average.

Returning to the Imperial Government, after reforming the states, we find our Chancellor appointed by the Emperor but responsible, in theory, to the Reichstag by the great reform which has made such responsibility a part of the constitution (the reader should remember that this reform is still only in the talking stage, but for the sake of argument we are assuming it to be law). He offends the Reichstag, which demands his resignation. This he refuses

## OUR TERMS OF PEACE

President Wilson's Answer to Germany, October 14, 1918

*The unqualified acceptance by the present German Government and by a large majority of the Reichstag of the terms laid down by the President of the United States of America in his address to the Congress of the United States on the 8th of January, 1918, and in his subsequent addresses, justifies the President in making a frank and direct statement of his decision with regard to the communications of the German Government of the 8th and 12th of October, 1918.*

*It must be clearly understood that the process of evacuation and the conditions of an armistice are matters which must be left to the judgment and advice of the military advisers of the Government of the United States and the Allied Governments, and the President feels it his duty to say that no arrangement can be accepted by the Government of the United States which does not provide absolutely satisfactory safeguards and guarantees of the maintenance of the present military supremacy of the armies of the United States and the Allies in the field.*

*He feels confident that he can safely assume that nothing but this will also be the judgment and decision of the Allied Governments.*

*The President feels that it is also his duty to add that neither the Government of the United States nor, he is quite sure, the governments with which the Government of the United States is associated as a belligerent, will consent to consider an armistice so long as the armed forces of Germany continue the illegal and inhumane practices which they still persist in.*

*At the very time that the German Government approaches the Government of the United States with proposals of peace its submarines are engaged in sinking passenger ships at sea, and not the ships alone, but the very boats in which their passengers and crews seek to make their way to safety, and in their present enforced withdrawal from Flanders*

*and France the German armies are pursuing a course of wanton destruction which has always been regarded as in direct violation of the rules and practices of civilized warfare. Cities and villages, if not destroyed, are being stripped of all they contain not only, but often of their very inhabitants. The nations associated against Germany cannot be expected to agree to a cessation of arms while acts of inhumanity, spoliation and desolation are being continued which they justly look upon with horror and with burning hearts.*

*It is necessary, also, in order that there may be no possibility of misunderstanding, that the President should very solemnly call the attention of the Government of Germany to the language and plain intent of one of the terms of peace which the German Government has now accepted. It is contained in the address of the President delivered at Mount Vernon on the Fourth of July last.*

*It is as follows: "The destruction of every arbitrary power anywhere that can separately, secretly and of its single choice disturb the peace of the world, or, if it cannot be presently destroyed, at least its reduction to virtual impotency."*

*The power which has hitherto controlled the German nation is of the sort here described. It is within the choice of the German nation to alter it. The President's words just quoted naturally constitute a condition precedent to peace, if peace is to come by the action of the German people themselves. The President feels bound to say that the whole process of peace will, in his judgment, depend upon the definiteness and the satisfactory character of the guarantees which can be given in this fundamental matter. It is indispensable that the governments associated against Germany should know beyond a peradventure with whom they are dealing.*

*The President will make a separate reply to the Royal and Imperial Government of Austria-Hungary.*

to give. How shall he be coerced? In England if a Premier dared defy the House of Commons, all money supplies would be stopped and there would not be a shilling left with which to run the business of government. But a German Chancellor, secure with his permanent taxes, productive government property, long-time military budgets and the like could carry on a struggle with the Reichstag for years before being compelled to give in. Bismarck ruled Prussia on behalf of King Wilhelm the first from 1862 to 1866, perhaps the most crucial years in the history of the kingdom, without obtaining a single appropriation from any elected legislative body. He did it by simply ordering the officials of the kingdom to collect taxes just the same whether they had been voted or not.

Not only will it be necessary, if responsible government is to exist in Germany, to give the Reichstag absolute power to stop the collection of Imperial revenues unless they have been duly voted, but the Reichstag must also have at command the force to carry out its decrees. That agency in any government rules which the army will obey. By German custom and tradition, in some respects by German law, the army stands outside the power of the Reichstag and even outside the control of the Chancellor. Its allegiance is personal, to the Kaiser; its establishment is regulated not a year at a time (as in England) but over a long period of years; it has its own laws and its own immunities which override all civil rights. Dueling, for example, is a penal offense in Germany, and yet army officers have been dismissed in disgrace for refusing to fight duels. When the military authorities proclaim martial law, or a "state of siege" or any equivalent emergency, law abdicates and civil government becomes mere clerical routine. During the war, Bethmann-Hollweg, Michaelis, Hertling and Prince Maximilian have been helpless and ridiculous puppets, altho in normal times they would, as chancellors, have directed the destinies of the empire so long as the Kaiser permitted them to remain in office. All decisions of importance have been made "over their heads" by the Kaiser, as "war lord," in consultation with Hindenburg, Ludendorff, von Tirpitz and other chiefs of the army and navy. Constitutional, parliamentary and responsible government in Germany is, and must remain a mockery until the military authorities are subordinated once and for all to civil authority. To accomplish this will require the most drastic and revolutionary changes in German constitutional practise and this must rest upon an equally drastic and revolutionary change in German political psychology. The burgher must learn to trample on the Junker.

## ONE GOOD GERMAN PROPOSAL

**A**LTHO the German plea for an armistice is preposterous and the German peace proposals as a whole are impossible, yet there is one point put forward in the speech of the Chancellor that ought not to be lost in the discard. It is a new note in the peace negotiations, due doubtless to the new element in the German Government, the representatives of the laboring classes. Prince Maximilian, in outlining the peace program of the coalition, says:

At the peace negotiations the German Government will use its efforts to the end that the treaties shall contain provisions concerning the protection of labor and insurance of laborers, which provisions shall oblige the treaty making states to institute in their respective lands within a prescribed time a minimum of similar, or at least equally, efficient institutions for the security of life and health as for the care of laborers in the case of illness, accident or invalidism.

Nothing like this has appeared in either the Allied or the American proposals, but we should not reject it merely because it emanates from an enemy. It is quite in accord with the program for social reconstruction drawn up by the British Labor Party, which is determined to participate in the peace congress in some way. It will doubtless meet with the approval of Premier Lloyd George, for when the

war broke out he was engaged in establishing a system of workingmen's insurance and employment agencies on the German model. This was one of the few features of modern Germany that attracted the approval of American tourists, for by such legislation Germany had largely done away with the destitution that prevailed in England and the insecurity of life and livelihood that prevailed in America. The inclusion of some such provision in the peace treaty would not only level up the condition of the working classes, but tend to remove a cause of commercial conflict, competition from underpaid and migratory labor.

## AN ATTACK UPON AMERICAN ARMY OFFICERS

**I**T is with amazement that we read in a circular purporting to express the mind of an organization calling itself The United Spanish War Veterans, a Bolshevik attack upon the officers of the American Army. It begins:

Husks and shoddy, shoddy and husks, for plain American voter, conscripted and become merely a common soldier! Husks and shoddy for *fighting man*; S. A. T. C. for supermen!!

A sinister system seems to be maturing in America, the full fruitage of which may spell disaster to the morale of the workers at home and their fighting sons abroad. Its formula seems to be:

The sons of the fortunate to training camp or college to achieve commissions.

The sons of the workers to the hardships and discipline of the ranks, to stay there—uninspired; perforce unambitious.

If these words are not open treason Congress and the courts have further work to do in defining the law of treason and putting teeth in it. The ostensible purpose of the circular is to support "resolutions proposing universal promotion from the ranks for the American Army by democratic test." It is explained that the democratic test demanded for "promotion to the lowest grade of combatant commissioned officer" is knowledge imparted in the graded public schools and practical skill in field and battle duties of the soldier.

Every living veteran of any American war knows that men in the ranks who prove by soldierly conduct and intelligent behavior that they are the stuff to make good officers out of are eligible to promotion and are every day being promoted in the American Army as in the armies of Great Britain and of France. Every veteran knows also that modern warfare demands highly technical and special knowledge, and that all the resources of all the colleges in the land cannot provide too many of them. Furthermore, every veteran who reads a newspaper knows, as all other literate American citizens know, that the S. A. T. C. has welcomed any boy eighteen years of age who has been graduated from the public high school, and who is a citizen of the United States, whether he is the son of a "worker" or the son of one of the "fortunate." And, what is more, every decently informed American knows that West Point and Annapolis, year by year, receive boys whose parents have been unable to give them anything but public school opportunities.

Of course no loyal Spanish War veteran will quietly submit to the disgrace which this copperhead circular impudently pours upon his head.

It is absolutely necessary that the armies of the democratic peoples should themselves be democratic, and that the way of promotion from the ranks should always be kept open. But the man who is not a fool or a crook knows that promotion from the ranks is only a very small part of the necessary provision for keeping an army democratic. The immeasurably more important thing is that every grade of technical military education should be made democratic by being opened and kept open to the humblest and to the poorest, no less than to the "fortunate." In the organization of the S. A. T. C. this has been achieved on a scale never before attempted by any nation in the world. The man who attacks this experiment as undemocratic is not objecting to privilege: he is objecting to brains, diligence, good conduct. In all kindness we warn him he had better "shut up."

# THE STORY OF THE WEEK

## Austria Accepts President's Terms

In opening the Austrian Chamber of Deputies on October 9, Premier Baron von Hussarek announced that a note had been sent to President Wilson accepting "in a measure" his terms as a basis for negotiations. The President in his note to Germany stated that he would give a separate reply to the Austro-Hungarian note. The President's delay in answering it is causing great anxiety in Vienna.

The movement for coming to an agreement with America has been under way for some time, tho little has

been heard of it in the United States. A month ago Count Karolyi, president of the Hungarian Independence party, declared that a decisive military victory was a dream and that "we ought to accept as a basis for negotiations President Wilson's program." Baron von Burian, the Austro-Hungarian Foreign Minister, last year expressed a general agreement with the President's fundamental principles, especially the league of nations and disarmament. The Socialist deputies in the Austrian Chamber on October 2 demanded peace on the following basis: The creation of a league of nations, no economic warfare, no annexations, the restoration of Serbia, Montenegro and Belgium, revision of the treaties of Bucharest and Brest-Litovsk, a settlement of the Eastern questions on the basis of nationalities, the regulation of the Polish question by the Polish constituents, the establishment of autonomy for each nation in Austria-Hungary.

At the same session of the Austrian parliament, Deputy Stanek, a Czech, declared that the only way to peace was the acceptance of Wilson's fourteen points and the concession of the nationalistic demands of the Czechoslovaks and Jugoslavs.

Baron von Hussarek's plan for federation offends the Germans without satisfying the aspirations of the subject nationalities, so he has been compelled to resign and Count Silva Taronica has undertaken to form a cabinet. It is no secret that all preparations have been made for a revolution in Bohemia whenever the signal for it shall be given by the Czechoslovak National Council at Washington. The constitution has been drawn up, the provisional government selected, and the money printed. Possibly the general strike ordered at Prague on October 15 may be the first act.

Hungary is showing a strong disposition to break away from Austria. Dr. Wekerle, the Hungarian Premier, has announced that Hungary must be represented at the peace conference and that the treaties connecting Austria and Hungary should be reconsidered. The Hungarian papers have of late been attacking Austria in the most savage language.

## THE GREAT WAR

October 10—Austria and Turkey join Germany in appealing to President for peace. "Leinster" and "Hirano Maru" sunk near Ireland.

October 11—Americans clear Argonne forest. Serbs occupy Nish.

October 12—French take Laon and La Fère. German note declaring acceptance of President's terms published.

October 13—Belgians take Roulers. British take Menin.

October 14—President replies to German note. Italians enter Durazzo, Albania.

October 15—Revolutionary rising at Prague. Germans evacuating Brussels.

October 16—Americans take Grand Pré. British reach Lille.

## Turkey Wants Peace

By the surrender of Bulgaria and the advance of the British in Palestine the Ottoman Empire was caught between two fires. On the European side there was the likelihood that an Allied army from Salonica, perhaps reinforced by Bulgarian troops, would soon be marching on Constantinople from the west. On the Asiatic side General Allenby, having annihilated the Ottoman armies in Palestine, had advanced to Damascus and was still going north. As soon as he reached Aleppo he would cut the railroad connecting Constantinople with Bagdad. In this extremity the Turkish Government called upon Germany for help. But Germany had her hands full and so Turkey was left in the lurch.

What then occurred in Constantinople is obscure, but obviously there was an irresistible peace movement. One hundred and fifty members of the Military Club demanded of the Sultan, under threat of a revolution, the closing of the Union and Progress Club, dissolution of the Chamber of Deputies, resignation of the entire cabinet, and the formation of a Liberal Government, the concession of rights to the population, general demobilization, and the signing of peace on any terms.

It was the so-called "Committee of Union and Progress" that engineered the revolution which overthrew the old

## WHY THE GERMANS WANT PEACE

The difference in shading shows (1) the new ground gained in preceding weeks over the old line of 1917, and (2) the new ground gained last week. But only a moving picture map could represent the rapidity of the German retreat. As we go to press the line runs thru Ostend, Thourout, Thielt, Courtrai, Lille, Carvin, Le Cateau, Guise, Ofeld, and Grand Pré.

#### WHEN THE GERMANS ENTERED LILLE IN 1914

This shows the first march of the gray troops thru the city streets before they had begun their destruction of buildings and enslavement of the civilian population

© Press Illustrating

#### LILLE, EVACUATED BY THE GERMANS NOW

There is little evidence left of the once prosperous city after four years of German occupation. This photograph shows German supply wagons, perhaps carrying away their last loot. The Germans evacuated Lille less than a month ago and the Allies took the city on October 16

régime and has virtually ruled the country ever since. It was the Young Turks of this organization who instigated the Armenian massacres and the alliance with Germany.

The Sultan acceded to the demands of the pacifists, and the pro-German ministers, Talaat Pasha, Grand Vizier and Minister of the Interior, and Enver Pasha, Minister of War, resigned their offices. Tewfik Pasha, former Ambassador to London, whose sympathies were rather pro-Ally, assumed the position of Grand Vizier, but within ten days he also was forced out, and Izzet Pasha, a pronounced pacifist, became Grand Vizier and Minister of War. The Germans in Constantinople have hurried home by way of Rumania.

But the Government at Constantinople did not move fast enough in the direction of peace to suit the Asiatic Ottomans. Before September 25, Rahmi, Governor of the province of Smyrna, took matters into his own hands and despatched a delegation of three, a Turk, a Greek and an Englishman, to Europe to negotiate a separate peace. Smyrna is the largest vilayet of Anatolia, comprising 2,500,000 inhabitants. The news of this attempt at

peace negotiations was not made public in London till October 8.

It is said that Great Britain will insist upon the same terms as were imposed upon Bulgaria, that is, unconditional surrender. The request for an armistice will be referred to General Allenby, commander of the British army in Syria.

**The Flanders Drive** On Monday, October 14, the Belgians, British and French renewed their offensive in Belgium on the Lys River east of Ypres. In the first day they took the important railroad towns of Roulers and Menin and approached Courtrai. The attack was made in the early morning after a crash bombardment that gave the enemy no time to bring up the reserves. This ground was formerly held with the utmost tenacity and during the last four years the Allies have made no progress whatever. But during the last three months the Germans have suffered more than 100,000 casualties and their resistance has materially weakened. In the first two days of the Allied advance over 12,000 prisoners and more than 100 guns were taken.

The retreat of the enemy became so rapid that the pursuing cavalry could not keep in touch with them. The Belgians in four days advanced fifteen miles, reaching Thourout and Thielt. The British on the right reached Lille, the largest city in the occupied territory and the chief German supply point.

The advance toward Ghent has a double effect. It weakens the hold of the Germans on the coast to the north and it endangers their possession of Lille and Valenciennes to the south. It is reported that the Germans are withdrawing their heavy guns from Ostend and Zeebrugge and trying to get their warships out of these ports. But the British navy is on the alert and may interfere with these operations. The warehouses and docks of Ghent are said to have been cleared of their stores.

**Smashing the North of Verdun** the Germans, having fallen back to the Kriemhild fortifications, are offering more stubborn resistance, for a break in the line here would leave them liable to a flank attack in the open country beyond. General von der Marwitz, commander-in-chief of the Fifth Army, has issued an order stating that: "It is on the unconquerable resistance of the Verdun front that depends the fate of a great part of our western front, perhaps even of our nation." In spite, however, of warnings and reinforcements, the Americans have already made a breach in the Kriemhild line which they are widening day by day. The Germans here, as elsewhere, are now placing their chief reliance upon machine guns, which they are using in unparalleled profusion. In the assault of Hill 288 the Americans had to meet the fire of 200 guns concealed in the adjacent woods. The capture of the villages of Grand Pré and St. Juvin made a definite breach in the Kriemhild line at one of its strongest points.

**The German Retreat** All along the line except at the end the Germans are retiring rapidly, and the Allies' gains during the past week have been more considerable than at any time since the war began. The drive of the British and French on the western side of the German salient between Cambrai and St. Quentin and the drive of the French and Americans against the southern side between Reims and Verdun have forced the Germans to withdraw from the apex of the salient at La Fère and Laon. The knot of wooded hills known as the St. Gobain massif, that has formed the bastion in the angle of the German line since 1914, has been carried by General Mangin's forces.

At eleven o'clock on the morning of October 13 the French flag was floated from the spire of Laon cathedral. Of the original 16,000 population only 6500 remained. All of the able-bodied men and most of the women and girls had been forced to labor for the Germans either about Laon or in prison camps in Germany and Russia. During

Briggs in the New York Tribune

#### ANOTHER CRY FROM MACEDONIA

Mr. Briggs has made this cartoon of Turkey's willingness to surrender one of his famous series called "When a Feller Needs a Friend"

the German occupation \$1,160,000 have been exacted from the town in the form of forced contributions or fines. The furniture of the city hall and many private houses was carried off when General von Herringen and staff left Laon.

The simultaneous retirement of the Germans from two hundred miles of front and their effort to carry off with them their big guns and enormous stores of munitions and supplies has thrown the transportation system into a state of unprecedented confusion. The Allies have now attained an unquestioned superiority in the air and they are nightly dropping tons of explosives on the railroads and stations, as well as using their long-range guns on the same objectives. To add to the congestion, the inhabitants of the frontier cities are trying to get out of danger by flight into Belgium, where there is neither room nor food for them. Because of the suffering of civilians and the impedance of military operations by this exodus the German Government has appealed to France thru the Swiss Government to abstain from bombarding the large cities of northern France and to permit at least a portion of the population of Valenciennes to pass into the French lines.

The Germans in their retreat are trying to lay waste the country as they did when they withdrew in 1917 to the Hindenburg line so as to render it impassable to pursuers, but now they are being followed up so closely that the devastation is incomplete and occasional villages are left intact thru the failure of those left behind to burn and blow them up. Not having men enough to spare for rearguard the Germans have in some places rigged up wooden soldiers, and against these dummies the British wasted their ammunition and their time.

An official inspection of the coal mines in the Lens region, of which the British have recently taken possession, shows that it will take about two years

to bring them into good working order and five years to restore their normal productivity. The mines have been flooded and their operating machinery systematically demolished. Some of the mines have been blown up. Of ten thousand houses in Lens not one has been left standing. The city has been right on the firing line for two years.

Altho the Germans are being forced out of the positions which they hoped to hold during the winter and are suffering unexpected losses in the evacuation, the movement is so far a systematic and well calculated retirement to pre-determined positions. To use their Nibelungen nomenclature, they have abandoned the Wotan-Siegfried-Alberich line and they are trying to establish themselves on the Hunding-Brunhild-Kriemhild line. The towns recently gained by the Allies and Americans, that is, Lens, La Bassée, St. Quentin, La Fère and Laon, lie between these two lines.

But this new line is probably untenable, for it is now outflanked on the north by this week's drive in Belgium, and the British are already pounding on the Hunding sector, the French on the Brunhild, and the Americans on the Kriemhild. If this line fails them the Germans may try to hold a front stretching between Metz and Lille. The next step would be to fall back into Belgium or to their own frontier.

While the Germans by retiring are shortening their line, they are losing more men than the saving on frontage will amount to, and besides, their new line in France, if they are able to establish one, will not be naturally so strong nor so well fortified as the old Hindenburg line from which they are being driven. Since the Allies started their offensive the middle of July they have taken about 275,000 German prisoners. To these must be added probably a million more in killed and wounded. To offset these losses Ger-

many will have only her annual contingent of about 350,000 of nineteen-year-old recruits and such of the wounded as may be returned to the ranks.

The British have, according to their official report, suffered over 700,000 casualties in the thirty-nine weeks of fighting from the beginning of the year to the end of September. To these must be added the heavy losses of October. The French never report their losses.

#### Down With the Hohenzollerns

The notes of President Wilson pointing out that the Imperial German Government is the chief impediment to peace has emboldened the anti-dynastic elements in the population to speak out their sentiments. The Socialist journals openly call upon the Kaiser to sacrifice himself for the good of his people and abdicate. In such a case, they insist, the Crown Prince should not succeed to the throne, for he has always been more belligerent and reactionary than his father. He publicly approved of the brutality of the German officers at Zabern, Alsace, shortly before the war, and in a speech to a regiment at Langthur said: "The happiest moment in my life will be the day when the war breaks out." During the war every effort was made to give the Crown Prince a reputation for generalship and a statue was erected to him as "The Conqueror of Longwy," one of the frontier fortresses that fell an easy victim to the first onslaught. He was put in command of the great German offensives like the siege of Verdun and the recent drive at Paris, but since both these proved failures, either thru bad luck or his incompetency, he has lost his former popularity. The second son of the Kaiser, Prince Eitel Fritz, tho named after Attila, King of the Huns, does not bear so bad a reputation. Or perhaps the

Committee on Public Information, Photo Illustration

#### A YANKEE "WHIPPET" TANK

Small, speedy tanks like this have taken a successful part in the Allied victories in France. They are almost invulnerable and armed with machine guns. The men of the American tank corps have won special commendation for their recent fighting.

Prussian crown might devolve upon Wilhelm Friedrich, the son of the Crown Prince, who being only twelve years old, has an impeccable reputation. But if a revolutionary movement gets headway it is likely to sweep away the Hohenzollerns from the Imperial if not the Royal throne. The minor German states have ever since 1871 been restive under the domination of Prussia and its upstart dynasty.

Riotous demonstrations in favor of peace are reported from various German cities. In Berlin great crowds marched down Unter den Linden and assembled in front of the Royal Palace shouting: "Down with the Hohenzollerns!" and "We want peace!" Similar demonstrations took place among the munition makers of the Krupp works at Essen.

It is now known that the appeal for an armistice was made at the instigation of Hindenburg. In the revision of the constitution the Junkers are con-

ceding all points in dispute. The right of the Kaiser to declare war is to be abrogated, ministerial responsibility granted, and all men given a single vote in Prussia.

**Armistice** A brief résumé of the correspondence between the United States and Germany with reference to Germany's request for an armistice seems desirable. The German chancellor, Prince Max of Baden, asked President Wilson on October 6 to invite the Entente Allies to delegate plenipotentiaries to negotiate with German plenipotentiaries as to "steps for the restoration of peace," and meanwhile to arrange for a general armistice.

The President replied on the 8th that he desired clearer information as to what, precisely, the German chancellor meant when he said that he accepted Mr. Wilson's program of January 8, 1918; also, what was the nature of the "German Government" represented. He also said that he could not suggest to his co-belligerents an armistice until Germany had withdrawn her armies "everywhere from invaded territory."

The Germans replied on October 14, accepting Wilson's terms in behalf of Austria as well as themselves; declared themselves ready to comply with his condition regarding evacuation; suggested a mixed commission to arrange the details of the proposed withdrawal; and explained that "the present German government . . . has been formed by conferences and in agreement with the great majority of the Reichstag"; hence "the chancellor speaks in the name of the German Government and the German people." The official German message reached Washington on the 14th, and that same evening the response was telegraphed to Berlin, via the Swiss legation, and published to the world.

It told the German Government that the only way to get an armistice was by treating with the military authorities on the battle line; and that none might be expected

so long as the armed forces [of Germany] continue the illegal and inhumane practices which they persist in. . . . The nations associated against Germany cannot be expected to agree to a cessation of arms while acts of inhumanity, spoliation, and desolation are being continued which they justly look upon with horror and with burning hearts.

The President also informed Germany in very solemn language that no peace could be made with her until she had rid herself in truth and permanence of her present system and spirit of government.

**Foreign Opinion** The President's handling of the German notes has greatly enhanced his prestige as a diplomatist and inspired confidence among the Allies in his leadership. The best way to show the feeling of our foreign friends and enemies is by brief quotations from the editorials of prominent newspapers:

#### BRITISH PRESS

President Wilson deserves the gratitude of the civilized world for having saved the situation. *Morning Post*.

Once more President Wilson has said the right thing in the right place.—*Evening Star*.

There is not a soldier or civilian who will not realize that to jettison the Kaiser and his generals and the whole hierarchy of Prussianism is the first step toward peace. *Pall Mall Gazette*.

President Wilson realized that there are other powers besides the United States in this war. This shows a loyalty we naturally expected from him.—*Globe*.

We must stand resolutely behind the President when he demands the destruction of the Prussian military power as a necessary condition of peace, but while we do this we must also back his appeal to the German nation and make it clear that when they can present their credentials as a free people we shall be ready for peace on terms which can be honorably accepted by honest men everywhere.—*Westminster Gazette*.

In a State paper, which is a model for its dignity, penetration, and restraint, the President translates into simple and direct words the thoughts of every allied government and of every allied soldier and citizen.—*Daily Mail*.

#### FRENCH PRESS

The Government at Berlin is now obliged to allow the reply to appear in every newspaper in Germany. The directors of Germany sought public debate. They have it.—*Le Temps*.

Since our Allies have accepted a French general to lead their armies why shouldn't we accept the American President to conduct our diplomatic operations? We shall not easily find a better guide than is President Wilson.—*L'Heure*.

#### GERMAN PRESS

Does President Wilson really want peace, or is he compelled to support England to the last? If so the efforts of the German Government are bound to be fruitless.—*Rheinische Westfälische Zeitung*.

Let who will believe in the league of nations idea; the fact is we will enter the league as a belittled power.—*Taegliche Rundschau*.

The German answer places the whole future of Germany in Wilson's hands and turns our territorial questions into international questions, which are bound to be answered negatively at the peace conference.—*Deutsche Tages Zeitung*.

We are unbeaten and have no occasion to act as if beaten. Acceptance of Wilson's conditions would be an acknowledgment of defeat.—*Hanover Kurier*.

Humanity, bleeding from a thousand wounds, reposes its hopes in the noble side of the character of the President of the United States.—*Germania*.

Germany has lost the war.—*Kreuzzeitung*.

We see in William II the last German military monarch. The Emperor always has asked great patriotic sacrifices from his subjects. It is now for him to show his spirit of sacrifice and to withdraw.—*Cologne Volks-Zeitung*.

**U-Boat Havoc** The renewed activity of the German submarines has caused heavy loss of life.

The American freighter and transport "Ticonderoga" was sunk on September 30 in midocean 1700 miles from the Atlantic coast. The "Ticonderoga" was the German steamer "Camilla Rickmers" interned at Manila when the war began. She had fallen fifteen miles behind the convoy on account of engine trouble when a U-boat rose out of the sea and launched two torpedoes at her. The first missed, but the second took effect, disabling the steamer. The "Ticonderoga" had only time to fire five or six shots when her guns were put out of action by the shells from the big guns of the submarine, said to have been of eight-inch caliber. The bombardment continued even after a white blanket had been raised as a sign of

#### WHAT A DOUGHBOY CARRIES WITH HIM WHEN HE GOES UP FRONT

The helmet, of course, is soon transferred from his pack to his head, but the rest of the equipment and the rations make a heavy load. The American infantryman carries this pack from the time he leaves camp till he goes over the top

surrender and the boats that were being lowered were riddled with shell fragments and shrapnel. One boat and a raft got away and of their occupants three officers and ten men were eventually rescued. Two lieutenants were taken on board the U-boat. The rest, ten officers and 106 men, perished.

The "Tampa," an American coast guard cutter in use as a convoy, was torpedoed off the British coast on the night of September 26 with the loss of ten American officers and 102 men, one British officer and five civilian employees.

The Japanese steamship "Hirano Maru" of 8000 tons was torpedoed early in the morning of October 4 about 300 miles south of Ireland while homeward bound. The steamer, carrying some 300 men, women and children, sank within seven minutes and none was rescued except twenty-eight, who were still alive and afloat in the water when the American destroyer "Sterrett" arrived on the scene.

The Irish mail boat "Leinster," carrying 687 passengers and a crew of seventy across the Irish Channel, was torpedoed on October 10 and 480 lives were lost. More might have been saved, but a second torpedo completed the demolition of the vessel while the women and children were being put into the boats.

#### Wreck of the "Otranto"

The British armed mercantile cruiser "Otranto" came into collision with the transport "Kashmir" in the North Channel between Scotland and Ireland on Sunday morning, October 6. The steering gear of the "Kashmir" got out of order during a storm and she knocked a hole in the side of the "Otranto." The water rushed in and put out the boiler fires, so the "Otranto" drifted onto a rocky reef a mile off

the cliffs of Islay Island, Scotland. Here no rope could be got to her and no boat could reach her. The destroyer "Mounsey" came four times alongside for a moment and some of the soldiers and sailors jumped for her, fifteen feet below, but many of them fell into the water or were crushed between the vessels. At noon the "Otranto" was lifted by a big wave and broken in two upon the rocks. All on board were then thrown into the surf and most of them drowned or dashed against the rocks. The sea of the inlet was full of wreckage and floating bodies. Two hundred bodies were recovered and buried in graves holding twenty each. Sixteen men managed to get ashore at Islay. The "Mounsey" took off 300 American soldiers, 20 French sailors and 266 members of the crew. But 357 American soldiers lost their lives in the wreck.

**Progress in Porto Rico** The first annual report of the food commission established by the legis-

lature of Porto Rico indicates the patriotism of the islanders in a most effective way. It shows that during the past year the island has saved for the Allies, by economy in consumption, 1,400,000 pounds of bread and biscuits, and more than 50,000 barrels of white flour. The decree of meatless days has saved more than a hundred head of cattle a week, and the retail prices of staple articles of food bought at stores have been so regulated as to reduce the necessary expenditure of the people by more than two million dollars.

There is great overcrowding in the labor market on the island, and wages are low. The proposal of the Employment Service to send Porto Rican laborers to do war work in the southern parts of the United States has there-

#### WAR LOANS OF THE BELLIGERENTS

The extent of the black area from the center and the figures on the radii show the amount per capita of the internal war loans raised up to July, 1918. Every person in Germany or England has loaned on the average about \$300 to his government, while the American, richer than either, has contributed less than \$100

fore been eagerly welcomed, and 30,000 volunteered and are now being sent to this country.

The war has made difficulties of other kinds in Porto Rico. Public schools have been seriously handicapped by military demands, as more than 150 members of the teaching force, and many of the older pupils, have been called into the army.

An interesting educational movement is the teaching of the soldiers at Camp Las Casas, near San Juan. A majority of them are unable to read and write in any language, and know little if any English. They are eager and quick to learn, and the Y. M. C. A. classes in simple schooling are producing most gratifying results.

A terrific earthquake shook the island on October 11, causing widespread loss of life and destruction of property, especially in Mayaguez.

#### VICTORY DAY IN NEW YORK

President Wilson led the military parade of the Allies down Fifth Avenue (known nowadays as the "Avenue of the Allies"). The climax of the day's celebration was the Liberty Loan appeal at the great Liberty altar in Madison Square, where a map of Allied victories gives point to the slogan, "Lend the way they fight!"

U-boat and British ship

#### ANOTHER U-BOAT DONE FOR

A passenger on board a Spanish steamer snapped this photograph of a U-boat being towed into port by the British ship that captured it. The U-boat fired a torpedo at the Britisher, missed, and was in turn fired on and damaged before it could escape.

#### Congress at Leisure

Both Senate and House remain inactive while awaiting the revision of the Revenue bill. In the Senate, however, a lively discussion was precipitated on October 10 by the President's inquiring reply to the German request for an armistice, some Republican Senators deploring any discussion with the enemy, and demanding blunt insistence on unconditional surrender, and Democratic senators contending that the President was seeking that end in a more astute way.

Meanwhile the Senate's Finance Committee continued its examination of the Revenue bill, dealing principally this week with the schedules of "luxury" taxes, some of which, as also some of the items of liquor tax, were considerably modified. The Judiciary Committee also resumed consideration of the alleged combination of German sympathizers to influence public opinion thru newspapers secretly supported for that purpose.

The Senate renewed for five years the arbitration treaties between the United States and Japan, and between the United States and Uruguay.

In the House the War Department asked for \$1,100,000 for additional heavy cannon; and the Public Health officials urged the immediate passage of a bill enabling them to spend \$10,500,000 for hospitals for men discharged from the army on account of having tuberculosis.

#### War Supplies

Some interesting statements have been authorized by the War Department showing that there has not been the slightest relaxation owing to recent events in the care or "carry on" of the two millions of American soldiers now in Europe. It is hard to visualize the amount of these supplies enumerated, but a glimpse may be gained from a list of materials in the single department of engineering that had been sent abroad previous to the first of September, and is constantly being augmented. It included pontoon equipment for thirty-six divisions. Then there is an item of 277,000 tons of railroad rails and accessories; another of 45,000 tons of structural steel, and 7,000 tons

of corrugated iron for walls and roofs. In addition to this, 100 tons of steel warehouse sheds, covering 2,000,000 square feet, went over; but it is more impressive to realize that the figures mean very nearly sixty acres under iron roof. The aggregate of lumber, wallboard and other things, such as 10,000 tons of nails, sent for the construction of wooden buildings is amazing, yet to it must be added timbers, railroad ties, etc., bought in England, France and Switzerland.

Consider the four items of camouflaging materials. There were needed 2,000,000 square yards of wire netting—enough to hide 411 acres; but this is a less spacious array than the shipment of burlap, for if that were spread out all at once it would conceal more than 500 acres. To this was added almost half a square mile of fishnet and 1200 tons of paint.

#### Liberty Loan

A slowing down of subscriptions to the fourth Liberty Loan early in the week caused some dismay. The percentage of accomplishment was about equal to that in the third loan in the same number of days, but the much larger amount to be gathered made the apparent equality illusory. The deficiency was explained partly by the prevalence of influenza and the directing of public attention to combating it, and partly to the talk of a military armistice, which gave some persons an impression that the money called for would not be needed. The managers of the loan sprang into renewed activity everywhere. Secretary McAdoo made a personal canvass in Washington with copious results. The President issued on October 10 a ringing notice that "nothing has happened which makes it safe or possible to do anything but push our effort to the utmost." This reminder produced immediate fruit; and Mr. Wilson's personal influence was shown again most picturesquely when he appeared unexpectedly at a theater in New York on the next evening (October 11) and by buying a \$2000 bond set going a subscription that brought \$750,000 from the audience.

On the next day the President marched down Fifth Avenue at the

head of the Army and Navy part of the big Liberty Day parade in New York City—a parade distinguished by the fact that it was led by contingents of soldiers from the troops of most of the Allies. Great parades were taking place simultaneously in Chicago and many other cities, and went far toward arousing the public to its duty. As the week advanced gains in subscriptions were steadily accelerated, especially in the West, where St. Louis reported on the 11th that 67 per cent of her quota was in hand, and two days later Minneapolis announced hers completed. Secretary Baker's return to the United States and his account of the urgent need of money to carry on the work abroad, was a further stimulus; and Mr. McAdoo capped this by a stirring appeal to buy on the instalment plan, especially address to farmers. Hardly half of the required six billions had been offered by the morning of the 15th, when the President's vigorous action on the German petition for an armistice, and a second call from him to the country to lend quickly and freely, furnished a new impetus. By October 18 \$4,000,000,000 had been subscribed.

#### Forest Fires in Minnesota

Fire swept into swift destruction a wide area of woods and villages in Minnesota at the western extremity of Lake Superior. Just when or how the fire began is not known, but in the evening of the 12th, a northerly gale blowing, it became evident that it was uncontrollable, and the inhabitants of the threatened district began to flee. The large town of Cloquet was first in its path, and here, as elsewhere, railroad trains were made up of any and every car available and thousands of people were hurriedly carried into Duluth. Great numbers fled by the wagon roads, aided by men who hurried to the path of the fire from outside the area and brought away refugees. By night of the 13th the conflagration had spent its force, but in these two days it had obliterated forests, farms, stacked grain, fodder and fuel, and more than twenty towns and villages within an area of not less than 10,000 square miles. It has not yet been possible to count the loss of life, but it is believed that 1000 persons perished.

# PUTTING TWO AND TWO TOGETHER

BY FRANKLIN KNIGHT LANE, SECRETARY OF THE INTERIOR

ON the one hand, 200,000,000 acres of unproductive land, a veritable No Man's Land of desolation; on the other 4,000,000 or more returned fighting men who will want jobs or the opportunity to acquire a home—these two factors lie at the foundation of the recent legislation by Congress appropriating \$100,000 "for an investigation to be made by the Director of the Reclamation Service of the reclamation by drainage of lands outside existing reclamation projects and of the reclamation and preparation for cultivation of cut-over timber lands in any of the states of the United States," and an additional appropriation of \$100,000 for an investigation of new irrigation projects in the so-called arid and semiarid states of the West.

The appropriation of these sums—small as they are—marks the beginning of a new era of prosperity for the United States, foreshadowed by the prosperity that has come to many sections of the West thru the construction by the Reclamation Service of world-famous dams and reservoirs to conserve the meager water supply and furnish it when needed, thru thousands of miles of canals and laterals, to the thirsty land, the former home of prairie dogs and jack rabbits, the land of the sagebrush and the cactus.

The 3,000,000 acres of otherwise desert land which will ultimately be brought under the plow of the settler on the irrigation projects now completed or under construction will, however, form only an insignificant part of the vast scheme of reclamation contemplated.

With a proper utilization of our water supply, it is estimated that 15,000,000 additional arid acres may be brought under the ditch. The expenditures required to construct the irrigation works necessary to impound and distribute the water for these areas are, however, too huge to tempt private capital. The West today is strewn with the wrecks of private irrigation companies which have attempted the impossible. Many others have turned to the Government for assistance in preserving the remnants of their investments. The sale of private irrigation bonds is at a low ebb. But the Government already has an organization—the Reclamation Service—tried in the fire of experience, which, given the funds, can build the necessary works, no matter how gigantic the task may appear, to reclaim these arid wastes; and the Government under present law gets back its investment thru long time payments, without interest, covering a period of thirty or forty years—a financial impossibility for the private company.

A similar situation is presented in connection with the cut-over timber lands, approximating 200,000,000 acres of as barren a waste as those former

timber lands of northern France which have felt the ebb and flow of battle. Yet this cut-over timber land, when cleared of stumps and brush, when leveled and brought under the plow, is capable of producing a higher average crop value per acre than the majority of the agricultural land of the country.

Overlapping the cut-over lands to some extent are approximately seventy or eighty million acres of swamp land, at present mosquito infested and a source of danger to the health of the surrounding country, but, when properly drained and cleared, as fertile as

the most favored agricultural land in the world.

There is then at present a vast area of 300,000 square miles of irrigable, cut-over and swamp land awaiting reclamation—an area ten times as large as the land area of the State of Maine, seven times as large as that of Ohio, six times that of New York, five times that of Georgia, four times that of Minnesota, twice as large as the land area of California, and larger by one-fifth than the State of Texas. The reclamation of this latent national resource and the placing of it in cultivation will add an almost incalculable amount to the wealth of the nation as a whole.

With the return of our fighting men the means to bring this about will lie ready to hand. There has been a good deal of speculation as to how these men will be amalgamated in our industrial organization without upsetting economic conditions. How will they react if left to themselves? What will their attitude be toward what some might feel was a paternalistic action on the part of the Government in attempting to guide their destinies after demobilization? It is of course idle to discuss these questions with the soldier in the field. Such an attempt was made recently in connection with a census of a large body of representative troops at the front from one of the Allied nations. The result was as might have been expected. The men answered practically as a unit that they didn't know what they were going to do on their return and furthermore they weren't thinking about the matter. Their big job right then was to finish the work for which they had been sent across the seas, to help put down the mighty forces of evil for all time, to make the world safe for democracy and once more a decent place to live in. They had no time to plan for the future while the present was at stake.

But on demobilization this attitude of mind will be entirely changed. The task of the present will be past, and the future will loom large and attractive to these men who have done their duty, looked death in the face, and come back to their own country.

If left to themselves, many of them will undoubtedly return to the same type of work with which they were familiar before joining the colors; others will follow the many lines of trade which they had learned during their period of enlistment in the service; others will be found among the drifters, taking a job here and there as opportunity offers, but never becoming of the highest economic value to themselves or to the nation; while a large number may be unable to find any employment of any kind and so will be forced into the ranks of the unemployed, compelled to wander about the country looking for a job, forced to bid against their fellows for a chance to earn a living.

It is believed [Continued on page 139]

# WHY WE MUST SAVE COAL

## A Message to the People From the Fuel Administration

**W**E are asked to save coal. The materials of war cannot be manufactured without it and our production of them is speeding ahead with a rapidity which demands one hundred million more tons than we mined last year. Altho coal represents only about 2½ per cent of the cost of manufactured articles of the United States, without it all industry would cease.

There is no effort to disguise the gravity of the situation. In his declaration of August 12th, to the miners, impressing upon them the urgency of increased production, President Wilson said: "The existing scarcity of coal is creating a grave danger—in fact the most serious which confronts us—and calls for prompt and vigorous action on the part of both operators and miners. Without an adequate supply our war program will be retarded; the effectiveness of our fighting forces in France will be lessened; the lives of our soldiers will be unnecessarily endangered and their hardships increased."

This does not mean that coal is not being mined in vast quantities. Let no one dream that the cry for fuel economies in factories and homes, the curtailment of coal to the less essential industries; the darkened resorts and highways and the high taxes placed upon travel and freight mean that miners are idle and freight yards asleep. Alone among the warring nations we have increased our output steadily since our entrance into the struggle. This year, for instance, we shall have mined almost 50 per cent more bituminous coal than in the year before the war started. Figures and percentages rush past us in such mighty volume that there is danger of not heeding the sound of them because of the noise. To increase our production by almost one-half in spite of the draft which has depleted the ranks of labor, and to get it from the mines over the railroads despite the fact that there are too few tracks and too few cars and locomotives to carry the traffic, enormously increased by war, tells a story of genius exercised by the mine operators and railroad administrators and, on the part of the miners, one of self-sacrificing patriotism.

*C. Underwood & Underwood*

*Dr. Harry A. Garfield, United States Fuel Administrator*

### YOUR JOB AND MINE

BY HARRY A. GARFIELD

UNITED STATES FUEL ADMINISTRATOR

*From every branch of the Government and from every war activity there comes a continuous and increasing cry for fuel to keep the machinery of war in motion. Soldiers, ships, shells and all the myriad materials which the army, the navy and their auxiliaries must have depend on fuel.*

*Every increase in the nation's war-making efficiency means an increased demand for fuel. Estimates as to the country's coal needs which were judged to be high in April, proved wholly inadequate in July. New war factories and new ships call for additional millions of tons.*

*To meet this enormous and constantly increasing demand the mines of the country are straining every nerve. Mine owners and mine workers are awakening to the tremendous responsibility which rests upon them, and in the last few months, in a spirit of national unity, they produced coal in greater quantities than ever before. In response to the demands of the country and the activities of the Fuel Administration they are turning out a weekly production such as the country never saw.*

*But there is a limit to the transportation facilities and labor supply available for the mines. There is apparently no limit to the growing demand.*

*The work of the Fuel Administration and the mine owners and mine workers must be supplemented by the work of every coal consumer if we are to supply the war demand for coal, and at the same time keep the country warm. Every coal consumer must do his part to eliminate every wasteful and unnecessary use of coal. The responsibility for securing the greatest possible production of coal rests with the Fuel Administration and the miners. The responsibility for seeing that every pound of coal does its full share of the nation's work rests with every consumer.*

The power of this war is mechanical science and the heart-beat of mechanical science is coal heat. What could we produce without it? Not ships, cars, locomotives, rails, airplanes, motors, projectiles, shells, barbed wire, ammunition; not food nor food containers; not hospital supplies, clothing, nor, in short, any of the materials which create an army and then transport and maintain it.

Because the war is a war of steel created by coal, the Government is controlling the output of the iron and steel industries for the period of the war. Mr. Leonard Replogle, Steel Director of the War Industries Board, is responsible for every pound of iron and steel made in the United States. When the grandeur of the war is told, the tale will be an epic of steel, written not only in figures and factories but in human character. When the steel manufacturers and the War Industries Board agreed upon prices which involved in some cases a reduction of 75 per cent from prevailing standards, a majestic stanza was given to history. Freely were fortunes laid in the lap of the Government to be used in the great cause. The sacrifice was made voluntarily by the steel manufacturers. They are not asking for profits, but only that we shall feed them coal for a twenty-four hour day of labor in the service of war.

For this war of steel, we must have such vast tonnage of coal as staggers the imagination when we try to conceive a definite picture of our fuel needs.

Five tons of coal, approximately, are used to produce and transport one ton of steel. Every steel plant which can be supplied with coal is running twenty-four hours a day and giving practically its entire output to the Government. Without coal the production of steel would cease; without steel war would cease. The program of the Emergency Fleet Corporation for 1919 is twelve million dead weight tons of steel vessels. During an artillery battle an amount of steel was discharged in one hour which requires 9900 tons of coal

to produce. Every American field army (composed of 1,250,000 men) must have eight thousand guns at the outset and the supply needs constant renewal. Every soldier sent over must be supplied with an amount of metal which costs more than forty tons of coal to make. Steel is the winged genius of the war.

More and more and ever more coal must our factories consume for the liberation of steel and the products made of steel. More and ever more coal must be used to transport our supplies. Our locomotives burn up every year one quarter of the coal which we take out of the earth. We depend on them to haul our coal from the fields to the factories and to carry from factories to ocean-going, coal-driven vessels, the war supplies produced by the consumption of this fuel.

Coal production, vigorously stimulated tho it is, cannot yield the entire coal requirements of our colossal war. How then shall we obtain coal to keep industry active, our home population warm, and our war activities going at top speed?

A part of the hundred million additional tons required this year must be taken out of smoke stacks which toss unburned particles of coal into the air, out of boilers which waste a shocking proportion of the fuel consumed and out of the furnaces, cook stoves and lights of our homes. In other words, it must be conserved.

The conservation program of the United States Fuel Administration divides the task, asking industrial plants to save about thirty-five million tons this year and householders about fifteen million. This demand for conservation of fuel power in factories and homes is economically sound. We are not asked to do without power and heat, but to use all that is potential in the black lumps which we put on our fires.

The Fuel Administration does more than admonish us; it has obtained the services of heating experts who tell us how to manage fires so that we can utilize all the energy they yield. For instance, it has issued directions to all the power plants in the country regarding the generation of power, heat and light and has appointed inspectors to go into these factories and power plants in order to determine how closely the instructions are followed. In each state and district are its administrative engineers, to whom are delivered the reports of the inspectors and who rate the plants according to their fuel management. So wastefully have power plants operated in the past that a saving of twenty million tons is expected to result from the instructions issued by the Fuel Administration and this follow-up inspection.

In the past, electric current has been generated wastefully. Coal must be had to generate such current. To start a car requires three times the electricity required to drive it the next block. This fact is at the basis of the so-called "skip-stop" which establishes certain stations for cars instead of permitting passengers to get on and off wherever they signal. The purpose is to reduce the number of stops one-half, thus reducing coal consumed in generating the extra power demanded for starting the car after more frequent stops. Pennsylvania, the heart of the great coal fields and keenly perceptive of the gravity of the fuel problem, expects to save 125,000 tons of coal a year by the establishment of the skip-stop.

But not only to street cars is the skip-stop being applied. Elevators are discharging passengers only at certain floors, and boats and trains make fewer local stops than formerly.

Another method of saving the coal consumed at the "peaks" of electric-power production is rather poorly de-

scribed by the word *staggering*. The word refers to a plan for not opening all industries and occupations at the same hour, but "staggering" them between eight and ten o'clock in the mornings, for instance, which would result in their closing at various hours between four and six. In this manner traffic would be relieved at the two overtaxed hours of the day and coal-consuming "peaks" of electric current required to carry packed and overflowing cars for a short time twice within nine or ten hours, would be graded down to a more gradual line over a longer period.

It takes coal to carry coal, so the Fuel Administration has worked out a zone system for coal deliveries which reduces the length of journeys between the fields and the consumers. So far as is compatible with the absolute requirements of the consumer in relation to his products, he must accept the coal which is mined nearest him and which can be delivered with the least expenditure of fuel.

Tho, in its campaign to save coal, the Fuel Administration has a system of factory inspection and rating, it does not inspect furnaces, cook stoves and lights in our homes. It does, however, offer us sound instruction in the management of them. City, state and county fuel administrators can be called on by householders for information regarding all the fuel-saving measures which, without wasting put warmth and glow into homes.

Our earth, which often has seemed inexhaustible in resources, falters when we seek a substitute for coal. Gasoline and kerosene are proving themselves so valuable as fuel for certain types of engines that their conservation has become a war measure equally with that of coal.

In certain regions natural gas is available as a substitute and should be employed so far as possible.

(c) Underwood & Underwood

This car dumping apparatus lifts two tons at a time from the elevated tracks and dumps them into cars on a lower level

(a) Underwood & Underwood

Fuel conservation begins at the mines. These miners are working a vein of anthracite, and one is drilling for a blast

I owe my trip to Italy to a recalcitrant French tailor. When I accepted the invitation of the British Government to go abroad I did not expect to do more than pay brief visits to the French, English and American fronts in addition to passing a reasonable time in Paris and London. But less than a week before I sailed from home I took part in the founding of the new Italy-America Society, which was established to promote closer relations between Italy and the United States. I had brought several letters of introduction to Italian people from members of the society, but I really did not expect to avail myself of them. I had already accepted the hospitable invitation of Captain W. P. Cresson, the head of the American Military Mission to Belgium, to be his guest at the Belgian front and we had planned to leave the Ritz Hotel in Paris in the captain's automobile at nine a. m., May 20th. At eight o'clock that morning the captain called me up on the telephone and said his tailor had not returned the promised new uniform that was absolutely indispensable for him to wear back to Belgium, and he would have to postpone our automobile trip to a later date. Of course I acquiesced in this postponement, but one hour after we would have been on the way to Belgium had the uniform arrived on time, I received a cablegram from Mr. Charles E. Hughes, president of the Italy-America Society, asking me to go at once to Rome to represent the society at the celebration of the third anniversary of Italy's entrance into the war, on the 24th of May. I had not heard that any special celebration was contemplated, but I consulted our American Ambassador, Mr. Sharp, as well as

the Italian Ambassador to France, both of whom assured me that it was very important that I should attend the celebration. Ambassador Sharp told me of the very serious German propaganda that was being insidiously spread throughout Italy to tempt her to make a separate peace, and he felt that it was important for the Italian people to be assured by a special representative that America sympathized with them in every possible way in their heroic struggle with Austria. The collapse of the Italian line at Caporetto had been a severe blow to Italy and she was not quite sure whether she would receive from the Allies, and especially from the United States, the moral and material support she needed. When the war broke out Italy had found herself after thirty-three years of alliance with Germany and Austria confronted with a problem which a lesser nation might have solved wrongly. She had to decide between the risk of being called a traitor by her then allies and of plunging into the most terrible war of history unprepared, for Italy never has been and is not now a martial country. The real purpose of Italy's alliances with Germany and Austria was the maintenance of peace with Austria, who had never forgiven Italy for taking the provinces of Lombardy and Venice when she achieved her unity and independence. Still there was no choice for Italy but to break with her allies, for the Italian people would never have consented to fight France and England, with whose political and moral life they were in most accord. Ambassador Sharp thought I could do some service by assuring the leaders of the Italian people of America's true attitude toward Italy, and accordingly I took the first train for Rome.

We were two nights and a day going from Paris to the Eternal City. Here, as elsewhere, all transportation has slowed up on account of the war. My stateroom companion turned out to be a most agreeable English officer. He was one of the "King's Couriers" and he told me he spent his entire time bearing official mail from the British Admiralty to the various capitals of the Allies. The mail pouch, which he never for an instant either day or night let out of his sight or that of his orderly, was perforated with holes so that it would sink if thrown into the sea. As the Germans on one occasion captured an official mail bag that was floating on the surface of the ocean after they torpedoed a British steamer, the perforated mail pouches have now come into universal vogue.

This was my first visit to Italy and if I should begin to tell of the trip over the Alps and down into the sunny plains beyond, and finally in Rome, of my visits to the Pantheon, the Colosseum, the Forum, the Catacombs and St. Peter's, there would be no end to this article. Suffice it to say that if London is more impressive than New York, and Paris more impressive than London, then Rome is the most impressive of all. Indeed, the only city I have ever seen that surpasses Rome is Venice.

I was very much pleased to be met

## WHEN I SPOKE FOR

BY HAMIL

The great hall of the Augusteum filled to the gables with representatives of all nations gathered to celebrate the

at the station in Rome by representatives of the Italian Foreign Office and the American Embassy. I was taken at once to the Grand Hotel, considered the best in Italy, and forthwith to luncheon with Mr. H. Nelson Gay, the active man in the recently established Italo-America Union, which will attempt to do in Italy for America what the Italy-America Society plans to do in America for Italy. Mr. Gay, who is said to have the finest library in existence on modern Italian history—it consists of some 90,000 volumes—received us in his beautiful old Italian palace, the drawing room of which opened into a garden of palms and flowers in which half a dozen fountains were playing. Another fountain at the doorway represented two crouching lionesses spouting water from their mouths. After going over carefully the policies and purposes of our two societies, Mr. Gay took me to pay my respects to Signor Gallenga, the statesman in the Foreign Office who had charge of the great celebration on the 24th.

Ambassador Page had in the meantime invited me to be the speaker to represent the United States on that gala occasion. The King of England had sent his son, the Prince of Wales, to represent England at the celebration and the Prince was to arrive in Rome the next morning. Signor Gallenga invited me to accompany him to the railroad station as one of the receiving party. The next morning at 10:30 he arrived at my hotel with his car. We drove thru streets lined with soldiers and when we arrived at the station we found that all the Cabinet from the Premier down were already there. The Reception Room, used only for royalty, was decorated with flags and flowers and the platform was covered with a crimson carpet. The Duke of Genoa, the uncle of the King of It-

N HOLT

on the night of May 24 when representatives of Italy's entrance into the war

aly, who represents the King while the latter is at the front, was the last to arrive. He came in the royal equipage, drawn by two glossy brown horses. A richly upholstered coachman in red and gold sat on the box and two equally gorgeous footmen were perched up behind. As the Prince's train puffed into the station the matchless Italian military band played "God Save the King," over and over again. The young Prince alighted and was forthwith introduced by the British Ambassador, Sir Rennell Rodd, to the assembled Italian dignitaries. The Prince is a very handsome boyish looking young fellow of twenty-two, tho he looks even younger. His face is tanned by exposure to the sun in the trenches, but under it one could see that exquisite red and pink British complexion that is the envy of all other nations. He was most unaffected and seemed embarrassed at his reception, all of which rather added to his charm. But I could not help wondering whether even such a fine chap as he evidently is could stand without deterioration of character the adulation from his superiors that he is destined to receive for the rest of his life. He was soon whisked off up the avenue by the Duke of Genoa and the crowd dispersed.

That evening Sir Rennell and Lady Rodd gave a reception to the Prince at the British Embassy. About 200 of Italy's most distinguished personages were invited. Mrs. Gay was good enough to procure an invitation for me. When we arrived at the Embassy at 9:45, the guests had been ushered into a beautiful old stone summer house in the center of the large garden in which the Embassy is situated. It was one of those perfect Italian summer evenings, warm and languorous. The moon was full and the garden, with its flowers and ancient statues and fountains, made

a perfect setting for the festivities. The reception room was sumptuously filled with palms and flowers. Two enormous portraits of King George and Queen Mary had been brought in from the Embassy and given the place of honor on the walls. Two large gilt, pink-cushioned arm-chairs were set under the portraits for the Prince and Lady Rodd to sit in, while the other guests had small chairs reserved for them in a large surrounding semicircle. The young Prince came in shortly with Lady Rodd on his arm from the banquet hall in the Embassy, where a dinner party had evidently preceded the reception. The orchestra played "God Save the King" again. The Prince, who seemed to be enjoying a large cigar, avoided the throne chairs and sat down in one of the ordinary ones. He was dressed in the uniform of a British officer and wore no decorations except his service ribbons. During the evening most of the guests were brought up one at a time and presented to him. Toward the end, Mrs. Gay and I were introduced. I expressed the hope that he would visit America as his grandfather had done, and I assured him of a warm reception from my countrymen. He said he would have to wait till after the war. Mrs. Gay told him I was the guest of the British Government but had not been allowed yet to go to the front. He asked why and expressed his regrets. Then some one else was brought up and I passed along.

During the evening a tenor and a soprano from the Royal Opera Company sang and a young attaché, Mr. McMillan, from the American Legation gave a most delightful and astounding demonstration of loose jointed dancing. It was as good a professional stunt as one would want to see on the vaudeville stage, and tho it was not of the superdignified character that would please the most fastidious stickler of the proprieties, the Prince seemed to enjoy it hugely and expressed his approval by applause.

The next night came the great meeting in the Augusteum, the largest hall in Rome, if not in the world. Representatives from all the nations were to be present. At 8:30 I took one of those diminutive victorias drawn by a diminutive pony—the only method of traveling in Rome now that automobiles are debarred—and drove to the meeting place. The crowd was converging upon the hall from all directions so that it was with extreme difficulty that I was finally able to get to the stage door, as I could not make the policemen understand why I should be allowed to go there. I went to the box to which Signor Gallenga had assigned me and the sight that confronted my eyes was inspiring. For the large auditorium, larger than the Metropolitan Opera House, was completely packed from parquet to top gallery. The Augusteum was erected by the Emperor Augustus in the second century as a mausoleum for the repose of his ashes, but it had never been used as such. Of late years it has been converted into an auditorium. It is circular in shape like the Pantheon. A low platform opposite

the entrance is erected for the orchestra, above which is a great organ and on either side a space for the chorus. On the balcony directly over the orchestra was the rostrum for the speakers. It was draped with pink plush and was flanked on either side by three heralds in brilliant liveries holding banners. Directly opposite the speakers' platform on the other side of the grand circle and over the entrance was the royal box, decorated with crimson, gold and plush, and festooned with flowers. The finest orchestra in Rome was tuning up. The tenor from the Royal Opera House had already arrived and a great chorus of 500 were in their seats on either side of the organ. The whole hall was chromatic with the flags of the Allies. Each member of the Italian Cabinet and each Foreign Minister in Rome had been given a box. Every seat in the parquet, every box in the first tier, every seat and the three galleries above were packed with men and women—the men mostly in uniform. There was no chairman of the meeting such as we are accustomed to have in this country, but each speaker when his turn came stood up and spoke without any introduction. The orchestra began to play the national airs. They had all been skilfully combined in thrilling harmonies in a manner entirely unfamiliar to me. I have never heard the "Star Spangled Banner" so richly embellished. The orchestra was a very large one and had several women in it, because many of Rome's finest musicians were at the front.

When the Prince of Wales finally entered the royal box with the Duke of Genoa and the Prince of Montenegro and Lady Rodd, everybody rose, turned about and cheered for several minutes, especially accelerating their clapping as the orchestra played "God Save the King." After their Royal Highnesses had bowed their acknowledgments the Mayor of Rome opened the meeting with a speech in Italian. Then came the Prince of Wales. He read his speech from manu- [Continued on page 134]

# PHONOGRAPHS ON THE FIRING LINE

*By a Soldier*

*The partners and the floor might be improved upon, but the music is fine*

**N**OT one of the soldiers in the little group gathered round the phonograph but has a decided opinion—and opinions vary. Voices call insistently for a “hot jazz,” others, frowned upon as sentimentalists, urge “Annie Laurie,” still others demand “that rattling good march-thing.”

The self-elected player of the machine, however, feels that his position entitles him to the deciding vote. He removes the well-worn disc at the final squawk and slips on his own particular favorite—perhaps the hot jazz, perhaps the rattling good march-thing, perhaps “Annie Laurie.” The boys settle back contentedly. For after all, the selection is extremely limited and sooner or later every one will hear his favorite record, not once but many times.

For the one rain-or-shine, outdoors-or-in, twenty-four-hours-a-day, old reliable musicmaker for the soldiers has proved to be the often-scorned talking machine. The soldier cannot get enough of it. Any one who disliked the company phonograph might as well slur the company mascot. He would be equally popular. The man who can sing is in constant demand, fellows who can pluck a banjo or wail upon the mouth organ or bang the stout “Y” piano are all useful in their own way. But a whole company can gather lazily round a single little squat music box and hear everything from opera to jazz band.

Yet, many as are its evident advantages, one drawback attaches to both machines and records—they will wear out or get broken. One phonograph now in use at the front has an amazing history of usefulness. It was bought by a company while they were at Camp Upton, New York, and its sponsor recently wrote home to a friend, “The old machine has been traveling ever since, as well as the boys, and it’s still doing its bit. It has been hoisted in and out from dock to ship and out again, thrown into freight cars, from there to motor trucks, and has had the honor of being played in a monastery six hundred and nine years old; been thru shell fire, played in the open regardless of the weather, played with the same needle for weeks at a time, owing to the scarcity of needles, and played cracked records as well. The machine is camou-

## THEY NEED YOUR “SLACKER” RECORDS

flaged to give it a real warlike appearance, and if the boys are fortunate enough to return to the States, the machine will come back with us.” The letter closes with an appeal for needles and records, both scarce when it was written and growing scarcer every day.

“Dancing on deck used to be regarded as a romantic occupation,” writes a college man now on a submarine chaser, “but for a really hazardous sport give me that now, when we have no lights, no ladies for partners, and a space about as big as a pocket handkerchief to navigate in. The various stumbling blocks provided by the architect of the vessel add a touch of excitement, yet every chance we get we may be seen fox-trotting and kitchen-sinking to the accompaniment of our faithful ‘Maggie,’ as we affectionately call the wheezy little phonograph. ‘Maggie’ has only three songs in her repertoire and we do become rather weary of their sameness, but if any one is ungrateful enough to complain, we offer to throw her overboard and the kill-joy immediately subsides. What we would do without ‘Maggie’ is too horrible to conjecture. She is helping win the war, all right.”

Talking machines have penetrated even into the trenches, and if the various seagoing and warfaring “Maggies” could tell their tales, they would often be of heroic stuff. For in trench, dug-out and shell-hole they have found a place to perch and grind out the rags, the stirring patriotic songs and the old-home tunes which the boys love—and which they actually need, as acutely almost as they need sleep, food, shelter.

Lieutenant Colonel Thomas Stanyan of the Salvation Army on his return from a special mission abroad reported that he had found Commandant Hughes of the Salvation Army in a dugout, playing a talking machine to six men who comprized the gun crew. The artillery opened fire, and the signal came to shell the enemy lines. As the men rushed out, several shouted back to Hughes to bring along the machine, so he followed after them, with it held tightly in his arms. While the men served, pointed and fired the gun, Hughes skirmished about till he found a tree stump with a fairly level top, where he placed the machine and proceeded to grind out popular airs in the midst of din and smoke. A gas shell broke up the concert and the gun crew’s activity, but the doughty little phonograph was rescued and is still grinding out tunes behind the lines.

Hospitals, convalescent wards, Y. M. C. A. and K. of C. huts abroad, hostess houses and canteens at home, all the different agencies which seek to make the tense, abnormal life of the soldier more comfortable and normal, find that a talking machine more than any single musical instrument solves the problem of keeping men amused at small cost and at wide variety of entertainment.

*Press Illustration*

*“The whole company can gather around the box and hear everything from opera to jazz”*

Nor is their use entirely recreational. Foreigners who can speak no English, Americans who cannot “parley-voo,” soldiers whose officers wish to drill them to music, are immensely served by this simple means. The record reproduces accent as well as phrasing perfectly. Many of the men are aurists rather than visualists—that is, learn better by the ear than by the eye. And when the lesson is accompanied by the comment of an experienced instructor and by the visual aids of blackboard and map, the men are very quick at grasping the new language and its conversational and military terms.

The very adaptability of the talking machine has made it hard, so far almost impossible, to keep up with the demands for machines, records and needles. The men have wanted it for work as well as play, and they have insisted upon their phonograph and its records following them actually into the thick of battle. Small wonder that among the much-handled discs there is a high per cent of mortality. Yet, unless a record is really smashed to atoms, play it must, and the sensitive among the audience can cover their ears with their hands when the “sour note” or agonizing crack is reached.

So great has been the demand from both sides of the water, and so uneven has been both the supply and its distribution, that music-lovers who have had the providing of this form of enjoyment especially at heart have found it wise to organize a committee to direct the collection of surplus records and supervise their distribution so that no obscure training camp or small coast patrol vessel should be neglected. The idea of the “National Phonograph Records Recruiting Corps” originated with Mr. Vivian Burnett, himself a composer, who had informed himself thoroly as to the need before launching his appeal for a systematic handling of the situation. His presentation of the need was so convincing that an active national committee of more than fifty prominent musicians, singers and writers was formed, and has been attacking the problems of finding out what sort of records are most wanted, of collecting them, packing, shipping and distributing them so that each cantonment and ship receives a fair quota.

Wild ducks and geese, heretofore protected, can now, under Federal law, be raised on game farms and sold to increase the food supply

## A NEW FOOD INDUSTRY

BY DWIGHT W. HUNTINGTON

AUTHOR OF "OUR FEATHERED GAME,"  
EDITOR OF "THE GAME BREEDER"

**T**HE United States Congress has just enacted a law which promises to be of great economic importance to all of the people. I believe, if this law can be properly executed, every one soon can obtain all the wild ducks he can possibly eat at prices surprisingly small.

The law referred to is known as the Migratory Bird Law. This gives the Secretary of Agriculture the power to make regulations governing the taking of wild ducks, geese, woodcock, snipe, and the other edible migrants. Section 12 of the new law is important, since it provides that nothing in the law shall be construed to prevent the breeding of game on game farms and preserves and the sale of the game so bred for the purpose of increasing the food supply. In this section a rapidly growing food producing industry is recognized and protected by the Congress.

It cannot be denied that in America a prejudice has existed against the sale of game. This prejudice was due in a measure to the opinion of people interested in birds that the sale of game was a great inducement to the killing of game. The opinion seemed to be well founded. A big mistake, however, was made in legislating upon this subject when the fact was overlooked that the stopping of the sale of the food must necessarily put an end to the production of the food. The wrongs and hardships created by laws regulating sport were discussed for the first time in an article in *The Independent*, which was followed, at the request of the editor, by a series of articles elaborating the subject. Two of the articles were devoted to the subject of popular prejudice which, here as elsewhere, seems to be wrong.

After the appearance of these articles many states soon enacted laws permitting and regulating the production of wild ducks and certain other species of game and the markets undoubtedly would be full of wild ducks and some other game birds today provided the same encouragement could have been given to game breeding by state and national officers which has been given to the producers of other new foods. One big difficulty which remained was that the laws permitting game breeding did not permit the taking of

wild birds for breeding stock and eggs to be used for propagation on the game farms and preserves.

The laws in many states, absurd as it may seem, only permitted the breeding for profit of one or two species of ducks and the imported pheasants, which least need the breeders' attention because they are in no danger of extinction.

Hundreds of thousands of pheasants and mallards are now produced annually and the numbers are increasing rapidly since people are beginning to learn that it is more profitable to have birds whose eggs sell for \$25 per hundred in large lots than it is to have birds whose eggs sell for from \$3 to \$5 per hundred. The wild ducks and the pheasants when sold alive bring better prices than poultry and the birds can be reared by those who know how, in an inexpensive manner. In safe fields and marshes, for example, they can be reared in a semi-wild state and will procure much of their food from the land and water, one meal a day being amply sufficient to hold them until the harvest time or shooting time. A few laws humorously require the game to be killed "otherwise than by shooting." Darwin pointed out long ago that shooting was a factor in inducing production.

The Secretary of Agriculture now has full power to permit the trapping of all species of wild fowl for breeding purposes and the taking of eggs for

propagation. Already he has made a most liberal regulation providing for simple permits to take any number of eggs or birds and permitting their sale for propagation purposes. The regulations further provide that those who obtain breeding stock and eggs may sell the birds they produce in the markets as food.

Every one knows that the prices of game are high and the result of high prices usually results in a liberal and often in an overproduction. The making of game contraband in the markets was a poor way to cause an abundance. The liberal policy of permitting every one to obtain breeding stock and eggs which has been adopted by the Secretary of Agriculture should result in a great stimulus to the game breeding industry, which has made an excellent start notwithstanding the many legal obstacles which were created in the effort to preserve and protect the wild game which is said to belong to the state because it has no other owner.

Dr. C. Hart Merriam, who was the distinguished head of the United States Bureau of Biological Survey for many years, in a letter to the writer said there were large areas in the United States suitable for game breeding and strongly endorsed the idea that the production of game should be encouraged and not prevented by laws. It is largely due to *The Independent* that a great legal reform has been accomplished and that the production of valuable foods has been permitted by the states and now is to be encouraged in a large way by the National Government.

The game farms in the older countries keep the shooting clubs and syndicates and the owners of country places well supplied with live game when any shortage occurs or when it is desired to increase the supply. So much game is produced on the country estates and on the farms big and small that often the markets are overstocked, and always the prices are surprisingly small. The reason is that sport pays a part of the cost of production. Game always is so plentiful that wildfowling, or market gunners as we say, are permitted to shoot and sell all the wild fowl they can from public waters and saltings.

The game has vanished rapidly from

agricultural regions because it does not pay to have it on the farms. In every country excepting America it is a farm asset. It seems almost amusing to think that sport has claimed to own the game on the farms which it does not own, and the reason for the disaster to wild creatures where no one looks after them properly is evident. The game has been actually exterminated on the vast areas in the agricultural regions. The owners of farms have drained the wet places putting an end to the ducks, and by the close tillage of fields and the pasturing of cattle, the lands have been made unsafe and uninhabitable for upland game. In some states the few remaining quail have been classed as song birds and they are protected by law for terms of years or forever. The important matter from an economic point of view is that in countries where the game laws are founded on scientific principles, good business sense and a due regard for the natural laws governing the increase and decrease of species, the game becomes quickly a great food supply for all of the people who are said to own it. Instead of the shooting being only for the rich, as those say who wish to excite prejudice, it is well known that the market gunners can shoot, trap and sell game with as much freedom as our fishermen catch and sell fish. The market gunners and poorer classes of sportsmen who wish to sell game, the owners of country places, the farmers big and small all contribute, each from his proper place, to send the food to the markets where the poor as well as the rich can procure it very cheaply.

A glance at the map of any state indicates that there are numerous places, suitable for the breeding of wild fowl and other game, many of which are not suitable for agriculture. Many small ponds and marshy tracts where no wild ducks breed today can be utilized for wild duck breeding and made to yield abundantly when the fowl are made and kept plentiful on such areas either for profit or for sport, as easily they can be. Many of the birds will go out and visit the larger lakes and ponds in the state and the bays and streams which are open to the public, and the shooting for all hands will be much improved. Those who by their industry will produce wild fowl or other game on places where it no longer occurs will perform a great public service and there is abundant evidence that the tendency of our legislation is in the direction of encouraging food production.

The Agricultural Department in addition to its regulations permitting the taking of birds and eggs for propagation should issue bulletins on the methods of game breeding in order that the farmers and sportsmen may know how to keep the wild food birds profitably plentiful. The regulations as written have the effect of criminal laws and one of them which provides that the birds must be taken "otherwise than by shooting" should, of course, be repealed, as it no doubt will be since the shooting is an inducement to production. Country places, shooting clubs and syndicates are the best customers of the game farmers who produce birds and eggs for profit. The regulation appears to be inharmonious with the statute which says in effect that nothing in it shall be construed to prevent the shooting of game on the country places which abroad are called preserves and in some of our Western states now are called game ranches.

At a recent convention of the State Game Officers of the United States and Canada held in New York, a resolution was adopted unanimously, providing that all states which had not done so should amend their laws so as to make game farming a legal industry.

# McCutcheon's Fancy Table Linens

*For Wedding and  
Christmas Gifts*

*Luncheon set of Italian Needlepoint and Embroidery, made on heavy hand-woven Linen. Set consists of 23-inch Centerpiece and two dozen Doylies.*

**\$42.50 Set**

Attention is invited to our comprehensive stock of fancy Linens from which selections may be made for Wedding and Holiday Gifts.

Practically every allied country in Europe and Asia has contributed toward making this collection complete. Many of these goods cannot be duplicated, regardless of price, when our present stock is exhausted.

**Tea Cloths**, with Napkins to match, in Irish and Madeira Embroidery, French and Italian Filet, Needlepoint, Cutwork, Japanese Mosaic work, Fayal and Porto Rican drawn work, etc., \$2.00 to 275.00.

**Tea Napkins**, plain Linen and figured Damask, Hemstitched, also Embroidered and trimmed with Lace, \$5.00 to 65.00 doz.

**Luncheon Sets**. Twenty-five piece sets in Madeira, Spanish, and Chinese Embroidery; also Lace, Needlepoint and Mosaic openwork. \$8.50 to 175.00.

**Centerpieces** in every kind of Hand Needlework. \$1.50 to 125.00 each.

**Scarfs**. Sideboard and Serving Table, Bureau, Dressing Table and Chiffonier Scarfs of every size and description. \$2.00 to 165.00 each.

**Tray Cloths**, oval and oblong, Embroidered, also Lace and Embroidery, 25c to \$17.50 each.

**Lace Luncheon and Dinner Cloths**, circular, 72 inch to 126 inch diameter, or oblong, 2½x3 to 2½x5 yds. \$65.00 to 550.00.

### Special

A lot of Italian Embroidered and Lace-trimmed Scarfs, 1½ yards long, at one third less than regular prices. Range of prices \$4.50 to 17.50.

*We respectfully suggest that in so far as possible you act on the Government's request that you do your Christmas shopping during October and November.*

*Our Christmas stocks are now complete in all departments.*

# THE CHOICE OF A NATIONAL FLOWER

THE suggestion that we made in The Independent of July 27th that this was a good time to decide upon a floral emblem for the United States, and that our readers might vote for it, had a curious result. We supposed that it would be merely a choice between the two leading candidates, the goldenrod and the columbine, but to our surprise three other flowers ran neck and neck with them: the sunflower, the clover, and the daisy, while there were besides a dozen also-rans. The candidates were so numerous and the votes so scattering that we must declare the election void. We cannot even give space to all the nominators, to say nothing of the seconders and supporters, but will print part of one letter from each of the leading contestants, giving first place to the only flower that has the backing of a "party machine," the columbine.

I think I have investigated the merits of every floral candidate for the honor of representing these United States and I am convinced that no other flower so fully meets the demands laid down by the National Flower Convention, of which you speak, held at Asheville, North Carolina, in 1895, as the Columbine.

It is a native of the United States and grows wild in every state of the Union. It blooms always on two of our national holidays, Memorial Day and Flag Day, and often lingers over, patriotically, to the Fourth of July. It is not only "capable of easy cultivation in any garden" but is actually growing in luxuriance in our gardens today as it did in our grandmother's garden years ago. It is "not a weed, or in any way offensive, or harmful to health." It bears what, not only "in the popular sense" but in any other sense, "is called a flower"—a very distinctive flower, and its beautiful leaves are "3-parted" which, if one wishes to go further in the symbolism of which the flower itself is so singularly rich, might symbolize "the government of the people, by the people, for the people." It "lends itself readily to floral decoration by variety and purity of color and distinctiveness of form"—added to which "variety and purity of color" is the fact that it furnishes our national colors, Red, White and Blue. "The features characteristic of its form combine such simplicity and gracefulness that, when used conventionally in decorative design, the flower may be readily recognized independently of its color." This is emphatically true because the Columbine is almost, if not absolutely, unlike any other flower in form. "It has never been used by any other people as their emblem, and does not resemble such a flower in general form." Thru its keen symbolism, easily discernible, it "possesses patriotic associations plainly connecting it with the best for which our country stands among the nations of the world." The flower itself in its wild estate growing in dry, un-nourished soil and protruding its vigorous beauty from the native rocks suggests our own early ruggedness as a nation, while the beauty and abundance of its garden blooms recalls the fact that in the world's march of civilization we have held our own.

In nomenclature the Columbine is rich in association. It was the Columbian year that Frederick LeRoy Sargent, in studying it, recognized its wonderful appropriateness as our national flower. Thus the

*The columbine, which won first place, is symbolic of the United States in color, and blooms on two of our national holidays*

*If the goldenrod were adopted, each state could have its own variety. It is a favorite because of its hardiness*

*The "farmer's favorite," the clover, has claim on the ground of utilitarianism*

four hundredth anniversary of Columbus's discovery of the New World gave birth to the championship of his flower, which in his native language means dove (and the forms of five such birds are discerned in the flower). We have made much of our dove of peace, but the Columbine saves us from inconsistency, even here, for its other name of Aquilegia (eagle) shows our talons which are now being used in the interest of self and world-respect and universal liberty—which latter word suggests that if you dissect the dove you find a liberty cap.

I love all flowers; I love the goldenrod, despite the fact that before gathering it I have had the laborious task of ridding it of those adhesive bugs for which it has such an attraction. It seems as if there were as many bugs as blossoms. It has been my custom, always when the season came round, to gather great quantities of goldenrod for house decoration, but I have been obliged to lessen the amount gathered each year, if not to discard it altogether, by the fact that many of my friends do not share my admiration of it; in fact it is as obnoxious to some as the detested ragweed and will cause hay fever as readily. You may have heard of the young woman who disposed of an unacceptable but ardent suitor by the persistent use of goldenrod as a house decoration. Now no flower should become the national flower that is obnoxious to any citizen. It also disqualifies under requisite 2, 6 and 7.

MRS. EDGAR M. HATTON,  
Ex. and Honorary President,  
City Federation of Women's Clubs,  
Columbus, Ohio

The hay-fever vote is something that every floral politician must consider, for it is undeniably influential. Still, the advocates of the goldenrod do not propose to toady to any such selfish interests:

The hardiness of the goldenrod represents the strength of our nation and its universal growth, the unity each state has with the others, holding all things in common. Its profuse blossoming and wonderfully golden coloring are typical of our national wealth; not wealth measured by dollars and cents, but our natural resources, the blood and brawn of our manhood, our ideals and our patriotism. The straightness and simplicity of the stem serve as a sign of our staunch and steadfast democracy, not given to either artifice or duplicity. And last, with more than eighty species, there is one for every state, one for every possession and some thrown in for good measure.

BETTY PORTER HUNTER

Paris, Tennessee

The farmers' favorite, the clover, is nominated in verse, none of your lazy, new-fangled *vers-libre*, but good old fashioned double and triple rimes:

Solidago prolific  
Has a trait most damnific  
When it's used for to decorate, folks come  
to grief.  
For it starts up our sneezing,  
And hay fever's displeasing!  
Only changing of climate can bring us  
relief.

The Miss A. Canadensis  
Commits no such offenses.  
'Tis a sad fact but true, her morale is most  
weak  
For her disinclination [Continued on p. 133]

# How One Evening's Study Led to a \$30,000 Job

A Simple Method of Mind Training That Any One Can Follow With Results  
From the First Day

*By a Man Who Made Formerly No More Than a Decent Living*

I HOPE you won't think I'm conceited or egotistical in trying to tell others how I suddenly changed from a comparative failure to what my friends term a phenomenal success.

In reality I do not take the credit to myself at all. It was all so simple that I believe any man can accomplish practically the same thing if he learns the secret, which he can do in a single evening. In fact I know others who have done much better than I by following the same method.

It all came about in a rather odd manner. I had been worrying along in about the same way as the average man, thinking that I was doing my bit for the family by providing them with three square meals a day, when an old chum of mine, Frank Powers, whom I had always thought was about the same kind of a chap as I, suddenly blossomed out with every evidence of great prosperity.

He moved into a fine new house, bought a good car and began living in the style of a man of ample means. Naturally the first thing I did when I noticed these things—for he had said nothing to me about his sudden good fortune—was to congratulate him and ask him what had brought the evident change in his finances.

"Bill," he said, "it's all come so quickly I can hardly account for it myself. But the thing that has made such difference in my life lately began with an article I read a short time ago about training the mind.

"It compared the average person's mind to a leaky pail, losing its contents as it went along, which if carried any distance would arrive at its destination practically empty.

"And it showed that instead of making the pail leak-proof most of us kept filling it up and losing all we put into it before we ever reach the place where the contents would be of real use.

"The leak in the pail, the writer demonstrated, was forgetfulness. He showed that when memory fails, experience, the thing we all value most highly, is worthless. He proved to me that a man is only as good as his memory, and whatever progress he accomplishes can be laid directly to his powers of retaining in his mind the right things—the things that are going to be useful to him as he goes along.

"Well, I was convinced. My mind was a 'leaky pail.' I started in at once to make my memory efficient, taking up a memory training course which claimed to improve a man's memory in one evening. What you call my good fortune today I attribute solely to my exchanging a 'leaky

pail' for a mind that retains the things I want to remember."

\* \* \* \* \*

Powers' story set me thinking. What kind of a memory did I have? It was much the same as that of other people, I supposed. Certainly it never occurred to me that it was possible or even desirable to improve it as I assumed that a good memory was a sort of natural gift. Like most of us, when I wanted to remember something particularly I wrote it down on a memorandum pad or in a pocket note book. Even then I would sometimes forget to look at my reminder. I had been embarrassed—as who has not been?—by being obliged to ask some man whom I previously had met what his name was, after vainly groping through my mind for it, so as to be able to introduce him to others.

I began to observe myself more closely in my daily work. The frequency with which I had to refer to records or business papers concerning things that at some previous time had come under my particular notice amazed me. The men around me who were doing about the same work as myself were no different than I in this regard. And this thought gave new significance to the fact that I had been performing practically the same subordinate duties at exactly the same salary for some three years. I couldn't dodge the fact that my mind as well as most other people's, literally limped along on crutches, because it could not retain names, faces, facts and figures.

The whole thing hit me pretty hard. I began to think about the subject from all angles as it affected our business. I realized that probably hundreds of sales had been lost because the salesman forgot some selling point that would have closed the order. Many decisions involving thousands of dollars had been made unwisely because the man responsible didn't remember all the facts bearing on the situation and thus used poor judgment. There are no greater words in the English language descriptive of business inefficiency than the two little words, "I forgot."

I had reached my decision. On the recommendation of Powers, I got in touch at once with the Independent Corporation which shortly before had published the David M. Roth Method of Memory Training. And then came the surprise of my life. In the very first lesson of the course I found the key to a good memory. Within thirty minutes after I had opened the book the secret that I had been in need of all my life was mine. Mr. Roth has boiled down the principles perfecting the memory so that the method can almost be grasped at a glance. And the farther you follow the method the more accurate and reliable your memory becomes. Within an hour I found I could easily memorize a list of 100 words and call them off backward and forward without a mistake. Instead of study the whole thing seemed like a fascinating game. I discovered that the art of remembering had been reduced by Mr. Roth to the simplest method imaginable—it required almost nothing but to read the lessons!

The rest of my story is not an unusual one among American business men who

have realized the value of a reliable trained memory. My income today is close to \$30,000. It will reach that figure at the beginning of our next fiscal year. And two years ago I scarcely made what I now think of as a decent living. I can never be thankful enough that I mended that "leaky pail" and discovered the enormous possibilities of a really good memory.

## Send No Money

Mr. Roth's fee for personal instruction to classes limited to 50 members is \$1,000. But in order to secure nation-wide distribution for the Roth Memory Mail Course in a single season the publishers have put the price at only five dollars, a lower figure than any course of its kind has ever been sold before, and it contains the very same material in permanent form as is given in the personal \$1,000 course.

So confident is the Independent Corporation, the publishers of the Roth Memory Course, that once you have an opportunity to see in your own home how easy it is to double, yes triple, the powers of your memory, and how easily you can acquire the secret of a good memory in one evening that they are willing to send the course on free examination.

Don't send any money. Merely mail the coupon or write a letter and the complete course will be sent, all charges prepaid, at once. If you are not entirely satisfied send it back any time within five days after you receive it and you will owe nothing.

On the other hand, if you are as pleased as are the thousands of other men and women who have used the course, send only \$5 in full payment. You take no risk and you have everything to gain, so mail the coupon now before this remarkable offer is withdrawn.

### FREE EXAMINATION COUPON

## Independent Corporation

Division of Business Education  
119 West 40th Street, New York

Publishers of *The Independent* (and *Harper's Weekly*)

Please send me the Roth Memory Course of seven lessons. I will either remain the Course to you within five days after its receipt or send you \$5.

Name .....  
Address .....

Ind. 10-26-18

David M. Roth

When Mr. Roth first determined to exchange his leaky mind for one that would retain anything he wanted it to, it was because he found his memory to be probably poorer than that of any man he knew. He could not remember a man's name 20 seconds. He forgot so many things that he was convinced he could never succeed until he learned to remember. Today there are over ten thousand people in the United States whom Mr. Roth has met at different times—most of them only once—whom he can instantly name on sight. Mr. Roth can and has hundreds of times at dinners and lectures asked fifty or sixty men he has never met to tell him their names, businesses and telephone numbers and then after turning his back while they changed seats, has picked each one out by name, told him his telephone number and business connection.

NEW YORK

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course has been reduced from three years to two years and six months. Every young woman who enters a training school for nursing to-day renders a patriotic service by releasing a pair of trained hands for service "Over There."

FIFTY-SECOND YEAR

A School in the Heart of the Open Country. For Boys from 9 to 19.

LOCATION: 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.

WORK: Preparation for College or Business Life: recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every seven boys.

ATHLETICS: Two fields with excellent facilities for all sports, under supervision; hiking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

## HOME STUDY

(27th Year)

Business Communication, Forms of Public Address—and more than 400 other Academic and professional courses are offered by correspondence. Address:

The University of Chicago

Division 6, Chicago, Ill.

## Union Theological Seminary

Broadway at 120th St., New York City

The charter requires that "Equal privileges of admission and instruction, with all the advantages of the Institution, shall be allowed to Students of every denomination of Christians." Eighty-third year began September 25th, 1918. For Catalogue, address THE DEAN OF STUDENTS.

## WHEN I SPOKE FOR AMERICA IN ROME

(Continued from page 125)

script in English and spoke in a clear, self-contained voice, tho I was told it was the first public speech he ever made. Senator George Lourand, Deputy from the Lel-gian Parliament, followed him, then Henri Simon, Minister of Colonies for France, then myself, representing the United States; and then Premier Orlando for Italy. As each one of us finished our address, the band played the national air and the whole audience rose and cheered. I am frank to admit that I felt some trepidation in appearing on such an occasion with these high dignitaries. But I remembered that there was nothing that the ancient Romans considered a higher honor than to be a Roman citizen and I knew there was no greater honor in these days than to be a sovereign American citizen. So I tried to present my country's cause in this world drama as any freeman of a great republic ought to do. I must confess that I never expected to begin a speech with "My lords and gentlemen" as I did at a dinner given Judge Wadhams and myself in the English Parliament a few weeks before. But to commence an address with "Your Royal Highnesses, Your Excellencies, Ladies and Gentlemen," seemed an even more incongruous thing for an American to do. However, that was the etiquette of the occasion and I did in Rome as the Romans do. As my entire speech has never been published in English, perhaps the readers of The Independent would like to hear what I did say, seeing that I was speaking for them and their fellow countrymen. So far as I can recollect these are my words:

Your Royal Highnesses, Your Excellencies, Ladies and Gentlemen: I am sensible of the honor and privilege of being permitted to speak here this evening as an American citizen in the presence of this distinguished international assemblage. Were it not for the fact that I am unable to address you in the Latin or the Italian tongue, I would feel very much at home, for I come from New York, the largest Italian city in the world.

On this third anniversary of the entrance of Italy into the war I would assure you that the American people have watched with pride and admiration the superb valor of the Italian army on the battlefields and the unstinted efforts and heroic sacrifices of the Italian people at home. On this very evening our newly formed Italy-America Society of New York is holding its first open meeting in the largest auditorium in New York—nearly as large as this—in honor of Italy and the part she is so nobly playing for human freedom. We rejoice that the Italo-American Union of Rome under the presidency of Senator Ruffini is organized to do for us in Italy a similar work to what the Italy-America Society is trying to do for you in America.

The United States, we Americans are proud to remember, was discovered by Italy, colonized and nurtured by England and established by the aid of France. Now after more than one hundred years we are a populous, prosperous and happy nation with the blood of all the peoples of the earth flowing in our veins. The United States is in fact the world in miniature. The United States is a demonstration—perhaps this is our greatest contribution to civilization—that all the peoples of the earth can come and live in unity and peace under one form of government, in which the rights of each are guaranteed by all and the rights of all are guaranteed by each.

Our great democratic President, Woodrow Wilson, has told the world in clear and unmistakable terms the reasons why we are waging this war. They may be reduced to two: First, to make the world safe to live in for those nations who wish to work out their own destiny unmolested and to enjoy the fruits of self-government, and second, to help set up a new world order after the war is won, in which the principle of coöperation shall be substituted for competition in international affairs.

Make no mistake. These aims are no rhetorical aspirations of a visionary statesman. They articulate the most sacred and fundamental principles of American history. They will be enthusiastically supported by the united sentiment and power of over 100,000,000 freeborn men and women.

The United States stands to gain nothing in a material sense from this war. Our losses in men and money will be complete. We want

## HOW TO USE THE INDEPENDENT IN THE TEACHING OF ENGLISH

This brochure prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address The Independent, 119 West 40th St., New York.

nothing at the Peace Conference either from our enemies or our allies. But we will gladly sacrifice every man and every dollar we possess to inaugurate a new reign of justice and democracy on earth.

The American people are absolutely united in the belief that this is the most important war they ever waged. We have finally come to realize that we are now facing the most fateful crisis in our history.

We might have lost our Revolutionary War in 1776 and we should now be in no worse plight than our friends and neighbors, the free and happy Canadians, find themselves. We Northerners might have lost our great Civil War of 1861-65, but we should doubtless have suffered little more than to have such Southerners as our beloved Ambassador, Mr. Thomas Nelson Page, in control of North America. But if we lose this war, we see before us the fate of Belgium. An inescapable issue now confronts the United States and, we believe, the world. There is only one certain thing that is going to happen when this war is over. And that is that things are not going to be the same then as they were before the war began or are now. Whether they will be better or worse depends on whether we achieve victory or not, and that in turn depends on our courage, our vision and our steadfastness. Our ex-President, Mr. Roosevelt, was probably right when he said not long ago, "When this war is over no halfway measures will avail. The issue before the world is Utopia or Hell." If then we make an inconclusive peace, if we learn nothing from this war, if we sink back into the old days of mutual hate, suspicion and intrigue, if we permit to continue secret diplomacy, economic exploitation and the mad rivalry in armaments, then we will have sown the seeds for another and perhaps greater conflagration than this.

If, however, we win the war and set up a friendly society of nations in which reason shall be enthroned on earth thru legislative, judicial and executive functions and all backed up by every available human sanction, moral, economic and military, then for the first time in history we shall have taken the first real step toward that golden day that is surely coming when, as Victor Hugo prophesied, the only battlefield will be the market opening to commerce, and the mind opening to new ideas.

In conclusion permit me to quote from the fraternal greeting of our President to the Italian people on this anniversary which we are celebrating tonight. Says Woodrow Wilson: "I am sure that I am speaking for the people of the United States in sending to the Italian people warm fraternal greetings upon this the anniversary of the entrance of Italy into this great war in which there is being fought out once for all the irrepressible conflict between free self-government and the dictation of force. The people of the United States have looked with profound interest and sympathy upon the efforts and sacrifices of the Italian people, are deeply and sincerely interested in the present and future security of Italy and are glad to find themselves associated with a people to whom they are bound by so many personal and intimate ties in the struggle whose object is liberation, freedom, the rights of men and nations to live their own lives and determine their fortunes, the rights of the weak as well as of the strong and the maintenance of justice by the irresistible force of free nations leagued together in the defense of mankind with ever-increasing resolution and force. We shall continue to stand together in this sacred common cause. America salutes the gallant Kingdom of Italy and bids her Godspeed."

After Premier Orlando had made an impassioned address which brought the audience many times to its feet, Colonel M. R. Stefnik, the commander of the Czechoslovak troops who had just joined the Italian army and from whom the Italian people that afternoon had received manifestations of homage, spoke in French, and then the speech making concluded with a brief address by Signor Lorenzoni on "Italy Unredeemed." The meeting closed with the rendering of the famous international anthem by Verdi arranged for orchestra, chorus, and tenor solo in which the maestro has interwoven the American, English, French and Italian hymns. As Verdi was the greatest of all Italy's composers and as his anthem seemed almost to have been composed for the occasion, the meeting ended in a wild delirium of patriotism. I suppose this celebration is by all odds the most important and spectacular patriotic gathering that has taken place in any nation since the war began. If I had been a mere auditor there it would have been an unforgettable occasion, but being a principal and representing my country, it must ever remain one of the most memorable days of my life.

## ..weather strip your windows..

U. S. FUEL ADMINISTRATION

Harry Payne Whitney's  
Lower Island Residence is  
Chamberlin equipped.

**SAVE COAL—1 to 2  
tons out of every 5  
—without foregoing  
heat—by Chamberlin**  
equipping your home or  
other building. Every  
ton you save keeps 50  
workmen busy, or man-  
ufactures 25 shells for  
French "75's," states  
the Fuel Administration.

Nearly twice as much  
Chamberlin in use as all  
others combined is proof  
it's best. Simplest, most  
weather-tight and trouble-  
free. Saves its cost in 4  
years or less. Guaranteed  
10 years—but outwears  
building. Backed by old-  
est, largest, most experi-  
enced firm in the business  
—a half million dollar cor-  
poration with a quarter-  
century reputation for re-  
liability. Beware of mis-  
representation—Chamber-  
lin Strips can be installed  
ONLY by skilled mechan-  
ics from the direct factory  
branches of the Chamber-  
lin Metal Weather Strip Co.  
itself.

The Chamberlin'd  
Window

Keeps in heat, bars  
out old drafts, dust,  
sleet, rain, snow,  
damp, deadens  
noise, prevents rat-  
tling and sticking  
—for the life of the  
building. There's  
nothing to wear out.

### Prominent Users of Chamberlin Strips include:

Chas. M. Schwab  
Wm. G. McAdoo  
Thos. A. Edison

## THE CHOICE OF A NATIONAL FLOWER

(Continued from page 132)

To civilization  
Makes her wilt and then droop in a manner  
quite meek.

Here's a candidate modest.  
You'll think quite the oddest.  
That it's ne'er been suggested, we greatly la-  
ment.

Uncle Sam sure must love 'em  
He has so many of 'em  
'Tis the common Red Clover we beg to present.

Considered artistic  
Even by ultra cubistic,  
It fulfils all your rules, and it goes 'em one  
more.

For our friends the agrarian  
Term it utilitarian.  
Can you beat it? American right to the core!

Mrs. RUTH H. FROST

Worcester, Massachusetts

The sunflower, introduced into fashion-  
able society by the exclusive esthetes of  
the eighties, has become the emblem of  
democracy and political equality:

The flower I would propose for this honor  
is the most democratic of plants. It requires no  
coddling nor coaxing to induce it to grow, but  
makes itself at home in almost any surround-  
ings. In shady copsewood, in open fields and  
meadows, along the borders of dusty roadsides,  
in hedgerows and in waste places, it blooms  
freely and brightens the landscape with its pres-  
ence, but never seeks to overrun and destroy,  
like the militaristic weeds that invade our fields  
and gardens, nor drives the native plant popu-  
lation from its home in the wild. It does not  
wear the purple robe of kings nor deck itself in  
the flaming red of bloody war and the consum-  
ing torch of the invader, but wears the livery  
of the golden sunshine, while its brightness calls  
to mind no fiercer flame than the peaceful  
glow of the domestic hearth. And its face is al-  
ways turned to the light, as the face of our  
country, let us hope, will always be turned  
toward the light of liberty, of justice, and of  
humanity. It is hardly necessary, now, to say  
that the plant alluded to is the sunflower.

ELIZA FRANCES ANDREWS

Rome, Georgia

When the question of our avian emblem  
was under discussion, Benjamin Franklin  
urged the adoption of the useful and do-  
mesticated turkey instead of the wild and  
rapacious eagle. So now we hear the apple  
blossom as well as the clover and sunflower  
advocated on utilitarian grounds as against  
such pestiferous weeds as the goldenrod  
and morning glory.

The July call for contributions for your mag-  
azine concerning the national flower comes like  
a refreshing breeze from the South after intoler-  
able heat. Even for a few moments to turn  
the thoughts to "God's Out of Doors" and  
breathe the perfume of flowers and in imagin-  
ation review the floral procession of the year  
is like water in the desert. Just think, of being  
able to find an article at this time breathing of  
peace and beauty!

Twenty-six states have chosen floral emblems  
by legislation. Six states have accepted the  
choice of the school children, and six have been  
chosen by common consent, mainly thru the  
work of the club women. Ten states have either  
made no choice or if any has been made there  
is no legal authority back of the selection.

What flowers have the states chosen? Colum-  
bine, Orange Blossoms, Sunflower, Carnation  
are in the list. The modest Red Clover and the  
flaunting Trumpet Flower represent Vermont  
and Kentucky. Violet and Daisy, Rose and Sego  
Lily are on the list. The Oregon Grape Blossom  
and the Golden Poppy represent the flowers of  
two of our Western states. The spiny Cactus  
with its wonderful display of bloom has been  
chosen by two of the Southern states. Count-  
ing the Cactus four times two states have chosen  
the same flower. Ohio and Indiana are rep-  
resented by the Carnation, altho Indiana makes  
no specification of color. Ohio chose the red  
carnation in loving remembrance of her mar-  
tyred President, McKinley. The goldenrod is  
the state flower of Nebraska, and Tennessee  
makes choice of the same flower tho without  
legislative sanction. Michigan and Arkansas  
have selected the flower that appeals most  
strongly to the writer—the apple blossom.

Why should we seek further for a national  
flower? The Apple Blossoms speak of home, of  
spring, of happiness and thrift. The old apple  
orchard of childhood joy comes before our vision  
with its promise of luscious fruitage, and we  
feel contentment creeping into our weary  
hearts. While the blooms of the apple tree are  
not available during a long season, neither are  
the other state flowers, and few of them bear  
promise of such abundant fruitage. Florida

Let  
Me  
Show  
You That  
You Can Hear!

Don't say that it cannot be done—Had Mr.  
Bell said that, there would I have been no telephones.  
I have shown over 325,000 deaf persons that they  
can hear distinctly and have thousands of grate-  
ful letters from them, mainly because I said to  
them what I now say to you—"My company does  
not want a cent from you until you know that the  
Acousticon will make you hear." Just send a line  
and say "I am hard of hearing and will try the  
Acousticon." We will immediately send you,  
charges paid, the new and inconspicuous

## 1918 Acousticon

For 10 Days'  
Free Trial

No Deposit  
No Expense

After you have given it any test that you  
choose, it is entirely for you to say whether you  
will keep or return it—at least you will know  
whether you are among the hundreds of thousands  
of fortunate ones to whom it does restore normal  
hearing. And it will have cost you nothing to try  
—not a cent. Since the perfecting of our new 1918  
Acousticon—it is smaller, better, and just as strong  
as ever.

The ACOUSTICON has improvements and patented  
features which cannot be duplicated. So no matter what  
you have tried in the past, send for free trial of the  
ACOUSTICON today and convince yourself—you alone to  
decide. Address me personally if you prefer. K. M.  
TURNER, President.

looks forward to the promise of the orange blossom, not only in the blushing bride but in the golden fruit. Delaware has chosen for her state flower the peach blossom with the hope of ripened fruit, and Oregon looks to a time of grapes, but all the other flowers are children of a few days, holding a promise of the resurrection when Nature calls them forth again.

FLORENCE CARPENTER BROWN.

Oxford, Ohio

The laurel, like the columbine, has the backing of powerful organizations:

The laurel, *Kalmia latifolia*, seems to have first place in the nation's nosegay. It is well known from the Canadian Rockies to the Gulf of Mexico and from the Atlantic to the Pacific. It grows on the barren hillside, its blossoms in the fragrant meadow, and its pink blossoms shed a rosy glow in the somber forest; with its glossy leaves we make garlands for our Christmas halls and its graceful blossoms decorate our spring gardens. It has long been used for the victor's crown. It has been endorsed by the Federation of Women's Clubs, and Congress has been petitioned to adopt it as our national emblem. What more beautiful tribute could the nation pay to womanhood, than to give the laurel crown to her who has given her choicest flowers at the nation's call?

MRS. S. W. COCHRAN

Lambertville, New Jersey

The daisy in the present referendum stands as high as the columbine:

Permit me to nominate the daisy: found everywhere, in bloom from early spring until autumn late; known to every person young and old; sought and found by children with joyous acclaim; emblematic of purity, of innocence and constancy; and for decorative purposes can be used in many ways.

PHILIP ROETTINGER

Cincinnati, Ohio

Then follow a bunch of dark horses, each with its enthusiastic backer; but we have room for only a few of them:

The pansy is a universal favorite, especially loved by men and little children. It is easily grown. There are none so poor they cannot call it their own. It is beautiful, and of infinite variety even as we are. It has a longer season of bloom than most flowers. It would be in bloom on Memorial Day, the Fourth of July, and often on Thanksgiving Day, while pot grown plants will bloom at other seasons. It is fragrant, not a flaunting perfume, but rather a coy, subtle sweetness to be sought after by those who love it. It is decorative; is largely used in conventional design; and is readily recognized. It makes a lovely artificial flower. Its significance is unsurpassed. The derivation of the word is from *penser*, to think, Latin *pensare*, to weigh, which reminds us to be thoughtful and to weigh our thoughts.

JESSIE CLOSE.

Cato, New York

I desire to enter the morning glory as a contestant in the race and give the following reasons for its adoption:

It is a native of the United States and grows wild from Maine to California. It blooms from July to October, covering at least three of our national holidays. It is easily cultivated in gardens or lawns and is quite decorative for porches and trellises. It grows rapidly but is not a weed or noxious plant. While the flower is rather too frail for floral decorations, it is distinct and graceful in form, varied and delicate in color, and with the foliage lends itself readily to painting and embroidery. As far as I know it has never been used by any other people as their emblem, nor does it resemble any other national flower. The name morning glory shows our nation to have the freshness and glory of perennial youth. The last and chief reason—it has our national colors, red, white and blue.

MRS. A. B. CULBERTSON

Shelbina, Missouri

I come for the coreopsis. It belongs to the family Compositae. Yellow is the predominating color in all of the fourteen varieties. It grows in nearly every section of the United States, and all the kinds are of equal culture. There are annuals and perennials, the latter are hardy border plants. It blooms freely with little care, all are showy plants and are in flower till late in the autumn.

BETH ALLEN PHIPPS, Librarian

Tyler, Texas

In place of either goldenrod or columbine I nominate the aster. This beautiful, highly decorative flower comes in the national colors, red, white and blue. It is found in every state in the Union; it is hardy, it is easy to grow, it is a weed, it is universally grown and admired, it has no one competitor except the daisy. It is in danger of extermination, however, by the red and white aster. It is a common flower, and its name is a signifier of a star.

HELEN GILES

Silver Springs, Maryland

## “Are You Using the Right Oil?”

Inferior oils play the mischief with sewing machines. They collect dust, dirt and lint in the delicate bearings. As you value your machine, *don't use them!* Repair-men sometimes “knock” 3-in-One because they have their own brands of oil to sell.

### 3-in-One The Universal Oil for ALL Sewing Machines

3-in-One is light enough to flow to the bottom of the deepest bearing, relieving immediately every hidden point of friction. And it has the necessary viscosity, or “body,” to remain in the mechanism. It wears longer and does more service than any other sewing machine oil.

3-in-One is just a *pure oil compound* that never gums—never dries out. Instead of gathering dirt, it really works all dirt out of the bearings. Keeps the entire mechanism clean, bright and free from harmful friction. Saves many dollars in repair bills.

Oil the treadle, hand-wheel and shuttle with good, pure 3-in-One. Then

watch your machine *run!* Polish the case with 3-in-One—this preserves the wood and brings out the beauty of the grain. Use 3-in-One on all nicked parts—it prevents rust and tarnish.

3-in-One is sold at all stores, in 25c Handy Oil Cans and 15c, 25c and 50c bottles.

FREE A liberal sample of 3-in-One Oil and Dictionary of Uses free for the asking.

Three-in-One Oil Co.  
165 U.S. Broadway, New York

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.00 absolutely beyond question of doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

**Only \$100 Down**

Yes, mail us only \$1, and we will send you prepaid on 10 days' free trial, a handsome mounted in solid gold. When it comes mailed deposit \$25 with the postman and then wear the ring 10 full days. If you or any of your friends can tell it from a diamond send it back and all your money will be returned at once. But if you keep it send us \$25 a month until \$137.50 has been paid.

**Write Today** Send \$1 today and tell us which of the two rings illustrated above “Ladies” or “Gentlemen” you wish. Be sure to send the size of your finger.

Harold Lachman Co., Dept. 247, 124 Michigan Av. Chicago

## Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein,

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching!*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—“play work,” he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, a valuable literary magazine. In our teaching series, we offer a magnificent course of instruction.

150 page illustrated catalogue free. Please address:

**WHY Big Insurance Companies Invest in FARM MORTGAGES**

Business necessities and safeguarding laws impose a double obligation on insurance company investments. That Iowa First Farm Mortgages and Bonds are considered desirable by them proves the Safety and substantial return of this form of investment.

Send for "Iowa Investment"—a booklet giving complete and personally investigated information about Iowa First Farm Mortgages, Iowa First Farm Mortgage Bonds and Tax Free Municipal Bonds.

Partial payment plan for bonds of \$50 to \$1,000 denominations.

**BANKERS MORTGAGE COMPANY**  
 Capital \$2,000,000.00  
 Dept. 1557 Des Moines, Iowa

### DIVIDENDS

**WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY.**  
 A dividend of one and three-quarters per cent. (\$7½ cents per share) on the COMMON stock of this Company for the quarter ending September 30, 1918, will be paid October 31, 1918, to stockholders of record as of October 4, 1918.  
 H. F. BAETZ, Treasurer.  
 New York, September 25, 1918.

**PACIFIC GAS AND ELECTRIC CO.**  
 FIRST PREFERRED DIVIDEND NO. 17.  
 ORIGINAL PREFERRED DIVIDEND NO. 51.  
 The Board of Directors will meet on October 31, 1918, and declare the regular quarterly dividends to that date of \$1.50 per share upon the full-paid First Preferred and Original Preferred Capital Stock of the Company, payable by checks mailed November 15, 1918, to stockholders of record at 3:30 o'clock P. M., October 31, 1918. The transfer books will not close.  
 D. H. FOOTE, Secretary.  
 San Francisco, California, October 10, 1918.

**FEDERAL SUGAR REFINING CO.**  
 October 15, 1918.  
 The regular quarterly dividend of One and One-Half Per Cent. (1½%) on the Preferred Shares of this Company will be paid November 1st, 1918, to stockholders of record at the close of business October 19th, 1918. Transfer books will not close.  
 PIERRE J. SMITH, Treasurer.

# GOVERNMENT CONTROL OF WIRES

## A Talk to Investors BY LUIGI CRISCUOLO

THE recent announcement of the terms upon which the Government would operate the properties of the American Telephone and Telegraph Company is of particular interest because of the simplicity of the problem as compared with that of the railroads now controlled by the Government. In the case of the telephone companies the negotiations were simplified because of the fact that the American Telephone and Telegraph Company is a great holding corporation whose management has maintained a conservative and constructive policy which has spelled success. So, in dealing with the wire companies the Government has dealt with a small and compact group while in the railroad negotiations there had to be considered nearly three thousand railroad corporations operating 397,000 miles of railways.

The telephone situation is interesting because of the fact that the stock of the American Telephone and Telegraph Company has been regarded as the premier public utility stock and a favorite investment for women and retired business men. According to its reports the Company had on December 31 last 86,599 stockholders, not including employees who were purchasing stock on the partial payment plan. The demand for the stock is proven by the fact that the figure cited had shown an increase of 16.044 during the year, of the shareholders, 77,258 held less than 100 shares each while 18 individuals held 5000 shares or more. Of the holders of less than 100 shares, 21,683 held 5 shares or less each and 59,280 held 25 shares or less each.

The company's capitalization consists of \$435,641,200 stock on which dividends at the rate of 8 per cent have been paid since 1907. This stock has sold in recent years as high as 134 and as low as 90½, which is the low figure for this year and was reached in August. Since then the stock has steadily risen as investors began to be reassured of its intrinsic value, and at this writing is selling at 107. For the \$435,641,200 stock there has been paid into the company's treasury the sum of \$470,613,540, the excess of \$34,972,340 representing the premium which investors have been willing to pay for the stock and which, of course, comprises a part of the corporate surplus. The bonded debt consists of two large issues of collateral trust bonds aggregating \$157,195,500 and several other issues aggregating \$25,988,800. Thus there are \$183,184,300 bonds against \$435,641,200 stock. This further shows that the company has a predominance of partnership interest rather than creditors, which makes for financial soundness.

The company's balance sheet shows that it had total assets of \$1,198,863,232, of which \$262,005,159 is surplus. In eighteen years the company has made plant additions totalling the enormous sum of \$914,648,400. The properties are being fully maintained out of revenues and in 1917 there was spent \$94,071,000 out of current revenue for maintenance and depreciation. For depreciation of plant there was expended \$52,919,000, an average of 5.5 per cent of the cost of the plant. There was discarded plant originally costing \$43,000,000 on account of its condition and replaced or sold, as compared with \$44,000,000 in 1916. Plans for new construction in 1917 amounted to \$90,000,000, but the actual additions amounted to over \$118,000,000, which was larger than the provision for any previous year by fifty per cent.

On July 23, President Wilson signed a proclamation by which all of the telephone and telegraph systems of this country came under Federal control on the 31st of that month, so to remain for the duration of the war and to be directed by the Postmaster General.

According to the proclamation the general conduct of the business of the wire companies was not to be disturbed altho it was under the direct supervision of the Postmaster General. Regular dividends on stock and maturing interest on bonds and debentures could be paid when due unless otherwise ordered by the Postmaster General, who likewise has control over all financial matters involving extensions or renewals of bonds, notes or other obligations.

As to the recent announcement of the terms of Federal control of the principal wire company, the American Telephone and Telegraph Company, Theodore N. Vail, the president, stated that there had been extended conferences between the representatives of the Postmaster General and the company in order that there might be no misunderstandings. President Vail stated that thruout the negotiations the representatives of his company found nothing but helpfulness. As they asked no more than they thought they should be paid for the use of their property "they found an intent and desire to pay all that ought to be paid."

Some of the principles established were: (1) That any compensation fixed was to be considered as compensation for an emergency period and not as a basis for property valuation. (2) The property was to be operated relatively as equal as it had been in the past and be fully maintained so that it could be turned back to the company in as good condition as when received. (3) Employees' pension and insurance funds were to be continued. (4) All taxes to be paid by the Government or reimbursed to the company if paid by it. (5) Interest and amortization charges on all bonds of the Bell system were to be paid, as well as dividends at the existing rate upon the stock then outstanding. (6) The company's surplus was to be invested in the property, but surplus from operation, after all charges and depreciation, may be invested by the Postmaster General. (7) If securities can be issued at fair terms the Bell system will issue them, but the nominal value of the securities must not exceed 80 per cent of the amount expended in property. Provision was made for the financing of extensions by the Government if this was found necessary.

It was obvious that on such a fair, straightforward announcement of policy the price of this stock, which was for years regarded as an issue of the first rank, should respond to speculative demand. At the low price of 90½ the return figuring on an 8 per cent dividend was 8.88 per cent, while at the present price of 107 the return is nearly 7.50 per cent. It is essentially a stock which would be benefited by peace because the great profits which the company can make are dependent upon commercial prosperity.

This article is not intended as an argument as to why people should buy this stock for a rise because it has never been my practise to make forecasts of that nature. The object is to give the many thousands of holders of American Telephone and Telegraph stock, some of whom are readers of this publication, a word of encouragement with respect to their investment.

## PUTTING TWO AND TWO TOGETHER

(Continued from page 121)

that, as a result of the time spent by many of these men in the open-air life of the army and navy, there will have been developed in them a feeling of distaste at the thought of returning to indoor occupations; they will have become so imbued with the spirit of the open that their first thought will be toward the possibility of a life outdoors.

The plan is not only to give these men the opportunity they are seeking—the opportunity to acquire a home of their own—but also intelligently to direct the efforts of many thousands of other men who are merely “looking for a job.”

Here then is where the two and two are put together—the unproductive land awaiting the labor of man to make it fit to produce abundantly, and the returned soldier who is looking for a home or for work.

It may take several years for the industrial institutions of the country to adjust themselves to the sudden influx of millions of soldiers and munition workers into the ranks of those seeking employment. Unless provision is made to prevent this by offering useful and remunerative employment on public works, great suffering will result. The reclamation work is peculiarly adapted to relieve this situation, as it will afford immediate employment to large numbers of people at work which will add to the permanent wealth of the country and the cost of which eventually will be returned to the treasury by the beneficiaries.

And let it be understood at the outset that the plan does not contemplate charity. To the men who want work and the men who want homes will be given the opportunity, at a fair wage and under the supervision of the Government, to build dams and canals, to blow stumps and clear brush, to construct drainage ditches. Then will come the work of leveling and breaking the land, of building houses and barns, of erecting fences, constructing roads, and performing all the necessary work of making the site of a future community a suitable place in which to live. And while these men are bringing about this transformation, they are being paid by the Government and at the same time earning an equity in their future homes, to be paid for in long time payments covering a period of thirty or forty years.

This briefly is the general plan, the details of which must be worked out to the last item before our fighting men begin to crowd our ports on their return.

With the country as a whole practically united in support of the proposition, there is every hope that when the data now being assembled by the new organization, covering the location, acquisition, and reclamation of these 300,000 square miles of unproductive land, have been digested and presented to Congress, funds will unhesitatingly be made available to enable the Interior Department, thru the Reclamation Service, to bring the fighting man and the land together and turn America's No Man's Land into another Garden of Eden.

Fritz's two biggest war-surprises: The Tanks and the Yanks.—*Passing Show.*

Germany has built three new bridges across the Rhine. Do coming events cast their shadows behind?—*St. Louis Globe-Democrat.*

“He's a remarkable man.”  
“In what way?”

He admits that the people running the war know more about it than he does.—*Le Rire, Paris.*

## The Reason Why

WE often are asked why the first mortgage serial bonds, safeguarded under the *Straus Plan*, are selling on a 6% basis in spite of the competition of other securities bearing a higher rate of interest.

The answer is very simple: The bonds we offer are selling on a 6% basis *because they are worth it.* Each issue is secured by a first mortgage lien on high grade income-producing property, with an ample margin of security, and is paid off serially, year by year, out of the earnings of the property.

These bonds yield a higher net return than other securities of equal safety. They are safer than other securities yielding 6% or more. This is the reason for the continued popular demand for the first mortgage 6% bonds, safeguarded under the *Straus Plan*.

This demand comes from that great class of investors who require:

*Complete and unquestioned safety;  
Prompt payment of principal and interest in cash;  
Freedom from worry and care;  
Absence of market fluctuation in value;  
A reasonable rate of interest;  
Thorough-going service.*

Every investor should post himself on the merits of these sound and popular securities, and on the reasons for the record of this House—36 years without loss to any investor. All this is explained in our booklets, “Safety and 6%.” Call or write for this booklet, together with our current investment list. Ask for

## How Big Men Make Money

**D**O you know how America's millionaires made their money? How they made their investments, what policies, principles and methods they followed in their business and personal life are clearly set forth in **MEN WHO ARE MAKING AMERICA**.

The fifty biggest financiers, bankers and business men tell you in their own words their secrets of success in this volume.

They show the essential qualities which every man and woman should cultivate to attain his desired goal. And they illustrate these points from their practical experience.

There is real help and inspiration in every page of this book for those who are ambitious. The introduction alone, in which the fundamental factors of success are summarized, is worth the price of the book.

If you strive for personal or financial achievement you need this volume. Send for it on approval today and decide for yourself how these Men Who Are Making America can help you.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

**TO THE TEACHER.** Ask every pupil to read as much of *The Independent* as possible, and to prepare at home written answers to two or three questions. When you call upon a pupil in class ask the pupil to step to the front of the room, to lay the written answer on the teacher's desk, and to speak without notes, unless notes are specifically suggested by the question. Then call for one supporting opinion concerning the thought presented, and for one dissenting opinion. Close the discussion by a vote of the class, and an expression of your own opinion. Make the work spontaneous, spirited, and original. Build up a vigorous Americanism founded on reliable information concerning present-day events, conditions, and thought.

#### I. When I Spoke for America in Rome. By Hamilton Holt.

1. Write a short, original story presenting a typical experience of a king's courier.
2. Write an imaginary interview with the Prince of Wales, making his remarks show his character.
3. Write a letter telling of your own imaginary experiences at Lady Rodd's reception.
4. Mr. Holt's speech is an ideal speech. Point out its excellent characteristics.
5. How did Mr. Holt make his speech pleasing to his Italian audiences? What good rule for public speaking does this suggest?
6. Sum up the American ideals presented in Mr. Holt's speech.
7. Explain why it is absolutely necessary for American and the Allies to win the war.
8. What unites the people of Italy and of the United States?

#### II. Your Job and Mine. By Harry A. Garfield, Fuel Administrator.

1. Present details to show how your people and all people, may aid in saving fuel.

#### III. Why We Must Save Coal. The Fuel Administration.

1. Explain exactly what has caused a shortage of coal.
2. Summarize the Fuel Administration's suggestions for saving coal.

#### IV. Putting Two and Two Together. By Franklin K. Lane, Secretary of the Interior.

1. Present, in a few words, Secretary Lane's plan for the reclamation of unproductive land.
2. Show how Secretary Lane's plan will benefit the American soldiers after the war.

#### V. Phonographs on the Firing Line.

1. Write the autobiography of a phonograph that has amused and cheered the soldiers in France.
2. Write the autobiography of a phonograph that has delighted sailors on an American battleship.
3. Summarize the various uses of a phonograph in war.

#### VI. The Choice of a National Flower.

1. Present an argument in favor of any one of the three flowers pictured on the page.

#### VII. A New Food Industry. By Dwight W. Huntington.

1. Present a clear, condensed exposition of the new food industry.

#### VIII. The Story of the Week.

1. Draw a blackboard map of the Western front. Give a spirited speech in which you explain the recent series of great victories.
2. Draw a blackboard map to illustrate all the places where fighting has taken place at any time during the war. Explain the present military situation, making it clear that Germany faces absolute disaster.
3. Summarize the important domestic events of the week.
4. Summarize the important foreign events not definitely connected with the war.
5. Which editorial article is most important for the pupils in your school? Explain.
6. Summarize the naval news of the week.

#### IX. Editorial Articles.

1. Make an outline of the leading editorial. Express its principal thought in a single sentence.
2. Select from the editorial articles a number of emphatic, patriotic sentences.

#### X. Illustrations.

1. Write a clear explanation of any cartoon in *The Independent*.
2. Write a description of any scene illustrated in *The Independent*.

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. Conditions Precedent to Peace—"Peace on Our Own Terms," "Democratizing Germany," "Our Terms of Peace," Story of the Week, pages 115-118.

1. "He [the President] kept clear the distinction between a truce of arms and a discussion of the terms of peace." What is the distinction between the two? Why is it important to make this distinction?
2. "... the process of evacuation and the conditions of an armistice are matters which must be left to the judgment ... of the military advisers," etc. Compare this statement of the President with the proposal of the German Secretary of State for Foreign Affairs that these matters be left to a "mixed commission."
3. "But, however the experts may decide the armistice question, the peace discussion can and will be carried to the end." How is this possible?
4. "President Wilson in his note of October 14 makes two stipulations of Germany," etc. Quote the sentences in the President's note which contain these stipulations.
5. "President Wilson is more concerned with the future than with the past." What are the evidences of this assertion?
6. From a study of the news from Austria and Turkey, try to determine why "The President will make a separate reply to ... Austria-Hungary."
7. What are the terms of an armistice indicated by the military conditions on the western and eastern fronts? What is the probable fate of the nations subject to Germany and to Austria?
8. Make a brief summary of the chief provisions of the present German constitution. Does this summary justify the statements: (a) "The Chancellor is the mainspring of the constitution." (b) "At present the Reichstag is the fifth wheel of the coach." (c) "Germany is ruled ... by a Bundesrath or Federal Council."
9. If Germany is to become a real constitutional monarchy, "it would be essential ... to revolutionize Prussia." Why?
10. What are the essential differences between the Reichstag and the House of Commons? Show that these differences justify us in speaking of Germany as an autocracy and Great Britain as a democracy.

#### II. Italo-American Relations—"When I Spoke for America in Rome."

1. Are your sympathies in this war as active for Italy as for France or for England? Why?
2. "When war broke out Italy had found herself ... confronted with a problem which a lesser nation might have solved wrongly." What was this problem and how did Italy solve it?
3. Mr. Holt refers to "the superb valor of the Italian army on the battlefields." What are the evidences of this superb valor?
4. What, according to Mr. Holt, are the two reasons why the United States is waging war? How do these reasons link up with Italy's reasons for waging war?

#### III. Conservation and the War—"Why We Must Save Coal," "War Supplies."

1. Explain the statement: "The power of this war is mechanical science and the heart-beat of mechanical science is coal heat."
2. What is the result of the enormous demand made by war industries upon our coal supply? How is this demand to be met without crippling our normal coal consumption?
3. Tabulate the items mentioned in "War Supplies" under these headings (a) metal wares, (b) timber, (c) textiles.

#### IV. Homesteading and the Returning Soldiers—"Putting Two and Two Together."

1. Investigate the history of our public lands, paying special attention to the settlement of western lands by Civil War veterans.
2. What are the opportunities for land grants to soldiers engaged in the present war? What steps must be taken before these land grants can be made?
3. Why is the problem of taking care of the soldiers who will be mustered out after the war not as simple as the problem at the end of the Civil War?

# New and Forthcoming Books

## The New Orthodoxy

By EDWARD S. AMES

The war marks the beginning of a new epoch in Christianity. Religion is gaining in reality and in sanity and also in vision and incentive. The new orthodoxy rests upon deeper grounds than does the old. Its foundations are in the nature of man, not in his superstition or his credulity. The book is a popular constructive interpretation of man's religious life. \$1.00, postage extra.

## Starved Rock State Park and Its Environs

By CARL O. SAUER, GILBERT H. CADY, and HENRY C. COWLES

The park and its surroundings have a number of features, such as the beautiful little canyons, which are unusual in this part of the country. The study includes the geography, geology, and botany of the park, and the exploration, settlement, and development of the region. \$2.00, postage extra.

## Outlines of Chinese Art

By JOHN CALVIN FERGUSON

The author of this interesting and authoritative work speaks from an intimate knowledge of the artistic treasures and workmanship of China. The book is published in the series of Scammon Lectures at the Art Institute of Chicago, and is the second number of that series to be published, the first being *Six Lectures on Architecture*, by Cram, Hastings, and Bragdon. The book is profusely illustrated, many of the photographs being of unusual worth. \$3.00, postage extra.

## A Survey of Religious Education in the Local Church

By WILLIAM C. BOWER

The church is becoming profoundly awakened to its responsibility and opportunity, and the workers in religious education can no longer be content with a vague satisfaction that they are doing good. The actual results of the theories upon which religious education is proceeding, the process itself, and the present agencies of religious education must be subjected to thorough analysis and criticism with reference to carefully formulated standards and tests. \$1.25, postage extra.

## A History of Suffrage in the United States

By KIRK HAROLD PORTER

The author presents a panoramic picture of the whole United States and carries the reader rapidly on from decade to decade without getting lost in the details of local history. The book throws new and interesting light on conditions of which histories give but scant hint. \$1.25, postage extra.

## The Relation of John Locke to English Deism

By S. G. HEFELBOWER

This book is to a great extent a detailed marshaling of evidence to prove that the several widely accepted historical opinions regarding the relation of John Locke and English Deism are wrong, and that Locke and the movement are related as co-ordinate parts of the larger progressive movement of the age. \$1.00, postage extra.

## New Editions and Impressions

*Readings in Industrial Society.* By LEON C. MARSHALL. \$3.50, postage extra.

*The Origin of the Earth.* By THOMAS C. CHAMBERLIN. \$1.50, postage extra.

*Army French.* By ERNEST H. WILKINS and ALGERNON COLEMAN. 44 cents postpaid.

Bruges

### THE BELFRY OF BRUGES

The recent capture of Bruges by the Allied troops adds another victory to the vision in Longfellow's poem, "The Belfry of Bruges":

In the market place of Bruges stands the belfry  
old and brown,

Thrice consumed and thrice rebuilt, still it  
watches o'er the town.

As the summer morn was breaking, on that  
lofty tower I stood,  
And the world threw off its darkness, like the  
weeds of widowhood.

Not a sound rose from the city at that early  
morning hour,  
But I heard a heart of iron beating in the  
ancient tower.

I beheld the Flemish weavers, with Namur and  
Juliers bold,  
Marching homeward from the bloody battle of  
the Spurs of Gold.

Saw the fight at Minnewater, saw the White  
Hoods moving west,  
Saw the great Artevelde victorious scale the  
Golden Dragon's Nest.

And again the whiskered Spaniard all the land  
with terror smote;

And again the wild alarum sounded from the  
tocsin's throat;

Till the bell of Ghent responded o'er lagoon and  
dike of sand:

"I am Roland! I am Roland! there is victory  
in the land!"

Then the sound of drums aroused me. The  
awakened city's roar

Chased the fantoms I had summoned back into  
their graves once more.

Hours had passed away like minutes; and be-  
fore I was aware,

Lo! the shadow of the belfry crossed the sun-  
illuminated square.

## THE NEW PLAYS

*Sleeping Partners.* From the French of Sacha Guitry. Triangle sex farce comedy of the French boulevards. Repellent and ignoble. (Bijou Theater.)

*Le Mariage de Figaro.* The Old Dove Cote that M. Copeau has transplanted from Paris to New York affords a rare chance to hear the best of French spoken, while to those who cannot follow a rapid fire dialog

the action and the spectacle of Beaumarchais's lively play is a sufficient satisfaction. (Theatre du Vieux Colombier.)

Jane Cowl is at her best as Lady Betty in *Information, Please*, a tearless, warless, sleuthless play—delightfully human and irresistibly funny. (Selwyn Theater.)

*Sometime.* Tuneful music and pretty costumes compensate in large measure for lack of ideas. The overworked plot, too old to entertain, can still soothe. (Shubert Theater.)

*Not With My Money.* A melodramatic comedy by Edward Clark—furnishes an evening of undiluted pleasure and laughter, if you don't take the plot too seriously. (Thirty-ninth Street Theater.)

*Perkins* gives Ruth Chatterton another "Come Out of the Kitchen" role, altogether charming. Henry Miller plays a sentimental diamond-in-the-rough. Good comedy, well acted. (Henry Miller's Theater.)

*The Better 'Ole.* "A fragment from France in two explosions, seven splinters and a short gas attack"—Captain Bairnsfather's cartoons in a musical comedy presented by Mr. and Mrs. Coburn. The best war play yet. (Greenwich Village Theater.)

Leo Ditrichstein is producer and co-author as well as actor in the title role of *The Matinee Hero*, a comedy of "o'er-leaping ambition." It contains an admirable recitation of Hamlet's soliloquy. (Vanderbilt Theater.)

## J U S T A W O R D

"Continue to stir up aviation. It will win the war," writes Laurence Driggs, aviator and expert on aerial warfare, in a personal letter from England to the editor of The Independent. Mr. Driggs went over some weeks ago as correspondent of The Independent to write particularly of what our Allies are doing in aviation and of the air fighting on the western front. Before he sailed Mr. Driggs wrote for The Independent "Beyond the Clouds Lies Victory," an article based on his own experience in manufacturing and operating airplanes and "Fifty-three to One," a story of the spectacular career of the Ace of the Allies, Georges Guynemer.

"I have been over the schools and aerodromes of England and thru some of the factories where motors and aeroplanes are built," adds Mr. Driggs in his latest letter. "Of course I have met scores of pilots, many of them old friends, who have told me of their work at the front. Have seen some of the seaplane stations. Many of the details of the training schools and of the new types of aeroplanes are of extraordinary interest, but they cannot be published."

Of the facts that can be published, however, Mr. Driggs has written an informing and intensely interesting article which will appear in an early issue of The Independent.

# "How I Added Ten Years To My Life"

"I GUESS I am what you would call the average man. Forty years old—earning a pretty good salary—a wife and two children. And I just can't afford to get sick. My family needs me—my business needs me—and I need myself.

"I haven't been sick in bed for fifteen or twenty years, so you see I'm not a health fanatic. I've been so busy in the work-a-day world of business that I haven't given much thought to my health. If I felt good one day and bad the next, I sort of accepted it as a matter of course. Sometimes I may have wondered why I should have a headache, or why I couldn't work as hard or with as much enthusiasm as in the old days, but by that time the headache had vanished and I forgot all about it until the next time.

"But about a year ago a friend of mine, a fine, generous-hearted fellow, and a famous athlete in his day, caught cold somehow—pneumonia developed—there was a weakness of the heart or something—and in four days he was gone.

"I tell you it set me thinking. Here was a man who thought he was in good health—who hadn't been sick within my recollection—and yet whose system had become so weakened through the strain of hard work and middle-age that he had nothing in reserve when the crisis came.

"I talked to the family physician and he told me that it was just like the breaking up of a ship when it hit the rocks. Nothing could save it then. But with the proper care all along the voyage, those hidden dangers could have been mapped and charted—known and understood—and easily avoided.

## People Die Too Soon

"Last year, for instance, more than 100,000 men and women between the ages of 40 and 60 died in the United States from diseases of the heart, circulation and kidneys. And the crime of it is that most of these deaths could have been prevented or postponed had the people realized the danger before it was too late to do anything but send out distress signals.

"It is safe to say that two out of every three people you meet can save themselves needless suffering and add years to their lives simply by going to some Human Service Station for periodic health examinations.

"I listened to all this and it came as a distinct shock and revelation. I had read how the infant mortality had been decreased through proper understanding and preventive measures, and I had assumed it applied equally to all ages. But I was wrong.

"I determined to undergo a thorough physical examination just as soon as I could, whether I felt particularly sick or

not. But the next day something happened in the office that required all my attention—I put off the examination that day and the next—and eventually forgot all about it.

## Taft Among Founders

"More recently, however, I was reading a magazine article by Cleveland Moffett. He mentioned the Life Extension Institute—told how it was founded by ex-President Taft, Professor Irving Fisher, of Yale, and other forward-looking men to conserve the health of the Nation and make life better worth the living.

"It reminded me of my former resolve and that very day I wrote to the Life Extension Institute and made arrangements for a thorough physical examination in my own home town.

"And such an examination as it was! I have never had anything like it in all my life. Life insurance examinations? Why they can't be compared with it! The Institute didn't miss a single part of me. They tested my heart and lungs and kidneys—took my blood pressure and made a microscopic examination of my blood—tested my eyes—examined my teeth—pored over my personal history blank for traces of hereditary diseases—delved into my daily living habits—literally made a map of my body and my entire life.

"I tell you frankly that that examination has added ten years to my life. I know now the dangers of middle age, but I am facing them neither blindly nor with fear. I know where my body is strong and where it is weak. I know the hidden dangers and the rocks, and my ship will never go to pieces from diseases that I know nothing of.

"Nearly 100,000 men, women and children in all parts of the United States have already been examined by the Institute and have received its guidance and instructions.

"I am writing this to you because I think it is something you ought to know. I am as much opposed to fads and quacks as any man who ever lived, and you couldn't get me to go on some nonsensical diet for a million dollars. But I see the value of periodic health examinations.

## Staff of 5000 Physicians

"It makes no difference where you live. The Life Extension Institute comes to you wherever you are. It has its main office in New York, a branch office in Chicago and a staff of more than 5000 physicians throughout the United States.

"The same questions are asked—the same tests made—wherever you take the examination. The same extended blanks are furnished all examining physicians.

"Back of the scientific policy of the Institute is the advice and counsel of the Hygiene Reference Board. You couldn't assemble such a weight of expert intelligence in years under any other conditions.

"These men are behind the Life Extension Institute because they believe in it—because it was organized on a broad humanitarian basis—because two-thirds of the profits are set aside in a trust fund for health propaganda of a national scope.

"That is one reason why the cost of the Institute's service is so low. For a very moderate sum you get a thorough physical examination—three additional urinalyses at intervals of three months—hygienic guidance and instructions—Keep Well Bulletins—monthly health journals—gratuitous advice on any questions you may choose to ask about personal hygiene.

## Don't Wait Too Long

"It is a great thing. You may realize it even as I did, and yet keep putting it off from day to day. But my advice to you is—don't wait! Another six months—a year perhaps—and in my case it would have been too late. I would not be writing this message to you today.

"Right now is the best time to say: 'I'm going to learn more about the Life Extension Institute. It costs me nothing to write for full particulars, and who knows but that the signing of this coupon will save me months of useless pain and suffering. Certainly it is worth trying.'

HON. WILLIAM H. TAFT

Chairman, Board of Directors

PROFESSOR IRVING FISHER, of Yale

Chairman, Hygiene Reference Board

HAROLD A. LEY

Harold A. Ley  
Charles H. Sabin

The Life Extension Institute has a Hygiene Reference Board of 100 leading scientific men, including the Surgeon-Generals of the Army and Navy, and U. S. Public Health Service; several ex-Presidents of the American Medical Association; Commissioners of Public Health, and others interested in the public welfare. Matters of scientific policy and educational material used in the Institute's service are submitted to this Board for opinion. A complete list will be furnished on application.

More than 100 prominent business houses have asked the Life Extension Institute to examine their vital, important employees. Foreign representatives of the American Red Cross, the Y. M. C. A., the Y. W. C. A., the Knights of Columbus and the Salvation Army have been examined before going over-seas.

## MAIL THIS COUPON FOR FURTHER INFORMATION

GENTLEMEN: Please send me, without obligation on my part, a copy of (1) "Neglect of the Human Machine," (2) List of 100 members of the Hygiene Reference Board, (3) "The Growing Movement to Prolong Human Life," and other literature descriptive of the services of the Life Extension Institute.

# GERMANY "OFFERS" PEACE

October 20, 1918.

In accepting the proposal for an evacuation of the occupied territories, the German Government has started from the assumption that the procedure of this evacuation and of the conditions of an armistice should be left to the judgment of the military advisers and that the actual standard of power on both sides in the field has to form the basis for arrangements safeguarding and guaranteeing the standard.

The German Government suggests to the President to bring about an opportunity to fixing the details. It trusts that the President of the United States will approve of no demand which would be irreconcilable with the honor of the German people and with opening a way to a peace of justice.

The German Government protests against the reproach of illegal and inhuman actions made against the German land and sea forces and thereby against the German people. For the covering of a retreat, destructions will always be necessary, and are, in so far, permitted by international law. The German troops are under the strictest instructions to spare private property and to exercise care for the population to the best of their ability. Where transgressions occur in spite of these instructions the guilty are being punished.

The German Government further denies that the German Navy in sinking ships has ever purposely destroyed lifeboats with their passengers. The German Government proposes with regard to all these charges that the facts be cleared up by neutral commissions.

In order to avoid anything that might hamper the work of peace, the German Government has caused orders to be dispatched to all submarine commanders, precluding the torpedoing of passenger ships, without, however, for technical reasons, being able to guarantee that these orders will reach every single submarine at sea before its return.

As the fundamental conditions for peace the President

characterizes the destruction of every arbitrary power that can separately, secretly, and of its own single choice disturb the peace of the world. To this the German Government replies:

Hitherto the representation of the people in the German Empire has not been endowed with an influence on the formation of the Government.

The Constitution did not provide for a concurrence of the representation of the people in decision on peace and war. These conditions have just now undergone a fundamental change. A new Government has been formed in complete accord with the wishes of the representation of the people, based on the equal, universal, secret, direct franchise.

The leaders of the great parties of the Reichstag are members of this Government. In future no Government can take or continue in office without possessing the confidence of the majority of the Reichstag.

The responsibility of the Chancellor of the empire to the representation of the people is being legally developed and safeguarded. The first act of the new Government has been to lay before the Reichstag a bill to alter the Constitution of the empire so that the consent of the representation of the people is required for decisions on war and peace.

The permanence of the new system is, however, guaranteed not only by constitutional safeguards, but also by the unshakable determination of the German people, whose vast majority stands behind these reforms and demands their energetic continuance.

The question of the President, with which he and the Governments associated against Germany are dealing, is therefore answered in a clear and unequivocal manner by the statement that the offer of peace and an armistice has come from a Government which, free from arbitrary and irresponsible influence, is supported by the approval of the overwhelming majority of the German people.

## THE PRESIDENT'S REPLY

October 23, 1918.

Having received the solemn and explicit assurance of the German Government that it unreservedly accepts the terms of peace laid down in his address to the Congress of the United States on the eighth of January, 1918, and the principles of settlement enunciated in his subsequent addresses, particularly the address of the twenty-seventh of September, and that it desires to discuss the details of their application, and that this wish and purpose emanate, not from those who have hitherto dictated German policy and conducted the present war on Germany's behalf, but from ministers who speak for the majority of the Reichstag and for an overwhelming majority of the German people; and having received also the explicit promise of the present German Government that the humane rules of civilized warfare will be observed both on land and sea by the German armed forces, the President of the United States feels that he cannot decline to take up with the governments with which the Government of the United States is associated the question of an armistice.

He deems it his duty to say again, however, that the only armistice he would feel justified in submitting for consideration would be one which should leave the United States and the powers associated with her in a position to enforce any arrangement that may be entered into and to make a renewal of hostilities on the part of Germany impossible. The President has, therefore, transmitted his correspondence with the present German authorities to the governments with which the Government of the United States is associated as a belligerent, with the suggestion that, if these governments are disposed to effect peace upon the terms and principles indicated, their military advisers and the military advisers of the United States be asked to submit to the governments associated against Germany the necessary terms of such an armistice as will fully protect the interests of the peoples involved and insure to the associated governments the unrestricted power to safeguard and enforce the details of the peace to which the German Government has agreed, provided they deem such an armistice possible from the military point of view. Should such terms of armistice be suggested, their

acceptance by Germany will afford the best concrete evidence of her unequivocal acceptance of the terms and principles of peace from which the whole action proceeds.

The President would deem himself lacking in candor did he not point out in the frankest possible terms the reason why extraordinary safeguards must be demanded. Significant and important as the constitutional changes seem to be which are spoken of by the German Foreign Secretary in his note of the twentieth of October, it does not appear that the principle of a government responsible to the German people has yet been fully worked out or that any guarantees either exist or are in contemplation that the alterations of principle and of practice now partially agreed upon will be permanent. Moreover, it does not appear that the heart of the present difficulty has been reached. It may be that future wars have been brought under the control of the German people, but the present war has not been, and it is with the present war that we are dealing. It is evident that the German people have no means of commanding the acquiescence of the military authorities of the empire in the popular will, that the power of the King of Prussia to control the policy of the empire is unimpaired; that the determining initiative still remains with those who have hitherto been the masters of Germany.

Feeling that the whole peace of the world depends now on plain speaking and straightforward action, the President deems it his duty to say, without any attempt to soften what may seem harsh words, that the nations of the world do not and cannot trust the words of those who have hitherto been masters of German policy, and to point out once more that in concluding peace and attempting to undo the infinite injuries and injustices of this war the Government of the United States cannot deal with any but veritable representatives of the German people who have been assured of a genuine constitutional standing as the real rulers of Germany. If it must deal with the military masters and the monarchical autocrats of Germany now, or if it is likely to have to deal with them later in regard to the international obligations of the German Empire, it must demand, not peace negotiations, but surrender. Nothing can be gained by leaving this essential thing unsaid.

## GERMANY REPEATS HER PLEA

October 27, 1918.

The German Government has taken cognizance of the answer of the President of the United States.

The President is aware of the far-reaching changes which have been carried out and are being carried out in the German constitutional structure, and that peace negotiations

are being conducted by a People's Government, in whose hands rests, both actually and constitutionally, the power to make the deciding conclusions. The military powers are also subject to it.

The German Government now awaits proposals for an armistice, which shall be the first step toward a just peace, as the President has described it in his proclamation.

# The Independent

WITH WHICH IS INCORPORATED  
HARPER'S WEEKLY

*We ask the indulgence of our readers for the unavoidable delay in publication of the October 26 issue of The Independent and the omission of the November 2 issue. It is the first time in the seventy years of its existence that The Independent has failed to make its weekly appearance, and we have done everything in our power to keep this record unbroken. A strike of press feeders thruout New York City was begun on Monday morning, October 21, which prevented the printing of monthly and weekly publications in New York City during the following eight days. We have made this issue of The Independent, dated November 9, much larger than its usual size in order to include in it a complete review of the two weeks instead of one*

## PUT GERMANY ON PROBATION

**P**EACE will be dictated, or negotiated, before August 1, 1919. If God reigns it will be dictated. If Gott reigns it will be negotiated.

When this point has been determined the peace table will be set. There will be many matters to consider. If the peace has been dictated German militarism will have surrendered and it will be necessary to decide what military and naval establishment Germany shall be permitted to perpetuate. The Hohenzollerns and the Hapsburgs will have been scrapped as royal families, and it will be necessary to say what worldly possessions and social standing, if any, they shall be permitted to enjoy. Among many other matters then to be taken up three are outstanding and of tremendous import.

Shall Germany be punished for her measureless wickedness? Anger says "yes." The instinct of vengeance says "yes." But the calmer reason of civilization will say "no." Civilization is not vindictive. It has no desire to inflict suffering for no other end than to gratify passion. It has no wish to destroy the products of human toil, to lay waste cities, to mutilate works of art, to desolate homes. Therein it differs from Kultur. Vengeance will not be included in the terms of peace.

Shall Germany be made to pay a just bill of damages? If there is to be no vengeance there will be no merely punitive indemnities. But the restoration of Belgium, of France, of Serbia, of Poland will be costly. Is Germany to be made to bear this cost, or is she to be let off? Powerful interests outside of Germany will be at work, they are at work now, to let her off. They care nothing for justice,

nothing for the rights of the desolated peoples whose intolerable losses and sufferings cry out for redress. They care only to resume business as usual.

Shall Germany be admitted forthwith into a league of nations created to safeguard the peace of the world? The humanitarians say "yes." The international socialists and a powerful group of international capitalists clasp hands and say "yes." France and Great Britain shut their jaws and say "no." In this antagonism of interests lies deadly peril to the league and the hope for which it stands.

Never in the history of politically organized mankind has so much been at stake. Not even in the days of darkness when the German armies were in gunshot of Paris, was civilization in graver danger.

What is the sailing course between Scylla and Charybdis? Happily it is clear and straight, tho narrow.

*Germany must be put on probation until she has made restitution to the peoples that she has desolated, and has reconstructed and democratized her own political life.*

Let there be no vengeance. Let there be no closing of the door of repentance and return. Let her not be excluded for all time from the family of nations. But let her be told in terms that cannot be mistaken: "You must first make good. You must not only prove your sincerity, you must actually pay the bill of damages that the world holds against you. You cannot enter the league of nations now. When you have discharged your obligations and the score is wiped off the slate, and you have established a people's government in which the world can have confidence, you will be welcomed and admitted, but not before."

## A CHALLENGE TO GERMANY

**T**HE President's ringing reply to the German note clinches his argument to the last nail. He culminates the correspondence by bringing squarely before the German people the question whether they will go down with Kaiserism to irretrievable ruin or by freeing their land from the incubus make peace upon the terms that he has prescribed. He wants not merely the evacuation of Belgium but the evacuation of the throne. All thru the mazes of this most complicated of conflicts he has stuck like a bulldog to his main object, to make the world safe for democracy—even in Germany. This phrase when he first enunciated it, mortally offended some of our friends over

the water. Reactionary British organs sneeringly remarked that it was more important "to make the world safe from democracy." But the common people heard him gladly, not only in England and France, but in Germany and Austria. More and more he has become the spokesman for the liberal elements of the world as his far-sighted policy was gradually unfolded. If any one will compare in tone and substance the Allied peace terms (published in The Independent of January 22, 1917) with the President's metropolitan speech (published in The Independent of October 12, 1918) he will see what a change America's entrance has made in war issues as well as in the military situation.

The President begins his note by a recapitulation of all the concessions Germany has made and all she has promised to make. Then he again points out "in the frankest possible terms" that he cannot trust "those who have hitherto been masters of Germany" and that he does not believe that their power has yet been permanently overthrown. Therefore there can be no cessation of military measures unless such "extraordinary safeguards" are demanded as to leave Germany incapable of further resistance in case she does not comply with the conditions proposed by her opponents. Finally he points out that so long as the present "military masters and monarchical autocrats" remain in power there can be no peace negotiations but only a demand for "surrender."

This is simply a succinct reiteration of what he has always held, that there should be two sets of peace terms, one for unregenerate Germany, sullen, revengeful and still controlled by an unscrupulous aristocracy, and the other set to be offered to the German people if after making reparation they prove themselves fit to enter the society of nations. He has previously explained under what conditions Germany or any other nation should be admitted to such a society and they are not easy conditions.

From what little we hear of Germany's internal affairs it is evident that this note is likely to prove a powerful stimulus to the forces now at work undermining the old regime in Germany. Doubtless the President knows more than the outside world what effect it will have. He has put plainly the alternatives before the German people; either they must make good their profest acceptance of all his conditions of a durable peace or if they insist upon retaining a dominant monarchical and military caste they would have no choice but surrender. Germany would in the latter case be an outlaw among nations and doubtless be kept under permanent military subjection, or at least surveillance. Under such circumstances, and however completely defeated and humiliated, Germany would still be a menace to the world. Consequently the President prefers that Germany should take the other alternative and unreservedly accept his peace conditions.

There is something better than "unconditional surrender" and that is surrender on our own conditions. We prefer the acceptance in advance of the American terms rather than the imposition afterward of the Allied terms. Suppose the Germans should unconditionally lay down their arms today. The peace terms would then be imposed by an Allied Council in which the United States might not be represented or might have one vote in twenty. The terms imposed would not be those of the Allied note of January, 1917, but the more questionable demands and plans which have since then found acceptance in Allied circles. The President in the last paragraph admits that if the German people continue in their fatuous affection for militarism and autocracy there will be no alternative but surrender, but he hopes for something better, namely, complete compliance with his own terms and full acceptance of his program of reconstruction. This alternative he therefore puts foremost.

Our hopes go with the President, for he has forced to the front the two issues that *The Independent* has been most earnestly advocating, the overthrow of autocracy and the establishment of a League of Nations. And we believe that there is a good chance of his success provided he receives the united support of his own people regardless of political party. The Kaiser has proffered his sword not to Lloyd George or Clemenceau or Orlando, but to Wilson. If the President had declined to consider it he might have lost his chance to carry out the American policy of world organization.

One point in his program he has virtually won already, the abolition of secret diplomacy. When he first proposed it the idea shocked the diplomatists of the old world. They declared it absurd and impossible. But Mr. Wilson stuck to

it. He tabooed whispering. He insisted upon discussing the most delicate questions in a voice loud enough to reach Berlin. He has the American faith in publicity. When you know you are right on any question, the more talk about it the better. He curtly declined the Austrian proposal for a secret and unbinding conversation but he is willing to discuss these questions publicly with Vienna—perhaps also with Budapest. Open warfare in the field, open warfare in diplomacy, these are the two changes since America entered the war.

The President's diplomacy has won a second victory in checking the plunder and demolition of French and Belgian towns. He has promise of a third victory in profest intention of Germany to limit the depredations of the U-boats. The note of October 14, in which he made these demands, was severely criticized by some of his political opponents, and he was threatened with impeachment if he pursued the policy of free and open discussion. But the people for whom we are fighting do not think so. "Wilson saved Bruges" said the Town Clerk.

Some folks are obviously more interested in the war than its objects. Art for art's sake. War for war's sake. They would rather have a splendid victory than to secure better results by a diplomatic peace. It would undoubtedly have been much more exciting for us to have seen Bruges besieged and carried by assault with the belfry crashed down by our shells or the enemy's mines than to have the Germans tamely walk out and the British quietly walk in. But the war is not being run for the amusement of those of us who stay at home. The President's note accomplished what a 42-centimeter gun could not do: it rescued Bruges without destroying it, and that without sacrificing any moral principle or relinquishing any military advantage.

The President keeps clear the distinction between an armistice and negotiations. Either one might be granted without the other. The military authorities will have to decide whether anything can be gained by granting an armistice. The civil authorities will have to decide whether anything can be gained by continuing peace negotiations. But the President has made it plain that the conditions of the armistice must be such—not only as to retain our present military advantage—but "to make a renewal of hostilities on the part of Germany impossible." We may trust Foch to see that these conditions are fully complied with. An armistice so safeguarded would involve placing no dependence whatsoever upon Germany's good faith or good intentions, but would leave us "in a position to enforce any arrangements that may be entered into."

With this as his sole recommendation the President passes the German proposal on to the Allies. Because he has gradually come into a position of leadership we are apt to forget that the Allies have, after all, the deciding voice. They could make peace at any time and on any terms without considering America. But they could not continue the war, at least with the same success, without America. That is, the President holds the war power but not the peace power. He must secure the coöperation of the Allies to carry thru his program. The United States is not signatory to the Pact of London of September 5, 1914, binding each one of the Allies not to make peace without the consent of all the others. We call them "our allies" in the loose popular acceptance of the word because they are friends and fighting with us, but we know that there is really no alliance. Because a man is in love with a lady and works with her in some common cause, he is not thereby entitled to regard her as his wife. The President has been called pedantic because he is careful to speak of "our co-belligerents" or "associates," but it is a necessary distinction and must be borne in mind now when we are discussing peace terms. Some people think we should sign the Alliance, but nobody can say that we have. The Allied nations have been brought continually closer to one another and closer to the

# CARTOON COMMENT

## K A M E R A D !

### THE GERMAN ATTITUDE NOW

The soldier below stands for several tens of thousand Germans who have cried out "Kamerad" to the advancing Allies in the fighting of the past two weeks. Cartoon by Walter de Maris in "Judge"

### UNCONDITIONAL SURRENDER EITHER WAY

The "New York Tribune" in this cartoon by Darling, stresses the point that Wilhelm has reached the end of his rope; if he does not surrender now military defeat will inevitably bring him to terms soon

### IN THE SAME MANNER

The cartoon below, drawn by Kirby in the "New York World," takes no pains to conceal its contempt of the German announcement that government by the people has displaced the Kaiser's rule

### MUSIC HATH CHARMS—?

The "Passing Show" of London enjoys a smile at Jerry's expense and implies at the same time considerable skepticism as to the efficacy of the peace fiddle

### THE ONE WAY OUT

"Unconditional Surrender" is the sign over the doorway thru which Fritz must go before he can smoke his peace pipe. "No smoking on the premises," says the commander-in-chief of the Allied armies in France. Cartoon (below) by Marcus in the "New York Times"

United States thru their common experiences in the present war. The President's peace terms have continually gained acceptance among all countries. This is, therefore, not the time to discuss such differences as still remain between the American program and the policies of our associates.

The President has undertaken the most stupendous task any man ever attempted, not merely the termination of the Great War on fair and equitable terms, but the reconstruction of the world system on a basis of freedom and justice. It may be too big a task for him. It may be too big for any human being. But if he fails it should not be for lack of sympathy and support from his own people.

## THE FIFTEENTH TERM

**P**RESIDENT WILSON has laid down fourteen terms as the basis of a just and lasting peace.

We respectfully submit that as the fifteenth term he demand that all the art treasures stolen by the Germans from the galleries and homes of France and Belgium be returned to their rightful owners.

## BURY THE HATCHET

**N**OW that the election is over let us all do what we can to close the breach caused by the recent irruption of party politics. It is doubtful whether the newly elected Congress will come into office before the main terms of peace are virtually settled, but it is important that in the difficult and delicate negotiations upon which we are now entering the United States shall have a single aim. This should be attained not by overruling the minority members but by cordially admitting them to the councils of the Administration.

A durable peace cannot be made by a majority vote. A true American foreign policy cannot be constructed out of a party platform. The more Democrats and Republicans differ the more essential it is that both should be considered.

## CZECHO-SLOVAK INDEPENDENCE

**T**HE Great War appears not as the destroyer but as the creator of nations. Bellona has given birth to a dozen new states within the last two years and tho some were stillborn and some are not likely to survive the diseases of infancy, yet others show a strength like Hercules in his cradle and bid fair to outgrow and outlive their elders in the family of nations. A man who had been on an Arctic expedition or in solitary confinement for the last two years would be astonished when he opened the paper for the first time to find that the United States was pledged by its President to continue war with Austria-Hungary until the establishment of the independence of two countries which he had never heard of and could not find on the map, Czecho-Slovakia and Jugoslavia. But he could hardly have been more surprized than the average Englishman and Frenchman on January 10, 1917, when in the reply of their governments to the President's note they read that one of the primary and necessary objects for which they had been fighting for the past two and a half years was the liberation of the Czecho-Slovaks. This might have been well known to the whole civilized world, as the Allies' note stated, but it obviously was not known to the man in the ranks who was doing the fighting or to the man in the ranks at home who was backing him. In fact it is not six months since a United States Senator was, according to Washington gossip, heard to inquire who were those folks with the unpronounceable name and where they lived. Not that there was anything wrong about the inquiry. Would that all senators were as anxious for information and took the same direct method of getting it. The addition of the word *Tchècoslovaques* to the Slavs, Rumanians and Italians who sought to be liberated from foreign domination was apparently an after-

thought, for the Czecho-Slovaks are Slavs and we may surmise that its insertion was due to the timely suggestion of the astute Professor Masaryk or some other member of the Bohemian National Committee who happened to be in Paris when the note was drafted. But however the Czecho-Slovak cause got into the list of the war aims, we may be glad that it was there, for it belonged there. It presaged the wider formula of the President—"to make the world safe for democracy." It was one of the things which the English and French were fighting for then and which we were to fight for later, tho neither they nor we realized it at that time. It has added both moral and military strength to our cause. The Czecho-Slovaks in Russia have kept control of the vertebral column of that country, the Siberian Railroad. The Czecho-Slovaks in Austria-Hungary have deserted from the army and defied the Government. The Czecho-Slovaks in America have aided us with men, money, enthusiasm and statesmanship. Masaryk in Washington is worth an extra regiment in France. The United States contains seven million Czecho-Slovaks, Jugoslavs and Poles besides Ukrainians, Italians and Rumanians equally eager to liberate from Austro-Hungarian domination the brethren they have left behind. The Czecho-Slovak Declaration of Independence that we publish on another page is worthy to rank with our own of 1776. It bears the marks of being "made in America" and if it can be realized in Europe it will in itself have justified our participation in the war.

We hope that the Poles and Jugoslavs will soon come out with a democratic declaration that sounds as promising to the American ear. Hitherto they have talked too much about "restitution" and "restoration" to suit a people who look forward rather than back. Americans have no desire to see reestablished upon earth the Commonwealth of Casimir or the Empire of Czar Dushan. Neither are they greatly interested in the rivalry of the Radziwills for the throne of Poland or of the Karageorgevitches and Obrenovitches for the throne of Serbia. The United States has "recognized in the fullest manner the justice of the nationalistic aspirations of the Jugoslavs" and Czecho-Slovaks, and therefore the American people are greatly interested to see that the form of government and society proposed to be set up does not contain such antiquated and obstructive institutions as shall render the new-gained freedom nugatory.

The conspicuous omission of the Poles from the President's reply to Austria-Hungary has caused alarm among the Poles. But President Wilson was the first to champion the cause of a united and independent Poland in the days when the Allies, for fear of offending the Czar, were silent on the subject. The American people have sympathized with Poland from the days of its partition. So we do not believe either the President or the people will abandon the Polish cause now when it appears possible of realization. But if the Polish propaganda is to prosper in America it must be cleared from all appearance of sectarian, class and racial exclusiveness. The Poles must prove themselves free from the faults that brought about the downfall of their commonwealth, the disposition to internal dissensions and the inability to get on well with their neighbors.

America is trying to call into existence a new Middle-Europe to balance the old Middle-Europe "made in Germany." The aim is to make a belt of independent states stretching from the Baltic to the Adriatic and cutting off the Germans of Austria and Germany from the Slavic lands on which they hoped to prey. But to bring together a dozen proud and patriotic nationalities, burdened with hereditary animosity and divided by rival interests, requires great tact and mutual self-sacrifice. It could only be done on American soil where these races join in common citizenship. It can only be done on a democratic basis. The meeting in Independence Hall, Philadelphia, on October 25 is a triumph of statesmanship and a good augury of a future federation of the world.

Of the three nationalities now appealing for American

support in establishing their independence the Poles started with the advantage of a century of American sympathy for the dismemberment of their country. The American people had seen Serbia ruthlessly overrun before their eyes and desired to have it reinstated and enlarged by the accession of the other Jugoslavs remaining under Austrian rule. But the Bohemians had been submerged for three hundred years and they were hardly recognizable when they reëmerged under the novel name of Czecho-Slovaks. The American people who are too timid to ask for a toothbrush or a talcum powder until they have seen it spelled out syllable by syllable could not be expected to shout "Hurrah for Czecho-Slovakia!" without previous practice. This awkward cognomen is partly due to linguistic accident and partly to political exigence. The old familiar name "Bohemia" has, like the name "Serbia" a territorial rather than a racial significance and is too small to cover the ethnical entity on which the modern concept of nationality is founded. The new nation aims to include the Czechs inhabiting the Austrian provinces of Bohemia proper, Moravia and Silesia as well as the kindred Slovaks inhabiting the adjoining part of Hungary. The Slovak language is only dialectically different from the Czech or Bohemian, but the differences were purposely intensified during the nineteenth century in order to keep the Hungarian branch of the race apart from the Austrian. Even in America the Slovak and Czech newspapers are distinct, altho either people can read the other language. Professor Masaryk, the head of the provisional government, is a Slovak. The Slovaks being inferior to the Czechs in numbers, wealth and education, are naturally insistent upon equal rights and recognition. The spelling "Czech" is neither native nor English. It is a Polish form of the word, foisted upon the world by the persistence of Viennese journalists. The true Bohemian spelling "Čech" is impossible to our newspapers for lack of type with inverted caret over the C to represent *Ch*. The final *ch* is sounded like the German guttural or the Scottish *ch* as in "loch," but to the ordinary ear is hardly distinguishable from plain *k*. If then Čech were simply transliterated Chek or Check no one would stumble over the pronunciation and the cause could gain many adherents who are now afraid to talk about it.

The name "Bohemian" is objected to because of its historical limitations and connotations, and because it is of Celtic, not of Slavic origin. Also there is a feeling that the word has been spoiled by its association with gipsies and the restaurants of the Latin Quarter of Paris and Greenwich Village of New York. But a good old word is not so easily spoiled and we hope that the constituent assembly will adopt the Republic of Bohemia as the designation of the nation. Shakespeare has been laughed at for three hundred years because he laid a scene of the "Winter's Tale" on "the coast of Bohemia." But perhaps he was merely in advance of his times, for President Wilson promises "access to the sea" for all the nations hitherto earth-bound.

## THE GERMAN COLONIES

THE idea that the captured German colonies should not be treated as the spoils of victory at the coming Peace Conference is gaining converts on all sides. It is approved by President Nicholas Murray Butler as well as by the British Labor party. Says Dr. Butler:

Why should not the German colonies, together with other undeveloped portions of the earth's surface, which under ordinary circumstances would become a prey to that form of colonization which is really only economic exploitation, be placed under the administrative control of the coming League of Nations, and be administered by organs of that league solely in the interest of the inhabitants of these territories? To return the German colonies to German sovereignty is unthinkable in view both of the use which the Imperial German Government has made of its power over these territories in the past, and of the effect upon the Union of South Africa and the Commonwealth of Australia of any such proposal.

On the other hand, to permit them to become mere derelicts

in the world is equally impossible. A practicable course seems therefore the one that is now proposed, namely their control by the organs of a League of Nations and their administration in the sole interest of their own inhabitants with a view to improving their physical, mental, moral, economic, and political conditions so that sooner or later they will become self-governing peoples.

This is precisely the suggestion which we made in a long editorial in *The Independent* of December 15, 1917. We then said, and it is more timely now than when we wrote it:

But why should not this League of Nations, when constituted, be put in control of all territories conquered by the Central Powers or the Allies. We have particularly in mind, however, the backward nations and the undeveloped and unorganized nations of the earth. . . . The profits from what has been mere exploitation of natural resources will furnish under enlightened and stable international supervision abundant funds for the development of these territories in communication, industry, education and all other elements of civilization. . . . If practicable it would solve at once the most difficult problems before the world, some of which would seem almost incapable of negotiated solution on any other basis.

The time has come when all the free peoples of the earth must realize that no one people is well intentioned enough, or wise enough, to hold in subjection another people who are of compact population and who occupy well-defined territory, even tho that subject people may be backward and uncivilized. Only the family of free nations has the right to administer the necessary restraints and corrective measures; and on it devolves the duty of educating and civilizing.

## THE UNITED STATES UNITED

THE aim of the founders of the nation was "to form a more perfect union and provide for the common defense."

The aim of the preservers of the nation was to maintain "liberty and union, now and forever, one and inseparable."

The ideals for which they fought are being realized in the present war. *E pluribus unum* is not a mere motto but an accomplished fact. The proof of it is to be seen in every day's newspaper. No state is missing from the Honor Roll of those who died for their country:

# THE STORY OF THE WEEK

## The Reconquest of Belgium

In the three months since the offensive started on July 15, the Allies regained 3000 square miles of territory and captured 380,000 prisoners and 3500 cannon and 40,000 machine guns. According to a cablegram from Herbert Hoover the recovered French territory contains a population of 1,500,000 and the Belgian territory 800,000.

In the week since October 15 the Allied gains have been greater than ever before, for the Germans have been swept out of western Belgium and many important places have been retaken, among them Bruges, Ostend, Thielt, and Zeebrugge in Belgium, and Lille, Valenciennes and Tournai in France. We give on another page an account of the occupation of Lille as seen by an eye-witness. In many cases the Germans retreated too hurriedly to destroy their military structures or to remove all of their guns and ammunition. The 38 centimeter gun which had been bombarding Dunkirk from

near Ostend, twenty-five miles away, was captured intact.

Most of the German troops were successfully extricated from the Belgian coast, but 15,000 of them were cut off by the rapid advance of the Belgian, British and French forces to Bruges and Eecloo, and were hemmed in against the Dutch frontier. The Dutch took down the electric barrier along the boundary and allowed them to enter, when they were disarmed and interned. Some thousands of Belgian and British troops cut off by the Germans when they took Antwerp in 1914 have been interned in Holland ever since, and now the Germans will be added to the list of the involuntary guests of the neutral buffer state.

The raising of the Belgian flag on the frontier was greeted with great enthusiasm by the Dutch on the other side of the boundary line. This brings Holland into land communication with France for the first time in four years and also opens up the sea for the half million tons of shipping held in the

Dutch ports because of the menace of U-boats and mines. The German destroyers and submarines in Ostend and Zeebrugge escaped from these ports and managed somehow to elude the British warships watching the coast.

While the Germans are rapidly withdrawing from the Belgian coast on the north and giving way slowly from the Aisne front in the south, they are holding on stoutly to the sector between Maubeuge and Laon. Here for a stretch of forty miles there is a division to a mile, or half a million men altogether, said to be a heavier concentration of forces than has ever been known before. But the British striking in the middle of this sector took Solesmes and Le Cateau and crossed the river Selle. Four thousand prisoners and a large quantity of war material were captured. The Americans are aiding the British in these difficult operations. That the fighting has been heavy may be seen from the fact that the British casualty lists are now averaging about 5000 names a day.

## CZECHO-SLOVAK DECLARATION OF INDEPENDENCE

At this grave moment, when the Hohenzollerns are offering peace in order to stop the victorious advance of the Allied armies and to prevent the dismemberment of Austria-Hungary and Turkey, and when the Hapsburgs are promising the federalization of the empire and autonomy to the dissatisfied nationalities committed to their rule, we, the Czecho-Slovak National Council, recognized by the Allied and American Governments as the Provisional Government of the Czecho-Slovak State and nation, in complete accord with the declaration of the Czech Deputies made in Prague on January 6, 1918, and realizing that federalization, and, still more, autonomy mean nothing under a Hapsburg dynasty, do hereby make and declare this our Declaration of Independence.

\* \* \* \* \*

We cannot and will not continue to live under the direct or indirect rule of the violators of Belgium, France, and Serbia, the would-be murderers of Russia and Rumania, the murderers of tens of thousands of civilians and soldiers of our blood, and the accomplices in numberless unspeakable crimes committed in this war against humanity by the two degenerate and irresponsible dynasties.

We will not remain a part of a State which has no justification for existence, and which, refusing to accept the fundamental principles of modern world-organization, remains only an artificial and immoral political structure, hindering every movement toward democratic and social progress. The Hapsburg dynasty, weighed down by a huge inheritance of error and crime, is a perpetual menace to the peace of the world, and we deem it our duty toward humanity and civilization to aid in bringing about its downfall and destruction.

We reject the sacrilegious assertion that the power of the Hapsburg and Hohenzollern dynasties is of divine origin; we refuse to recognize the divine rights of kings. Our nation elected the Hapsburgs to the throne of Bohemia of its own free will, and by the same right deposes them. We hereby declare the Hapsburg dynasty unworthy of leading our nation, and deny all of their claim to rule in the Czecho-Slovak land, which we here and now declare shall henceforth be a free and independent people and nation.

We accept and shall adhere to the ideals of modern democracy, as they have been the ideals of our nation for centuries. We accept the American principles as laid down by President Wilson: The principles of liberated mankind, of the actual equality of nations, and of governments deriving all their just power from the consent of the governed. We, the nation of Comenius, cannot but accept these principles expressed in the American Declaration of Independence, the principles of Lincoln, and of the declaration of the rights

of man and of the citizens. For these principles our nation shed its blood in the memorable Hussite wars 500 years ago; for these same principles, beside her allies, our nation is shedding its blood today in Russia, Italy, and France.

We shall outline only the main principles of the Constitution of the Czecho-Slovak nation. The final decision as to the Constitution itself falls to the legally chosen representatives of the liberated and united people.

The Czecho-Slovak nation shall be a republic. In constant endeavor for progress, it shall guarantee complete freedom of conscience, religion, and science, literature and art, speech, the press, and the right of assembly and petition. The Church shall be separated from the State. Our democracy shall rest on universal suffrage. Women shall be placed on an equal footing with men, politically, socially, and culturally. The rights of the minority shall be safeguarded by proportional representation. National minorities shall enjoy equal rights. The Government shall be parliamentary in form and shall recognize the principles of the initiative and referendum. The standing army shall be replaced by militia.

The Czecho-Slovak nation will carry out far-reaching social and economic reforms. The large estates will be re-deemed for home colonization. Patents of nobility will be abolished. Our nation will assume its part of the Austro-Hungarian pre-war public debt. The debts for that war we leave to those who incurred them.

In its foreign policy the Czecho-Slovak nation will accept its full share of responsibility in the reorganization of Eastern Europe. It accepts fully the democratic and social principles of nationality and subscribes to the doctrine that all covenants and treaties shall be entered into openly and frankly without secret diplomacy.

Our Constitution shall provide an efficient, rational, and just Government, which shall exclude all special privileges and prohibit class legislation.

Democracy has defeated theocratic autocracy. Militarism is overcome—democracy is victorious—on the basis of democracy mankind will be reorganized. The forces of darkness have served the victory of light—the longed-for age of humanity is dawning.

We believe in democracy—we believe in liberty—and liberty evermore.

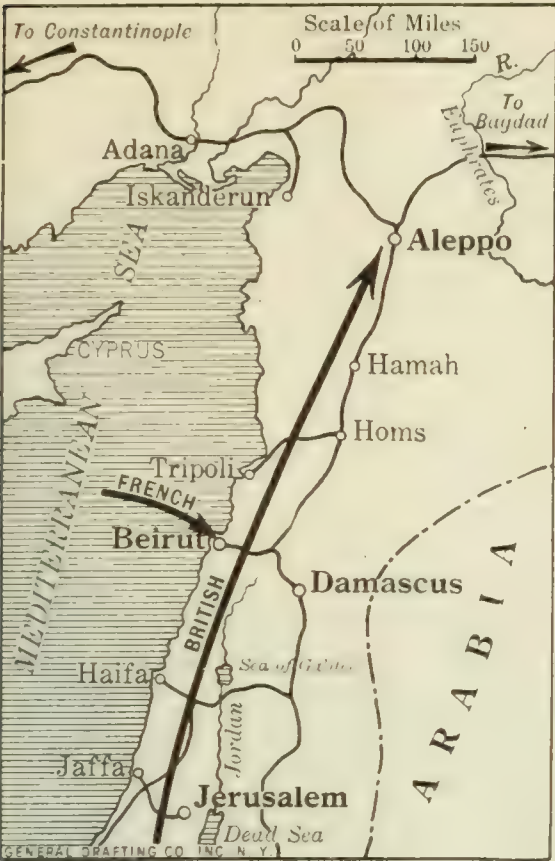

Given in Paris, on the 18th of October, 1918.

PROFESSOR THOMAS G. MASARYK,  
Prime Minister and Minister of Finance.

GENERAL DR. MILAN R. STEFFANIK,  
Minister of National Defense.

DR. EDWARD BENES,  
Minister of Foreign Affairs and of Interior.

### CUTTING THE SPINAL COLUMN OF THE OTTOMAN EMPIRE

The capture of Aleppo by the British completes their command of Palestine and Syria and breaks the connection between Constantinople and Bagdad. The ports of Jaffa and Haifa are in the possession of the British and Beirut of the French.

### Wilson Saves Cities

The indignant protest of President Wilson against the wanton destruction of property by the Germans in their retreat has saved many villages and towns in France and Belgium from ruin. Following the receipt of the American note the German army command announced that to bring "military measures into accord with the steps taken for the conclusion of peace the German armies have received orders to cease all devastation of places unless they are absolutely forced to follow this course by the military situation for defensive reasons."

In accordance with the promise made to the President the Germans have abandoned their former policy of laying waste the country behind them in order to prevent pursuit. Lille, the largest and richest of the cities of northern France, was found uninjured by fire or explosives when the British entered it. The belfry of Bruges, famous from Longfellow's poem, rang out its bells in welcome of its rescuers. M. Victor, the town clerk, said to the first correspondents to enter the city:

President Wilson saved Bruges. The President's reply caused a marked change in the German attitude. Thus the commandant had notified some two score leading citizens ten days ago that they would be removed as hostages. We were conducted to the station for departure when suddenly a counter order for our release came from General Headquarters. The enemy carefully refrained from injuring buildings or works of art and confined his destruction to the arsenal and his own depots.

The Germans began the evacuation of Belgium by taking away all their war material. Unoccupied houses were stripped of their furniture and valuables, but occupied houses were respected.

The munition plants and other factories were mostly denuded of their machinery. Food supplies have been taken away, leaving little or nothing for the inhabitants to live on. All able-bodied males between fifteen and fifty were deported when the Germans retired. Every household has a horrible tale to tell of privations and oppression of the four years of German rule. Careful account has been kept of all confiscations and damage done by the Germans in order to make up the bill to be presented at the peace conference. According to official Belgian figures the local contributions and fines levied by the Germans in Belgium from August, 1914, to October, 1918, amount to \$517,000,000. The Germans took out of Belgium during the first five months of the war, according to their own estimates, machinery and raw material to the value of \$400,000,000. The damage done to Belgium since may amount to more than a billion dollars.

**The Entrée** At eleven o'clock in the forenoon of October 17, to Ostend two hours after the Germans left, a British airplane alighted on the beach at Ostend and was immediately surrounded by a joyful crowd. Shortly after, Admiral Sir Robert Keyes entered the harbor in a whaler, but soon withdrew because the presence of his flotilla of destroyers drew the enemy's fire. But the King and Queen of the Belgians could not longer restrain their eagerness to enter the seaport, so they were brought from Dunkirk to Ostend in the British destroyer "Termagant," flying the Belgian flag.

About 25,000 of the original 45,000 inhabitants were found remaining in Ostend when it was released. The city has been as gay in war as it was in peace, for it was the favorite rest place for the German officers and soldiers on leave.

### Aleppo Captured

The most strategic victory yet achieved in Turkey is the occupation of Aleppo by the British cavalry on October 26, for this city is close to the point where the railroad running south to Jerusalem joins the railroad connecting Constantinople with Bagdad. Aleppo was held by 12,000 troops under a German commander, Field Marshal Liman von Sanders, but on the approach of the British cavalry and armored cars he withdrew 10,000 of his men, leaving only a rearguard of Turks to hold the place until he got clear of it and then to burn up the station and railroad stock.

General Allenby's progress thru Palestine and Syria has been rapid and uninterrupted. Starting on the night of September 18 he encircled and captured the Turkish armies between Nazareth and Jericho and then advanced to Damascus, which he took on October 1. This netted him more than 71,000 prisoners and 350 guns, while his Arab allies under King Hussain took 8000 more. Among those captured were the commanders of five divisions and more than 3000 German and Austrian troops including 206 officers.

The French naval forces on October 7 took Beirut. This is the port of that part of Syria which was long ago

### THE CONQUEST OF WESTERN BELGIUM

The Germans have evacuated the Belgian coast as far as the boundary of Holland. The Belgian Government has been established at Bruges. The British have made headway against strong resistance east of Le Catoy and Solesmes. The shaded area shows gains over last year's line.

## THE AUSTRO-HUNGARIAN APPEAL FOR PEACE

October 7, 1918.

*The Austro-Hungarian Monarchy, which has waged war always and solely as a defensive war and repeatedly given documentary evidence of its readiness to stop the shedding of blood and to arrive at a just and honorable peace, hereby addresses itself to his Lordship [Monseigneur in the French text] the President of the United States of America, and offers to conclude with him and his Allies an armistice on every front on land, at sea, and in the air, and to enter immediately upon negotiations for a peace for which the fourteen points in the message of President Wilson to Congress of January 8, 1918, and the four points contained in President Wilson's address of February 12, 1918, should serve as a foundation, and in which the viewpoints declared by President Wilson in his address of September 27, 1918, will also be taken into account.*

### PRESIDENT WILSON'S REPLY

October 19, 1918.

*The President deems it his duty to say to the Austro-Hungarian Government that he cannot entertain the present suggestions of that Government because of certain events of utmost importance, which, occurring since the delivery of his address of the eighth of January last, have necessarily altered the attitude and responsibility of the Government of the United States. Among the fourteen terms of peace which the President formulated at that time, occurred the following:*

*X.—The peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the freest opportunity of autonomous development.*

*Since that sentence was written and uttered to the Congress of the United States, the Government of the United States has recognized that a state of belligerency exists between the Czecho-Slovaks and the German and Austro-Hungarian Empires and that the Czecho-Slovak National Council is a de facto belligerent Government clothed with proper authority to direct the military and political affairs of the Czecho-Slovaks. It has also recognized in the fullest manner the justice of the nationalistic aspirations of the Jugo-Slavs for freedom.*

*The President is, therefore, no longer at liberty to accept the mere "autonomy" of these peoples as a basis of peace, but is obliged to insist that they, and not he, shall be the judges of what action on the part of the Austro-Hungarian Government will satisfy their aspirations and their conception of their rights and destiny as members of the family of nations.*

### AUSTRIA-HUNGARY ACCEPTS THE TERMS

October 28, 1918.

*In reply to the note of President Wilson of the 19th of this month, addrest to the Austro-Hungarian Government and giving the decision of the President to speak directly with the Austro-Hungarian Government on the question of an armistice and of peace, the Austro-Hungarian Government has the honor to declare that equally with the preceding proclamations of the President, it adheres also to the same point of view contained in the last note upon the rights of the Austro-Hungarian peoples, especially those of the Czecho-Slovaks and the Jugo-slavs.*

*Consequently, Austria-Hungary accepting all the conditions the President has laid down for the entry into negotiations for an armistice and peace, no obstacle exists, according to the judgment of the Austro-Hungarian Government, to the beginning of these negotiations.*

*The Austro-Hungarian Government declares itself ready, in consequence, without awaiting the result of other negotiations, to enter into negotiations upon peace between Austria-Hungary and the States in the opposing group and for an immediate armistice upon all Austro-Hungarian fronts.*

*It asks President Wilson to be so kind as to begin overtures on this subject.*

ear-marked to go to France whenever the Ottoman Empire should break up.

General Marshall, who is in command of the British army at Bagdad, has begun again to move up the Tigris. The Turks were defeated near Kerkuk, 155 miles from Bagdad, and are retreating on Mosul, near ancient Nineveh. If they fail to make a stand here the British from Mesopotamia may continue westward until they join General Allenby's forces at Aleppo.

**Italian Drive on the Piave** Foch has seized the time when Austria-Hungary was in greatest demoralization and discouragement to order an attack from the Italian front. This sector has been comparatively quiet ever since last June, when the Austrians

launched what they intended to bring them a complete victory, but instead suffered ignominious defeat. The Italians took 30,000 prisoners and more than regained their ground.

The new offensive was started at sunrise on October 24 and by the end of the day the Italians had taken 2000 prisoners. This was followed by 9000 prisoners on the second day and 7000 on the third. The first point of attack was about the Mount Grappa massif, which forms the barrier between the Brenta and Piave rivers. Here is where the Austrians tried to break thru in June and succeeded at first in taking Mount Grappa. Now the Italians retaliate and have ousted the Austrians from their stronghold on Mount Pertica, just north of Grappa.

The Italians have also succeeded in crossing the Piave River between Montello and Nervesa. Further east the British troops captured some islands in the river and on the west the French gained ground near Asiago.

The Piave was crost on a thirty-mile front on Sunday and within two days the enemy's front was penetrated to a depth of seven miles. Ohio troops joined in the offensive. King Victor Emanuel crost the river with a regiment of Bersaglieri and was greeted with cheers by the Austrian prisoners as well as Italian troops on the further bank.

**The Federalization of Austria** In an effort to meet the demands of the subjected

nationalities for independence the Emperor of Austria has decided to convert Austria into a confederation of self-governing states. The manifesto issued by Kaiser Karl to his people on October 18 reads in part:

The terrible struggles in the world war have thus far made the work of peace impossible. The heavy sacrifices of the war should assure to us an honorable peace, on the threshold of which, by the help of God, we are today.

We must therefore undertake without delay the reorganization of our country on a natural and therefore solid basis. Such a question demands that the desires of the Austrian peoples be harmonized and realized.

Austria must become, in conformity with the will of its people, a confederate state in which each nationality shall form on the territory which it occupies its own local autonomy.

This does not mean that we are already envisaging the union of the Polish territories of Austria with the independent Polish state.

The city of Trieste with all its surroundings shall in conformity with the desire of its population be treated separately.

This reconstruction, which in no way affects the integrity of the countries under the holy crown of Hungary, will guarantee the independence of each individual national state. It will, however, also effectively protect common interests and will bring them to bear wherever a community is a condition of vital importance for individual states.

This concession probably comes too late, for as President Wilson points out in his note to Austria, these nationalities have passed beyond the stage when they might have been willing to accept autonomy, and they now demand complete independence. The United States on September 3, 1918, recognized the Czecho-Slovak National Committee, under the presidency of Professor Masaryk, as a belligerent government, and this recognition has been confirmed by England, France, and Italy. The United States and the Allies have also recognized the justice of the nationalistic aspirations of the Jugoslavs. The Poles will oppose this solution because it stipulates that the Polish districts of Austrian Galicia are not to be allowed to unite with independent Poland. The Italians of Trieste who want union with Italy will not now be content with autonomy. The provision that the federalization is not to be extended to Hungary will please the Magyars but will disappoint the Rumanians and Slovaks of Hungary. The Germans of Austria, fearing that they will be lost

in the rise of the new nationalities, have organized the "German state of Austria," and already formed a national assembly composed of the German deputies in the Austrian Reichsrath. As president of this provisional government Karl Seitz, leader of the German Socialists in Austria, has been chosen.

#### Hungary Breaks with Austria

When Dr. Wekerle, the Hungarian Premier, announced in the Hungarian Diet that Austria was going to be federalized it precipitated one of the wildest scenes of that tumultuous body. The deputies exchanged epithets like "blackguard," "liar," "traitor," "slave," until the chairman had to adjourn the session. Ex-Premier Tisza, whom a young official tried to shoot the day before on the steps of Parliament, shouted at the Opposition: "You are Entente agents!" to which Martin Novassy answered "We are friends of the Entente."

On resuming the sitting an address to the King was presented declaring:

Hungary feels herself to be in full accord with the ideas spreading thruout the world along the lines of the noble principles of President Wilson's address. Hungary must be completely independent, must have general electoral suffrage, and the relations between nationalities in the country must be governed by the principles enunciated by President Wilson.

Count Michael Karolyi, president of the Hungarian Independent party and leader of the Opposition in the Diet, denounced the policy of the Government before the outbreak of the war and since, and demanded that peace negotiations be begun at once by Hungary without regard to Austria or Germany. He declared that the war had been brought on by the Austrian ultimatum to Serbia at the desire of the German Emperor and might easily have been avoided:

The rejection of the British proposal for the occupation of Belgrade and a settlement of the entire Balkan question at a European conference was striking proof that Austria wanted war. Our policy during the war was worse than before the war. We might have concluded peace times without number, but we never trod the path of sincere peace. When we saw Germany would not yield and the entire world in revolt against Germany's policy, we ought to have followed this lead. Our monarch desired to take this course, but he had a Diplomatic Corps whose incapacity from the start made success impossible.

Count Karolyi arraigned the Germans for their ruthless submarine warfare and said that the main mistake of the Government was in underestimating America.

Premier Wekerle, in replying to Count Karolyi, defended the Government and said that it had created in Germany a sentiment favorable to peace.

The King having refused to concede Hungarian independence, Count Karolyi declared his intention to enforce a complete separation from Austria. The Hungarian National Council at Budapest, of which Karolyi is the head, has set up as a free and independent Government and will demand separate recognition at the peace council.

#### Austria Accepts American Terms

The next step in the transformation of the Dual Monarchy was to replace the existing Government by pronounced pacifists. Professor Lamasch, who becomes Austrian Premier in place of Baron von Husarek, and Count Apponyi, who becomes Hungarian Premier in place of Dr. Wekerle, were before the war leaders in the international movement for world peace and a league of nations. They will therefore be disposed to work with President Wilson for this aim. The Emperor has also removed the Austro-Hungarian Foreign Minister, Baron Burian, and appointed Count

### THE GREAT WAR

**October 17**—Hungarians in Diet demand reparation from Austria. Allies enter Ostend, Zeebrugge and Thielt.

**October 18**—Kaiser Karl proclaims federalization of Austria. British advance beyond Le Cateau.

**October 19**—Germans evacuate Bruges. President replying to Austrian note calls for independence of Czecho-Slovaks and Jugoslavs.

**October 20**—British cross Selle River. Denmark demands plebiscite of Schleswig.

**October 21**—German note accepts Wilson's terms. French reach Danube at Vidin.

**October 22**—British reach Valenciennes. Americans gain north of Grand Pré.

**October 23**—President replying to German note refers armistice to Allies. Reichstag approves of German peace overtures.

**October 24**—Italian drive on Piave started. British take 9000 prisoners on Scheldt front.

**October 25**—President appeals to people for support in congressional election. Croatian troops mutiny at Fiume.

**October 26**—British take Aleppo. American First Army has taken 20,000 prisoners north of Verdun.

**October 27**—Germany accepts President's terms and asks for armistice. British take Kerkuk, 155 miles northwest of Bagdad.

**October 28**—Austria appeals to President for immediate peace on American terms. French break thru Hunding line at Guise.

**October 29**—War Council meets at Versailles with Colonel House as American representative to determine armistice conditions. Turks evacuate Baku.

**October 30**—Italians go seven miles beyond Piave and take 25,000 prisoners. Czecho-Slovak National Council in control of Prague.

ITALIAN DRIVE ON AUSTRIAN FRONT

The Italians, aided by British, French and American contingents, have broken thru the Austrian lines along the Piave River and in the highlands between the Piave and the Brenta. The latest news, as we go to press, is that they have reached Vittorio.

#### "LE JOUR DE GLOIRE EST ARRIVE" IN ST. MIHIEL

One of the war achievements of which America can be ever proud was the victory of Pershing's troops in driving back the Germans from the salient of St. Mihiel. The French people of St. Mihiel in this photograph are celebrating their emancipation from slavery to the Boche. French flags, hidden against this day, can at last be hung in sight; an old Frenchman is tearing down the sign that made this building a hospital for Germans

Andrassy, a Hungarian. The first act of the new Foreign Minister was to send a note to Washington declaring his complete acceptance of the President's peace conditions and expressing adherence to the point of view to which the President in his reply had called attention, that is, the rights of the Austro-Hungarian peoples, especially those of the Czecho-Slovaks and Jugo-Slavs.

This was followed next day by a note from Count Andrassy appealing directly to Secretary Lansing to intervene with the President in favor of an immediate armistice, and repeats his assurances that "we accept all the points and principles laid down by President Wilson in his various declarations, and are in complete accord with the efforts of President Wilson to prevent future wars and to create a League of Nations. We have taken preparatory measures, in order that Austrians and Hungarians may be able, according to their own desire and without being in any way hindered, to make a decision as to their future organization, and to rule it. Since the accession to power of Emperor King Charles, his immovable purpose has been to bring an end to the war."

#### Turmoil in Germany

Each successive reply from the President has added to the consternation of the ruling class in Germany. His significant reference in his last note to the power exerted by the "King of Prussia" in the affairs of the German Empire pointed out a possible solution that the German people were predisposed to consider. The tacit dropping of the word "Imperial" from the customary phrase, "the Imperial German Government," in the later correspondence on both sides is another straw showing how the wind blows. When Dr. Karl Liebknecht, the Socialist member of the Reichstag, was released from the prison

to which he had been confined for opposing the war, he was received in a carriage filled with flowers and taken thru the streets in triumph by a crowd shouting for a republic. The *National Zeitung* of Berlin says: "President Wilson has answered quickly. Well, if ever Emperor William's invocation that God be with him is in season, it is right now." The *Fränkische Tagespost* says:

Had the Kaiser followed the example of some of the greatest monarchs and apparently of his own free will divested himself of power his position in history would have been other than it will be when in obedience to President Wilson's demands he will have to resign his throne and end his life somewhere or other as a private individual. . . . If the Emperor must go let him go at once.

Herr Haase, leader of the Independent Socialists, demanded in a Reichstag speech a republican form of government and this demand is echoed by Socialist papers and platforms thruout the country. The *Volkzeitung*, the organ of the Nuremburg Socialists, says: "The German people are searching for the guilty. The Pan-Germans and Junkers are silent today, but we do not forget that they are the great war inciters in Germany and have led the German people to disaster. To the gallows with the guilty, whoever they may be!"

The Kaiser is rumored to have said that he was willing to become a hereditary president like the kings of England, Belgium and Italy. When something of the kind was suggested in the Reichstag the Socialist Deputy Hoffmann raised an uproar by exclaiming: "You seem to wish the King of Prussia should exchange his crown for a tall hat."

Anton Stychel, a Polish deputy in the Reichstag, declared that President Wilson was the benefactor of humanity and the savior of the Poles from German oppression.

Maximilian Harden, the outspoken

editor of *Die Zukunft* (The Future), says:

I hope von Tirpitz will be put on trial as soon as possible. There must be limits for what human beings can do to one another. As to Belgium, the war started on our part with a piece of trickery; so I have never gloried in our military victories which were the fruits of dishonor. But today treaties are no longer scraps of paper.

We must dissolve the confederation of the German states. It is too expensive. Our debt is now 200,000,000,000 marks. Our grandchildren's children will be born only to work it off.

Mathias Erzberger, formerly leader of the Catholic opposition but now admitted to the Cabinet, has publicly expressed his great regret over the torpedoing of the "Leinster" and declared that the whole Government shares his viewpoint. He adds:

Just here it has been shown how right the German proposal was for the completion of an immediate armistice. I think with sorrow of the thousands and thousands of refugees who are now flying roofless from Lille, and of those who may suffer needlessly in the last hours. It is unthinkable that now, when the door of peace slowly begins to open, unfortunate women and children should suffer because of the will for war, the cessation of which should now only be a question of days.

Herr Erzberger was one of the few German public men who in 1915 openly deplored the sinking of the "Lusitania" and he has always opposed the U-boat depredations.

#### Proposed German Reforms

More convincing evidence of change than the utterances of the radicals is the fall of Ludendorff, who in the last year or two has superseded Hindenburg as military dictator of the German Empire. It was Hindenburg who urged the opening of peace negotiations against Ludendorff, who wanted to stick it out to the bitter end.

The German Vice-Chancellor von Payer shows a sense of the situation in his frank admission to the Reichstag:

We need confidence, not merely at home, we need the confidence of foreign countries, even the confidence of our enemies. For we want peace and we need it. Our enemies distrust our sincere intention to conclude a peace of justice. They mistrust us mainly on the ground of many events in the past, concerning which we cannot take it amiss of them if they have certain doubts. What we need in order to be able to exist is an unequivocal, honest, and straightforward policy. That alone can promote our welfare in the future.

It has been doubted whether Germany could have meant to accept all of the President's fourteen points because one of them insisted that the wrong done to France in the matter of Alsace-Lorraine "should be righted." But Dr. Solf, the new Foreign Minister, expressly states that as these territories are mentioned in the program accepted "we agree to the regulation of these questions by peace negotiations" and further that "we will loyally and in the sense of complete justice and fairness fulfil the program in all directions and at all points."

As an earnest of good intentions a new Governor has been appointed for Alsace-Lorraine, Karl Hauss, who declares that the future of the population must be decided by a vote of the people.

lation and that it is the mission of the two provinces to form a point of reconciliation between France and Germany and "to collaborate in establishing a compromise between the two civilizations called to work in common for the safety and prosperity of humanity." The old Governor, Dr. von Dallwitz, and his secretary were as usual decorated on their retirement, which moves *Vorwärts*, the Socialist journal, to remark that instead of decorations they should have had a sign hung on their necks reading: "These are the men who have robbed Germany of the affection of Alsace-Lorraine."

All the Belgian political prisoners have been ordered released. Among them is Burgomaster Max of Brussels, who was imprisoned for trying to defend his people. According to Foreign Minister Solf the representatives of the Belgian relief organization, Commissioner van Bree and the Spanish Minister Villalobar, found on their visit to Valenciennes and Tournai that the German military authorities were doing everything in their power to alleviate the condition of the fugitives and residents in the bombarded towns.

The changes proposed to democratize the German constitution in accordance with the demands of President Wilson are:

First—War can only be declared with the sanction of the Reichstag and Bundesrat.

Second—The Chancellor can remain in power only while he possesses the confidence of the Reichstag.

Third—The Chancellor will be responsible for the political actions of the Kaiser, and the Chancellor and Ministry will be responsible for their tenure of office to the Reichstag and Bundesrat.

Fourth—The appointment, promotion, and dismissal of officers of the army and navy can be effective only by the signature of the Chancellor. The Minister of War will be held responsible for the same by the Reichstag.

#### The Siberian Campaign

The international expedition to Vladivostok has succeeded with unexpected ease in getting in touch with the Czechoslovak troops in the interior and in gaining control over both branches of the Siberian Railroad. But the further aim of supporting the Czechoslovaks on the Volga and re-establishing the front against Germany appears less possible of attainment than formerly. Indeed, the Czechoslovaks may be obliged to withdraw altogether from European Russia. In that case the Allied front would have to be established at the Urals instead of at the German boundary as was hoped. The new army raised by the Soviet Government appears to be stronger than was apprehended. It has driven the Czechoslovaks from Samara, where the Siberian Railroad crosses the Volga River, and now threatens Ufa, where an anti-Bolshevik Government was recently set up. The Bolsheviks are also said to be gaining south of the Siberian line about Orenburg and Astrakhan and beyond in Turkestan. On the north of the Siberian line, however, the Czechoslovaks defeated the Bolsheviks in their attempt to recapture Ekaterinburg. A thousand of

British Official © Underwood & Underwood

#### KEEPING UP WITH THE GERMAN RETREAT

The enemy's involuntary evacuation of Belgium and France has progressed so rapidly lately that the British have had to build new railroads to keep moving their men to the front

the Bolsheviks were killed in this battle and three armored trains and sixty machine guns were captured.

Some progress appears to have been made toward getting together the rival factions in Siberia altho, according to the *London Times*, this has been accomplished largely thru the power of the Czechs who are supporting the Cadet or monarchist party and eliminating the socialistic elements. The Vladivostok Government, which has hitherto been too socialistic to suit the Allies, is now reported to have joined with the Omsk Government, which now inclines toward the Cadets. General Horvath, who recently attempted a monarchical *coup d'état* at Vladivostok, has been reinstated in his position as general manager of the Chinese Eastern Railroad and will have charge of Allied dealings in the Far East. Vladivostok has been placed under martial law by Colonel Butenko and a similar regime has been established on the Chinese Eastern Railroad by the Czech commander, Colonel Gaida, who has threatened with instantaneous execution any railroad man or telegrapher who strikes or incites others to strike.

The Czechoslovaks blame the Americans severely for not sending forces to the Volga and so saving them from a withdrawal from European Russia in face of the Bolsheviks. But in financial aid the United States has been generous. The American Government has contributed \$5,000,000 to President Masaryk and provided \$3,000,000 worth of supplies for the Czechoslovak armies, besides \$5,000,000 for Russian relief.

In Congress The Senate Finance Committee, continuing its revision of the House Revenue bill, decided on October 16 to recommend a stamp-tax of two cents on every bank check; and allowed the Secretary of the Treasury \$60,000 with which to pay for expert advice, in lieu of the proposed advisory commission. On the 17th it relieved the President,

and all Federal judges, of taxation of their salaries; and adopted an amendment permitting corporations to deduct the amount of any net loss suffered during the preceding year from their taxable income. On the 18th the committee struck out the much criticized differential on undistributed corporate income, substituting a flat rate of 12 per cent on all corporate income, and removed the tax on the income from state and municipal bonds.

On the 21st the committee concluded what they thought their most important day's work. The whole war profits and excess profits tax section of the House bill was reconstructed, under the influence of the Secretary of the Treasury, and by the advice of Senate lawyers, who feared that the alternative system of the House would prove to be unconstitutional, and who disapproved of it economically. In place of it a flat-rate war profits tax is substituted. As the section now reads the tax will be:

1. Thirty per cent of the net income in excess of the excess profits deduction of 8 per cent of the invested capital.
2. Sixty per cent of the net income in excess of 20 per cent of the invested capital.
3. The amount by which 80 per cent of the net income in excess of the war profits credit or deduction exceeds the amount of the tax computed under the first and second brackets (or paragraphs).

A change was also made in the individual surtax plan, the arrangement now being that 1 per cent shall be added to the regular income tax for every additional \$2000 of income above \$6000. Thus an income of \$8000 would bear 2 per cent surtax, \$10,000 3 per cent, and so on.

On the 25th the estates tax of the bill was changed to a tax on inheritances of more than \$10,000; and the tax on alcohol not used in beverages was reduced to \$2.20 a gallon, as at present. The chairman announced on the 26th that the committee would not report the bill until after the elections.

The day of the 24th was occupied

by a partisan debate on the question whether President Wilson meant by "the removal of economic barriers," as proposed in one of his fourteen requirements for peace, that protective tariffs should be abandoned. (A denial was immediately forthcoming from the President that this was the intent of his language.)

On October 25, with very little discussion, the Army Deficiency bill, carrying appropriations amounting to \$6,345,523,688, was passed and sent to the President. The draft treaty with Italy was authorized and several minor bills put thru; also a resolution directing the Military Committee to investigate the recent explosion which caused heavy destruction in the munitions works at Morgan, New Jersey.

The President's appeal to voters was published on Saturday, the 26th, and on Monday the Senate began a heated debate, lasting four hours, over questions of party fealty and responsibility. An attempt to order an adjournment over election day was frustrated by the Republicans, who held that it was the duty of Congress to remain in session in view of the great international questions pending.

In the House little business has been done since sending to the Senate on October 17 the Army Deficiency bill. Resolutions have been introduced for the recognition of the Armenian Republic of Ararat, and for the celebration of November 8 as Czecho-Slovak Day, as a sign of American welcome to a new free government.

**President Wilson Pleads for His Party** The somewhat trite witticism that the war is being waged "to make the world safe for the Democrats" received new impetus from an appeal made by President Wilson ten days before election, in which he urged the return of a Democratic majority to both the Senate and House of Representatives. "My power

to administer the great trust assigned me by the Constitution would be seriously impaired," said the President, "should your judgment be adverse."

In support of his request for a Democratic Congress, President Wilson went on to say:

I have no thought of suggesting that any political party is paramount in matters of patriotism. I feel too deeply the sacrifices which have been made in this war by all our citizens, irrespective of party affiliations, to harbor such an idea. I mean only that the difficulties and delicacies of our present task are of a sort that makes it imperatively necessary that the nation should give its undivided support to the Government under a unified leadership and that a Republican Congress would divide the leadership.

The leaders of the minority in the present Congress have unquestionably been pro-war, but they have been anti-administration. At almost every turn since we entered the war they have sought to take the choice of policy and the conduct of the war out of my hands and put them under the control of instrumentalities of their own choosing.

This is no time either for divided council or for divided leadership. Unity of command is as necessary now in civil action as it is upon the field of battle. If the control of the House and the Senate should be taken away from the party now in power an opposing majority could assume control of legislation and oblige all action to be taken amid contest and obstruction.

The return of a Republican majority to either House of the Congress would, moreover, be interpreted on the other side of the water as a repudiation of my leadership. Spokesmen of the Republican party are urging you to elect a Republican Congress in order to back up and support the President, but even if they should in this impose upon some credulous voters on this side of the water they would impose on no one on the other side. It is well understood there as well as here that the Republican leaders desire not so much to support the President as to control him.

The peoples of the Allied countries with whom we are associated against Germany are quite familiar with the significance of elections. They would find it very difficult to believe that the voters of the United States had chosen to support their President by electing to the Congress a majority controlled by those who are in fact not in sympathy with the attitude and action of the Administration.

**The Republicans' Side of the Case** In answer to President Wilson's request for the election of a Democratic Congress the Republican leaders in the Senate and House of Representatives took up the cudgels in defense of their party. From the statement signed by Senator Lodge, Senator Smoot, Congressman Gillett, and Congressman Fess we quote the following points:

Some time ago the President said "politics is adjourned." Now, in the closing days of the campaign—delayed by the united efforts of all parties for the Liberty Loan—now, when all public meetings have been given up, owing to the influenza epidemic, the President sends out a direct party appeal, calling upon his countrymen to vote for Democrats, because they are Democrats, without any reference to whether such Democrats have been, or are, in favor of war measures, and have a war record which deserves support.

The voters of Michigan, to take a single example, are called upon to support Mr. Henry Ford—notorious for his advocacy of peace at any price, for his contemptuous allusions to the flag, for the exemption of his son from military service—on the sole ground that he will blindly support the President.

The President is quite ready to admit that Republicans are loyal enough to fight and die, as they are doing by the thousands; loyal enough to take up great loans and pay enormous taxes; loyal enough to furnish important men, at no salary, on some of the great war boards in Washington. But they are not loyal enough, in the President's opinion, to be trusted with a share in the government of the country or legislation for it.

If the Republican party controls the House, we can point out some of the things they will do. They will replace Mr. Dent, of Alabama, at the head of the Military Affairs Committee, with Mr. Julius Kahn, to whom the Administration was obliged to turn for assistance, to take charge of and carry the first draft bill against Mr. Dent's opposition.

They will put a Republican at the head of the Ways and Means Committee, as leader of the House, instead of Mr. Kitchin, of North Carolina, who voted against the war.

They will give the country a speaker who did not oppose, and would never oppose, a draft bill, and could never say, as Speaker Clark did, that "there is precious

#### REMEMBER CHATEAU THIERRY!

Here the Americans had their first big chance in battle on the western front just at the turn of the tide against the Huns

little difference between a conscript and a convict."

The statement shows specifically that Republicans in Congress have not hampered the administration's war program.

Altho the Republicans of the House are in the minority, they cast more actual votes on seven great war measures than the Democratic majority was able to do.

What is the record of the Senate?

On fifty-one rollcalls on war measures between April 6, 1917, and May 29, 1918, the votes cast by Republicans in favor of such measures were 72 per cent, while only 67 per cent of the votes cast on the Democratic side were in favor of such measures.

Those were the President's own measures.

Does that record look as if we had hampered him?

The Republicans answer the President's concern for the effect of the election on our Allies by reiterating their own war platform.

The President speaks of the effect of the election abroad. He says that there they understand the meaning of elections.

They do and they will know that if the Republicans have a majority in Congress the war will be prest with greater vigor than ever before.

They are quite aware that the power of the Senate is equal to that of the President in the consummation of peace by treaty.

They will know that the Republican party stands for a victorious peace and the overthrow of Prussian militarism. That knowledge will not depress the spirit of Allies or encourage the Government of Germany.

The Republican party believes that the question of surrender should be left to Marshal Foch, to the generals and to the armies in the field. When they report that Germany has laid down her arms the United States and the Allies should then impose their terms. Will that knowledge cause dejection to those who are fighting with us.

All the world knows that the Republican party is opposed to negotiations and discussion carried on in diplomatic notes address to the German Government. The Republican party stands for unconditional surrender. There is no Republican creed so short that there is not room in it for those two words.

**Food Saving** In view of the great number of persons in the United States, estimated at 9,000,000, who take their meals, or a large share of them, at hotels, clubs, restaurants or lunch counters, the order of the Food Administration, effective October 21, regulating the consumption of food at public eating places, is of widespread interest. These restrictive orders have been made because we are pledged to send to the Allies this year 17,500,000 tons of food, and must economize in order to do it; and the authorities deem a coöperative reduction in consumption better than some system of rationing.

**Upbuilding the Navy** Congress has been asked by the Navy Department to authorize a second three-year building program to provide ten additional superdreadnaughts, six battle cruisers, and 140 smaller vessels, at a cost of \$600,000,000. This authorization is asked for the next fiscal year and is in addition to the 156 naval vessels comprising the first three-year building program, authorized in 1916, and the great number of new destroyers and other special types contracted for since the United States entered the war. Work on the first three-

FOR AIR MAIL ONLY

This mailbox in the lobby of a New York hotel marks the general acceptance of what was only a few weeks ago a startling innovation. There is a regular mail service now by aeroplanes flying between New York and Washington, and a similar service between New York and Chicago is to be started soon.

year program was delayed by the war, but Congress has required that a start must be made on all the vessels before July 1 next.

Secretary Daniels explained to the Committee on Naval Affairs of the House that only \$200,000,000 of the \$600,000,000 will be made available next year for structural work on the three-year program. In addition, \$372,090,000 is asked for completing vessels already authorized.

This program, the Secretary said, was in continuation of the policy

adopted in 1915, which has met, he said, "with the entire approval of the American people." Mr. Daniels informed the committee that 200,000 officers and men will be added to the navy during the next year to man new naval and merchant ships. This will bring the total naval man-power to slightly more than 700,000. The navy furnishes officers and men for the merchant ships entering the war zone, and the greater part of the additional men will be needed for that service, and will be obtained from the Great Lakes and other naval training camps.

**German Plotting Exposed** The German Government recently sent a formal protest to Washington against the seizure of German property here, especially with reference to ships and terminals, because it was likely to embarrass Germans in resuming business with and in the United States; and threatened retaliation on American property in Germany. This did not greatly impress our Government, in view of the fact that, whereas the German property here approached a billion dollars in value, American property in Germany was hardly more than \$12,000,000. How the Germans had systematically used their business opportunities here to aid their intended warfare has often been shown; and a further striking instance was revealed by the Alien Property Custodian on October 18, as an answer to the protest mentioned above, to which no other attention was paid. He announces that in 1915 the managers of the great Bayer chemical works (taken over several months ago), by the formation of intermediate corporations, secured possession of an Edison invention of a method of making carbolic acid, which is essential to the manufacture of ammunition, and arranged to corner the whole product. This was done by the connivance of Dr. Albert, the commercial agent of the German Embassy, and the capital was furnished by him, under the sanction of Bernstorff, in the form of Imperial German Government certificates. The Bayer company, under the concealment of their subsidiary, composed of their own directors, did in 1916 acquire and use great quantities of this carbolic acid, but they failed to send any of it to Germany.

**Epidemic Declining** The epidemic of influenza and its sequent pneumonia is slowly declining, and physicians say it is likely before long to disappear, but will probably come again next spring. The cases in army camps have decreased, and the number of fatal cases lessened, altho the disease is still rife there, fed by the coming of new recruits. Experience has improved methods of treatment and prevention, particularly in the way of prophylactic vaccination, which has proved successful in many places, and has been administered to thousands of persons with satisfactory results. The War Department has announced that vaccination has been given to all the men in two cantonments, and is to be required of the whole army.

Inside Information from Our Recent Ambassadors to Austria-Hungary and Turkey on the Conditions There That Necessitate the Appeals for Separate Peace

## THE HOHENZOLLERN'S CATSPAW

BY FREDERIC COURTLAND PENFIELD

AMERICAN AMBASSADOR TO AUSTRIA-HUNGARY 1913-1917

**P**oor old Francis Joseph was called to his eternal rest before the world had allocated the crime of launching the war that came so close to strangling civilization and before he could have seen half its awful consequences. Therein fate was kind to the aged Hapsburg who for nearly three generations had governed from the banks of the Danube more absolutely than Russia had in two decades been ruled. For years Francis Joseph had sternly set his face against war and had prayed to be permitted to pass his declining years in peace. Yet he yielded to specious advice and the influence of an inspired cabal and fathered the cruelest war declaration known in history.

In Germany there was a restless ruler, a parvenu compared with Hapsburg antiquity, a man bursting with the greatest ego ever known, loquacious in describing the divinity of his rule, who wanted war before the strength and skill of France and Russia might make their armies superior to the fighting machine of Germany. For upwards of forty years Wilhelm and his forebears had been preparing for strife, and believing his legions ready to the very last button, he was willing in 1914 to avail of any pretext for converting Europe into a shambles, from which Germany would be certain to emerge the undisputed victor.

Ever had the vain Hohenzollern been a close reader of the lives and exploits of soldier despots, and probably he detected flaws in the careers of Charlemagne and Hannibal. The leader receiving the known approval of the Prussian soldier was Attila, the murderous Hun, and there are contemporary reasons for believing that this cutthroat was adopted by Potsdam's superman as the model of what a military leader should be.

One of the Kaiser's faithful had written a book around the idea of a Mitteleuropa governed from Berlin,

© Underwood & Underwood

Ambassador Penfield at his desk

and this effusion of Friedrich Neumann had the scheme fined down to such a certainty that Wilhelm looked upon the suggested chain of countries—controlled by himself—as the most logical of corollaries for his matchless military machine.

Not content with the advancement of Germany by legitimate effort in commerce and manufacture, unique in Europe, and a progress capturing the markets of the continent, even of the British Isles, and of Asia and Oceanica—and having ships on the seven seas—the military-mad potentate of Germany believed he might upbuild by armed force at a greater rate than by the peaceful penetration that was already the envy of rival lands.

With Wilhelm the craving was for a complication of international affairs that might serve as a plausible pretext for war. Then the Mitteleuropa dream might be achieved by the sword. In Germany the junker class wanted war, and naturally every member of the military cult was passing sleepless nights wondering when war might advance him in title or position or bring an added ribbon for his padded chest.

Wilhelm II had dreams of Eastern

Empire vaster than mere Palestine and Persia and the "penetration" to be spread by the Bagdad Railway, be it known. If he could become dictator of Russia what was there to prevent Germany from entering India as overlord? Anyway, the Kaiser had seen to it that Turkey was ready at any time to serve his purpose as a way station to the East. For thirty years German drill-masters had been goose-stepping Turkish troops in the way they should go, and the Kaiser's agents could dragoon the Ottomans into line whenever Wilhelm's grandiose scheming might use them. Even the Sheikh-ul-Islam was chosen at Germanized Constantinople to use his exalted religious office for spreading German propaganda when so instructed.

In the somnolent hours of a peaceful Sunday late in June in 1914 the telegraph flashed the startling information from the capital of Bosnia that assassins had killed the heir to the thrones of Austria and Hungary, as well as the consort of the Archduke. The news appalled Europe, for the murder was another tragedy in the House of Hapsburg and had great dynastic importance, but it remained the consensus of Austro-Hungarian opinion that it would not bring war.

The concrete facts were that a youthful zealot named Princip with two or three accomplices, all of Serbian blood but actually subjects of Austria, had been prepared at the Serbian capital by a handful of agitators to kill the Archduke Francis Ferdinand when he came to officially inspect the soldiers stationed at Sarajevo. In a forest contiguous to Belgrade the anti-Austrians had schooled the fanatical lads in shooting Browning pistols and throwing hand bombs that had secretly been made in a Serbian arsenal. The dastardly crime was undeniably the outcome of a deliberate political plot formulated in Serbia, but it was neither the work of King Peter's Government nor of the Serbian nation.

Thruout the Danube monarchy, where the Archduke had never been popular, scarcely a person regarded the murder as a sufficient cause for hostilities, and after the press for a few days had animadverted harshly against the Balkan kingdom, Russia and all Slav peoples, Austrian anger seemed to have run its course. It is doubted if a hundred of Francis Joseph's subjects had any thought of war, and nobody apart from the militarist class could have wanted strife. It was simply not regarded possible.

Diplomatists inquiring at the Foreign Office were uniformly assured that while certain demands must be made upon Serbia, nothing drastic was contemplated. Distinctly was the idea given that recourse to arms was not being considered. The press soon forgot its abuse of the Slav races, the venerable Emperor went back to his hermitage at Ischl, and it was good deduction that Europe was not in 1914 to see an outbreak of war.

Weighing the pros and cons in his Potsdam study the crafty Hohenzollern must have decided that the hour had struck for launching his grandiose military plans. The killing of Francis Ferdinand was the best of pretexts for United Germany to set out for the place

in the sun that destiny had so long been preparing for her. The Dual Monarchy might not wish war, but her important Teuton ally did, and hence Francis Joseph must be made to understand how overwhelming was the crime committed on that sleepy Sabbath afternoon in the capital city of Bosnia by the "Serbs" who in reality were subjects of the Austrian crown.

But could the dreaming old sovereign be influenced to play Wilhelm's game and handle his cards in a manner keeping Potsdam and Berlin from being suspected as the instigator? The Hohenzollern believed this might be accomplished, and he well knew that Francis Joseph ruled more autocratically than the Louis of France who was convinced that he alone was the state, and Wilhelm also knew that the Hapsburg chief was very proud as well as very old. It was the comment of habitual courtiers that at the age of eighty-four Francis Joseph's mind was as keen and alert as that of the average man of forty, yet there were many competent people who were convinced that the mind of the doyen of European rulers was bordering upon decay, like the intellects of men not born in the purple. The great Hapsburger had no parliament to bother him, for not in

many months had it been in session and then only to break up in a row with the conflicting races throwing books and inkstands at each other. Further the Cabinet of the Emperor was made up of fawning aristocrats whose judgments had not in years differed an iota from those of their imperial master, and only semi-occasionally were these statesmen summoned to the council table to express approval of measures that the gentle old man believed were to benefit his discordant peoples.

The absolutism of the Czar of All the Russias was pegs below that of the old Emperor of Austria, for the autocrat of the north had a Duma that on occasions he had to pretend to consult. Astute Wilhelm well knew this and must have thought the conditions ideal for getting Francis Joseph to set things going by springing a war of vengeance against Serbia. True, the Hapsburg chief had not made war upon Italy when a crazed Italian murdered his beautiful Empress at Geneva—that was another matter, and then Francis Joseph was twenty years younger, and had not learned to run a government controlling 52,000,000 persons of eight or ten distinct races as a one-man affair. Progressive Germany already had easy-going [Continued on page 180]

## TURKEY HAS SHOT HER BOLT

BY HENRY MORGENTHAU

FORMER AMBASSADOR OF THE UNITED STATES TO TURKEY

**W**E here in the United States must realize that Turkey has at last shot her bolt. She is finished. She has demonstrated her absolute inability to govern herself or the Christians and Jews and Arabs that live in her domains. During this Great War she was given an opportunity really to conduct her government untrammelled by capitulatory restrictions and free from the interference of the big nations. What use did she make of this opportunity? She wilfully, shamelessly murdered about two million Armenians, Greeks, Syrians, etc. She exploited her own people to such an extent that they are now hopelessly ruined and starving. She foolishly allied herself with Germany and sacrificed over a million of her own youths. She has reduced her country to an almost hopeless condition.

There is no one at present in Turkey, whether he holds the rank of Sultan or Grand Vizier, who can establish a strong enough government to prevent anarchy, and the revolution which will follow in the wake of a military defeat. The nation is absolutely without resources, is economically and morally bankrupt, and cannot be reorganized from within. At last, after 450 years

of Turkey's parasitic possession of these beautiful countries, it is within the power of the Christian nations to recover the Bible lands and forever exterminate the rule of the wild barbaric tribe that now misgoverns them. In these countries which the Turks overran and which they have simply used during all these centuries as conquered territory, they have not succeed-

ed in any way in developing their resources, or in assimilating their people, or in keeping in line with the progress of modern times.

Turkey and the Balkan States were the cause of this war. The Near East has been the festering sore of the world. Unfortunately this war has uncovered other perhaps more serious conditions, particularly Russia. Still we must not forget that the root of all this difficulty was in that district and now with Mesopotamia, Palestine and Syria in the possession of the English, and Turkey completely isolated from her allies, and unable to secure either ammunition or food, it is unquestionably the proper time to perform a major operation on the patient.

This is no time to hesitate and every one who at all studies the conditions of Turkey must come to the conclusion that it will re-

quire military occupation for some years to establish security of life and property, to introduce a system of education, reform the judicial system and repair as far as may be possible the fearful damage done to the Armenians, Greeks, Syrians, etc., by reinstating the survivors in their towns and villages.

# THE SKY AND RIVER FRONTS OF ITALY

BY HAMILTON HOLT

Paul Thompson

Mr. Holt in his mask and trench hat, holding the unexploded Austrian bomb

**I**N my last week's article I described the Great Celebration on the 24th of May held in the Augusteum of Rome in commemoration of the third anniversary of Italy's entrance into the war. This week I shall relate some of my experiences with the Italian armies on the front where they have this week started their last great drive.

I made my headquarters, as I have already said, at the ancient city of Padua, to which I returned each evening after a long all-day motor trip. Two most agreeable officers had been put at my disposal, and during my three days in their company we traveled over 300 miles, passing thru lovely rural scenes, quaint old towns and medieval walled cities. I never tired of watching the smiling hills and valleys, the ancient crumbling statues, the tall clock towers, and the peasants working in their picturesque gardens or walking about the shaded roads.

On our first day we took a long spin out to the Asiago Plateau. We stopped for luncheon at an enormous plain oblong villa that looked much like the old, white barrack hotels still to be found in some parts of rural New England. It was now in a state of mild decay, but a century ago was evidently one of the show villas of northern Italy, for when Napoleon had conquered that part of Venetia the mansion belonged to the Grand Duke of Austria. It was now used as the headquarters for the Italian Fourth Army, and its innumerable chambers were all occupied by the staff officers. General Galati, the commandant, was good enough to receive me for a few minutes in his private office, and it was fascinating to see on long tables beside his desk the great relief maps of the mountains where the troops were entrenched ten miles away. After an excellent mess, which we took

with the officers and which consisted of fowl, fresh vegetables, macaroni, desert and native wines, we climbed up to the observation tower on the top of the villa, where we got a splendid view of the Asiago Plateau, the Brenta Valley and the Austrian mountains in the far distance. We were within easy shelling distance of the long-range Austrian guns, but, strange to say, the country round about was scarcely pocked at all. Such an undisturbed landscape would have been unthinkable behind the Allied lines in France.

I was amazed to see great straight zigzag gashes along the sides of the mountains. When I looked at them thru my glasses they turned out to be the latest thing in military roads leading to the top. The work of the Italian engineers has been one of the marvels of the war. We had no time to go to the front trenches that afternoon, but contented ourselves with riding along the valley under the shadow of the mountains in order to get an impression of the devastation caused by the Austrian artillery fire. Most of the villages and cities we passed thru were badly shot up, but the wreckage was nothing compared to what I had already seen in the zone behind the French front lines. Evidently the Austrian brand of "Kultur" is not so deadly as the German.

The next morning we started at 7:15 from Padua for the Piave front. For the first twenty-five miles we followed the main road thru a rural section where the old Vienesie patricians had their exquisite summer villas. These aristocrats used to go up the canal in their gondolas to within a few miles of their country seats and then ride the rest of the way in carriages. At Fusina we came to the end of the road and there took a large wooden tugboat to

Venice. Within half an hour we were in the matchless city "throned on her hundred isles," which I am happy to report has been scarcely touched at all by the Austrian air fiends. For, most fortunately, nearly all the bombs that have been dropt on the city fell into the canals. At the Royal Naval Station we were provided with a special motor boat to take us to Porto di Lido. We proceeded up the Canal Basso to Cavilino, where we entered the locks, and then on for another hour or more to our final landing place. Great pontoon boats camouflaged with straw matting were hiding in the marshy reeds on the mud banks. From the decks of these boats and under protecting camouflage the Italian heavy guns were shelling intermittently the Austrian lines, some three miles away. We left our boat and took a waiting auto to the headquarters of the commandant. This sector, being more water than land, is naturally a marine station, and therefore in command of an admiral. Admiral Seranni was a most agreeable officer with a black beard and a sturdy frame. He invited us to luncheon with himself and his staff at a little farmhouse near by, the yard of which had several gaping shell holes in it. The Italians had captured two prisoners that morning and we saw them lying fast asleep on the concrete floor of an outhouse. The officers told me deserters were coming over every day and giving themselves up. They were especially impressed with the story of an Austrian officer who had surrendered two weeks before. His father was an Austrian, but his mother was an Italian from Zara in Dalmatia. He was fighting on the eastern front until Russia collapsed, and then he was moved over to the Italian front. He was unwilling to fight the country of

Charles A. Robert

his mother, so deserted to the Italian lines. My Italian hosts trusted his statements because he informed them where some Austrian big guns were concealed behind a church, and the Italians happened to know that he told the truth. He assured them that if Italy could only hold out for three or four months longer Austria would collapse. In Austria there was intense feeling against Germany because Germany had taken all the food that came from Russia and had given none of it to Austria. He said the food of the Austrian soldiers was insufficient in quantity and inferior in quality and was always served cold. He also declared that the German officers that had been put over the Austrian troops had just been sent back because the Austrians could not endure their arrogance and brutality.

After luncheon the commandant took us out to visit the front trenches. We motored to the shores of the Adriatic, then skirted along the beach for a couple of miles. Part of the time the surf surged over the wheels of our automobile. We stopped behind some sand dunes not a quarter of a mile from the front trenches, where a battalion of marines was drilling. The commandant ordered them drawn up in front of us and asked those men who had been in America to step out and come forward. Fifteen or twenty responded. We found that all had worked in America and most spoke good English. They told us that the Italian soldiers were a unit in hoping that America would send troops to Italy so that Italy would have visible evidence that we meant to fight with them. When I left they gave me a rousing cheer. We then proceeded along the beach, visiting the numerous gun emplacements that dotted the sand dunes and were so arranged as to cover both the land and sea approaches. We were followed by a large number of frisking

and friendly dogs. One, which evidently had some fox terrier blood in his motley makeup, enjoyed the onomatopoeic name of "Tapung," which is the sound that the Italians say the Austrian shells make when they come over the lines. Then we walked up to the top of one of the sand dunes, and, lying flat on our stomachs, we peered thru the coarse grass and got a very excellent view of the Austrian positions between Cavazuccherina and Casa de Motte. Along the Cavette canal the Italian lines were held by the marines and the Bersaglieri. The latter are familiar to every one from pictures, because they wear these most picturesque caps with a whole cluster of rooster tail feathers on top. We then went down into the connecting trenches only about three feet deep and walked along until we came to the front trenches running directly along the edge of the Piave River. They did not seem as well constructed as those in France. To prevent them from caving in woven thickets were placed along their sides. They were only dug two or three feet below the surface of the ground, and were completed by erecting in front of them one thickness of sand bags two or three feet above the earth. I should have thought that a good Austrian battery could have blown them to bits in five minutes. I looked thru a slit in one of the parapets and saw several Austrian machine guns partially hidden in the bushes across the river not 100 yards away. The ground was so marshy on the Austrian side that their front lines were quite a way back of their machine gun outposts. There was no shelling, however, going on while we were there, and the sector was as quiet as death. At one point where the river sharply turned our lines were under fire from the front and rear. The Italians had consequently erected earthworks on both sides of the trenches.

The Italians have the sense of

Press Illustrating

Hamilton Holt (right) in a front line trench

beauty. Everywhere the soldiers had made wonderful little gardens flanked by sea shells in front of their dugouts. In these flowers were growing. The dugouts were not great underground caves for half a regiment, as they often are in France, but only dog kennel affairs for one or two men at the utmost. When we returned to the commandant's headquarters he gave me an unexploded bomb which had been dropt by an Austrian aeroplane within a few feet of his headquarters the week before. As the insides had been taken out I had no hesitation in accepting it, and herewith reproduce it in the picture that heads this article. Later the plane that dropt it was brought down by one of our anti-aircraft batteries. The commandant also gave me a 75-millimeter shell which landed in the neighborhood of the farmhouse where we lunched, being fired about a fortnight previous to our visit.

After bidding goodbye to Admiral Serianni we returned home via the Grand Canal of Venice and then motored back past the old Venetian villas to Padua.

The next morning we started early for our Alpine trip to the summit of Mount Caviogio. After arriving at the foothills, where we called upon the general in command of that sector, we proceeded straight up the broad valley, thru which a silvery river ran. The towering mountains on either side were held by the Italians. At the head of the valley was a frowning mountain in Austria's possession, from which could be had a superb view of the valley and the plains of Italy beyond. As the Austrians could shell the entire length of the valley, the roads were camouflaged above as well as on both sides with matting made of dried rushes. As we motored up the valley we passed thru [Continued on page 166]

In a teleferic three of us shot up from the earth, crept over crevices and cascades, and finally landed three or four hundred feet below the top of the mountain"

# A "Y" CANTEEN NEXT NO MAN'S LAND

BY HARRY EMERSON FOSDICK

I AM safely located in one of the most memorable situations I am ever likely to be in. I am sitting in the shade of a little group of trees, happily untouched by the general ruin, outside our dug-out, in a village on the second lines of trenches. The dugout is a marvel of security, built by the French out of the ruins of a French home. I suppose the little cellar of the house was the beginning, and over that have been banked up layer after layer of logs, concrete, steel bars and stone, so that while a direct hit with a high explosive shell

would doubtless blow it all to pieces, anything short of that would leave it a thoroly safe hiding place. There is room in it for three army cots, with a narrow passage for maneuvering between, and three of us Y. M. C. A. secretaries are comfortably located there. How strange it would look to you: the ruined old house that used to be a home, the heap of debris where once the front room was, the pretty forget-me-nots still blossoming where the family's flower garden used to be, the stone stairway down into the old cellar, the dark, damp, smelly hole now boarded up into fair decency, furnished with those few necessities which soldiering allows, and on top the great mass of stone and iron and concrete which makes it safe! As for gas, the door and window, broken up thru the encircling stone, are provided with an army blanket for a curtain, which makes the gas at least filter in more slowly.

We got in last night about nine o'clock, and I went to work at once in the Y. M. C. A. canteen. The canteen is located in a wine-cellar of great depth and capacity. Room after room opens out as one ranges around it. Here is the local army signal service station, with telephones to the whole military district; here is the first-aid hospital for men in from the trenches; here is a bunk room for the men who stand guard in and about the village; and here at the entrance is the Y. M. C. A. with the canteen in one corner and a piano in the other. Above all is the dilapidated ruin of an old school or monastery—no one knows which. A company were going out to the trenches

*The title of Dr. Fosdick's position at Union Theological Seminary—professor of practical theology—describes as well his attitude as preacher and author. His books, "The Assurance of Immortality," "The Meaning of Faith," "The Meaning of Prayer," put theories of theology in terms that strike home to the average man. Dr. Fosdick has recently returned from overseas service with the Y. M. C. A.*

*"After dark armed with the password we walked quickly up the road to the billets, traversing in a half-hour what had taken three hours by trench"*

just as we got in, and had come to the Y. M. C. A. for a parting cup of tea. For nearly two hours I served out great cups of hot tea to the boys who crowded in, and it was worth the price of admission to see them. This is the "Yankee Division," all the men are from New England. They are splendid fellows! I wouldn't have missed dishing that tea last night for anything. My! how good it tastes to them! And going or coming they can get it freely at any hour of the night. A company came in from the trenches about two this morning, and the regular secretary was out

there enough of a room remains to surround the great rents where the shells came thru; often the four walls stand, a hollow square, barren and empty; generally the walls themselves are broken, the roof caved in, the whole house left a pitiful ruin.

Yet there are plenty of inhabitants, all Americans. They live underground; no one sleeps above. Now in the beautiful quiet of this Sunday morning they are wandering around at ease, for no activity is evident at all on either side of the battle line, save a few guns that occasionally boom out. Yesterday the Germans dropt twenty shells into the village, just to show that they were alive. But now it is as quiet as Englewood, and I have been out watching the various activities of the soldiers. Some are sleeping late after their early morning return from a week in the trenches; some are burnishing their equipment; many are bathing—there is a glorious fresh fountain of cold spring water here; many are hunting for the "cooties" that are the torment of the boys. I can see now one boy with his looking glass stuck in a ruined wall, shaving; one boy I saw with his New Testament sitting apart in quiet study; and a line of boys keeps going to the fountain (not too many at a time, lest the Germans drop a shell there) to fill their canteens. The scene is peaceful enough now; we might be camping out. We could have Sunday service, if gathering were allowed.

But we know that at any moment the aspect may change. From where I sit now, looking over the camouflage that hides [Continued on page 18]

October 18.*

**T**O go into Lille this morning was as good as anything that can come to a man who had seen four years of war, and I am glad that I have lived to see the liberation of that city. I saw the joy of thousands of people who during all those four years have suffered tragic things, unforgettable outrages to their liberty and spirit, and have dwelt under a dark spell of fear and have waited month after month, year after year, with a faith that sometimes weakened but never died, for the rescue that has now come to them.

It seems a miracle to them, now that it has come suddenly, and they fill their streets like people in a dream, hugging their gladness, yet almost afraid that it is unreal and that they may wake again to find the swarms of field gray men about them and guns in their gardens and the German law hard upon them.

I went into Lille this morning very early, feeling also that I was in the midst of some miracle because Lille was a world away from any road which an English soldier could pass except as a prisoner of war until last night, and now the barriers were down and the city was quite close to the old British front line.

It was early in the morning, but the streets were already thronged with people, with well-drest women and children and men of all ages in black coats such as one sees outside the war zone, and never before this within such close sound of the guns.

It is a fine city with broad avenues and streets and parks, where all the leaves are turned to crinkled gold, and everywhere it was draped with the flags of England and France. They were flags which these people had hidden until it was made a prison offense for any French civilian to be discovered with such symbols, and now they waved from every balcony around the city.

All the bridges had been blown up as the last act of the enemy at 1:30 o'clock yesterday morning before his flight, and most of the British troops were still on the west and south side of the canal and had not entered the city, but they had built foot bridges here and there, and I crost on one and walked into the heart of the people, who were ready to give a warm welcome to any Englishman in khaki.

They opened their arms in great embraces of gratitude and love for those who have helped to rescue them from their bondage, and I saw the joy of vast crowds, and the light in thousands of eyes was like sunlight about one, and in a few hours one made hundreds of friends who thrust gifts into one's

*The city of Lille when the Germans invaded it in 1914*

## THE FIRST ENGLISHMAN IN RESCUED LILLE

BY PHILIP GIBBS

WAR CORRESPONDENT OF THE  
NEW YORK TIMES

hands and poured out their emotion in words of utter simplicity and truth, and thanked one poor individual as tho he were all the army and had done this thing alone.

It was overwhelming and uplifting. Before one had gone far up the first avenue of Lille one was surrounded by a great crowd. A lady broke thru the ring and, clasping both hands, said:

"I embrace you for the gladness you have brought us."

She kissed one on both cheeks and it was the signal for general embraces.

Pretty girls came forward and offered their cheeks, and small boys pushed thru to kiss the men bending down to them, and old men put their hands on one's shoulders and touched one's face with their grizzled mustaches, and mothers held up their children to be kissed. This did not last for a few minutes. It lasted all the time I was in Lille. For hours tens of thousands of people were in the streets and my hands were clasped by many hundreds of them, by all close enough to take my hand.

Every one began the conversation in English (tho most of them finished in French) with "Good morning," "Good day," "How are you?" "We are very glad to see you," "We have great joy today," for everybody in Lille had been learning these words so that they might say them when this day of deliverance came, and now they said them with wonderful gladness.

But many times in the crowds I heard English voices, and ladies came forward a little and the groups parted so that we might talk. They had been caught in Lille when the Germans came and had suffered this four years' agony.

"We have longed for this day," said one of them, "and now it is like a dream. We can hardly believe that all those gray men have gone and that we are free."

Several of them spoke of two English women who had done splendid work in Lille for English prisoners, Miss Wood and Miss Butler, who devoted themselves to helping men who were helpless and whose sufferings, as I shall have to tell, were frightful.

An American doctor at Lille took me into his house, where I sat in his pretty salon and drank a glass of wine with him and saw his secret cupboard, where he had hidden his brass ornaments from the enemy, who had determined that every scrap of brass in Lille should be taken. In these apartments, as elegant as any in London or Paris, or a thousand miles remote from the war, tho only a mile or two, I

heard many things of German brutality and the tragedy of the besieged city.

Then there was an English clergyman, who for four years had ministered to the English wounded and recited prayers over the English dead. Mr. Moore is his name, and his housekeeper is Miss Browne of Beverley, in Yorkshire, and his cat is called Bunny, and he has people in England who will be glad to hear after all this time that the clergyman and the housekeeper and the cat have survived the ordeal of war. It is not strange how quickly one learns little things like that in Lille, because every one is one's friend.

To those people it was wonderful that they had regained their liberty by the arrival of the British troops. There are Lancashire men in Lille today. But it is no less astonishing to them to go inside that city in twenty minutes by motor car from their old line at Armentières.

I passed today thru Armentières, a town of shapeless ruin, and thought of all the death that has been there while Lille remained an unattainable place. Thousands of British have fallen round here in four years of terrible fighting, and in April last, after the German offensive, when they drove thru Armentières itself, Lille seemed further away than before, and that to many of the British men was all the way from life to death.

Now, this morning, I passed the last rubbish heap of ruin, the last dead tree stump, the last shell craters and barbed wire, the last dead horses on the road, and came very quickly to that great city beyond the canal, that was so close to the British lines and yet so far, where there are fine churches, colleges, shops, factories, private houses, and an enormous population of rich people and poor, all under the evil spell of German rule, all passionate against its tyrannies, torn with emotions and agonies that were hidden from the Allies until today.

I wonder [Continued on page 178]

# MISLEADING FICTION

## A Russian Author Discusses Happy Endings

*If we are to exert any influence over the Russian people in their present hour of distress there must be mutual understanding. We have thought that we could get an understanding of Russian character from reading Russian literature, and the Russians on their side have believed that American stories gave a true picture of American life. But can the authors of either nation be trusted? Miss Moravsky, a Russian poet and journalist, who has come to this country to study American life, finds it not at all what she had been led to believe from acquaintance with our fiction, and she warns us against making the same mistake about Russia*

THE stories in Russian books always have a sad, tragic end: that is our national tradition. The genuine Russian writer believes it is a crime against good taste to finish his story with the happiness of the hero. No! the poor hero must be killed, or abandoned by his sweetheart, or ruined, or something like that. At times I have believed that our story writers are the cruelest people in the world—forgive me, O my Fatherland, but I must confess it to my American friends.

What do they do with little children in the Christmas stories? You can scarcely imagine! Terrible things!

They freeze the little ones before the windows of the rich people's houses; they lead the victims of their imagination into the snowy forest and leave them there as food for the wolves; They can take the sweetest of little girls and make her a thief for the sake of her sick mother, who is dying of cold and hunger in the basement. And all this takes place exactly on the 24th of December. That is our literary law.

You may ask me why: We have learned that the Slavs are not at all cruel. Their hospitality and kindness to the beggars and even criminal prisoners is well known all over the world.

No, we are not cruel, we are rather too gentle even for our enemies. The soft Russian heart has become a proverb. But our life has been cruel—that is the reason: Our writers want to be true to life. Life in Russia has always been unhappy. And our artists love truth. The cruelty of our old regime existed side by side with the difficulty of our social circumstances. And the great sincerity of our spirit demanded of writers that they paint the real portrait of our life in its darkest tones.

And they painted it. Our wisest, our sweetest, our best—Dostoyevsky, Chekoff, Gorky—I shall not recall many names, you know them well—all the blossoms of our rich literature have the bitter fragrance of poisoned flowers.

What did Dostoyevsky do with his beloved heroes? They were thieves, they became criminals,

BY MARIA MORAVSKY

they were punished with all the severity of conscience and laws. . . . And still—he loved them passionately—it is clear! In every sentence of his books you may feel the great compassion for the humbled and insulted.

So, too, Chekoff and Gorky wrote. They suffered when they wrote these things. They wept bitterly over the pages where they buried their beloved victims. I met Maxim Gorky just after he had finished one of his talented and cruelly realistic stories. He was dark as a storm cloud. . . . And still, with heavy heart and face wet with tears—the Russian author continues to disappoint, to torture, to kill his heroes.

Do you remember the story written by Leonid Andreev: "The Seven Who Were Hanged"? I know that a few of them were his personal friends. I never asked him anything about the material for that story—I guessed it would be too painful for him to recall it. You can imagine how terrible it is to revive such facts as these. And the Russian writers have had the courage to revive them. It is their great merit.

To defeat unhappiness in the nation, we must see it face to face. To improve the character of our people, we must first know ourselves. Naked truth was more necessary for us than the beautiful, idealistic lie! Perhaps a great part of our revolutionary movement was energized by the bitter and restless thought of our pessimistic writers. They showed us all the misery and dearth of our old life, and at last we saw it so clearly that we could not endure it any longer. And we swept it away! Yes, it was the great merit of our writers that they turned their minds to the tragedy of life. But . . .

"Every beauty has her monkey" is a Caucasian proverb. And our great tragic literature has its pigmies. And they make a tragedy even of everyday life, which they describe in their short stories.

The tradition of sorrow penetrates

every page of our popular magazines. Even in the humorous magazines, in the temple of jokes, the stories remind one of a rainy autumn: the authors make a joke of the unhappiness of the Russian citizen; how he is always deceived by the Government or by the "unofficial scoundrels."

If you were born an unfortunate optimist your literary career would be lost in Russia. I have often heard in our editorial offices a conversation like this:

"Your story is really splendid! The portrayal of character and so on. . . . Poetical stuff! But—why is the ending so happy?"

"You do not like it?"

"Positively I do not—it is untrue—it never happens here—our life is gray, you know. . . . Why not let the hero die?"

"But—I love him; I do not want him to die!"

"Of course—you stand for prosperity—you are so young. . . . Quite natural, you like prosperity. But—his death in that case would be more natural than his rescue. . . . Will you kindly change the end?"

Perhaps after the present revolution my poor oppressed people will change their tastes, and the unfortunate optimistic authors whom I have met in the editors' offices will be welcome. But I am afraid it will not be very soon. You know our traditions have lived long.

I shall never forget the hard battle which I had with my editor about an article in which I praised one of our rare optimistic writers, Mr. Vinnichenko. The name of his book is "I Will!"

In this article, printed in our so-called "gross" monthly magazine, *Russkaya Mysol*, I wrote about American stories, too. I should not like that article to be translated now! It was "the sin of my youth." I did not know America personally when I had written it, and American life seemed quite a paradise from afar. And especially it seemed rosy thru the eyes of your writers.

I praised your writers for their optimism; I wanted Russians to follow your example, and I never supposed that it was the *fault* of your literature—that cheap hyperbolic optimism; I did not know that it is the same funny and sometimes dangerous extreme, as our tradition of sorrow.

I should like to show you how the green foreigner sees your life thru your short stories.

She was "sweet sixteen" and wanted to believe in happiness. Her name was Olia. She hated the official pessimism in Russia and was looking for a brighter national spirit. And she became the victim of American story writers.

## FENCES

BY LOUISE AYER GARNETT

I have torn down all my fences:  
The challenging air blows free;  
I can look across the spaces  
Where new life is hailing me;  
My horizon is unrolling  
Like the vistas of the sea.

I have torn down all my fences—  
But I never can recall  
The seclusion of my garden  
With the world beyond the wall;  
My old way of looking upward  
Where the sky was all in all.

# The Countryside

A MONTHLY SECTION DEVOTED TO SENSIBLE AND EFFICIENT COUNTRYSIDE LIVING : BETTER HOUSES : BETTER ROOMS : BETTER GARDENS : BETTER ROADS AND BETTER TOWNS FOR THOSE WHOSE INTERESTS LIE BETWEEN THE CITY AND THE FARM

*Rhubarb roots to be forced in a dark cellar may be planted very close together*

**I**F you have a warm cellar you can provide your family with fresh grown asparagus, rhubarb and other vegetables all thru the winter months. It is a pity that so few people realize what can be done with a winter garden in the cellar. All you need are a few boxes filled with good earth. If you want a bigger garden, tho, you can make a bed in a corner of the cellar, with a few boards set on edge to hold the soil in place.

It may seem strange that good vegetables can be grown without sunlight, yet darkness is necessary to get the best results from rhubarb and a few other crops. This need entail no difficulty, however, for if you use boxes, you can simply invert other boxes over them, a few holes first being bored in the sides for ventilation, while some old blankets hung to the beams will exclude the light from the corner bed.

The lower the temperature in your cellar, the slower the vegetables will grow. The ideal temperature is between fifty and

## A WINTER GARDEN IN THE CELLAR

BY E. I. FARRINGTON

sixty degrees. Most heated cellars and basements are warmer than is usually realized, especially in the vicinity of the heating plant.

Of all the common vegetables suitable for cellar gardening, rhubarb is perhaps the easiest to grow. You can take the roots from your own garden, or if you have none there, you can purchase them for a small sum. It is useless to use either young or very old roots. Well established clumps three or four years old are best, but it is not necessary to dig up an entire clump. You can slice off a section to force, and what remains will continue to bear as usual. Leave them in some cold place until every clump is frozen solidly. Some gardeners say that this freezing is not really necessary, but it is desirable at any rate, and commercial growers always freeze their roots. Don't start all your roots growing at once. Successive plantings will prolong the season. Be sure to exclude the light when growing rhubarb, for light injures the color and induces leaf growth. You can use any good soil, or even pure sand. The higher the temperature, the faster the stalks will grow, but the quality is best when they grow rather slowly. Extra rapid growth is obtained by putting a layer of fresh manure in the bottom of the bed. Of course it is necessary to keep the plants watered, and yet the soil should not be too wet. It will not dry out as rapidly as might be expected.

Bury the roots about two inches under the surface. They can be set almost close enough to touch. The stalks should be ready for use in from one to three months, according to the temperature. They will not

*Leeks must be taken up by the roots and then planted in boxes of good earth*

be red or green, but nicely blanched, and with almost no leaf growth. Rhubarb grown in this way is extra good for making pies, as well as for sauce, and it is something of a novelty to have rhubarb pies in midwinter.

Most people are familiar with the delicate salad which is served in the restaurants and hotels under the name of French endive. This salad is really the blanched stalks of the garden vegetable known as Witloof chicory. In former years, large importations of this salad plant were made from Belgium. Of course, this source of supply has been cut off, but American gardeners have found that they can grow and force Witloof chicory just as successfully as the Belgians. The plant can be grown in any garden from seed sown in the spring, but roots ready for forcing can also be purchased in the fall, and they are no longer expensive.

Darkness isn't so necessary when French endive is being [Continued on page 185]

*It is desirable, altho not necessary, to leave rhubarb clumps out to be frozen; this practise is followed by commercial growers*

*It is well always to plant several inches deeper than the finished height requires*

**F**ALL planting is advisable for many definite and well-founded reasons. In the spring we are all imbued with that do something spirit, but there is so much detail that must be attended to that we find our ambition is soon lost; or in our zeal to hurry matters we get careless. This, of course, results in needless loss or serious errors. In the fall we have an abundance of time to study our planting problems, and sufficient time to carry them out to the smallest detail.

Many trees and shrubs start active growth very early in spring; in many cases before it is possible to plant them they will have started root action. Even the layman realizes this is wrong. Because Jim Jones planted a Golden Bell in full flower and it survived, doesn't necessarily imply that it was the proper thing to do. The plant didn't succeed "because of" but rather in "spite of."

The one big stumbling block to making a general habit of planting everything in the fall is the evergreen family; with this class of plant the sap is more or less active during the entire winter and any injury to the root system in the fall deprives the plants of the necessary moisture. Necessity, however, is a hard master, and sometimes evergreens have to be planted in the fall regardless of our preference, but with a little extra care good results are obtainable. Last year I had the opportunity of witnessing a planting of evergreens on Thanksgiving Day. The ground was frozen

# NOW IS THE TIME TO PLANT SHRUBS

BY WILLIAM C. McCOLLOM

so that a pick was necessary to break the openings, but of the thirty plants not one died, because they were well cared for thereafter. They were thoroly mulched with coarse manure a week or so after planting, and as a further protection a few pine boughs were cut in the woods and stuck upright between the plants to shelter them.

There are a few of the deciduous trees and shrubs that should not be planted in the fall. This applies to very thin barked trees such as the beech or birch. Oaks might also be included in this list, along with stone fruits, peaches, plums and cherries.

For the planting of herbaceous perennial plants fall is preferable to spring. These plants die down to the ground during winter, and if they are not very carefully labeled it is necessary to wait until the growth starts before it is safe to transplant them. In the fall the old tops guide us in determining varieties and in regulating the height of the crowns. All these plants have ironclad constitutions; few suffer from the vigors of our winters and many are destroyed from too much care. They are usually suffocated by too deep covering. The nurseryman never practises mulching; everything must take pot luck and it is very rarely he sustains a loss with the perennials. At the present time shipping facilities are far from ideal for nursery stock, and it is not uncommon for plants to be weeks in transit instead of days. In spring this is absolutely ruinous. The plants will start to grow in the cases and when unpacked the roots will be found to have been destroyed by mold. While it is never healthy for plants to be out of the ground for any considerable length of time, if it must be, fall is a thousand times preferred to

*Firming with the feet is one good way to bring the roots and soil in contact*

spring, when the plants are then becoming more active each day. In the fall they are going into their natural resting period.

Another factor worthy of consideration is that the nurseryman in order to make early spring shipments oftentimes digs his stock in the fall, storing it in sheds for the winter. Why not get your stock in the fall when you are certain it is freshly dug, even tho a little effort is necessary to protect it over the winter? In the fall the nursery stock is fairly complete, but is gradually reduced until by late spring many varieties are exhausted. Of course the best plants of the better varieties are the most sought, and late buyers must therefore accept something other than their first choice. In brief there are few, if any, good reasons for not planting in the fall, while there are many reasons to justify this practise.

## HOW TO PLANT

There is no secret to planting. To do it successfully, first get the opening for the roots of sufficient diameter and depth so that they may lie in a natural position without crowding. It is a good practise to make the hole wide enough so there will be room for the feet in the opening without tramping on the roots. The depth is determined by the character of the plant, but it is always well to make the hole at least one foot deeper than the requirements of the plant.

When preparing the holes for the planting always throw [Continued on page 173]

*The first rule: have the hole large enough to prevent any crowding of the roots*

*When evergreens are planted in the fall, corn stalks furnish the best protection*

*Wherever possible it is most advisable to use only the good top soil in planting*

A Chippendale armchair of the Louis Quinze period

# CHAIRS FOR COMFORT AND BEAUTY, TOO

BY HAROLD DONALDSON EBERLEIN  
AND ABBOT McCLURE

An American rush bottomed Sheraton

SOME chairs are just to sit on. Others, one strongly suspects, were made merely for looks. Others, again, are designed primarily for comfort. The first neither promises nor gives ease; the second flouts the idea. With either sort few people have any patience at all, especially if they happen to have been subjected to a recent period of purgatorial discomfort by sitting thereon. The third kind, clearly, is the only variety that makes any general or convincing appeal.

The primary and indispensable quality of comfort is entirely compatible with good looks, no matter whether the chair is a side chair or one of the many types provided with arms. A mischievous notion crops up now and again—exactly how it started it would be hard to say—that somehow comfort and style in a chair do not go together. How often does one hear it said that a chair is good looking but is probably not really comfortable. Especially is this mistrust exprest of the simultaneous achievement of style and comfort in any of the recognized historic chair forms.

This notion is quite as fallacious as its contrary, that is to say that the realization of comfort requires ugly, slouchy, cumbersome lines and that a mammoth of upholstery, tufting and amorphous contour must, from the very nature of its makeup, be an embodiment of luxurious ease. This double-barrelled fallacy is to blame for a vast deal of ugly, banal furnishing and also for the hostility of a certain type of mind toward anything that savors of "the antique," whatever exactly that may mean to them. The irony of it all is that the "practical-minded" opponents of style oftentimes pay a great deal for expensive discomfort, in deference to their prejudice, rather than accept comfort with style at a lower cost. No one will deny that a great many ugly chairs are also comfortable. They are. But that is quite beside the mark. They are comfortable and ugly; not comfortable because they are ugly. They could be just as comfortable if built with more regard for grace of line.

The whole matter of comfort depends chiefly upon two physical considerations—suitability and measurements. The former has reference altogether to the purpose of the chair—that is to say, whether it is designed for the use of a person who wishes to sit up, to sit back, to sit forward, or to lounge. It is physically impossible that any one chair should equally well fulfill the requirements for each of the different purposes noted. It is also manifestly unfair to judge of a chair's comfort or suitability by any other standard than that of the purpose for which it was made. To take

an extreme case, by way of example, could anything be more villainously uncomfortable to sit upon, for the space of an hour's reading, than a typewriter's chair with its protruding pad jabbing one in the middle of the back? Contrariwise, could any seat be more inconvenient to occupy than a reclining, deep-seated armchair if one were trying to work on a typewriter? Each is admirably adapted to its own special purpose and comfortable when properly used, giving support at the requisite points.

The other determining factor of chair comfort is the element of measurements. Herbert Spencer, in one of his essays, says upon this point: "Ease is to be gained by making the shapes and relative inclinations of the seat and back such as will evenly distribute the weight of the trunk and limbs over the widest possible supporting surface, and with the least straining of the parts out of their natural attitudes." This philosophy of chair comfort, summed up in one phrase as the even distribution of the sitter's weight, seems so perfectly obvious that it ought not to require the prestige of the name of one of England's greatest philosophers to make us heed or realize it, and yet we constantly ignore the principle and trust to dumb luck or caprice in making selections of chairs. Then we blame the chairs when we ourselves are to blame for not using our wits.

The even distribution of the sitter's weight in a chair will depend upon the intended posture of the sitter while occupying that chair. To use a kind of "house that Jack built" sequence, the purpose of the chair will determine the posture of the sitter, and the posture of the sitter will determine the relations of the measurements that ought to be followed. In other words, chairs ought to be high-seated or low-seated, deep-seated or shallow-seated, straight-backed or slant-backed according to the purpose for which they are intended and for which they are suitable. And the purpose must be known before one can judge of the different requirements for comfort that must be complied with in each case.

The measurements that must be considered are height of seat from floor, depth of seat from front to back, angle of seat's inclination from front to back, width of seat from side to side, shape of seat; angle or rake of back, shape of back, height of back; height of arm from seat. When sitting down, one's feet should rest easily on the floor but no more than that; if the knees are brought up by a seat that is too low, and at the same time perfectly horizontal, excess of weight is thrown

at the base of the vertebral column if the chair back is perpendicular or approximately perpendicular. Altho the exact height of the seat must be determined somewhat by the stature of the individual, from fifteen to eighteen inches will usually prove about right.

For chairs other than those intended for dining or writing, where a directly upright posture is proper, the seat should be somewhat inclined from front to back and the back should be inclined or raked backward. Under these conditions, the lower the seat the greater should be its depth and the more necessary the inclination of the back. Even when a deep seat is not perceptibly inclined, the back should be inclined so as to receive the weight of the body and support it equally at all points. If the back is somewhat curved so as to conform to the vertebral curve and be equally in contact with the body at all points—for example, some of the "spooned" backs of the Queen Anne period—so much the better, so long as the curve is not too pronounced. The back, too, should be slightly concaved or curved to follow the lines of the body. The arms should be not more than ten inches above the seat and not less than seven and one-half or eight inches.

We may classify chairs according to their different uses and then, with the physical requirements of the comfortable chair before us, we may examine how those requirements are fulfilled by certain types whose excellence in respect of style cannot be questioned. According to their uses we may divide chairs as follows: Dining, writing, conversation, and reading or lounging.

Dining chairs are made for an upright posture. Their seats, therefore, are high enough so that the feet just rest upon the floor. The seats are not inclined backward; neither are they deep and the backs may be either perpendicular or very slightly raked. If the seats were deep or sloped backward, or the back much inclined, the tendency would be to throw the weight of the body backward and draw it away from the table. A dining chair with a deep or a sloped seat is positively uncomfortable. Types that meet the above requirements are, in the seventeenth century modes, the so-called "Cromwellian" chairs with low, square, padded backs, or late Stuart and William and Mary caned or upholstered chairs with high, slightly raked backs; in eighteenth century patterns, any of the English fashions of side chair—Queen Anne, early Georgian, Chippendale, Adam, Hepplewhite, Sheraton, and the Directoire and Empire forms that came at the end of the eighteenth and the beginning of the nineteenth century—Louis Quinze, Louis Seize and Directoire side chairs in French patterns, and the corresponding Italian forms. Queen Anne "spooned" backs supply an additional item of comfort by supporting the middle of the back, where support is needed, and falling away at the upper part so that the contour coincides with the curve of the spine. The same thing is true of the Empire type, with curving back cou-

Carved walnut Queen Anne wing chair with tapestry

tour, which presses a little forward in the middle of the back and falls away again below the shoulders of the sitter. Most of the wooden-seated and rush-bottomed "farmhouse" types and Windsor chairs, meet the requirements of dining chairs.

Writing chairs require practically the same measurements as dining chairs, as the posture of the sitter is upright and the weight of the body to be kept well forward to the desk or writing table. Writing chairs with an arm attached may have a deeper seat than those for use at desks, the seat slightly sloped, and a little inclination of the back. An example of a thoroly comfortable chair of this pattern is a high, comb-backed Windsor with broad arm.

In conversation the body is ordinarily thrown slightly back in a relaxed attitude and there is no need to keep the sitter "up to his job." Seats should be perceptibly deeper, inclined slightly downward from front to back, and consequently lower, in accordance with the principle before stated. The back must have a perceptible rake or inclination backward. In this way the weight of the sitter is evenly distributed and equal support given at every point of contact. Queen Anne and Chippendale chairs with deep seats are admirable in this respect and so are the deep-seated Louis Quinze arm-

Chippendale carved mahogany chair

chairs (*fauteuils* and *bergères*). Their makers thoroly understood chair comfort and skilfully combined necessary measurements with grace of line. The Chippendale armchair deserves special commendation.

Reading and lounging chairs will necessarily have low and deep seats. They should be a little lower and deeper and slightly more sloped backward, and the backs correspondingly more inclined, than those of chairs intended mainly for conversation, as the body is in a more relaxed and reclining attitude. It is desirable, too, that the backs be higher so as to support the head. For really comfortable reading and lounging chairs one must seek mainly among English and American models, so far as historic types are concerned. Early in the eighteenth century English conceptions of solid comfort evolved the Queen Anne wing chair and the type continued highly popular thruout the century, Chippendale, Hepplewhite, Sheraton and other designers all contributing their share to its perfection. Apart from the wing-chair types, the Chippendale armchair (of the illustration) with high, square back, merits consideration. Besides these historic types, there are numerous easy chairs of thoroly modern pattern, some of them fully and luxuriously upholstered and some of them not,

that meet all the aforesaid bodily requirements in a perfectly satisfactory manner. Occasionally, however, a modern type will overshoot the mark and throw the body into an unnaturally relaxed posture which soon proves wearisome. Great importance must be attached to the angle at which the body is thrown.

Side chair of Chippendale style

The following hints to the chair purchaser will prove useful: (1) Always keep in mind the principles just explained; (2) choose good looking types that unquestionably have the merit of style in preference to those of less distinguished line, and then test them by the principles; if they prove comfortable, you have scored a double hit; (3) don't be fooled by looks. A fully upholstered and padded chair may appear the acme of comfort and yet prove the opposite because its measurements are wrong—for example, a low, deep-seated chair with inclined back luxuriously padded, but the seat not sloped. (4) Test everything for yourself. Exact measurements that will prove universally satisfactory cannot be given; people's bodies differ too widely.

## DOGS AND PEOPLE

BY WALTER A. DYER

AS I review in my mind the fundamental characteristics of the people I know, I am led to classify mankind into three essential groups—people who love dogs, people who mildly like them and people who dislike them. And I am inclined to think that the transfer of individuals from one class to another is very infrequent. Those of us who love dogs are steadfast and somewhat stubborn, perhaps aggressive, in our allegiance; those who dislike them are seldom converted. We seem to be born that way, and the matter is not one for argument.

I have read many profound and witty essays on the character of the dog and his peculiar relation to man, and I am not much wiser than I was before. What is the source of that deep, instinctive feeling which possesses some of us, which makes us delight in the antics of a puppy, yearn toward the dog that is ours, and weep broken-heartedly when he dies? I cannot say. I only know that we feel that way, and that there are people constitutionally incapable of sharing that feeling. If I were to write an essay on the dog today, I feel quite sure that it would be mostly in-

"My own irrepressible Irish terrier"

terrogation and exclamation points; logic would be lacking.

Take my own irrepressible Irish terrier, for example. He enjoys the reputation of being the worst-behaved dog in two different communities, and yet I know of no dog who has wriggled his unregenerate way into the hearts of so many people. He has killed chickens, has stolen meat, and has caused the timid youth who brought our Sunday papers to abandon the route, and yet most of our long-suffering neighbors appear to be inexplicably fond of him. Perhaps it is his unquenchable youth, his mental alertness, his tireless curiosity, his evident zest in life. One is bound to look upon such joyous energy with envy.

I find it either impossible or unnecessary to advance any defense of his character. Either you love him or you don't, and there's an end on't. That is, indeed, the conclusion to which I have arrived after long speculation on this whole subject of dogs. To those who do not love them I can

offer no explanation of the matter; I can only feel sorry for them. They might as well have been born color-blind or with no ear for music; they will never know what they miss.

Those of us who do love dogs, however, need no argument, no array of facts and instances to prove to us that the dog is, of all creatures, man's most devoted friend—faithful, useful, sympathetic, enjoyable, sagacious, brave. We cannot be entirely happy without a dog. We devote more attention to our dogs, are more indulgent and demonstrative toward them, than toward our human friends.

Perhaps it is extravagant, foolish, unreasonable, but it is so.

Our attitude is exprest in the oft-repeated quotation, "The more I know about men, the better I like dogs." That idea was recently put into more spontaneous, original words by a little girl in New Jersey. After a long period of thoughtful silence, she gave expression to this piece of rare wisdom:

"Do you know, mother," said she, "there's some very nice people in Summit, and there's an awful lot of nice dogs."

# What to Do in November

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

## VEGETABLES

**Seed** On account of the scarcity of seed and the high cost, it is the patriotic duty of every gardener to save as much of his own seed as possible. Seed corn should be left on the cob and hung where it is dry, cool and out of the reach of rats and mice. If the corn is allowed to get wet and freeze, the outer coat of the kernel cracks and the oil is lost and often the germ is killed. The seed of cucumbers, tomatoes, squash, melons, pumpkins, etc., may be kept in tin cans with a few small holes punched in the lid.

**Last Call** Sutton's Excelsior and Thos. Lexington are both hardy varieties of wrinkled peas. The seed sown in a very rich soil to a depth of from three to four inches will remain dormant thruout the winter but will start growth some weeks before the soil is in a condition to work in the garden. The surface soil in the furrow should be covered with a heavy coating of manure. This should be removed very early in the spring.

The last sowing of New Zealand spinach the first week of this month will follow that sown in September. Cover the seed bed with a heavy coating of litter.

Multiplier or tree onions may be set out this month. They will remain dormant during the winter but will follow closely the early spring onions. They should be mulched heavily.

**Brussels Sprouts** If the plants are lifted, root and all, and stood upright in a cool frame, they remain fresh for some months.

The plants should be kept just above freezing, the roots kept moist and fresh air and light should be made possible. These plants may be packed in a box and placed in a cool cellar.

**Perennials** If the soil has been properly prepared, by applying a heavy coating of decayed horse manure mixt with coarse bone meal, both rhubarb and asparagus may be set out. Asparagus should be planted six to eight inches deep in rows three and one-half to four feet apart and the plants set twelve inches apart in the rows. Asparagus requires a very deep soil well filled with humus. Rhubarb should be planted so that the crown is at least six inches below the surface and the plants four feet apart both ways. These fleshy rooted perennials should be protected by a heavy covering of stable manure after planting.

**Storage** This is the last call for lifting all the root crops. Cut the tops back to within one inch of the roots. All vegetables may be stored in a cellar or a pit out of doors. Roots should be piled not deeper than three feet and placed on a dry space in the garden. Six inches of clean straw should be laid down, the roots piled on it, another six to twelve inches of straw covering them and then a layer of soil sufficient to keep out the frost. A ditch twelve to eighteen inches deep should be dug around the pit to take away surplus water and keep the roots dry. Cabbage should be pitted the same as roots, with the heads wrong side up and the roots left on.

Cauliflower may be lifted and stored similarly to Brussels sprouts. Tie the leaves over the head of cauliflower.

Celery may be lifted and packed upright in boxes and placed in a protected shed or cellar or stored in hotbed or cold frames. The roots should not be disturbed. The soil should be kept moist. Sufficient fresh air should be permitted to circulate thru the plants to prevent decay.

**Pests** Fall plowing and spading to a depth of eight inches, the soil left in the rough, will destroy many insects hibernating below the frost line. If the soil has been covered with quack grass expose the roots with a light application of coarse salt and the plants will be destroyed by spring. Apply a little lime especially to clay soil.

**Clean Up** All weeds and garden litter should be burned. Tomato stakes and bean poles should be put under cover. Oil all tools before storing. Put your garden in order this fall so that you will not lose valuable time next spring.

## THE FLOWER GARDEN

**Winter Protection** Place windshields of wood or temporary wind-breaks of wire and evergreen boughs on the north side of shrubs or completely about such plants as rhododendrons and other flowering shrubs not natives of the north. Tender plants such as the oleander and American aloe should be placed in a cool dry cellar free from gas and the temperature should be above freezing. Do not water or spray these plants during the winter.

**Early Bloom** In order to force bloom for April, such plants as lilac, roses, deutzia, etc., should be lifted after the wood is fully ripe. Pot in a rich soil and pack the soil tightly about the roots. Keep in a dark, cool place with the temperature at about freezing. Gradually bring into the light and finally into the heat. These plants need continual spraying after being brought into the heat.

**Bulbs** All bulb beds should be protected by a heavy coating of straw manure. Hold this in place by branches of trees. The soil should be frozen from one to two inches in depth before covering bulb beds. Store all tender bulbs or roots such as cannas, gladioli and dahlias in a clean sand. Place the box or barrel in a cool cellar which is free from gas. Do not wet the sand.

**Flower Beds** If the soil is a clay type scatter on it a heavy application of green horse or cow manure. Spade this into a depth of eight inches and leave the soil in the rough. Scatter on the surface a free application of lime. Where the soil is quite stiff a load or two of sand will help to lighten it. All flower beds should be covered with manure in the fall and this plant food dug into the soil. Perennial beds should be mulched heavily with manure, and this manure dug into the soil in the early spring.

**Compost and Mulch** Mulch all fern and wild flower beds with leaves to a depth of from five to eight inches. Throw on a few branches to keep the leaves from scattering. Mix a little garden loam and sod with some of the leaves for a compost loam to be used for ferns, etc. A soil and manure compost heap may be made early this month. Alternate six inches of soil to twelve inches of manure until the pile reaches a height of four feet. Mix in considerable bone meal. If the soil is a clay type scatter a little lime on the soil but not on the manure. This soil, if mixt two to four times, will be in excellent condition to pot early flowers and vegetables.

**Indoor Gardening** Keep in check the green fly by dusting the plants with tobacco dust. The foliage should be moist. Wash off the dust and dead insects by a force of clean water. Destroy mealy bugs usually found on coleus by washing the plant in whale oil soap and removing the insects with a small stiff paint brush. Keep all pot roses free from red spider by spraying with a force of clear water on bright days.

## FRUIT AND BERRIES

**Winter Protection of Trees** If you have not yet placed guards about the trunks of your young trees, do so before the snow flies. If small mesh wire is used, be sure to make it stationary by driving stakes on the outside of it, otherwise the wire sways from side to side and destroys the bark. All weeds should be removed from the guard. Weeds and grass packed in the guards make a fine nest for insects to hibernate in. If the limbs of your apple trees are heavy, brace them before the early fall snows fly. This treatment will prevent breaking of the limbs. Mulch the surface soil with stable manure. Do not pile the manure close to the trunk. This practise encourages the development of disease and the breeding of insects.

**Insects** Gather all nests of Tussock moths. They are white patches found on the bark and made up of hundreds of small eggs. Pick off and burn all clusters of tent caterpillars. These glossy eggs are found encircling the young limbs. Remove all old piles of apple tree wood. These places are harbors for the borers.

**Spring Planting** Order your trees early from a nursery in your vicinity. Dig the holes this month. Place the seed in one pile, the fine loam in another and the subsoil in a third pile. Fill the hole with manure. The rains and snow free the plant food and the soil is made rich. In the spring the manure is removed, the soil in the hole made loose and the tree planted. Fit the fine loam about the roots, pack in the decayed sod next and place the subsoil on the surface. Litter the remaining manure on the surface of the soil under the tree.

**Cane Fruits** Mulch blackberries and raspberries after all the old dead wood has been cut out. Currants and gooseberries should have a very heavy coating of manure placed not only about the plant but for some distance from the crown of the plant so that the surface roots may be protected.

**Strawberries** Mulch strawberries to a depth of two inches with straw manure.

**Stored Fruit** Keep the air in the storehouse fresh and cool. Pick over the fruit and remove all ripe or specked fruit. If late apples are kept in a temperature of about 33° F. they will not need handling, providing they were perfect when stored.

## THE GREENHOUSE

**Plants for Christmas** This is the month to shape the plants for a Christmas display of bloom. It is also time to treat certain plants for an early spring display.

Cyclamen should be kept cool; feed now and then with a little weak liquid manure. Jerusalem cherry (Solanum) should be kept in a warm sunny place. Never allow the soil to dry out. Chinese primrose and heliotrope should both be kept cool and growing vigorously. In potting gloxinia use one half leaf mold in the soil. Cut back the impatiens holsti so that the plant will grow stocky and produce more bloom. Cineraria should be well along. Water freely. Apply liquid manure about once each week. If the plant gets green fly on the foliage, hold the soil in the pot with the fingers, turn the pot upside down and dip the foliage in tobacco water made from Black Leaf 40.

**Bulbs** If a few blooms are desired for Christmas this is the month to bring the bulbs from the pit after they have been buried for at least six to eight weeks. Gradually increase light, heat

and moisture. Keep a normal growth; rapid forcing often completely destroys the bloom. Bulbs grown in water should be kept in a place where there is considerable moisture in the air. Bulbs started in fiber should after four to six weeks be shifted to bowls, etc. Care should be taken not to break the tender roots. Keep such bulbs in a shady place for a few days and then bring them to the light and keep them growing rapidly so that they will be in full bloom by Christmas. Care should be exercised not to wet the foliage of tuberous root begonias. Freesias do not require storing in the pit and if planted this month will be in full bloom by February.

**Seedage and Plants** Sow the seed of spinach and keep the temperature about 45° to 55° F. Endive, parsley and radish will grow in a heat from 35° to 45° F. Cool houses may be used for carrots, beets, cauliflower, rhubarb and asparagus. Grand Rapid lettuce requires a low temperature but a very rich soil. Heat is required for string beans and cucumbers. Sow the seed of early cabbage in a cool house and protect from frost. After the plants are the size to transplant, the sun may be checked and the temperature lowered by mulching the plants with straw. These plants are thrifty for very early planting in the open. On account of the lack of coal the heat may be shut off completely if the plants are covered with litter. Sow the seed of pansies this month and reap a harvest of bloom in February. If the seed of foxglove, primrose, asters, phlox, hollyhock, etc., are planted now and the seedlings kept growing slowly but steadily, they will produce an early spring bloom.

**Chrysanthemums** After the pompom chrysanthemums are cut and the bloom of other late varieties removed, lift the stock plants with label. Stock plants to be kept healthy should not be wholly shut off from light and the soil should not be allowed to dry out.

**Roses** The changeable weather of this month requires great care in ventilating and spraying. Keep the mildew in check by dusting the plants with flower of sulfur and painting the heating pipes with a paste of sulfur. Spray only on bright days.

## NOW IS THE TIME TO PLANT SHRUBS

(Continued from page 169)

the top soil to one side and the subsoil to another, fork a little manure in the bottom and then a scattering of coarse crushed bone. Then place some of the top soil in the bottom, mixing with it the manure and bone. Never have the manure so it comes in direct contact with the roots. If possible, it is advisable to use nothing but top soil for the planting, entirely discarding the subsoil, but if this cannot be done the subsoil should always be used on the surface where the action of the gun and air will soon convert it into good soil.

The plant should be placed in the hole so that it sets a few inches deeper than it is intended to be planted. After partly filling the hole by working the plant up and down it will settle the soil around the roots. This will raise the plant to the proper height. The soil must then be brought in contact with the roots. There are two methods: lifting with the feet or a tamp of some kind, or flooding the hole with water. This is called puddling and is the best system of planting, for by watering you relieve any danger of breaking or otherwise injuring the roots, and no amount of pounding will settle the soil around the roots as thoroughly. Care must be exercised to keep the tree straight when lifting.

When planting large trees it is advisable to support them in some manner to prevent them bending over before the roots have become established.

## The Judges Are the Children—Let Them Say

Leave these questions to the children:

First—What ready cereal do you like best, of all the kinds you know?

The answer will be Puffed Grains—these flimsy, flaky, toasted bubbles—as a million mothers know.

Then—Which Puffed Grain—Rice, Wheat or Corn? Their tastes will differ. Try them all, then serve them what they want.

## The Unmatchable Foods

These airy, flavory, bubble grains are the supreme food delights.

Two are whole grains steam-exploded, puffed to eight times normal size. One is corn-heart pellets puffed to raindrop size.

All are shot from guns. A hundred million steam explosions are caused in every kernel. Every food cell is blasted for easy, complete digestion.

So let the children—who revel in Puffed Grains—eat them to their hearts' content.

Puffed Wheat being a whole-wheat product, no substitute need be bought with it.

# THE FUTURE OF MOTOR TRAVEL

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

**P**ARADOXICAL as it may seem, motor travel will be directly benefited by the improper classification accorded the automobile, that is the passenger car, by the Federal Government in the emergency created by our participation in the war. And this benefit will come from a proper recognition of the utilitarian value of the passenger car resulting from its wartime designation as a luxury.

When the prohibition against the use of passenger cars on Sundays came a short time ago to cap the climax of curtailed production and heavy taxation, more than one advocate of motor travel exclaimed, "If they would only order the absolute non-use of these vehicles for thirty consecutive days." The result can be readily imagined. It would be little if any different from prohibiting the use of telephones for a similar period. However, such restrictions as have been placed on the use of passenger cars, especially the so-called "gasless Sundays," will serve nearly as effectively to secure the recognition so necessary to the realization of the great future of the motor vehicle; necessary because it will bring just taxation, reasonable regulation and, most important of all, real progress in developing extensive systems of suitable highways.

There are already many indications that the real function of the automobile, which is to transport passengers, is more generally appreciated today than it was twelve to fifteen months ago; that there is greater inclination on the part of even Government officials to class it with railroads and electric traction lines. For example the Provost Marshal's office recently secured the reversal of a decision made by the draft boards of Washington, which placed employees of garages and automobile dealers in the class of "non-essential" workers. Consequently draftees in classes two, three and four, who are in such employment, are not subject to the "work or fight" regulations. And this new ruling is being interpreted in many instances to include those employed in automobile dealer's selling organizations. Inasmuch as passenger cars outnumber motor trucks almost ten to one, this may be taken as a Government acknowledgment that the sale and maintenance of the former is essential in wartime.

## CARS NO LONGER A LUXURY

**I**T is only fair to state here that the automobile industry and motorists in general are in no small measure responsible for the attitude which the Government took toward the passenger car in the emergency of war. From its infancy this modern transport agent has been exploited as a luxury, a convenience for the well to do. In its equipment and appointments, in its advertising, and in its methods of selling, especially as represented in the expensive retail salesrooms, these features were over-emphasized. Compare the advertisements of passenger cars during the past six months with those of six years or so ago, and this fact will be at once apparent. The vehicle of quick and economical travel of today differs from the luxury of yesterday only in the manner of its presentation to the public. And motorists in general accepted and used the passenger car in much the same manner as it was sold to them. When about a year ago announcements were made of the result of several canvasses which showed that fully eighty-five per cent of the use of all passenger cars—until then

they had always been called pleasure cars, which again proves the point at issue—was a utilitarian use, motorists seemed as much surprized as any one. Even then not a few had difficulty in classing their cars with electric lights and telephone, and the railroads. It is not strange then that Congress and Government officials did not at once recognize the passenger car in its new and proper light. The phenomenal growth of the automobile industry in a single decade occasioned some jealousy and opposition on the part of other manufacturing interests, and besides the "automobile situation" was none too well handled at Washington. A careful study leads to the belief that the foregoing is the correct explanation of the psychology of the Government's wartime attitude toward the passenger car.

## SIX MILLION MOTOR VEHICLES IN USE NOW

**T**HERE is every indication that motor travel will continue its rapid growth in the next decade, not alone in this country but thruout the world. This fact is not affected by the immediate afterwar situation; whether the "boom" predicted by many sets in, or recovery is more gradual. There are in use thruout the world at the present time something less than six million motor vehicles of all types, of which fully eighty per cent are in the United States. Of the five million or so in this country about ten per cent are classed as motor trucks. There should be another class made up of vehicles having light commercial bodies fitted to passenger car chassis, and the proper names would seem to be motor truck, motor wagon and motor carriage. An idea of the potentialities of motor travel may be had from the report of an investigation made by the Foreign Trade Department of the National Association of Manufacturers of the United States of America, made public about a year ago. This showed that if the entire world used automobiles as extensively in proportion to population as the United States does, the total number in use would be 56,201,213. It is of course preposterous to assume that China, for example, within many years could approach our ratio of approximately one automobile for every twenty-four of our population; but, on the other hand, such countries as South America and Australia should exceed it, basing the assertion on their need of transportation facilities, which can be most readily and economically provided by motor vehicles.

The same investigation, basing its conclusions on such important factors as wealth and existing suitable roads, showed that there was a market outside of the United States at the present time for 3,617,570 motor vehicles. This world wide market has been severely curtailed by war conditions, but such as it has been during

the past four years has fallen almost entirely to American manufacturers. After the war, however, our makers will meet in these foreign markets the severest kind of competition from the automobile industries of France, Italy and England. Enough has leaked out to show that several leading European manufacturers, at least, are prepared to enter the field at the declaration of peace, with new types especially designed to compete with the light, low priced American car. These all have now manufacturing facilities many times greater than in pre-war days. For example, the maker of one prominent Italian car now has almost fifty thousand workmen engaged in making motor trucks, tractors, airplane motors and passenger cars, and his products are being used in large numbers by the French and American armies as well as by the Italian military forces. This maker is credited with having developed an after war model of a passenger car which is to compete with a certain famous American make, which now outnumbers any other four to one, and by means of it he hopes largely to keep his great plant in operation after the demand for war vehicles ends. Almost the same facts may be cited in connection with a prominent French automobile manufacturer. However, irrespective of who provides the cars there will be a great after war impetus to motor travel in foreign lands.

## THE WAR HAS PAVED THE WAY

**T**HE war itself has paved the way for a widespread adoption of motor travel in many parts of the world. Take South Africa for example. Prior to the war the automobile made relatively slow progress there, handicapped by poor roads, high priced fuel, heavy taxation, and, according to salesmen who covered that section of the world, a strong prejudice in the agricultural districts against any innovation however worthy. With the outbreak of the war South America faced the De Wet rebellion, with all the possibilities of a repetition of the Boer War. The military forces, however, commandeered all the automobiles procurable, and using them to transport troops, captured and dispersed the rebel bands before they could combine and join the invading German forces. It was a case of motor travel versus horse travel and the former won handily. In the campaigns which followed and which resulted in the capture of all the German possessions in South Africa, passenger cars and motor trucks were used in large numbers and for a variety of military purposes with marked success. There was thus provided a most convincing demonstration of what could be accomplished with motor travel and transportation under South African conditions, the results of which will be highly beneficial. The Africans who have traveled to battle in motor vehicles and had their supplies unfailingly brought forward by the same means, are not likely to return to horseback travel and ox-team transportation if they can help it. The same holds true for Egypt, Palestine, Mesopotamia, Macedonia and many sections of vast Russia.

It is difficult to forecast how rapidly motor travel will increase in this country after the war. A million cars a year will be needed to maintain the number now in use. Roads will be the principal determining factor, and prospects are bright for a real national effort in the direction of highway improvement.

*Ask the Motor Efficiency Service anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is always ready to give full and impartial information about any individual product.*

## THE POULTRY YARD IN NOVEMBER

BY E. I. FARRINGTON

**I**F you have been successful in your season's work you should have pullets laying now. The winter laying hen is the profitable hen, for she produces eggs when the price is highest. If the pullets have not begun to lay, you should adopt special measures to speed them up. Giving them warm grain is one helpful measure. Use a mash moistened until it will just crumble in the hand. It should be mixt with warm water and fed in the morning. If you can get some green cut bone, that will be found an especially valuable stimulant. Feed it sparingly; an ounce to a hen is enough. This bone can be given three times a week.

Don't forget to put a band or celluloid ring on the leg of the pullets which are the earliest to lay. It will mark the hens to use as breeders next season. Be sure that the pullets have all the green food they need. The garden maker is likely to have many poor cabbage heads which can be used for a time. Cabbages must not be fed to excess, tho, for they do not add to the flavor of the eggs.

Make a point of inspecting the hen house carefully to make sure no vermin are present. Look under the perches for red mites, which congregate there during the day. These mites are more troublesome than body lice because the hens can get rid of the latter by dusting. The mites work only at night, so that the hens are completely at their mercy unless they receive help from the poultry keeper. The best way to guard against these pests is to paint the under side of the roosts with carbolineum or some similar material. This treatment once in three months will completely obviate the red mite nuisance.

You will need a house that is perfectly tight on three sides during the cold weather. You cannot expect good results from your flock if cold drafts blow upon them at night. It is just as important that the house be kept dry.

If you keep ducks, be sure that the yards are plowed or dug over before the ground freezes. The soil in duck yards quickly becomes contaminated unless it is frequently renovated.

Hens that molt at this season of the year are more valuable than those which molted earlier. Usually they are good layers, and good hens to breed from. They are likely to molt quickly, and may be almost bare of feathers now. Keep them confined when cold winds are blowing, and give them more meat scraps than usual, or add oil meal, sunflower seeds and such foods rich in nitrogen to their rations.

It is probable that you have already weeded out all the surplus old hens. If not, get rid of them as soon as possible. In this way you will save on grain and provide more room for the young stock. If you can these hens, they will be relished later in the season. It is time, too, that you were rid of your surplus cockerels, and it is best not to have any male bird with the hens up to the first of the year.

Tho it is not necessary to have a dusting bath in the house with an earth floor, or one that has a deep litter, it will add to the comfort of the hens. A wide box from the store may be used, or a corner of the house can be set off with a couple of upright boards. Road dust and ashes are often used. Garden soil is really better. The hens seem to prefer earth which is a little heavy and moist. It will help to keep the lice away if you throw a handful of sulfur into each box of earth occasionally.

## McCutcheon's Blankets and Comfortables

Reg. Trade Mark

With the long winter ahead and a shortage of fuel that is going to make it difficult to keep homes as warm as usual, it behooves the wise housekeeper to invest in plenty of good warm Blankets and Comfortables.

### Blankets

We have a full stock of Blankets from the best domestic manufacturers, in all sizes and all qualities.

**Single Bed Size,** \$5.00, 6.00, 8.00 per pair, and up to \$35.00.

**Three-quarter Bed Size,** \$6.00, 7.00, 9.00 per pair, and up.

**Double Bed Size,** \$10.50, 11.50, 12.50 per pair, and up to \$42.50.

We have also an excellent selection of extra-long Blankets and Crib Blankets.

### Comfortables

A wide variety in a large range of colors and qualities.

**Cotton-filled Comfortables,** covered with Silkoline. \$4.25 and 7.50.

**Figured Silk Mull Centre,** plain Silk Mull border, \$7.50.

**Wool-filled Comfortables,** covered with figured Nainsook, Sateen borders. \$9.00.

In addition we have a complete line of plain colors, Silk and Satin-covered, Wool-filled; also a full assortment of fine Brocade Silks and Satins.

If you anticipate adding to your supply of either Blankets or Comfortables this winter we respectfully suggest that you make your purchases now while stocks are complete and before prices advance again.

### Christmas Shopping

We respectfully suggest that in so far as possible you act on the Government's request that you do your Christmas shopping during November.

Fifth Avenue, 34th and 33d Streets, New York City

## THE 1918 EDITION OF THE AMERICAN YEAR BOOK IS NOW READY FOR YOU

By special arrangement with Messrs. D. Appleton & Co. we are able to supply you with the American Year Book at practically manufacturing cost in combination with a yearly subscription to THE INDEPENDENT. You can obtain the Year Book from no other source for less than the regular price—\$4.00. THE INDEPENDENT, \$4.00. Our price for both is only FIVE DOLLARS. Address

THE INDEPENDENT

119 West 40th Street New York

## REST-GOOD

### Sound Sleep Aids Efficiency

Your mental and physical forces "pick up" like an electric battery during your sleeping hours—if you rest on a "Rest-good" mattress. You waken refreshed and fit—100 per cent efficient. Wilson's "RESTGOOD" Sanitary Curled Hair Mattress is filled with clean, sanitary, resilient curled hair, treated by our exclusive process.

Ask your dealer to show you Wilson's "Restgood" Mattress. If he does not handle it, please write for name of the dealer who does. Interesting booklet free. Address Dept. TI 11

## Roofing Products

For lasting service and fire protection use metal roofing—adapted to rural and city properties.

APOLLO-KEYSTONE Galvanized Sheets are carefully manufactured and highest in quality. Unequaled for Roofing, Siding, Culverts, Silos, and general sheet metal work. Sold by leading dealers. For fine residences and public buildings KEYSTONE COPPER STEEL Roofing Tin Plates are unexcelled. Look for the Keystone added below regular brands. Send for our "Better Buildings" booklet.

AMERICAN SHEET AND TIN PLATE COMPANY, Pittsburgh, Pa.

## THE SKY AND RIVER FRONTS OF ITALY

(Continued from page 161)

deserted cities now completely destroyed by artillery. We finally arrived at the base of a great cliff. This we proceeded to surmount in a teleferica, which is nothing but a couple of parallel steel ropes no thicker than the little finger, from which are suspended two openwork baskets. As one is hauled up by electricity the other goes down. Three of us squeezed into one basket. The signal was given and up we shot from the earth at an angle of about sixty degrees. We crept over crevices and cascades, gently swinging to and fro. As we looked down I could see everything getting smaller and smaller below us. I was experiencing something of the sensation, I imagine, one has on his first aeroplane ride. I would have been seasick had I not used all my will power to hold myself in hand. Higher and higher we ascended. The valley continued to recede beneath us until finally the roads which we had been motoring over were nothing but little brown lines in the green plain below and the river only a tiny winding silver thread. After what seemed an eternity our basket came to a sudden stop with a jolt and we clambered out. We found ourselves on a wooden platform on the side of the cliff three or four hundred feet below the top of the mountain. We zigzagged up over the roughest and steepest mule path I ever essayed and after a tough puffing pull, with many rests to catch our breath, we arrived at a little city in the clouds where a thousand or more Italians were living like eagles in nests hollowed out of the solid rock. The colonel of the regiment came out to greet us and at once took us to see his concealed batteries. From one observation post we obtained a good view of the Austrian barbed wire entanglements on the summit of the mountain peak next to us. The Italians were holding one of the two peaks of the mountain and the Austrians the other. But the Italians had gone down over the ravine separating them and had hollowed out a point of vantage in the cliff directly under the Austrian peak. The Austrians had attempted to meet this effrontery by boring a hole down from the top and opening a lookout in the side of the cliff only a few feet above the Italian hollow. Thus the Austrian line was vertically above the Italian line and neither party could get at the other.

After inspecting these unique positions the commandant invited us into his little rock cabin to partake of some refreshments. On the walls I noticed some sketches in color by some would-be Italian F. Opper, for there appeared before my astonished gaze a life-sized portraiture of "Happy Hooligan" himself. The commandant then took us all over his mountain sector. He conducted us into a hole in the side of the mountain where we walked spirally forty or fifty feet up the inside of a peak to get a better view of the Austrians from an observation post near the top. Our batteries from a mountain across the valley were shelling the Austrian lines directly over our heads and as we were near the zenith of the arc of the shells' trajectory, their shrill whirr sounded as tho they were only about ten feet above us. I was accustomed to hearing the shells go over my head in France far up in the sky and I had grown quite used to that, but it was an entirely different matter when one was up in the sky himself and close to them.

We walked out along the edge of one of the peaks of the mountain that stood fronting the valley and then entered another

tunnel that wound thru the solid rock. It was so wide that artillery could be dragged thru it. Then there was another path that took us along the side of the mountain from one peak to another where we had to duck and run because we were in plain view of the Austrian sentries above our heads who could, if they wanted, signal to their batteries five miles away across the valley to send some shells back at us. Fortunately we were unmolested as we hurried along this pathway.

Finally we said goodbye to our hosts and proceeded down the zigzagging mountain paths until we arrived at the teleferica again. Then having crawled into our flying basket we glided down upon the destroyed villages below until we reached the base of the mountain. Thence we motored back thru Verona, where Shakespeare's two gentlemen came from, and arrived at our headquarters in Padua in time to take the evening train to Rome.

As I conclude these three articles on my Italian trip, I may say that in general I found the situation in Italy most encouraging. The morale of the troops had been restored since the untoward Caporetto debacle. Every one assured me the peasants who were the backbone of the Italian army would see the war thru, for the four million of these were overwhelmingly loyal. The food problem, to be sure, was serious, but it was not acute. I was told that the American Red Cross had done magnificent work in Italy in relieving the destitution of the civil population. Indeed there had been several instances in which the war weariness of the population had been fanned into its pristine enthusiasm by the devotion and relief measures of our Red Cross. The opinion seemed to prevail universally in all military and political circles that when Germany realized she could not get Paris or the Channel ports she would dig herself in in the trenches and then send twenty or thirty divisions down to invade Italy. In that case the Allies would find it difficult, if not impossible, to come to Italy's assistance before Germany had seized the manufacturing and wealthy provinces of northern Italy, for the railroad facilities over the Alps are very inadequate. Moreover, if such an eventuality should occur it would give the Bolshevik party in Italy an opportunity to make trouble. With northern Italy annihilated, Venice and Lombardy handed over to Austria and the temporal power of the Pope restored, Italy would be reduced to the rank of a second or third class power. The next step would be for the Austrian army to be brought to France, thus permitting a joint Austro-German smash on the west front which would have surrounded the Allied armies with a semicircle of fire from which escape would have been impossible. As it was necessary to prevent this at all costs I found a universal desire to have as many American troops at the Italian front as we could possibly send so that the Italians could see that we realized the peril confronting them. Fortunately all danger of such a catastrophe now seems to have passed forever. But while I was in Italy the fear was a very real one, and quite justifiable.

On the economic side the Italians were most anxious to have America invest money in Italy after the war. Italy has no steel or iron or coal deposits, but there is an enormous amount of electric power to be had from the streams of the Alps, and the Italians think that America could develop this electric power better than the English or French. "We have no fear from the investments of America," they told me, for Americans "would have no selfish political motive behind them."

## Yale Door Closers complete the door

YOU can't fail to pull the door open.

How many times do you fail to push it closed?

Knobs on doors are accepted conveniences, for pulling doors open. You insist on having them.

Yale Door Closers on doors are accepted devices for closing doors that have been pulled open. They control them quietly, without the slam, always, positively.

They keep out drafts and dust, promoting your comfort and health, conserving warmth.

Yale Door Closers may be had in proper size and finish for every type door in your house.

*They are one of the famous Yale products: Yale Night Latches, Padlocks, Builders' Hardware, Cabinet Locks and Chain Blocks.*

On the market 10 years.

# Save Coal

By Discarding Something  
Good for Something Better

EVERY time you forced your boiler or furnace to keep you warm last winter, you drove far more extra heat up the chimney than you secured in your rooms. Up chimney heat is absolutely wasted heat.

Wasted heat costs money. How much wasted money your system may be costing you don't know. But we can show you. We can show you that no matter how economical you think your system is, for even the average weather, the Kelsey Health Heat is far more economical.

This is a strong claim. But after you have your facts and figures, you may see the wisdom of substituting a Kelsey for your present system.

You won't hesitate to discard something you thought to be good; for something you find out is decidedly better.

Whatever you do or don't do; at least send for booklet called "Some Saving Sense on Heating."

## THE FIRST ENGLISHMAN IN RESCUED LILLE

(Continued from page 166)

if any of the sentries in the trenches by Chapelle Armentières ever established spiritual contact with that city full of human yearnings as he stared over the parapet and saw thru the mists the tall chimneys of Lille. Women lay awake, as they told me today, and cried out:

"When will the English come?"

After the first terror of the German occupation and the first nagging of law which regulated all their lives, forbade them to be out in the streets after 8 o'clock in the evening, and shut them up in their houses like naughty children at 2 in the afternoon when the German commandant was annoyed with some complaint, one of their worst days came when, just before Easter, 1916, 8,000 young women of Lille were forcibly seized and sent away to work in the fields, hundreds of miles from their homes.

It was a reign of terror for every girl in Lille and for their parents. Different quarters in the town were chosen for this conscription of girls, and machine guns were posted at each end of the street, and families were ordered to gather in doorways, when the German officers came around and made arbitrary choice, saying to one girl, "You," and to another, "You," and then ordered their men to take them.

One of them who was taken and spent six months in this forced labor told me that she had no change of linen all that time, and slept on a truss of straw in an old barn, at first with men who were put into the same barn with them, and then only with women.

More unspeakable things happened, and there is no forgiveness in the hearts of those who suffered them.

That was the first exodus from Lille, and the second happened twelve days later, when 12,000 men and boys were sent away further into the German lines so that their labor should not be given to the Allies.

More than two years ago a German commission visited Lille and all the machinery was removed from the great textile factories, which made the wealth of the city. With that of Roubaix and Tourcoing, millions of pounds' worth of machinery was taken, and what could not be taken was smashed. It was a deliberate plan to kill the industry of northern France.

Among the worst cruelties done by the Germans was their treatment of the British prisoners. From Mr. Moore, the clergyman, and from the American doctor, and from other witnesses I heard dreadful things of the prisoners' sufferings. Most of them were kept in the citadel at Monsenbarceul outside the city, and from that place were drafted to dig trenches. There were about 800 of them there at a time, and it was said by Mr. Moore to be a Black Hole of Calcutta. They were always half starved so that they were almost too weak to walk.

"I looked into young faces," said the clergyman, "and thought, 'I shall be called to bury you in a day or two.'"

One does not wish at this stage of the war to stir up passion and desire for revenge. God knows there is no need of that, but these things must be written in history, and I write them now, knowing their truth. In this city of Lille I have heard a thousand things of tragedy, even in one day's visit.

In the hearts of the people there are thousands of other memories. One scene that was described to me had the German

**INDIVIDUALITY** in home decoration today may be so readily attained—at moderate cost.

This is accomplished by well-chosen furniture and rugs—and "well-chosen" does not necessarily mean expensive. These, against a background of quiet, even-toned walls and ceilings, make certain real individuality.

Liquid Velvet is the quiet, even-toned flat enamel. It is truly economical because it is washable. The original soft color and texture of Liquid Velvet covered walls are preserved for years—because they may be washed as often as necessary. Liquid Velvet has an unusually large spread—another real economy. And the first cost of Liquid Velvet is low. Made in white and attractive colors. Write for Color Chart and Booklet.

## HODGSON Portable HOUSES

The building of even a small house usually brings with it a long string of red-tape and finally when the building is finished you may find that your expectations have not been fully realized.

Why not know before you drive a nail just what the finished result will be? You can.

Buy your house the Hodgson Way. First send for a catalog containing photographs of many kinds of small houses in various styles and sizes.

After you have made your selection, send your order and the house will be shipped in neat, compact sections, painted, and ready to be assembled—this can be done by a couple of unskilled workmen in a comparatively short time.

First send for the catalog

25c each; \$2.50 per dozen; \$15.00 per 100  
The set of 12 varieties for \$2.50 postpaid.

Our Fall Catalogue also gives a complete list of Seasonable Seeds, Plants and Bulbs for outdoors, window, garden and conservatory.

A copy mailed free to anyone, mentioning this magazine.

**HENRY A. DREER**

714-716 Chestnut St. Philadelphia, Pa.

Emperor as its central character. He came to Lille in April last, when the German offensive in Flanders was in full force and they had taken Kemmel.

From 6 in the morning until 2.15 in the afternoon soldiers were drawn up in the streets awaiting the man who symbolized the might of German arms and is now bearing the burden of all its crimes. When he passed at last on his way to Kemmel there was only one company of German soldiers who cheered him with mechanical "Hoch! Hoch!" All others maintained dead silence, and the Kaiser passed down their lines with gloomy looks on his way to Kemmel Hill. Those were the worst days for the people of Lille, and during the last offensive in Flanders, when the British lost Armentières and Kemmel and the British army was but a thin line, holding back the tide.

"We gave ourselves up for lost," some of the people told me. "It seemed that all our faith and all our patience had been in vain. We cried out to God in despair, but that lasted only a little while. We steeled ourselves again and said, 'France and England cannot be beaten. We must win in the end.' And your men helped us. Your prisoners were brought through our streets, muddy, exhausted, and covered with blood, some of them, but they held their heads high, so proudly, oh, so proudly, and some of them said as they passed: 'It's all right; we shall have them yet; we shall come back on them.' Then we said: 'If the boys speak like that, after all they have suffered, we must not lose heart'; and we were comforted."

Two hundred and forty British soldiers lie buried in Lille, but 2000 Germans lie buried there, too.

"Once when I was burying three of our men," said Mr. Moore, "a German pastor was burying seventy-six of his own soldiers. The number of their dead appalled them, and as year by year their losses piled up and still there was no end and no victory, even the braggarts were silenced and gloom took possession of them all."

The American doctor was friendly with a young German who had an English mother and was a nice fellow, and it was he who brought tidings of strange things about to happen.

It was last midnight on September 30 that the doctor heard a ringing at his door-bell. He went down, frightened, as some sudden summons like that was always frightening, and opened the door and saw his friend.

"What are you doing at this hour?" he asked. The young German was white and haggard.

"I must tell you a strange secret," he said in a whisper. "I promised to let you know when to leave, in case Lille were abandoned by us and there was risk of bombardment. That time has come. To-night 15,000 men are leaving Lille and in a little while it will be evacuated."

There were other signs of approaching flight under the pressure of British troops. All the bridges were mined. German guns were placed on the inner side of the canal and fired to the British lines, which seemed to come nearer every day, judging by the roar of cannon.

"The English are coming," said the people of Lille, and held their hands to their throats. They could hardly breathe because of their excitement. They were sick and white with hope.

And so it happened yesterday and today I went into Lille, but even now like those I met, I can hardly believe that all this is true.

Lille is a city of splendid thanksgiving, and the name of England is spoken on the lips of its people and of its children as a magic word to which they owe their rescue.

## Your Investment Problem

**U**NDER present conditions sound investment securities are available at prices which yield unusually attractive returns. In solving your investment problem—in placing your funds or in re-investing your holdings to the best advantage—the Bond Department of this Company can be of service to you.

This department is a complete investment organization, with every modern facility for service to investors. It investigates, examines, and underwrites bond and note issues; buys and sells securities; and furnishes information relating to investments. Through our correspondents in various cities, these facilities are placed at the convenient disposal of our customers outside of New York.

This Company is an organization—of which the Bond Department is a part—covering completely the field of banking and trust service.

Through its Banking Department, the Company transacts a general commercial banking business. As a member of the Federal Reserve System the Company is enabled to extend to its customers the credit facilities and rediscount and collection privileges of a member bank.

Through its Foreign Department and its affiliations and connections throughout the world, the Company affords a complete foreign banking service. It also gives special attention to the banking needs of officers and men in the American Expeditionary Force and other recognized organizations abroad.

Through its Trust Department the Company acts in every fiduciary capacity for corporations and individuals.

Your inquiries as to how we may serve you will be welcomed.

Our monthly booklet, *Investment Recommendations*, is mailed on request

## THE HOHENZOLLERN'S CATSPA

(Continued from page 159)

Austria fettered by political and military alliances, customs agreements, trade understandings, secret and open contracts and treaties of every known character, few of which contained any modicum of equity for Austria.

It was a sad fact that the coffers of the Austrian Government had for months been in so depleted a condition that financial experts of the Emperor were displaying genius in keeping the truth from the people. Two disquieting wars in the neighboring Balkans had almost paralyzed commerce in Austria and in Hungary. Wilhelm obviously knew this, but doubtlessly hoped that Francis Joseph would not think of a matter so unimportant in declaring war.

With half an eye Wilhelm must have perceived the ease with which the dreaming recluse might serve his purpose and this safely accomplished by absent treatment. In Vienna the Kaiser had for Ambassador a keen-witted Saxon whose zeal for the Fatherland and its ruler was boundless, and this functionary would be the very man to organize and conduct a cabal influencing Francis Joseph to do anything. It would not be safe for the German Government to have to do with so sinister a program, while it would be sufficiently safe for the hint to come from the All Highest and be carried to the Austrian capital by trusted militarists of the Crown Prince's clique.

Well, the suggestion from high quarters was all that the diplomatist required to organize the cabal to halt the aged Monarch's prayers for peace, and to so work upon his pride and probably weakening intellect that he would play Germany's game by hurling a surprise ultimatum and war declaration against the Serbian Government, whose people he had long detested. There were not more than six or seven men in this band of schemers; there were military high officials who had long wanted war for their own purposes, and one or two were Hungarian statesmen saturated with the Pan-German idea, one of whom had the Emperor's ear to the exclusion of advisers of higher positions.

One by one these conspirators journeyed to the Imperial villa at Ischl and remained until convinced he had furthered the project of war, and in this specious manner Francis Joseph was influenced into assuming the outward responsibility for the world's master crime.

The original intention of calling for an apology from Serbia, the punishment of certain agitators against Austria-Hungary, and promises of better conduct thereafter, was departed from piecemeal by the substituted ultimatum drafted *con amore* in the Vienna Foreign Ministry by a diplomatist of Hungarian birth intimately knowing Serbia thru official residence at Belgrade. The formal declaration of hostilities following the ultimatum was wholly unnecessary, for the ultimatum adroitly meant to be unanswerable had all the force of a declaration of war. The unreasonable time-limit of forty-eight hours for replying to the demands made a clash absolutely certain—it could not be avoided, in spite of the conferences held day and night at St. Petersburg, London and Paris.

And this is the true genesis of the starting of the world cataclysm, already killing four or five millions of innocent mortals, maiming twice as many, and devastating half of Europe. In all faith do I believe that the responsibility for the war rests in Germany, and that the irresolute Francis Joseph was influenced into his murderous action by the cabal of men doing Wilhelm II's bidding.

## Ingram's

Therapeutic  
Shaving Cream

This new shaving cream which is prepared with particular thought for the needs of the safety razor possesses medicinal qualities that keep the skin healthful. The rich, creamy lather it forms does not gum up between the guard and blade, helps the blade cut easily and evenly, prevents irritation of the skin and is a healing agent to small abrasions or scrapes. It is cooling and soothing to the skin.

Buy a jar of Ingram's Therapeutic Shaving Cream from your druggist for 50c. Mail us the carton, with his name, and receive free a 25c package of Ingram's Zodenta, for the teeth. If your druggist is not supplied, mail the 50c to us and receive the jar of Ingram's Therapeutic Shaving Cream with the Zodenta.

Head of History Department, Julia Richman High School, New York City.  
Teachers send for this brochure. It is free.  
**THE INDEPENDENT**  
119 WEST 40TH STREET, NEW YORK

Thruout Austria and Hungary there was always good feeling for America, superficially at least, and dignitaries from the Emperor down to subordinates in public offices always assured me that the Monarchy wanted nothing but the best of relations with the Washington Government and the people of the United States. But beneath the surface there was a feeling of animosity against us varying always with the current attitude of Berlin toward Uncle Sam. The press of Vienna and Budapest was ordered not to print statements or opinions unfriendly to America, and the official censor scores of times forced the newspapers to delete carping editorials and letters written by persons whom the editors delighted in describing as "American Journalists" or "Professors in recognized American universities." When taken to task by the Foreign Office for these disobediences, the editors would make the shambling excuse that the offending article slipped into their columns by mistake, and that would terminate the incident. Of course there were German propaganda agents operating in the Danubian capitals, and these had little fear of the Austro-Hungarian Government.

When a submarine flying the Austrian flag pounced without warning upon the Italian ship "Ancona," having American passengers, and Washington demanded an apology with punishment of the commander of the undersea craft, the Austrian Government promptly apologized and offered compensation. A day or two after the Foreign Office had rendered satisfaction for the outrage, a distinguished Austrian diplomatist assured me that the piratical craft was really a German submarine, manned by Germans, and that the flag of Austria had been employed solely as a ruse.

I have seen the play of fate in the passing from life of certain of the actors in the superlative of tragedies staged at the Austrian capital in the epochal year 1914. I saw the venerable Emperor and the German Ambassador in their coffins, witnessed the loss of honor of the pro-German statesman at Budapest, and the dismissal from the Foreign Office by the well-meaning Emperor Karl of the conscienceless man who drafted the Serbian ultimatum. Of the military men, I have read that one achieved a field marshalship and the other a countship for their efforts in causing the purposeless war.

Poor Austria has surely paid a crushing price for her partnership with Prussianized Germany, with which her only similarity was the possession of the same language, and Austria's fate must ever be remembered by statesmen who think there is strength in secret alliances.

Newcomer to the Trenches—And where do I go when this shelling business starts? Sandy (late of the Wee Kirk)—Laddie, that all depends on your religious opinions. —*Cassell's Saturday Journal*.

Great is the red tape habit. Before he entered the army he had scoffed at the infection. One Saturday, after a few months' training, he found that he would be unable to come to New York for the week end. Accordingly he phoned his sweetheart to that effect. An hour later she received this telegram:

Confirming telephone message even date, regret report will be unable visit New York Saturday. Reason, shutting off of fur-linghe. Respectfully — *New York Tribune*.

# THE NEW BOOKS

## Joan and Peter

H. G. WELLS puts forth a new theology and a new social program in each successive book. But as he writes more volumes than there are different kinds of religion and politics he sometimes has to revert to a former scheme. When he wrote "God the Invisible King" the critics were not slow to point out the inconsistency of the adoption of kingship as the symbol of deity by a man who detests kings and wants to do away with them all. So stung by these criticisms or more likely because his agile mind has moved on to another viewpoint he has, in his new novel, *Joan and Peter*, run to the opposite extreme and presents a conception of a most democratic and modern God, in fact a visible business man instead of an invisible king. Peter, who is smashed up by the fall of his airplane, dreams in delirium that he visits the office of God whom he finds behind a most untidy desk, cluttered up with

grubby test tubes and bottles at which the Lord God had apparently been trying over a new element. The windows had not been cleaned for ages. They were dark with spiders' webs, they crawled with a buzzing nightmare of horrible and unmeaning life. It was a most unbusiness-like office.

Peter from his pallet criticizes the Lord for his mismanagement of the universe in the plainest language:

"Here was I, sir, and millions like me, with a clear promise of life and freedom! And what are we now? Bruises, red bones, dead bodies! This German Kaiser fellow—an ass, sir, a perfect ass, gnawing a great hole in my shoulder! He and his son, stuffing themselves with a Blut-Wurst made out of all our lives and happiness! What does it mean, sir? Has it gone entirely out of your control? Look at this room, consider it—as a general manager's room. No decency. No order. Everywhere the dust of ages, muck indescribable, bacteria! . . . Look at that beastly spider in the corner! Why do you suffer all these cruel and unclean things?"

"You don't like it?" said the Lord God, without any sign either of apology or explanation.

"No," said Peter.

"Then change it," said the Lord God, nodding his head as one who should say "got you there."

"But how are we to change it?"

"If you have no will to change it, you have no right to criticize it," said the Lord God, leaning back with the weariness of one who has had to argue with each generation from Job onward, precisely the same objections and precisely the same arguments.

"After all," said the Lord God, giving Peter no time to speak further; "after all, you are three-and-twenty, Mr. Peter Stubland, and you've been pretty busy complaining of me and everything between me and you, your masters, pastors, teachers, and so forth, for the last half-dozen years. Meanwhile, is your own record good? Positive achievements, forgive me, are still to seek. You've been nearly drunk several times, you've soiled yourself with a lot of very cheap and greedy love-making—I gave you something beautiful there anyhow, and you knew that while you spoilt it—you've been a vigorous member of the consuming class, and really, you've got nothing clear and planned, nothing at all. You complain of lack of order; where's the order in your own mind? If I was the hot-tempered old autocrat some of you people pretend I am, I should have been tickling you up with a thunderbolt long ago. But I happen to have this democratic fad as badly as any one—Free Will is what they used to call it—and so I leave you to work out your own salvation. And if I leave you alone then I have to leave that other—that other Mr. Toad at Potsdam alone. He tries me, I admit, almost to the miracle pitch at times with the tone of his everlasting prepaid telegrams—but one has to be fair. What is sauce for the goose is sauce for the Kaiser. I've got to leave you all alone if I leave one alone. Don't you see that? In spite of the mess you are in. So don't blame me. Don't blame me. There isn't a thing in the whole of this concern of mine that Man can't control if only he chooses to control it. It's arranged like that. There's a lot more system here than you suspect, only it's too intricate for you to see. It's yours to com-

mand. If you want a card index for the world—well, get a card index, I won't prevent you. If you don't like my spiders, kill my spiders. I'm not conceited about them. If you don't like the Kaiser, hang him, assassinate him. Why don't you abolish Kings. You could. But it was your sort, with your cheap and quick efficiency schemes, who set up Saul in spite of my protests—ages ago. . . . Humanity either makes or breeds or tolerates all its own afflictions, great and small. Not my doing. Take Kings and Courts. Take dunghoops and flies. It's astonishing you people haven't killed off all the flies in the world long ago. They do no end of mischief, and it would be perfectly easy to do. They're purely educa-

French Official, from Paul Thompson

H. G. Wells (right), author of "Joan and Peter," in a trench somewhere in France

tional. Purely. Even as you lie in hospital, there they are buzzing within an inch of your nose and landing on your poor forehead to remind you of what a properly organized humanity could do for its own comfort. But there's men in this world who want me to act as a fly-paper, simply because they are too lazy to get one for themselves. My dear Mr. Peter! if people haven't taught you properly, teach yourself. If they don't know enough, find out. It's all here."

This fantastic passage gives the theme of the volume which is the need of a new type of education. The disappointments and reverses of the war have done what nothing less was able to do, shaken the confidence of the English in their traditional form of education and they are now, in the midst of the conflict, engaged in reconstructing their schools of all grades to make them equal in efficiency those of America and Germany. *Joan and Peter* is hardly more of a novel than Xenophon's "Cyropaedia" or Rousseau's "Emile." It is a tract for the times. To be sure it contains all the customary ingredients of Wells's later and larger novels, travel, imperial politics, illicit love, satirical sketches of contemporaries and bits of autobiography but these are subordinated to the purpose of the book, the criticism of British schools and suggestions for their improvement. It is not written with the emotional power of "Mr. Britling," but contains some of the author's best pages both in the way of characterization and of analysis. He gives descriptions of schools that will match Dickens's "Dotheboys Hall."

The plan of the book—it could not be called a plot—is this: a colonial adminis-

trator, Oswald, comes back from his work in Africa full of zeal for the mission of the British Empire as an agent of civilization and eager for the training of men competent to meet such responsibilities. He finds himself made the guardian of an orphan boy and girl and sets out to find schools and colleges for them in accordance with his ideas of what education is needed by the modern world. But he can find none in all England. The old schools are snobbish and conservative, the new schools are faddish and pretentious.

Much of his criticism will apply as well to America, for while our schools have been superior to the English in the adoption of modern methods and equipment they have also failed to provide the younger generation with a working knowledge of foreign countries and of America's relation to the world at large. The war has shown us this defect and we are now doing some hasty cramming to make up for it. But we must undertake the reconstruction of our educational system to meet the needs of America as a world power. *Joan and Peter* will help to rouse the American people to a realization of what must be done. Mr. Wells used to be regarded as merely a fantastic romancer. He is now beginning to be recognized as one of the most original thinkers of our times.

*Joan and Peter*, by H. G. Wells. Macmillan Co. \$1.75.

## National Honor

WHAT is national honor, is a question many of us are asking today, and we look vainly for a satisfactory answer. National honor has plunged the world into war but no one seems to be able to analyze or define this catclysmic force.

National honor is the fundamental *casus belli* and the challenge of the reconstruction. To define it is to lay the cornerstone for universal all-inclusive arbitration without which the peace of the future must rest as a house built upon sands.

Recognizing this, Mr. Perla subjects national honor to a searching analysis, somewhat academic, but nevertheless rational, keen and penetrating; attempting to reduce it to a logical basis and finding it to be not a "rational ideal" but an emotion. He suggests as a constructive program the directing of this national feeling into "a great international emotion which shall be the only abiding and unfaltering guarantee for the peace of the future."

*What Is National Honor*, by Leo Perla. Macmillan Co. \$1.50.

## The Four Horsemen

IN the Revelation of St. John, the Apocalyptic Beast, "the Nemesis of humanity" attempts to govern the world, to make mankind render him homage. For him might is superior to right; the weak should not exist. He is preceded by the four horsemen, Pestilence, War, Famine, Death, who ride rough-shod over humanity in their desolating course.

These are the Four Horsemen of the new novel by Ibañez, the best known of the contemporary Spanish writers. He has given a stirring picture of the Great War, culminating in the Battle of the Marne. Aside from the epic effect which he produces by his sweeping and masterly style, his book arrests the attention because of his radi-

By SAMUEL A. ELIOT, JR.

Contains five classic one-act plays of rare merit adapted for "Little Theaters," or for stay-at-home readers. \$1.50 net.

Boston, Mass.

## IMPORTANT BOOKS

### THE WINDS OF CHANCE

By REX BEACH

For almost a century the life and labors of the great American author, Rex Beach, have been the subject of a great deal of discussion. There is no doubt that the author of "The Wind of Chance" is a man of a neutral nation, whose hero is an Argentine bound by no ties to France, tho he makes his home there, we see the war objectively. Perhaps because it is presented as a thing apart, as something at which we look from a long distance and thus get true perspective in our survey, it is the more impressive and overwhelming.

Illustrated, Cloth, Post Sec., \$1.50 net

### FOES

By MARY JOHNSTON

Author of "The Mountain"

A delightful eighteenth century story of Scottish romance and adventure. Alexander Jamieson and Ian Ramsay, two friends, are separated by the war. They are again separated, and each lives a life of hardship.

Eight years later Alexander meets Elspeth Barrow, and tells her of his life. But though the love was not returned he never gave up hope. One day Ian met Elspeth and both felt tragically in love. Later Ian left for France and Elspeth drowned herself and was found by Alexander, who from that day swore vengeance on his friend. How he worked out his revenge is the grand finale of one of the most thrilling stories that has ever been written.

Half Cloth, Post Sec., \$1.50.

### THE RECLAIMERS

By MARGARET HILL McCARTER

Here is the fascinating tale of a young girl, an orphan, young, pretty, reared in luxury who inherits a head claim in the Sage Brush country in Western Kansas. She is in love with a poor artist and decides to give up her life of idleness to fight her own way. To carry out this plan she goes to Kansas, intending to earn a living on her ranch, but finds that it is nothing but a "blow out" land, acres and acres of sand on the edge of which she meets romance.

Frontispiece, Half Cloth, \$1.50.

### THE KAISER AS I KNOW HIM

By ARTHUR N. DAVIS

With amazing candor, sometimes for hours at a stretch, the Kaiser has discussed with Doctor Davis the events and developments of world politics, tendencies of human progress, personalities high and low, not only in Germany and other nations of Europe and Asia, but especially in America.

The book throws blinding light upon the question of the Kaiser's responsibility for the war, upon his foreknowledge of the destruction of the "Lusitania," upon the part attempted by the German government in the Presidential election of 1916, upon the Kaiser's own idea that "America shall pay the bills for this war" upon the thousand and one vital questions to which Americans want the answer.

Illustrated, Crown Svo, Cloth, \$2.00.

### THE WAR IN THE CRADLE OF THE WORD

By ELEANOR FRANKLIN EGAN

The author is virtually the only civilian who has been allowed to enter the British war zone in Mesopotamia since the beginning of the military operations there. Traveling up the Persian Gulf on a British troop ship, she was received at Basra by Major-General Sir George MacMunn, and followed with the aid of maps the whole course of British operations. Arriving at Bagdad the author became the guest of General Maude. Then followed two months in Mesopotamia which are here described.

Illustrated, Crown Svo, Cloth, \$2.00.

### FROM BERLIN TO BAGDAD

By GEORGE A. SCHREINER

Author of "The Iron Ration"

The vivid story of an eye-witness is revealed in this book. The events, mysterious and sinister, in the near East since the war began are told here for the first time. Captain Schreiner went to Turkey in the early stages of the conflict and was an eye-witness to the tragedy at the Dardanelles and all the heart-rending happenings at Gallipoli and Suvla Bay.

Other sidelights include a glimpse at the deportation horrors in Armenia and a graphic description of an overland journey to Damascus for the purpose of interviewing the survivors of the ocean terror, the "Emden."

Maps, Crown Svo, Cloth, \$2.00.

### YESTERDAYS IN A BUSY LIFE

By CANDACE WHEELER

What do you know about these famous people—Peter Cooper, Inness, Boughton, William Cullen Bryant, James Russell Lowell, Millet, Alma Tadema, Abbey, Du Maurier, De Morgan, Thomas Hardy? In this book the founder of the Decorative Arts Society gives us a fund of interesting anecdotes concerning these well-known figures, as well as hosts of other celebrities with whom she came in contact during her long and busy life here and in Europe. Owing to her great interest in art, her acquaintance with artists in both America and the Old World was a very extensive one, and gives these pages a large cosmopolitan interest.

Illustrated, Crown Svo, Cloth, \$3.00.

**HARPER & BROTHERS**  
ESTABLISHED 1807

cally different method of approach to the war. We have had books of the war by Frenchmen, by Englishmen, by Americans—in all of them a combatant or at least a sympathizer has spoken. In this book, written by a man of a neutral nation, whose hero is an Argentine bound by no ties to France, tho he makes his home there, we see the war objectively. Perhaps because it is presented as a thing apart, as something at which we look from a long distance and thus get true perspective in our survey, it is the more impressive and overwhelming.

Whether because he is a neutral or because his objectivity gives him clearer vision, Ibañez is little stirred by idealism and optimism in his view of the war. His attitude is that of old Don Marcelo, standing by the grave of his son, who had given his life not for France but for a French woman—"All the rest was a dream—the four horsemen were the reality. Altho the Beast might be mutilated, it would again come forth years afterward as the eternal curse of mankind."

*The Four Horsemen of the Apocalypse*, by Vincente Blasco Ibañez. E. P. Dutton & Co. \$1.90.

### Live-Wire Letters from a Yank

Dear Joe: Well, I figure by this time the whole world and Yonkers has been dazed by the news that I have give the Alleys the best of it by joinin' the U. S. Army.

Ed. Harmon's genial wind-up for the first inning of *From Baseball to Boches*, by H. C. Witwer, begins one of the most entertaining accounts of the doughboys at the front that has been written. Its picturesque baseball slang reads like a sporting editor's prize story of the world's series now being played in France. There's a laugh in almost every line of it, too, and all the action that the war allows. Harmon is "first in war, first in peace, corporal in the 101st Infantry," but he manages to add an air fight, a talk with General Pershing, a baseball game 'mid bursting bombs, a wedding with the prettiest girl in France, a couple of promotions and a German prisoner to his regular day's work. These letters in which he tells about them are warranted gloom-dispellers.

*From Baseball to Boches*, by H. C. Witwer. Small, Maynard & Co. \$1.35.

### The New Verse

POETS OF MODERN FRANCE, by Ludwig Lewisohn. (B. W. Huebsch, \$1.50.) Translations from thirty modern French poets. A collection of great beauty and charm.

FARM VOICES, by Don C. Seitz. (Harper & Brothers, \$1.) Incidents of farm life ranging from hard cider to hogs, and schoolmarms to mortgages, told thru verse, humorous and pathetic.

THE MIRTHFUL LYRE, by Arthur Guiterman. (Harper & Brothers, \$1.25.) A book of light verse for children and for grown-ups who don't want their intellects disturbed. Pleasantly humorous.

THE MODERNISTS, by Robert W. Norwood. (George H. Doran & Co., \$1.25.) Those who were Modernists in their own age speak forth in this collection of poems, which are characterized by rare beauty of diction, a wealth of color, and a singing quality of unusual sweetness.

HIGH ALTARS, by John Oxenham. (G. H. Doran Company, 50 cents.) Mr. Oxenham has a knack of expressing the thoughts that are in the hearts of the majority in a way that appeals to the majority. He has interspersed his impressions of a visit to the front in this book with verses, including the famous Ode to Mud.

### For the Countryside

GARDEN STEPS, by Ernest Cobb. (Silver, Burdett & Co., 60 cents.) A useful pocket manual for the amateur in vegetable gardening, with special reference to workers in school gardens.

HOME VEGETABLES AND SMALL FRUITS, by Frances Duncan, formerly Garden Editor of the Ladies' Home Journal. (Charles Scribner's Sons, \$1.40.) Deals with culture and preservation, covering the whole matter from soil preparation in a condensed but complete manner. Serviceable for suburbanite or town gardeners.

## A WINTER GARDEN IN THE CELLAR

(Continued from page 168)

grown, as it can be forced thru sand. Indeed, this is the best plan, for then the heads are tighter and better formed than when grown in the usual way. This is a very good plant to force in boxes of earth, for the roots can be shortened a third and set close together. The box must be a deep one, tho, for it is necessary to allow for about six inches of sand on top of the soil. The sand is added after the roots have been set in place just under the surface. If the cellar is fairly warm, the growth will be very rapid, the heads reaching the top of the sand in a few weeks. These heads are cut just above the roots. New growth will then be made. Oftentimes, three or four cuttings can be obtained from the same roots, so that only a few roots are necessary to keep the table supplied all winter. This salad plant is so useful and makes such an agreeable addition to the winter table that it should be better known. A box may be set near the furnace or even behind the kitchen range.

Think of having asparagus all the year round! Some garden makers have learned that this is possible, and without much labor. The main thing is to get an abundance of good roots. Any one who has a garden can keep a supply of roots constantly coming along by starting seeds each year, or making new beds from started plants. Three-year-old roots should be used for forcing, and this forcing can be begun any time in the fall. They can be handled in about the same way as rhubarb roots, but it isn't necessary to grow them in the dark.

It may be that you have a cold frame in which good sized lettuce heads are now growing. When they are fully formed, remove the glass and let them freeze solidly. Then you can take them up, root and all, and set them in earth in a cool corner of the cellar. They will thaw. Some of the outside leaves will soon decay, but the inner part of the lettuce will keep in good condition for many weeks. The longer they are kept, the more leaves you will have to remove, but you will have a winter treat if only the heart itself remains good.

It may be that a considerable number of Brussels sprouts will be found in the garden when fall comes. Indeed, the wise garden maker with a liking for this vegetable, takes pains to start enough seeds to make sure of a surplus at the end of the season. If the plants are taken up, root and all, and set in earth in the cellar, the sprouts will continue to develop, and can be used for a long time.

Cauliflower plants may be taken up late in the season and set in boxes of earth in the cellar in the same way. Altho looks are not commonly grown in private gardens, some gardeners appreciate them and raise them. It is a simple matter to keep looks well into the winter. They must be taken up, root and all, and planted in boxes of earth. The same plan can be followed with celery, or the celery can be set in a bed of earth on the floor, with an upright board to hold the earth in place.

There is no reason why people fond of dandelions should not enjoy them in winter, altho in a little different form from spring greens. If good sized dandelion plants are dug up in the fall, care being taken not to break the crowns, they can be forced easily, especially after the turn of the year. It is only necessary to place them in boxes of good, rich garden soil, and keep them well watered. They must be grown in the dark, tho, so that the tops will be well blanched.

## This Year Buy Books for Christmas —Buy Now

### The Great Adventure

By Theodore Roosevelt

This volume, dedicated to all who in this war have paid with their bodies for their souls' desire, contains Colonel Roosevelt's most recent expressions on the world war. He tells why men are willing to give their lives or to offer their sons for this great adventure.

\$1.00 net.

### Soldier Silhouettes On Our Front

By William L. Stidger

Y. M. C. A. Worker in France

"I have tried to set down some of my experiences. I have had but one object in so doing, and that object has been to give the father and mother, the brother and sister, the wife and child and friend of the boys 'Over There' an accurate heart picture."—*The Author.*

*Illustrated.* \$1.25 net.

### The City of Trouble

Petrograd Since the Revolution

By Meriel Buchanan

Preface by Hugh Walpole

Miss Buchanan, daughter of the British Ambassador at Petrograd from 1910 until this year, begins her story before the Czar's downfall—includes the dramatic account of the death of the notorious Rasputin, and comes down to the departure of the British Ambassador from Petrograd early in the present year.

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUR LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

**TO THE TEACHER:** Ask every pupil to read as much of *The Independent* as possible, and to prepare at home written answers to two or three questions. When you call upon a pupil in class ask the pupil to step to the front of the room, to lay the written answer on the teacher's desk, and to speak without notes, unless notes are specifically suggested by the question. Then call for one supporting opinion concerning the thought presented, and for one dissenting opinion. Close the discussion by a vote of the class, and an expression of your own opinion. Make the work spontaneous, spirited and original. Build up a vigorous Americanism founded on reliable information concerning present-day events, conditions and thought.

#### A. The Sky and River Fronts of Italy. By Hamilton Holt.

1. Give a full oral explanation of the meaning, and the appropriateness, of the title.
2. Give a talk summarizing what Mr. Holt says concerning the war spirit of Italy. Give your talk as though many of your audience were of Italian descent.
3. Explain orally how the Italian and the Austrian armies played hide and seek in the mountains.

#### B. The Kaiser's Catspaw. By Frederic Courtland Penfield.

1. Characterize the German Emperor as presented in this article.
2. You are a Four Minute Speaker. Give a short, clear account of the German aims that led to world war.
3. Narrate the steps that led to the Great War.
4. Define the following words: cabal, parvenu, shambles, grandiose, cataclysm.

#### C. Turkey Has Shot Her Bolt. By Henry Morgenthau.

1. Explain the title. What figure of speech does it involve?
2. Explain, as if to an audience at a moving picture theater, why Turkey is unfit to remain in power over the lands she ruled at the beginning of the war.

#### D. A "Y" Canteen Next No Man's Land. By Harry Emerson Fosdick.

1. Prove that the article is a good presentation of the best American spirit.
2. Write an original story introducing daily events in the life of a Y. M. C. A. worker; and describing scenes that he would be likely to witness.

#### E. The First Englishman in Rescued Lille. By Philio Gibbs.

1. Imagine that you are an aged, or disabled, inhabitant of Lille, and that you have lived in that place during the full course of the war. Narrate your experiences vividly, making your narration express the changing emotions that you felt.
2. Write an original, romantic story founded on the changing fortunes of Lille.

#### F. Russian Pessimism and American Optimism. By Maria Moravsky.

1. In an antithetical sentence express the difference between Russian literature and American literature.
2. Name and explain the figures of speech in the sixth paragraph.
3. Name any book that you have read, and criticize it in connection with the thought of the article.
4. Explain in full your reasons for agreeing, or for disagreeing, with the author's statement that "American optimism is pernicious to the nation."
5. What does the writer believe should be the true aim of literature?

#### G. The Czecho-Slovak Declaration of Independence.

1. Define the following words: dismemberment, federalization, autonomy, provisional government, degenerate dynasties, menace, sacrilegious assertion, theocratic autocracy.
2. Give one or two clear sentences of historical explanation concerning the following: The Hohenzollerns, the Hapsburgs, Bohemia, Prague, Comenius, the Hussite wars.

#### H. The Story of the Week.

1. Draw a blackboard map to illustrate the recent Allied victories. Give a brief speech showing the importance of recent events on the western front.
2. Present the steps Germany has taken toward peace, the significance of these steps, and the attitude all good Americans should take toward an armistice.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. Conditions Precedent to Peace.

##### A. In Germany—"A Challenge to Germany," "Put Germany on Probation," "Germany 'Offers' Peace," "The President's Reply," "Turmoil in Germany," "Proposed German Reforms."

1. "All thru the mazes of this most complicated of conflicts he [President Wilson] has stuck . . . to his main object, to make the world safe for democracy—even in Germany." Prove this by quotations from the German Note and the President's Reply.
2. "Those who talk of 'unconditional surrender' are the real defeatists," etc. Do you agree?
3. Why has Germany thus far carried on her correspondence with President Wilson rather than with Lloyd George or Clemenceau or Orlando?
4. "If God reigns it [peace] will be dictated. If Gott reigns it will be negotiated." What does this mean?
5. Are the guarantees which the editorial writer thinks we should exact of Germany adequate? Are they just?
6. Summarize the evidence given in the Story of the Week which seems to prove "the destruction of every arbitrary power" in Germany "that can separately . . . disturb the peace of the world."

##### B. In Austria—"Czecho-Slovak Independence," "Czecho-Slovak Declaration of Independence," "The Austro-Hungarian Appeal for Peace," "President Wilson's Reply," "Austria-Hungary Accepts the Terms," "The Kaiser's Catspaw," "The Federalization of Austria," "Hungary Breaks with Austria," "Austria Accepts American Terms."

1. "Bellona has given birth to a dozen new states in the last two years." Discuss the conditions under which these states came into existence. What is the probable fate of these states?
2. Why did the United States and the Allies recognize the Czecho-Slovak National Council as a *de facto* government? What is its present status? its probable future?
3. "America is trying to call into existence a new Middle Europe to balance the old Middle Europe 'made in Germany.'" What does this mean?
4. Explain the significance of the following phrases and sentences in the Czecho-Slovak Declaration of Independence: (a) "[Austria-Hungary] a state which has no justification for existence," (b) "The Hapsburg dynasty, weighed down by a huge inheritance of error and crime."
5. What will be the effect on Germany of Austria's declaration that it is ready "without awaiting the result of other negotiations, to enter into negotiations for peace," etc.?

#### II. Progress of the War.

##### A. On the Western Front—"The First Englishman in Lille," "The Reconquest of Belgium," "Wilson Saves Cities," "The Entrée to Ostend."

1. Trace the progress of each of the four Allied armies on the western front during the past two weeks. In what sections are the Germans retreating voluntarily? In what sections are they resisting in their retreat? Account for the difference?
2. What is the significance of the German abandonment of the Belgian coast?
3. What military steps are still necessary for the complete restoration of Belgium? for the reestablishment of Allied control in northeastern France?
4. What are the probable terms of an "armistice . . . which should leave the United States and the powers associated with her in a position to enforce any arrangement that may be entered into," etc.?

##### B. On the Italian Front—"The Sky and River Fronts of Italy," "Italian Drive on the Piave."

1. In view of the Austrian declaration that they are ready for "an immediate armistice upon all Austro-Hungarian fronts," why did Italy reopen operations on October 24?

##### C. In the East—"Aleppo Captured"

1. The French forces are now occupying territory in Bulgaria along the banks of the Danube; the English and Greeks are stationed to the east facing Turkish territory. Why have they taken up these positions?
2. Why was the occupation of Aleppo on October 26 "the most strategic victory yet achieved in Turkey?"

# The Best Child Ever Born

is a problem. The brighter the child the greater your problem. Upon your wisdom depend his physical, his mental and his moral development. The greatest of these is his moral development—the building of his character—for this gives value to the others. And there is no way that you can better solve this problem than by the proper selection of his reading. Much that children read is positively injurious to their eager, plastic minds. Some books merely entertain in a wasteful way. But, some not only entertain but at the same time have those fine, constructive qualities which inspire high ideals and build strong, clean character.

## The Young Folks Library

(A Beautiful Christmas Gift)

is enthusiastically endorsed by the leading educators of the nation and by the fathers and mothers in over 25,000 homes, especially because of its interesting and distinctive plan of character building. An unusual gathering of men and women under the leadership of Thomas Bailey Aldrich, Henry Van Dyke and Hamilton Wright Mabie, who never forget at the child's point of view, have overlooked his interests, have made this plan and library a rich treasure-house of character-deeds and a boon to parents. And you will be pleased to learn that you can secure this library in a remarkably low price, on very easy terms.

### Send for Beautifully Illustrated Book—Free

## A "Y" CANTEEN NEXT NO MAN'S LAND

(Continued from page 162)

our fountain from the enemy. I can see the little village where our first line trenches are, and a bit beyond, across No Man's Land, which lies visible from my perch here. I can see the German first line trenches, too. And beyond that in plain view is the little mountain which cost the French 20,000 lives to take, and then they lost it after twelve hours. We are on one ridge, and the enemy are on another, and our trenches are in the marshy valley in between.

Last night I worked late at the canteen. What a welter that old wine cellar is! It gets jammed to the consistency of a sardine-tin; the piano is drummed for all the tunes that there are in it, and at times the whole crew joins in a chorus; the stove where the tea is made warms the air to the heat of Hades, and tobacco smoke thickens the air, which has not been ventilated for centuries, until it enters the nostrils like dough. At 10:30 last night we had Sunday evening service, by special permission. The hospital end of the cellar was crowded. I started in with fun, and went from that to deeper things, and at the close we all stood uncovered to pray for ourselves and for the folks at home. It was a strange, steaming crowd of men, in a weird place for worship, but it was well worth while. And then the Y. M. C. A. turned on a surprise. While I was speaking a car had come up with a parlor movie machine, and so at eleven o'clock we had a cinema performance in the wine cellar—the first one ever held there so far as any one here knows.

This morning I slept until breakfast time—ten a. m. For there are only two meals a day here—at ten and five. That saves the food, of which there is none too much, and it suits the convenience of the men who come in late at night from the trenches and want to sleep long in the morning. Breakfast consists of boiled rice with karo syrup over it, a hunk of bread and a bowl of coffee. Dinner yesterday consisted of thin tomato soup, a hunk of bread and a bowl of coffee. It doesn't sound very ample, but one gets along on it most comfortably—especially with the Y. M. C. A. canteen to fall back upon. Without that I fear the fellows would be hard put to it at times. But chocolate, cakes, jam, tinned milk, figs, even in very limited quantities, help out like everything—with plenty of free tea to wash it down. And cheerfulness is certainly the prevailing atmosphere here. So far as my experience goes, the most happy place in which to live, while war is on, is a dugout on the second line trench.

Tomorrow we are going to inaugurate a Y. M. C. A. service to the front line trenches. Twice a week after this the secretaries with a carrying party of the soldiers, will go out to the first line, taking canteens and smokes to the boys there. I am glad to be in on the first trip. We shall walk out by daylight thru the communication trenches—a long, hard, muddy, hot pull, as everybody says—and shall come back at night along the road, where it is impossible to go by day. Anyhow, I will tell you about it tomorrow morning.

Well, we had a great time. We left early in the afternoon, two Y. M. C. A. men and three soldiers. We had steel helmets on our heads, gas masks at "alert" on our chests, canteens of drinking water across our shoulders, shoes over our shoulders, too, to walk back with, and rubber boots on our feet to walk out with, and on our backs bitlap bags of edibles and smokes. It was

# LIPPINCOTT Books

## FICTION

**ESMERALDA, or Every Little Bit Helps** by Nina Wilcox Putnam and Norman Jacobson. Frontispiece in color, 1 in half-tone by May Wilson Preston. \$1.00 net. The breezy, humorous story of a girl from California who upsets the traditions of New York's smart set and incidentally does some splendid War Work. This is a patriotic tale, up to the minute, startling and delightful, that no American will want to miss.

**CLEAR THE DECKS!** by "Commander." A thrilling tale of our navy boys in action—based on fact. The type of "new" book we are all anxious to read. Written by a U. S. Naval Officer during off hours in actual service. Illustrated. \$1.50 net.

**THE HISTORICAL NIGHTS' ENTERTAINMENT** by Rafael Sabatini. Scenes already famous through great foreign writers portrayed with rare skill in the form of thirteen short stories each culminating in the dramatic happenings of a night. \$1.75 net.

## MISCELLANEOUS

**THE SUBMARINE IN WAR AND PEACE** by Simon Lake, M. I. N. A. The foremost inventor of the day along submarine lines, gives an interesting, authoritative account of the development, present, past and future of under-sea craft, with many suggestions for inventors. It is scientifically accurate, yet not at all technical. Illustrated. \$3.00 net.

**THE WAR AND THE COMING PEACE** by Morris Jastrow, Jr., Ph.D., LL.D. Author of "The War and the Bagdad Railway." A new kind of Peace Book. The great moral issue of the war and the foundations of a permanent peace set forth in an original manner. \$1.00 net.

**THE ROMANCE OF OLD PHILADELPHIA** by John T. Faris. All the fascinating romance of the pioneer settlers' lives. Much new historical material and a "different" viewpoint. Period—up to the transfer of capital to Washington. 100 Illustrations. \$4.50 net.

**DECORATIVE TEXTILES** by George Leland Hunter. A perfect reservoir of combinations and schemes old and new. The first authoritative, comprehensive and thorough work of reference published in any language. 577 Splendid Illustrations in color and half-tone \$15.00 net.

**HOME AND COMMUNITY HYGIENE** by Jean Broadhurst, Ph.D. "A cyclopedia of hygiene."—N. Y. Tribune. Vital health problems and their solution, disease prevention and cure. The author is an expert in her field. Illustrated. \$2.00 net.

**MODERN SHIPBUILDING TERMS, DEFINED AND ILLUSTRATED** by F. Forrest Pease. The shipbuilders' and shipworkers' need for a complete authoritative reference book is supplied by this new encyclopedia and guide to the use of tools and ship construction. The author is an instructor in the Emergency Fleet Corporation. Illustrated. \$2.00 net.

**THE BUSINESS OF THE HOUSEHOLD** by C. W. Taber. Everything affecting home government thoroughly treated—heating, lighting, housing, insurance, pleasures, etc. A book every housewife, home-economics teacher and pupil should have. Illustrated. \$2.00 net.

## FOR BOYS AND GIRLS

**THE AMERICAN BOYS' ENGINEERING BOOK** by A. Russell Bond. Following a boy's natural bent to construct, the author trains his youthful readers to do real men's work in miniature, at almost no cost. A book boys will revel in, and which will help to fit them for larger tasks. In years to come, 250 diagrams. \$2.00 net.

**AMERICAN BOYS' BOOK OF SIGNS, SIGNALS AND SYMBOLS** by Dan Beard. Every kind of code transmission fascinatingly described. Indian, forester, animal tramp, secret organization, Morse Telegraph, Navy, deaf and dumb, etc. A treasure-house for boy scouts. 350 Illustrations. \$2.00 net.

**GENERAL CROOK AND THE FIGHTING APACHES** by Edwin L. Sabin. A stirring tale of adventure with General Crook, the redoubtable Indian fighter. Actual history is the basis for this thrilling tale. Jimmy Dunn, who aided General Crook, will be the envy of every live American boy. Illustrated. \$1.25 net.

**KEINETH** by Jane D. Abbott. The best of modern American home life is portrayed in this wholesome girls' book. The enchantment of this delightful story lingers long in the memory of the fortunate girl reader. Illustrated. \$1.25 net.

## CASH for Your Real Estate No Matter Where It Is

I got cash for my property in less than two weeks. Made sale myself so had no commission to pay. You can do the same with

The Simplex Plans for Selling Real Estate. No matter where located, these practical, scientific plans will show you how to sell your property—put it up, and for cash—without employing agents or paying commissions. Investigate at once. Learn how easily you can use The Simplex Plans, just as I did, to sell your real estate. Write today (a postal will do) to

THE SIMPLEX COMPANY  
Dept. 5, 1123 Broadway, New York

They will send you full particulars without cost or obligation.

### Quick Results!

"Sold for Cash in 10 days. Recommend your methods." — Wm. H. Crawford, Meigs. "Your method sold my farm for cash." — Mrs. J. J. Childs, Minn. "Sold my property. Your plan quickest I ever saw." — J. J. Smith, N. Y. "Sold my hotel for \$8,000." — G. F. Stewart, Ill.

a heavy load. I never went so heavily accoutered before, and am not hankering for the like again.

The communication trench leaves the town just a little below where I am sitting now. It is a deep, narrow slit in the ground, duck boards at the bottom, and the sides bolstered up with wire netting whose sharp points catch one's clothes, or with plaited sticks that poke into one's anatomy most viciously. We stumbled on thru a tortuous maze of these intersecting passageways—wading thru water, sloshing thru mud, falling thru broken duckboards, squeezing thru caved-in narrows, losing our way and doubling and turning with the trenches. After two hours, we emerged to find ourselves about fifteen minutes' walk from town—if we could only have gone over-head! We sat for a few moments behind some camouflage, where the trench takes the surface, resting, and we had our reward. The Germans began shelling our town that we just had left. When we heard that first shell we "hit the earth" quick. That is a military order easy to obey without thinking, and any officer would have been content with the speed and agility with which we fell flat. After that, we discovered what was afoot and could watch it at leisure. We could hear the German gun go off, several miles away; then the "sing-song" of the shell along its trajectory over our heads; and then the burst of the shell in the town; and we could see the cloud of smoke which it kicked up.

We watched until the shelling stopped and then went on again, and about 4:30 came to the first group of men that we were seeking. I wish you could have seen our extemporized post-exchange, in a trench, just in advance of our present first line trenches, beside a camouflaged road. It was a most welcome arrival, you may be sure, to all the hungry, smokeless men.

Out there we had a fierce little battle a few weeks ago, as a result of which our men had to fall back, and when they counterattacked and regained the ground, they found their old first line so knocked to pieces that they have not used it since as a regular first line. They occupy it by day with outposts and sharpshooters and fall back at night. There is, therefore, quite a little ground which is our territory by day, and at night is No Man's Land. We went out into that dubious ground and set up our second post-exchange in a little hamlet, that now is hammered utterly to pieces. It was very worth while doing; the boys naturally appreciate having the Y. M. C. A. come out to them in such a place with things they need. We set up our canteen in a ruined courtyard, and the men came in from the dugouts all around. We had an evening meal with the men there, too—beans, tinned salmon, bread and coffee. Then we went out to our old first line. It is as close to the enemy as I am likely to get. From the observation post we could see plainly, a hundred yards or so away, the German barbed wire and trenches. All was quiet, except the crack of sharpshooters' rifles and the sing of bullets, going back and forth as some unwary men on either side were sighted and sniped at. Needless to say we kept our heads down. It was very interesting. The traps set, with mines waiting to go off if unwise marauders came, the piles of hand grenades, the sing of the snipers' bullets, the desolate silence of No Man's Land—very impressive! We came away reluctantly, picked up the remainder of our packs and hiked over to the village, which I can see from here now—down by our front line.

Here we found boys who had not been paid for weeks and were all "broke." We blew ourselves—gave away tobacco, choco-

# A LAST CHANCE

On November 15 the Survey raises its price to \$4 a year.

But not only will the price increase. The value of the Survey will keep on increasing during the years of war and reconstruction when social and industrial issues play so large a part in world affairs.

The Survey deals fully and expertly with problems in the fields of labor, health, civics, relief, education, child welfare. Edward T. Devine, back from France, has re-joined the Survey Staff as a regular weekly contributor. Dr. George M. Price, director of the N. Y. Board of Sanitary Control, is now in charge of the Survey's department on public health. Special attention will be given to the labor movement at home and abroad.

Subscribe to the Survey  
NOW at \$3.

late, cookies, to the whole town. The news spread. Out from the dugouts, down between the ruins, along the paths and streets the fellows streamed in to get the coveted goodies. It was *great* sport; I haven't had so good a time in a long while.

What a picture of desolation the village was! Nothing was whole, but once in a while enough to indicate with pitiable clearness what used to be there. The school, the mayor's office, the fire department, the church—one could locate them. And here a fireplace, there a broken bed, showed that a home was once between the now shattered walls. Everything was done utterly to pieces, and even the roads ripped every way by shells.

From this first line town, our second line town is plainly visible, sitting on the ridge. The Germans put on a show for us, and shelled our town again as evening came. Once more we could hear the boom of the German guns, the song of the flying shells above our heads, and the burst when they struck their mark near the old tower in our village here. It came at sunset time—a wonderful sunset after a perfect day—and for a little while the show was very interesting.

Then after dark, armed with the password, we walked quickly up the road to our own billets, traversing in a half-hour what had taken three hours by trench. Perhaps I wasn't tired! I was glad to spend twelve hours in bed last night. Not without some thrills, tho! At eleven o'clock a series of our aerial squadrons began going overhead toward Germany, and they say this morning that heavy bombing was done. Then at midnight bedlam broke loose. All our batteries along the line behind us here began pouring high explosive and gas into a newly discovered German billet, and the shells tore over us, splitting the air with terrific reports. The shelling was short and fierce, however, and then we had peace. And now after three hours' selling in the canteen I am back here in my shady nook among the trees. Once more it is a glorious, hot day. Near me three boys, stripped to the waist, have been searching for "cooties." I heard one of the boys, evidently not altogether a stranger to the hymnbook, refer to them as "pilgrims of the night." One of our big guns has been sending shells over us with startling suddenness and a terrific report; if you see some special jiggles in my chirography, that is where the shell came by. But, for the rest, all is quiet, and war could not be conducted much less dangerously to the combatants.

### Pebbles

The Russian revolution would be all right if it could stop revolving. —*Brooklyn Eagle*.

Usher—Excuse me for waking you, sir, but your snoring is waking up everybody in church.—*Judge*.

Motto for the American "Doughboys": "Always ready when kneaded!"—*London Pizzing Show*.

Mahomet V may have been assassinated, but for a sultan that does not mean that he did not die a natural death.—*Springfield Republican*.

"Did Angela reject Sammy when he proposed?"

"Not exactly, but she put him in Class 5, only to be used as a last resort."—*Life*.

There's nothing to equal the Yankee sense of humor. One of the boys in the trenches, who has evidently been greatly troubled by cooties, says he knows now why the pictures of Napoleon always show him with his hand inside his shirt.—*Detroit Free Press*.

# "See Here, Tockstein, We Need You in Our Business"

## How a Patriotic Letter Carrier Came to be Deluged with Fine Business Offers

In Fresno, California, there is a wide-awake young man named Tockstein. Until recently, he wore the blue-gray uniform of the Post Office and delivered letters for Uncle Sam. He was ambitious, and he knew that to get on he must not look for aid outside himself but within.

He had very little time and he was always very tired when he was through with his day's work. But he found a way—and that way is open to you too. The first result of his new way was that he sold 37,744 thrift stamps in one day—breaking all records—simply because he had learned a new way to do the work of three people in one short day without getting tired.

And the next result was that because of his record-breaking feat, he has had offer after offer from responsible business houses at a big increase in salary. He hasn't decided yet which to take—they are all so good.

Now what he did was simple. He sent a coupon like the one at the bottom of this page for

## The Emerson Course in Personal Efficiency

What It Has Done for Others It Can Do for You

R. S. Howland, who owns fruit groves in Florida, found that it gave him 24 hours more a week—a whole day. Suppose you had one day more a week in which to make money, or to play golf, or to run your car?

R. F. Brune, a grocer of California, got \$3,000 a year extra in income and cut down his working hours. E. L. Swanson, Secretary of the Fort Pitt Chocolate Company, Inc., got a 33 1/3% raise in salary. E. Q. Cannon, President of the Salt Lake Stamp Company, learned how to quit before quitting time. And so it goes with 25,000 men all over the United States. What you get out of efficiency is what you want to get—whether it is leisure, health, money, or peace of mind—that thing you find in it.

This Book—20 Chapters  
—In Colors—Illustrated

**FREE**

Send for this book. It tells you how to take "A Short Cut to Success." Some of the chapters: What is Efficiency? For whom is Efficiency? How you are taught Efficiency? Are you can-headed or eye-headed? Most failures are due to guess-work. You use only half your power. To what do some men owe their success?

**Send This Coupon**

It costs you nothing. It will be a big step ahead and put you on the road to leisure and success. It will give you a wider view of your business. This Course is not an expense. It is an even investment for future returns. It pays for itself with the first page of the first lesson.

Send for the free book now and start on a new and sure road.

**REVIEW OF REVIEWS CO.**  
30 IRVING PLACE NEW YORK

Harrington Emerson has applied these principles to over 200 factories, railroads and other organizations. They are studied by efficiency engineers in America, in England, in France, and in other countries who have learned them from Emerson.

Every day that you work wrong is a day taken out of your future success. Send the coupon today. It costs you nothing and may mean the doorway to a great new future for you.

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course has been reduced from three years to two years and six months. Every young woman who enters a training school for nursing to-day renders a patriotic service by releasing a pair of trained hands for service "Over There."

For Information write to MISS AGNES S. WARD, Superintendent

## THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York

FIFTY-SECOND YEAR

A School in the Heart of the Open Country. For Boys from 9 to 19.

**LOCATION:** 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.

**WORK:** Preparation for College or Business Life; recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes. A teacher for every seven boys.

**ATHLETICS:** Two fields with excellent facilities for all sports, under supervision: hiking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

## MISLEADING FICTION

(Continued from page 167)

thing is rosy in your popular magazines, you know. Even the print, the pictures, are much better than in Russia. Since the war began we have had every kind of crisis in Russia: the paper crisis, too. And the appearance of our story books became as pessimistic as their contents.

The smiling Americans from the book covers won the credulous heart of Olia.

"How nice life in America must be!" she whispered to me very often. "Every hero in their stories becomes happy: if he is a good-looking young man (they are all good-looking!) he may marry the beautiful and innocent daughter of a millionaire."

If it is *she*, she becomes the wife of a terribly brave young Hercules who saved her life, won the first prize during the baseball game, made a great invention or something of that kind. If she is a dear old lady, kind and religious but very badly off, she may get an unexpected inheritance and so buy a nice bungalow in California and exercise her good deeds and prayers undisturbed all the rest of her life. It looks like a lottery in which there is no losing—the happy life in the happy country!

Of course sometimes there is sorrow even in American short stories. The wife thinks her husband is untrue to her; the mother is afraid of the conduct of her youngster. The railroads belonging to the papa of the sweet girl-millionaire are in danger: the strike of the poor, misled, uneducated workmen or the ghastly vision of the government ownership, you know. But everything is solved at the end of your eternally optimistic stories: The suspected husband rides downtown so often, leaving his wife alone, just to take dancing lessons; it seems to him that he is too serious for his young wife and he fears lest she be bored without the dancing. . . . The mother, anxious for her son, makes a discovery that he visits the suspicious old house for the noble purpose of giving English lessons to the poor children of a young immigrant widow. The father of the young millionaire-bride convinces the strikers that their demands are unreasonable, and the ghost of national ownership becomes the good angel who grants profits to stockholders. And everything is all right!

O, that blessed life in American short stories! No wonder it won the heart of my young friend, Olia!

She whispered and exclaimed, "How beautiful and moral is the American life!"

And at last she ran away to see it. Poor Olia! She lived in a modest boarding-house uptown. The landlady's face was gloomy, her eyes red with tears.

"Why are you so sad?" asked Olia sympathetically.

"Oh, I am so unhappy! My husband, that old rat, spends five afternoons every week in the Bronx, I think. . . ."

"You must not think that!" exclaimed my friend Olia warmly. "You must not doubt your husband. Perhaps he is only learning to dance for your sake and . . ."

But when she looked at the skeptical face of the woman, she felt suddenly how silly she was.

The same little disappointments repeated themselves of course: the young bookkeeper, so eloquent and handsome that he seemed to be a real book hero, was not the disguised son of a millionaire; he was just the bookkeeper and, altho he worked hard, and believed in the cheerful American creed: "I am the master of my fate, the captain of my soul," he was very, very far from the position of chief manager. . . .

And the dear old ladies who were badly off had not the slightest hope of acquiring a bungalow in California. They stood, in

## Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. **Real teaching.**

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, especially valuable for its full reports of the literary market. Besides our teaching service, we offer a manuscript criticism service.

## How to Use The Independent in the Teaching of English

The lessons prepared by Dr. Frederick J. L. L. H. in the English Department of the University of Chicago, where more than FIVE THOUSAND have studied, is of great value to teachers of Oral Composition, Composition, Reading, Public Speaking, Rhetoric, Journalism, Interpretive Speaking and Oral Examination. It is free. Send for it will not place you under any obligation. Address: **The Independent**, 119 West 4th St., New York.

stead, in the long fuel lines, sugar lines, bread lines, and their "lovely white hair" was disarranged by the cold wind coming from somewhere in Chicago. (Olia received an impression that all the cold waves were manufactured in Chicago.)

The strikers of America were not convinced by kindly words of millionaires, and continued their demands. The youngsters were not so well conducted as that innocent young boy in the story—they preferred to give lessons to the young immigrant widow, instead of to her children.

Oh, but I feel that I am becoming too pessimistic to write about America. Excuse me—it is my old bad Russian custom.

Let us talk seriously: my Olia is only a caricature of me. My disappointment is my fault; I expected too much from America; I know life—I am not sixteen any more. But really, your "middle literature"—your optimistic short stories may deceive the green foreigners. I must admit it is not wholesome food for even Americans.

I do believe in cheerfulness and optimism. Your great writers showed the world how to smile and be brave. Such different types of talent as Mark Twain, Walt Whitman, and Jack London teach the same feeling. They teach us to love life and not be afraid of it.

But every theory and every feeling can be extended to the absurd. The great philosopher Hegel told the truth, altho he was a German. Every proposition, exaggerated to its extreme, becomes its opposite.

American personal optimism in big doses, swallowed every day, is pernicious to the nation. Everybody overappreciates his personal ability. Every poor clerk believes he can become a chief director and every movie-actress is confident she can become a star. How many broken ambitious and shattered hopes!

And the worst of it is that the typical personal optimist forgets one great thing: solidarity.

Social solidarity is born of doubt, of disbelief in personal strength. People disappointed in their weak powers gather together to be a mighty society. That is the way the first states were formed.

Every day American literature repeats too often, "I am the master of my fate, the captain of my soul." It makes Americans too self-assured and selfish; they accustom themselves to fight alone. But the last war has shown us that in the great struggle we cannot be victorious without solidarity. Even our common life cannot be radically improved by personal effort only. What can the strongest personality do with the lack of fuel and the cold wave? The convinced "master of his life" may be frozen by circumstances as well as the Russian fatalist, if he does not become more modest. At the present time society is master of life, and it is very helpful to realize our weakness, and join the great work of the community.

Don't believe that each of you can marry the daughter of a millionaire or make a big invention. Don't believe so much in personal success! It is a mirage from the short stories, shown to thirsty people to keep them under the illusion of happiness.

The typical Russian writer sees life through dark goggles. The typical American novelist sees it in too rosy a light. If it were possible to mix them together, what a really splendid creature it would be! The genuine writer, true to life, to its hopes and to its sorrows!

But, as we cannot mix them together, the best way to change the style of our literature is to know each other as well as possible. Every example is contagious. And I believe optimistically (altho I am a Russian) that good examples are more influential than bad ones.

## \$95 an Hour!

"Every hour I spent on my I. C. S. Course has been worth \$95 to me! My position, my \$5,000 a year income, my home, my family's happiness—I owe it all to my spare time training with the International Correspondence Schools!"

Every mail brings letters from some of the two million I. C. S. students telling of promotions or increases in salary as the rewards of spare time study.

What are you doing with the hours after supper? Can you afford to let them slip by unimproved when you can easily make them mean so much? One hour a day spent with the I. C. S. will prepare you for the position you want in the work you like best.

Yes, it will! Two million have proved it. For 27 years men in offices, stores, shops, factories, mines, railroads, in the Army and Navy—in every line of technical and commercial work—have been winning promotion and increased salaries through the I. C. S. More than 100,000 men and women are getting ready *right now* with I. C. S. help for the bigger jobs ahead.

### Your Chance Is Here!

No matter where you live, the I. C. S. will come to you. No matter what your handicaps, or how small your means, we have a plan to meet your circumstances. No matter how limited your previous education, the simply written, wonderfully illustrated I. C. S. textbooks make it easy to learn. No matter what career you may choose, some one of the 280 I. C. S. Courses will surely suit your needs.

When everything has been made easy for you—when one hour a day spent with the I. C. S. in the quiet of your own home will bring you a bigger income, more comforts, more pleasures, all that success means—can you let another single priceless hour of spare time go to waste? Make your start right now! This is all we ask: Without cost, without obligating yourself in any way, put it up to us to prove how we can help you. Just mark and mail this coupon.

## Salt pork for breakfast, salt pork for dinner, salt pork for supper

Do you remember? You do if you lived in a village or on a farm thirty or forty years ago.

Fresh meat was in those days hard to get. The refrigerator car had not then been developed, and therefore it was practically impossible to ship perishable meats from the city packing houses into rural communities.

In the larger towns the local meat shops did their own meat dressing, but on the farms each family did its own butchering in the winter and used salted and pickled meats in the summer. The small villages depended on the farms in the winter for what meat they could get.

\* \* \*

Today there is no village so small, and few farms so isolated, that fresh, sweet meat is not regularly available at all times.

This change came with the establishment, by the large packers, of a nation-wide system of meat distribution into the small towns and rural communities.

This system is known as the "Car Route" system. It means that practically every village and small town in America is visited at regular intervals—in many cases as often as

three times a week—by refrigerator cars loaded with fresh, sweet meats.

\* \* \*

Following closely on the heels of the development of the refrigerator car, an achievement in which Swift & Company played a big and vital part, came the development of the car route system.

Here again Swift & Company played a leading role, as it was they who put into operation in 1890 the first car route.

This first route has grown and expanded until today there are hundreds of such routes operated out of the various Swift packing houses.

\* \* \*

Today millions of people who live on farms and in villages rely on car route distribution, to a great extent, for fresh meats.

Thanks to the initiative and progressiveness of America's packing industry, they are no longer confined to an unchanging diet of salted and pickled meats.

Fresh beef and meats of all kinds—of a quality that is recognized as the standard of the world—are today staple foods on American farm and village tables.

#### "Y"

When he wants to write a letter  
And you know that he had better;  
To his mother, or his father, or The Girl,  
Or he's feeling sort of lonely  
And the thing he craves is only  
An oasis in the racket and the whirl,  
Or he yearns for conversation  
Or the glad exhilaration  
Of a movie with a comic custard pie.  
He will hurry helter-skelter  
To the Y. M. C. A. shelter,  
Hereinafter to be spoken of as "Y."

It's a cosy little cot  
When it's chilly or it's hot;  
For a fellow needs a spot  
Where it's dry.  
'Tis a happy little hut  
Where they do not pose or strut,  
And the door is never shut  
At the "Y."

So, that nothing need be lacking.  
Lend the Hut your earnest backing—  
Let the boy who bears the battle have  
his club!  
Give more often than you care to,  
Draw the biggest check you dare to,  
For the entry will look well upon the  
stub.

Help to cheer the youthful fighter;  
Help to make his lot the brighter;  
You can spare a little extra if you try,  
That the lonely, sad, or weary  
Shall have comfort, warm and cheery.  
In the winsome little wigwam known as  
"Y."

It's a heavenly retreat  
For the lad on weary feet  
Where we possibly shall meet  
By and by;  
'Tis a happy little hut  
Where they do not pose or strut,  
And the door is never shut  
At the "Y."

—Arthur Guiterman

#### REMARKABLE REMARKS

**THE KAISER**—President Wilson must see his chance to take Canada and Mexico.

**DOROTHY DIX**—Men like to be clucked under the chin as tho they were babies.

**JOHN D. ROCKEFELLER, JR.**—As surely as there is a God in Heaven right will prevail.

**CARL SANDBURG**—Our earth of a turning ball, Who set it swinging? A great Nobody.

**CHANCELLOR VON HERTLING**—The wild-war fury is at present raging in the United States.

**KITTY CHRISTIAN**—I know that "The Star Spangled Banner" can never be adopted permanently as our national anthem. How do I know that? Because God—omnipotent wisdom and intelligence, the God

#### THE NEW PLAYS

Robert Mantell begins his season of Shakespearian and classical repertoire with a masterly performance of Lord Lytton's *Richelieu*. (Forty-fourth Street Theater.)

*Le Secret*. A typical French situation created by the deception of the fascinating Gabrielle Jannelot. Each part is sympathetically taken and the whole is delightfully and artistically portrayed. (French Theatre du Vieux Colombier.)

*Ladies First*. Not a big show but a clever one. Nora Bayes is deservedly featured. If you have enjoyed her before you will enjoy her even more. William Kent as Uncle Tody is immense. (Broadhurst Theater.)

*Be Calm Camilla*. Another charming comedy of subtle humor by Clare Kummer. Lola Fisher is at her prettiest. William Sampson does an excellent piece of character work in "Mac," the waiter. (Booth Theater.)

True types and incidents in English county family life are portrayed in *Peter's Mother*, with special emphasis on manners and the traditional, hereditary, unheeding selfishness of man. There is a bit of war flavor. (The Playhouse.)

*A Stitch in Time*, by Oliver D. Bailey and Lottie M. Meaney. Comedy drama of a rich little poor girl who gets the pot of gold at the end of the rainbow. Wholesome and pleasing romance, tho nothing exceptional. (Fulton Theater.)

# Two Mines with but a single thought

The coal mine and the asbestos mine have a big job in common — maximum production of power.

With the burning of coal in these times goes the obligation to use its heat efficiently. So every ton of fuel mined summons more asbestos from another mine, automatically, to guard jealously the heat from that fuel.

The two mines are racing together toward a common goal.

As the largest factor in the mining and fabrication of asbestos, Johns-Manville bears a burden of heavy responsibility. Asbestos is the fibrous mineral base of the most efficient heat insulations. It is the necessary other 15% in 85% Magnesia.

It is, as well, the basic material for many economical packings which reduce friction, prevent leakage, resist wear, and save power. In almost every plant improvement or extension, asbestos in one form or another is practically indispensable.

This development of asbestos from the status of a little-known curiosity to its present rating as an industrial necessity, is due in no small part to Johns-Manville. So we can be doubly proud that when the nation needed Asbestos, our mines and factories, our laboratories and mills, our engineers and chemists, all were ready to play their part in the nation's service.

**H. W. JOHNS-MANVILLE CO.**  
New York City  
10 Factories—Branches in 63 Large Cities

*To save steam and power, and hence to save coal, specify these Johns-Manville Materials:*  
Asbesto-Sponge Felted Heat Insulation; 85% Magnesia Sectional Insulation; Asbestocel and Air-Cell Sectional Insulations.  
Sea Ring Rod and Shaft Packing; Universal Piston Packing; Mogul Stem Packing; Service Sheet Packing; Seigelite Sheet Packing; Kearsarge Gaskets; Vulcabeston Pump Valves.

## FORCE PLUS DIPLOMACY BRINGS VICTORY

**T**HIS supreme triumph, the satisfactory ending of the greatest war the world has ever known, has been brought about by the joint action of two forces, the military genius of Foch and the diplomatic genius of Wilson. By that we do not mean to impute to them any exclusive credit or to imply that there are no others who in their places might have done as well. But by the course of events these two men were put into a position of leadership and they have accomplished their task in a way to win the admiration of the world, including their enemies at home and abroad. Sometimes the critical have complained that Foch was retreating or that Wilson was weakening, but we believe that when the inside facts are known it will be seen that both have pursued quite consistently and very tenaciously a well thought out line of policy leading toward the conclusion now attained. It was combined effort under unified direction that won.

The completeness and suddenness of our victory are due to the unprecedented coördination of the military and diplomatic offensives. Enemy towns have been bombarded simultaneously with high explosives and presidential messages. Neither one alone could have so quickly accomplished the desired result. When Foch delivered an attack he knew what was the weakest sector in the enemy's line and when to hit it. Wilson had the same knowledge of the internal state of the enemy countries and he timed and directed his utterances to promote their demoralization. And each played into the hands of the other in accordance with the plans of the Allies. The military movements had a political aim and the diplomatic measures were designed to facilitate the military operations. The half-million men at Salonica remained almost idle for two years while the Bulgars, largely because of America's intervention, became increasingly disgusted with their part in the war. Finally, when it was thought that the process of internal disintegration had gone far enough, external pressure was applied and Bulgaria collapsed at the touch. The Bulgarian troops, undefeated, withdrew from their impregnable positions in the Macedonian mountains and the white flag promptly appeared at the front. The

same strategy was pursued in the case of Austria and with the same success. While the Allies were fighting their hardest along the Marne and the Aisne and the Somme and the Meuse, all was quiet along the Piave. It was uncanny. Some suspected the Italians of being unwilling to attack; some accused the Allies of leniency toward Austria. But while there was no fighting on the Austrian front, the Allies were making gains daily in the heart of the country. Certain conversations in Washington and Paris with exiled Czechs, Jugo-Slavs and Poles were doing what cannon alone could not accomplish. Finally, when the signal was given for the Italians to advance they found their work half done. The Austro-Hungarian armies were dislodged from their Piave positions by an inferior force. The retreat became a rout, three hundred thousand surrendered and the white flag came to the front within a week.

In the case of Germany also the successive attacks of the French, British, American and Belgian troops were so timed as to coördinate with the exchange of peace notes and produce the maximum effect upon German public opinion and military morale. The peace offensive and the war offensive both reached their climax this week, and while the Versailles Council was discussing the terms of the armistice Haig and Pershing were winning their greatest victories.

And may we take this occasion to reply collectively instead of by private letter—since the Government wants to save paper and we want to save postage—to the various correspondents who during the last few months have criti-

cized us for our support of the President's policy. They insisted that there must be no cessation of hostilities or peace parleys till every German was driven out of France and Belgium, or till as many cathedrals and homes should be demolished on the eastern side of the Rhine as on the western, or till the Allied armies had marched down Unter den Linden, or till the German people were unanimously convinced that they had been wrong all the time, or till the Kaiser was hanged, or till something else more or less desirable had happened. And when we pointed out that it would be much better, if possible, to induce the Germans and Austrians to accept the

The recall of the U-boats.  
The assassination of Count Tisza.  
The abdication of the Czar of the Bulgars.

President's terms where they stand than to fight them back to their own frontiers and destroy the country to be delivered, some few readers who failed to get our point of view accused us of being "Bolsheviki," "Pacifists" or "Democrats" or "Pro-Germans," whichever epithet seemed to them most opprobrious. But now the peace policy of the President has been vindicated by events. We are satisfied with the situation and if all our readers are not we cannot help it. Nor—fortunately—can they.

## A COALITION CONGRESS

THE election did not return to Congress the Democratic majority which the President—speaking in his capacity of party leader—asked for. But we do not believe that the result means any repudiation of his war policy now being brought to a triumphal conclusion nor that the Republicans will hamper him in the development of his future plans for the establishment of a durable peace on the basis of a society of nations. On the contrary, we believe that both parties will cordially coöperate in this unprecedented undertaking.

Party divisions ought never to be carried into the field of foreign relations. In times of peace and for ordinary internal legislation the two party system does not work so badly, for important measures are carried usually thru by a party vote and the opposition serves the minor tho essential purpose of criticism. But in times of war and on foreign affairs the nation should so far as possible present a united front, and this means that the two parties must coöperate in the formulation of a single line of policy. To accomplish this both parties must submit to a sacrifice of partizan advantage. The dominant party should suspend its power of ruthlessly overriding the wishes of the others by weight of numbers and should counsel with them as partners. On the other hand the party which is in the minority in Congress should lay aside its attitude of opposition and destructive criticism and give its active aid to the administration. The two party system works like the wheels of a cart. So long as they are of nearly equal size the cart goes straight ahead. But if one of them gets much bigger or the other gets a hot box the cart just goes around in a circle.

Every European country has met the emergency of the Great War by a suspension of party politics and the formation of a coalition government of some sort. First, the Kaiser in his speech from the palace balcony called for the united support of the whole people, even the Socialists, whom he had a few years before denounced as outlaws. He received their support, altho later a minority of the Socialists went into opposition. Now both Clericals and Socialists have been admitted to the Cabinet. Next, the King of the Belgians called to Government Emile Vandervelde, the Socialist leader. In France a "sacred union" of all parties was declared and a coalition Cabinet organized. This pact has been religiously kept, altho last year a faction of the Socialists withdrew their support of the Government because of the disclosure of its plans for annexing the left bank of the Rhine. In England the opposition took the initiative and before war was declared Mr. Balfour and Mr. Law sent a note to Premier Asquith promising their support to any measures he might take. The British Parliament has long outlived its legal limit, but no election has been held altho one is now set for December 7.

We have sometimes suggested the advisability of a coalition war cabinet for the United States composed of the ablest men of all parties, tho we were well aware that meant a violent departure from American tradition. But something of the same result may be obtained from a coalition Congress provided its members will act as the representatives of various parties do when called into a coalition cabinet, that is, lay aside party prejudices and

cease to strive for party advantage. The President and Congress, whatever their party affiliations, should work together in the formation of foreign policy. In the future they will have to—or there won't be any foreign policy.

## FREEDOM OF THE SEAS

THE Allies have accepted all of the American terms with two exceptions. They have extended the demand for reparation to all damages inflicted upon civilians, and in this the President rightfully concurs. They have questioned the clause demanding the freedom of the seas, but this the President cannot withdraw without repudiating the historic policy of the United States from Washington to Wilson inclusive. The interference of England with our navigation was one of the chief causes of the Revolution, as the Declaration of Independence recites. We fought England again in 1812 in defense of the same right, but failed to get it assured in the Treaty of Ghent. Nor during the century since have we been able to make our views prevail in the world at large and today there seems little chance of it. England and France have always opposed the American doctrine of the freedom of the seas and they still do. Prussia, which was the first of the foreign powers to accept it, has been in the Great War the most ruthless violator of it and we cannot trust her present profession of it. President Wilson's polite but plain spoken remonstrances at the beginning of the war against British interference with the freedom of trade and navigation without even the pretense of a blockade had no effect, and since our sympathy was wholly with the cause of the Allies we had no disposition to insist upon our technical rights. But when Germany began her barbaric warfare upon the high seas we promptly entered the conflict and brought Germany to her knees. It was our third war for the freedom of the seas, or our fourth if we count the war against the Barbary States to protect the shipping of the Mediterranean.

The question must be brought before the peace conference for discussion, but it is evident in advance that the opposition will be too great to carry the idea thru in its original form as enunciated by Franklin, Jefferson and Washington. But the President proposes a different solution:

Second—Absolute freedom of navigation upon the seas, outside territorial waters, alike in peace and in war, except as the seas may be closed in whole or in part by international action for the enforcement of international covenants.

This asserts the freedom of the seas but not as an inalienable and irreducible natural right. It recognizes that it may be necessary to limit this freedom, but declares that the power to do it shall not as at present be in the hands of whatever nation happens to have at any time the most powerful navy but be exercised solely by international action for international aims. The League of Nations shall be mistress of the seas. In this form the doctrine ought to find acceptance even from those countries that have hitherto opposed it.

## THE OTHER ABSOLUTISM

WHEN the absolute monarchs have been put away and their estates have been probated, it will be necessary to turn attention to the other absolutism.

Of the two absolutisms the other one is on the whole the stupider and the wickeder. If monarchical absolutism learned little from the days of Nero to those of William II, the other absolutism has learned nothing since the days of Cain. Both absolutisms have been murderers from the beginning, but the other one has taken the greater relish in butchery for the animal excitement of it.

The other absolutism is the insensate power of the amorphous many, otherwise known as the mob or rabble. The amorphous many is ignorant beyond belief. Three thousand

years of enlightenment have sent hardly a ray into its instinctive mind. It is cruel beyond imagination. Two thousand years of Christianity have now awakened within it a pulsation of sympathy. It bawled "Crucify him" thru the alleys of Jerusalem, and it bawls "Hang him" in the streets of Petrograd. It yelped in pandemonium when Brutus, the megalomaniac, struck down Cæsar, and it leered impartially at Marie Antoinette and Robespierre on their way to the guillotine. In England a century and a half ago it burned and looted "papistical edifices" in the name of the Protestant religion, and in the United States in the twentieth century it burns negroes in the name of civilization.

A peril to life and liberty since the beginning of history, the absolutism of the amorphous many has become a menace to the human race. Extended beyond bounds by the aggregating percussion of modern communication, and frenzied by the brain storms of revolution, it now imagines itself to be humanity. It proclaims itself "the people," and announces its creation of "a new social order."

On what has this monster fed? On what is it feeding now; and wherewithal is it arrayed?

It is barbarically arrayed in countless strings of pearls that a bastard sentiment which has stolen the name of Christianity has been busily casting before swine. This sentiment insists that all human beings are by nature good until they are exploited. Destroy discipline, credulous sentiment says, compel no one to obey, give everybody "freedom" to "realize" himself, and the millennium will be at hand. An environment of ancient social injustices multiplied and magnified by modern capitalism is the cause of all badness: this is the irresponsible teaching. These beads of imbecility are the necklace with which the amorphous many accentuates its intellectual nakedness.

And the food on which it subsists, by which it grows and ravens and gathers absolute power, is the self-same dogma on which monarchic absolutism was nourished: the dogma, to wit, that the end justifies the means. Must a throne be strengthened? Assassinate all rival claimants. Must the state expand? Make scraps of paper of covenants and treaties. Must democracy triumph? Destroy the fruits of industry and thrift. Must the white man rule? Burn the "nigger." For "the king can do no wrong." The state "makes its own moral law." The "higher race" is its own justification. And "the people"? What is the people but a majority? And is a majority, forsooth, to be balked in its triumphant progress?

These are plain words. The time for plain speaking has come. The danger is real, and it is imminent. If the blood and treasure that have been poured forth to destroy the absolutism of the monarchs has been expended only to create and usher in the absolutism of an amorphous many, undisciplined in thought and uncontrolled in conduct, bitter with envy, and taking over from the older social system only its dogma of unscrupulous method, and its sentimental gurgle-song of the inherent goodness of human nature, what shall the travail of civilization have profited us?

## NATIONAL CHARACTER

THERE is no subject on which words have been spent more foolishly than that of national character. After all, a nation is an abstraction, the individual is a fact. You may make any statement you choose about the Irishman, the German, the negro, the Italian, or the Japanese as a people, but you would be rash to bet a penny that it was true of the next stranger you met who was introduced to you as Michael O'Gorman, Hans Schmidt, George Washington Johnson, Antonio Vermicelli, or Idzuno Motu.

And yet with every deduction for numberless individual exceptions, it remains true that certain facts of national conduct cannot be made wholly clear by reference to natural environment or industrial development. Why, for instance, are a people so numerous, so rich in genius, so favored by

nature with vast resources as the Russians, the least effective people in Europe in organizing against internal anarchy or foreign aggression? The dynasty and bureaucracy which ruled till last year was largely German; the forces of reorganization came from minor nationalities or from pioneer offshoots of Russian stock, such as the Cossacks and Siberians; even Bolshevism relied upon German organization, Jewish leadership and Lettish bayonets. The Balkan peoples are just as "Slavic" as the Russians, almost as unlettered, almost as backward in economic development and far weaker numerically, yet they had barely emerged from under the obliterating rule of Turkey when they showed, among less pleasant traits, a vigor, tenacity and indomitable self-assertion which have made them nations to be reckoned with.

It is evident that to achieve national greatness a people must have as a whole something in addition to the sum of their individual merits. In an army this is called "morale"; in a university "college spirit"; in a nation "patriotism." While it is easy to recognize the presence of this cohesive quality, it is not so easy to define it. It is not physical stature and strength, as any one can see who contrasts a spectacled Japanese student or a slender city-bred Jew with a giant Patagonian or Iroquois. It is not warlike courage, or the world would not have witnessed the partial extinction of the valiant and chivalrous Polynesian races. It is not military genius. Hannibal towered head and shoulders over the Roman generals who opposed him; but he was face to face with something, a "Rome," a spiritual republic, an invincible public spirit, which seems to have found no parallel in wealthy Carthage with her hired armies.

It is not intelligence, or the Athenians could not have succumbed to the comparatively stupid Macedonians, Spartans and Romans. It is a moral rather than an intellectual quality, but it does not comprize all traits of moral excellence, for the Germans of the northeast—the "Prussians"—rank above the European average in national cohesion as clearly as they rank below it in scrupulousness and just dealing. Finally, it is not mere uniformity; the mob of the like-minded. China, Great Russia and Egypt have produced the most homogeneous of civilizations. Yet they have shown less national virility and public spirit than Switzerland, a loose federation of microscopic cantons.

The usual explanation of this difference between the peoples who are self-determined and those who have to have self-determination thrust upon them, is that the former include the "sturdy" and the latter the "weak" races. But race will not explain. The ten tribes that scattered and were lost, in what did they differ from the other Jews who were scattered even more widely and yet are everywhere found, and found at the top? What changed the wandering Bedouin tribes before Mohammed into the world conquering warriors of Islam who swept from India to Spain? In these two instances religion supplies an obvious answer. But is not nationalism itself a religion? Would Michel Angelo have done "for art's sake" the great work which he did for the sake of beloved Florence? Could you remove the memory of England's history from the mind of the English and leave intact their poetry, their governmental skill, their moral character? Is it not possible that Verdun would have surrendered if the poilu had not somewhere found in himself a memory of Bayard and Joan of Arc? Are not Jefferson and Lincoln ruling us yet as truly as the present President and Congress?

National spirit is not, as the Germans hold, the only religion; it may not even be the best religion. Sometimes it degenerates into a religion of human sacrifice, sometimes it is exalted into a religion of saints and martyrs. But it can change a mob into a people, city dwellers into citizens, a stretch of hills and plains into a country, a place into a home, a dialect into a language and the day's happenings into history. It must be a religion because it works miracles.

# THE STORY OF THE WEEK

## THE GREAT WAR

*October 31*—Armistice with Turkey signed. Americans take 3000 prisoners at Bayonville, north of Verdun.

*November 1*—French and Serb cavalry reach Belgrade. Count Tisza, former Hungarian Premier, assassinated.

*November 2*—Boris of Bulgaria abdicates. Italians enter Trent and Udine.

*November 3*—Armistice with Austria-Hungary signed. United States recognizes Poles as co-belligerents.

*November 4*—War with Austria ceases at 3 p. m. Americans swim the Meuse.

*November 5*—President transmits Allied terms to Germany. British and French offensives gaining ground rapidly.

*November 6*—German peace delegation starts to meet Foch. Revolt of German sailors and soldiers at Kiel.

**The Americans Cross the Meuse** Underterred by the peace negotiations and the prospect of a speedy closing of the war, the British, French and American troops in France continued their attacks with equal pertinacity and unparelled success. Pershing's First Army launched a great drive north from their line at Grand Pré which carried them forward twenty-five miles in six days. Thursday they took Sedan, where was fought the decisive battle of the Franco-Prussian war of 1870. This advance meant the smashing thru the great German barrier known as the Freya Stellung which had been constructed between the Meuse and the Aisne. The eastern end of this system of fortifications rested upon the Meuse at Dun. When the Americans by their northward movement had got past this point it gave them an opportunity for a flank attack upon the town of Dun and other German positions east of the Meuse. This, however, was a perilous undertaking for it meant the crossing of two moats, the river and the canal in the face of the enemy fire. But here as

in the Philippine campaign the swimming ability of the Americans carried the day. A picked detachment of swimmers were sent on in advance and made their way across the Meuse, altho some were killed and many drowned after being disabled by wounds. The ropes carried over by the swimmers served as a means of constructing a foot-bridge and later pontoons were brought in. Next the Americans had to cross a half-mile stretch of mud raked by the machine guns from the German trenches. Beyond this was a canal sixty feet wide with steep sides. Some of the men made their way across by swimming, others by rafts and floats and finally the engineers succeeded in constructing two bridges. Those who swam the canal were able to gain the farther bank only by throwing up their grappling hooks and climbing up the ropes. The success of the Meuse enabled the Americans to encircle Dun and drive the Germans from the eastern bank. While the Americans were making this drive on the eastern end of the German line, the British were equally successful in a drive upon the western end along the Sambre and the French along the Serre. This joint attack from three sides converged toward a common center and imperiled the entire German position in France. Under this pressure the German military authorities hastened to learn the terms of the truce dictated by the Versailles conference. Ghent was evacuated by the Germans and the white flag raised to protect the city from bombardment.

**The Reply to Germany** Secretary Lansing in his reply to Germany of November 5, 1918, transmitted thru the Swiss Minister at Washington, recalls that in his note of October 23 he advised Germany that the President had transmitted his correspondence with the German authorities to the governments with which the American Government is associated as a belligerent with the suggestion that

if those governments were disposed to accept peace upon the terms and principles indicated, their military advisers and the military advisers of the United States be asked to submit to the governments associated against Germany the necessary terms of such an armistice as would fully protect the interests of the peoples involved and insure to the associated governments the unrestricted power to safeguard and enforce the details of the peace to which the German Government had agreed, provided they deem such an armistice possible from the military point of view.

Mr. Lansing then quotes the "memorandum of observations by the Allied Governments" which we give in full elsewhere. He then adds that the President "is in agreement with the interpretation set forth in the last paragraph of the memorandum," that demanding indemnification for damage to civilians and their property, but nothing is said about the doubt expressed by the Allies in regarding the "freedom of the seas" clause. We discuss this point editorially in this issue. Mr. Lansing concludes by notifying the German Government that:

Marshal Foch has been authorized by the Government of the United States and the allied governments to receive properly accredited representatives of the German Government and to communicate to them terms of an armistice.

**Germany Asks Armistice Terms** As soon as Secretary Lansing's note telling the Germans that they could find out the terms of truce by applying to Marshal Foch at the French front was received at Berlin the German Government hastened to comply. A wireless message received at 12:30 a. m. of November 7 from the German High Command to Marshal Foch named the plenipotentiaries and asked to be informed of the place where they could meet Marshal Foch. Within an hour Marshal Foch sent the following reply:

If the German plenipotentiaries desire to meet Marshal Foch and ask him for an armistice, they will present themselves to the French outposts by the Chimay-Fourmies-La Capelle-Guise road. Orders have

## THE ALLIES' TERMS TO GERMANY

The text of memorandum from the Allied Governments, transmitted thru President Wilson to the German Government:

*The Allied Governments have given careful consideration to the correspondence which has passed between the President of the United States and the German Government. Subject to the qualifications which follow, they declare their willingness to make peace with the Government of Germany on the terms of peace laid down in the President's address to Congress of January, 1918, and reserve to themselves complete freedom on this subject addresses. They must point out, however, that clause two, relating to what is usually described as the freedom of the seas, is open to various interpretations, some of which they could not accept. They must, therefore, reserve to themselves complete freedom on this subject when they enter the peace conference.*

*Further, in the conditions of peace laid down in his addresses to Congress of January 8, 1918, the President declared that invaded territories must be restored as well as evacuated and freed, the Allied Governments feel that no doubt ought to be allowed to exist as to what this provision implies. By it they understand that compensation will be made by Germany for all damage done to the civilian population of the Allies and their property by the aggression of Germany by land, by sea and from the air.*

been given to receive them and conduct them to the spot fixed for the meeting.

The mission appointed by the German Government to receive the armistice is headed by the Secretary of State, Mathias Erzberger, and includes Gen. H. K. A. von Winterfeld, former military attaché at Paris; Count Alfred von Oberndorff, former Minister at Sofia; General von Grunnel and Naval Captain von Salow, ten persons in all. A cessation of hostilities was ordered upon the sector where the peace delegation was to appear. On account, however, of the destruction of the roads leading to the front, the German automobiles could not pass until the road was mended, so the delegation did not arrive at the French line until Thursday evening.

It has since transpired that the German Government had additional reasons for hastening peace negotiations. The German sailors at Kiel revolted and were joined by the workingmen and soldiers. The mutiny spread until the entire Kiel Canal was in the hands of the insurgents. A Soviet, or Soldiers', Sailors' and Workingmen's Council, was organized and assumed control. The first act of the council was to order the release of military and political prisoners and to authorize complete freedom of speech and writing. The red flag is reported to have been raised on many battleships in the harbor.

**The Italian Victory** The Italian offensive which started on October 24 was brought to an end by the Austrian capitulation on November 4. It found the enemy demoralized by internal dissensions and weakened by privations, so victory was assured from the start, altho the enemy was superior in numbers and well entrenched in their old positions along the Piave River and in the mountains on the Trentino side. There were sixty-three Austro-Hungarian divisions, while opposing them were fifty-one Italian divisions reinforced by three regiments of British, two of French, one regiment of Czechoslovaks, and one of Americans.

The Austro-Hungarians lost heavily in the bombardment and assault of the first few days, and as they began to retire across the Venetian plain the Italian cavalry pursued them and cut them off. Five hundred thousand prisoners were taken before the truce was concluded, and the immense stores of munitions and provisions stored for the winter's campaign were abandoned without destruction. The booty includes at least five thousand guns and 250,000 horses and about a billion dollars in cash.

**Italy's New Frontier** The boundary line of the evacuated territory is delimited in great detail and is obviously not merely a temporary contrivance for the purposes of the armistice, but is designed to serve as a basis for a permanent peace. It apparently represents a compromise between the conflicting claims of the Slavs and Italians such as has

#### WHERE AMERICAN SOLDIERS ARE HELD PRISONER

This photograph of the prisoners' barracks in the Darmstadt camp was taken by a French soldier, who subsequently escaped. The prisoners have put rude chairs of their own making at their feet in the hope of preventing the German guard from walking on them while they are asleep.

been worked out in the conferences between these nationalities at Corfu, Rome, and lately at Washington. The extreme Italian Irredentists laid claim to the whole eastern coast of the Adriatic on the ground of future security from Austria sea power and because the chief cities were largely inhabited by Italians. On the other hand, the Jugoslavs pointed out the population of the littoral just outside the cities was overwhelmingly Slav and that the new Slavonic state or states to be established must have access to the sea if they were not to be strangled at birth.

The line described in the armistice divides the disputed territory partly on racial and partly on commercial considerations. Presumably the evacuated area west and south of the line is to be occupied and ultimately annexed by the Italians, and that to the east left to the Jugoslavs. If so, Italy gets the Austrian province of Istria and the northern half of Dalmatia, including the ports of Trieste, Pola and Zara. But the ports of Fiume, Spalato, Ragusa and Cattaro are not on the Italian side. The islands are divided. Italy gets the islands off the Dalmatian coast from Paga Island to Cape Planca, and again further south the islands of Curzola, Lesina and Lagosta, but not Veglia and Cherso opposite the port of Fiume or Brazza and Salta opposite the port of Spalato. The object of this doubtless is to prevent the islands commanding the entrance to these ports from falling into foreign control.

On the north the new boundary line follows the crest of the watershed of the Rhetian, Carnic and Julian Alps from the Swiss frontier to Carniola. This gives to Italy the Trentino as far north as Brenner Pass, territory peopled largely by Italians. It was the possession of this mountain salient, dominating the lowlands of Lombardy on the one side and Venetia on the

other, that enabled Austria for the last four years to resist all attempts of Italy and her Allies to break thru the northern frontier.

As soon as the armistice went into effect Italian troops were carried on warships across the Adriatic to the newly acquired islands and ports. The governor of the islands is Admiral Milio, of the city of Trieste is General Pettiti, and of the city of Fiume is Admiral Gagni.

**Austria Surrenders** At three o'clock on the afternoon of Monday, November 4, the Austro-Hungarian troops in Italy ceased fighting in accordance with an armistice signed on the previous day. General von Weber, of the Austrian General Staff, with a party of eight, presented himself on the evening of October 30 under a white flag at the Italian front and asked to discuss an armistice. The Italian commander, General Diaz, referred the matter to Premier Orlando, who was at Paris attending the Inter-allied Conference at Colonel House's residence. The terms decided upon by the conference were forwarded to General Diaz and promptly accepted by the Austro-Hungarian representatives. We publish the armistice in full on another column.

**The Dissolution of Austria-Hungary** The Austro-Hungarian monarchy, now that the external pressure is removed by the truce, is flying to fragments from its internal strain. Race has risen against race and class against class, while destitute people, deserting soldiers and unrestrained criminals roam about the country, rioting and looting. The various nationalities have seized the occasion to possess themselves of the territory they claim and a dozen local governments have sprung into existence.

In Galicia the conflict between the

claimants has reached the point of civil war. Eastern Galicia is inhabited largely by Ruthenes, who are of the same race as the Ukrainians of the adjoining region of Russia. In Western Gal-

icia the Poles predominate. But the two races are mingled in the most of Galicia, the Ruthenes generally forming the peasantry and the Poles the landed gentry, while in the towns the Jews

constitute the commercial class. The Ruthenes have set up a government at Lemberg with a view of uniting with the independent Poland of which Warsaw is the capital. The Poles have set up a government at Cracow with a view of uniting with the independent Ukraina of which Warsaw is the capital. But the fortress of Przemyśl, famous for its siege in 1915, lies half way between Lemberg and Cracow, and the rival races in Galicia are fighting for it. It seems that the German-Austrian troops took the Ukraine side and have captured Przemyśl.

At Budapest serious fighting took place between soldiers and civilians. The dominant personality here is Count Michael Karolyi, who seems at last to have secured recognition from King Karl as premier of Hungary and a mandate to form an absolutely independent Hungarian state. It is his intention to submit the question of a monarchy or a republic to a popular referendum in December at which men and women will have equal votes.

Count Stephen Tisza, who as Hungarian premier in 1913 is supposed to have dictated the ultimatum to Serbia that precipitated the war, came to a dramatic end at Budapest in retribution for that act. One evening three armed soldiers invaded the drawing room of his residence and were met by Count Tisza with his wife and the Countess Almassy. The soldiers asked the ladies to leave the room, but they refused. Then one of the soldiers said to him: "You are responsible for the destruction of millions of people because you caused the war. The hour of reckoning has come." Then the three soldiers raised their rifles and fired, killing the count and wounding one of the women. His last words were: "I am dying. It had to be." An attempt had been made to assassinate him a fortnight before.

The Austrian Government is doing what it can to facilitate the organization of the nationalities without disorder. An Imperial decree authorizes officers and soldiers to place themselves at the service of the new governments. Professor Lammasch, the Austrian Premier, states that the Government will act as trustee for these newly formed states and will aid them in receiving recognition from neutral powers and representation at the peace conference.

**The Resurrection of Bohemia** The best organized and most efficient of the various na-

tionalist committees has been that of the Czecho-Slovaks, and, as we should expect, the transition was effected at Prague with less confusion than elsewhere. The Austrian governor of Bohemia was politely given an indefinite leave of absence and the public offices taken over by the Czech National Committee without opposition. The machinery of the new government had been prepared in advance even to money and postage stamps. The troops and city officials swore allegiance to the Czech state. The railroad, telegraph and postal systems are running

## TERMS OF THE AUSTRIAN ARMISTICE

November 4, 1918.

### MILITARY CLAUSES

*One*—The immediate cessation of hostilities by land, by sea, and air.

*Two*—Total demobilization of the Austro-Hungarian army and immediate withdrawal of all Austro-Hungarian forces operating on the front from the North Sea to Switzerland. Within Austro-Hungarian territory, limited as in Clause Three, below, there shall only be maintained as an organized military force reduced to pre-war effectiveness. Half the divisional, corps, and army artillery and equipment shall be collected at points to be indicated by the Allies and United States of America for delivery to them, beginning with all such material as exists in the territories to be evacuated by the Austro-Hungarian forces.

*Three*—Evacuation of all territories invaded by Austria-Hungary since the beginning of the war. Withdrawal within such periods as shall be determined by the Commander-in-Chief of the allied forces on each front of the Austro-Hungarian armies behind a line fixed as follows: [The line described is marked on the map printed herewith and is discussed in the item on "Italy's New Frontier."] All territory thus evacuated shall be occupied by the forces of the Allies and the United States of America. All military and railway equipment of all kinds, including coal belonging to or within those territories, to be left in situ and surrendered to the Allies, according to special orders given by the Commander-in-Chief of the forces of the associated powers on the different fronts. No new destruction, pillage, or requisition to be done by enemy troops in the territories to be evacuated by them and occupied by the forces of the associated powers.

*Four*—The Allies shall have the right of free movement over all road and rail and water ways in Austro-Hungarian territory and of the use of the necessary Austrian and Hungarian means of transportation. The armies of the associated powers shall occupy such strategic points in Austria-Hungary at times as they may deem necessary to enable them to conduct military operations or to maintain order. They shall have the right of requisition on payment for the troops of the associated powers wherever they may be.

*Five*—Complete evacuation of all German troops within fifteen days, not only from the Italian and Balkan fronts but from all Austro-Hungarian territory. Internment of all German troops which have not left Austria-Hungary within the date.

*Six*—The administration of the evacuated territories of Austria-Hungary will be intrusted to the local authorities, under the control of the allied and associated armies of occupation.

*Seven*—The immediate repatriation without reciprocity of all allied prisoners of war and internal subjects of civil populations evacuated from their homes, on conditions to be laid down by the Commander-in-Chief of the forces of the associated powers on the various fronts. Sick and wounded who cannot be removed from evacuated territory will be cared for by Austro-Hungarian personnel who will be left on the spot with the medical material required.

### NAVAL CONDITIONS

*One*—Immediate cessation of all hostilities at sea and definite information to be given as to the location and movements of all Austro-Hungarian ships. Notification to be made to neutrals that freedom of navigation in all territorial waters is given to the naval and mercantile marine of the allied and associated powers, all questions of neutrality being waived.

*Two*—Surrender to the Allies and the United States of fifteen Austro-Hungarian submarines completed between the years 1910 and 1918, and of all German submarines which are in or may hereafter enter Austro-Hungarian territorial waters. All other Austro-Hungarian submarines to be paid off and completely disarmed and to remain under the supervision of the Allies and the United States.

*Three*—Surrender to the Allies and the United States with their complete armament and equipment of three battleships, three light cruisers, nine destroyers, twelve torpedo boats, one mine layer, six Danube monitors, to be designated by the Allies and the United States of America. All other surface warships, including river craft, are to be concentrated in Austro-Hungarian naval bases to be designated by the Allies and the United States of America and are to be paid off and completely disarmed and placed under the supervision of the Allies and the United States of America.

*Four*—Freedom of navigation to all warships and merchant ships of the allied and associated powers to be given in the Adriatic and up the River Danube and its tributaries in the territorial waters and territory of Austria-Hungary. The Allies and associated powers shall have the right to sweep up all mine fields and obstructions, and the positions of these are to be indicated. In order to insure the freedom of navigation on the Danube, the Allies and the United States of America shall be empowered to occupy or to dismantle all fortifications or defense works.

*Five*—The existing blockade conditions set up by the allied and associated powers are to remain unchanged and all Austro-Hungarian merchant ships found at sea are to remain liable to capture, save exceptions which may be made by a commission nominated by the Allies and the United States of America.

*Six*—All naval aircraft are to be concentrated and impactionized in Austro-Hungarian bases to be designated by the Allies and the United States of America.

*Seven*—Evacuation of all the Italian coasts and of all ports occupied by Austria-Hungary outside their national territory and the abandonment of all floating craft, naval materials, equipment and materials for inland navigation of all kinds.

*Eight*—Occupation by the Allies and the United States of America of the land and sea fortifications and the islands which form the defenses and of the dockyards and arsenal at Pola.

*Nine*—All merchant vessels held by Austria-Hungary belonging to the Allies and associated powers to be returned.

*Ten*—No destruction of ships or of materials to be permitted before evacuation, surrender, or restoration.

*Eleven*—All naval and mercantile marine prisoners of the allied and associated powers in Austro-Hungarian hands to be returned without reciprocity.

under Czech authority. The cars bear the inscription, "Free Czech Socialist Republic." The exportation of coal and food to Germany has been stopped. The Imperial insignia have been torn down by the crowds from all public buildings. American flags and miniatures of the Statue of Liberty are commonly displayed in Prague.

The Germans of Bohemia have formed a provisional government, with Reichenberg as its seat. They propose annexation to Germany. The Slovaks have made Pressburg their capital and are going to name it after Woodrow Wilson.

#### The Question of the Jugo-Slavs

It has been the ambition of the Jugo-Slavs or South Slav nationalists to unite independent Serbia and Montenegro with the Austrian and Hungarian provinces containing other branches of the same race, the Slovenes, Bosnians, Croats and Dalmatians. But it has always been a question in how far the Jugo-Slavs under Austro-Hungarian rule wished to join their brethren outside, for of course they were not allowed to express such a preference under the old régime. Now they are free, but we can ascertain little of their disposition from the conflicting reports that reach us. At Serajevo, the capital of Bosnia, where the agitation for independence led in June, 1914, to the assassination of the Austrian Archduke and the Great War in consequence, the union of Bosnia with Greater Serbia has been proclaimed and the assassins liberated amid great jubilation.

On the other hand, the Croatian Diet, meeting at Agram, adopted unanimously a resolution calling for the union of Croatia, Slavonia and Dalmatia with an independent kingdom of Austria. But the National Council of Slovenes, Croats and Serbs, which assembled at Agram on October 5, declared for separation from Austria and union with independent Serbia. On November 2, the officers of the government took the oath of office to Jugo-Slavia in the cathedral of Agram. The President is Josef Pagaomic, former vice-president of the Austrian Reichsrat. At Laibach, the capital of Carinola, the Slovenes are also in control.

Fiume, the seaport of Croatia, was abandoned by the Austrian and seized by the Croatian revolutionists, to whom it is said the Austrian Government consigned the fleet. But according to the armistice the fleet is to be turned over to the Allies and an Italian governor has been sent to Fiume. This may cause a conflict, since Fiume is claimed by the Jugo-Slavs as their only outlet to the sea from this section.

#### The Capitulation of Turkey

The subjection of the Ottoman Government for an armistice was arranged thru General Townshend, the commander of the first British expedition into Mesopotamia, who was captured at Kut-el-Amara. In the latter part of October

THE NEW BOUNDARY LINE

The shaded area outside the dotted line represents the territory which must be evacuated by the Austrian armies according to the armistice signed this week. It comprises most of what the Italians have claimed as Italia Irredenta and is apparently destined to be annexed to the Kingdom of Italy in spite of the protests of the Jugo-Slavs.

he was liberated and sent to Vice-Admiral Calthorp, commander of the British fleet in the Aegean, bearing the request from the Turkish Government for the opening of negotiations. The Allies having expressed their willingness, the British plenipotentiaries were sent to Mudros, and three days later, on October 30, signed the terms of the armistice dictated by the Allied Council at Versailles. America, not being at war with Turkey, took no official part in the determination of the terms.

We publish in full elsewhere in this issue the details of the Turkish armistice. Like that of Bulgaria and Austria, it virtually converts an enemy into an ally by enabling the railroads, warships and territory to be used for belligerent purposes against Germany. The most important immediate consequence is that it opens up the Dardanelles, the Bosphorus and the Black Sea to the British and French navies, and so will enable them to send aid to Russia and to destroy the German power in the Black Sea. When the Germans got control of the Ukraine they took possession of the naval bases in the Black Sea and the Russian fleet, which consists of seven battleships, two cruisers, twelve submarines, and twenty-six other warships. It was by means of their control of the Black Sea that the Germans were able to send troops to the Caucasus and Turks to capture the oil port of Baku on the Caspian Sea which was held for a time by a force of Russians and Armenians and British.

#### The Hughes Aircraft Report

The long-awaited report by Judge C. E. Hughes on aircraft production, an investigation assigned to him last May, was received by the President on October 28, and published four days later in the form of an official summary filling a dozen newspaper columns. Its circumstantial details and clear financial tables show the searching completeness of the inquiry, and its candor and sobriety of statement have inspired general confidence in its fairness. The report contains nothing sensational, and presents a far more comforting and encouraging picture of what has been done and is doing than did the alarming document issued by a congressional committee a few weeks before. That paper declared that nearly \$700,000,000 then appropriated for aviation had been substantially wasted; but Judge Hughes's report finds that only \$20,500,000 can be considered as "sunk," and a part of this may be salvaged. This much waste occurred in the early days, when inexperience, divided counsels and bad judgment combined to cause extravagance and waste, and gave to some contractors extortionate profits for which they are likely to be called to account. This was mainly during the period when aircraft matters were wholly in charge of the Signal Corps of the Army, which proved unfitted to handle so great and novel an enterprise. Attorney General Gregory, in transmitting the report to the President, said of it:

An exhaustive examination into the entire conduct of aircraft matters fails to show that any member of either board has had any desire to retard or delay production, or has done anything to accomplish that result, or has intentionally caused the waste of funds, or been actuated by a disloyal motive, or been guilty of dishonesty or malversation.

This report does disclose, however, that certain officers of the army, who held subordinate executive positions, retained personal interests in companies that were furnishing materials or work, and could, and in some cases did, favor those corporations as contractors. Against certain of these officers Judge Hughes recommends that they be turned over to the Secretary of War for trial by court martial.

As to the public anxiety over the rumors of interference and harm in various factories by German spies and sympathizers, Judge Hughes finds little truth in them; but he sharply rebukes the laxity in the factories of Henry Ford, where a large number of enemy aliens continued to be employed in spite of strong protests.

Attorney General Gregory's accompanying letter summarized the expenditures and results of aircraft production up to October 18 as follows:

The actual disbursements up to the close of the fiscal year ending June 30, 1918, were: For production in this country, \$106,741,490.77; for production abroad, \$25,605,074.31; for experimental and development work, \$1,607,830.19; total, \$134,044,395.27. This amount includes not only the cost of planes and motors delivered, but also large payments for special tools and for labor and materials in planes and motors not then finished. The figures are not now available to show just how much more has been disbursed on this account since June 30, tho the total amount disbursed for all aviation purposes between that date and September 30 was \$139,186,661.33.

Deliveries of planes and engines produced in this country up to July 1, 1918, were: Training planes, 5618; service planes, 553, and of Liberty engines of both types, 12,633. Since July 1, and up to October 18, the production has been: of train-

#### THE REPUBLICAN MAJORITY LEADER--SENATOR LODGE OF MASSACHUSETTS

With fifty senators Republican and forty-six Democratic, Senator Henry Cabot Lodge—for the last two years leader of the Republican minority—becomes now the leader of the Senate and chairman of the Foreign Relations Committee, to which are referred all treaties and matters of international relations

ing planes, 7374; service planes, 2850, and of engines, 24,672. When those airplanes acquired abroad are added, it appears that the United States produced or bought by October 18, 19,524 planes, and 37,305 motors ready for service. "While the only service planes thus far produced in this country have been observation and bombing planes," the report says, "those acquired abroad include pursuit and combat planes."

#### The Fall Elections

Election of senators and representatives in all the states, and of governor and other state officers in more than half of them, were held on November

5, and were conducted after shorter campaigns, and with less excitement, than usual. In several states women voted for the first time, sat on election-boards, and here and there obtained office. Almost everywhere the vote was "close." Widespread defection from socialism was noticeable, especially in the East. As a result of this approximate equality of parties nearly all majorities are small. It is certain that the next Congress will be predominantly Republican, insuring a change of committee heads.

Among the more striking results in respect to senators are the defeat in Michigan of Henry Ford by Commander Newberry; the reelection after a close contest of Senator Fall, Republican, in New Mexico; the election of ex-Governor Walsh, Democrat, over Senator Weeks in Massachusetts; the decided defeat of James Hamilton Lewis in Illinois by Medill McCormick; the election of David Elkins, in West Virginia, over his Democratic opponent; the return by Nebraska of Senator Norris, credited with being "pacifist"; and the narrow margin by which Kentucky elected a Democratic senator.

In the House some conspicuous changes have resulted. Altho Speaker Champ Clark appears to have squeezed in, Governor Folk was defeated in Missouri, and the Republicans assert they have gained four seats in Kansas, two in Pennsylvania, and one each in Maryland, New Mexico, Missouri, Kentucky, Rhode Island, Michigan, Delaware and Nebraska. The Democrats have apparently gained three seats in New Jersey and three or four in New York. All the Socialist candidates in New York, including such well-known names as Morris Hillquit, Scott Nearing and Meyer London, were decidedly beaten. In Wisconsin Victor Berger won over Representa-

Lieutenant Commander Truman H. Newberry, Secretary of the Navy under President Roosevelt, defeated Henry Ford, the Democratic candidate for Senator from Michigan

**A REPUBLICAN LANDSLIDE IN KANSAS**  
Former Governor Arthur Capper was elected Senator from Kansas by an overwhelming majority. Both the Senators from Kansas and the present Governor are now Republican

**BAY STATE REJECTS SENATOR WEEKS**  
Massachusetts elected the Democratic candidate for Senator, ex-Governor David Walsh, by a surprisingly large majority to succeed Senator Weeks, Republican

tive Stafford, who had opposed war-preparations; and Mr. Berger will be the only Socialist in Congress.

In the matter of governors, the widest interest was felt, probably, in respect to New York, where Mr. Smith, Tammany Democrat, has been pronounced elected, but by so small a majority that Governor Whitman still hopes it will be overturned by the soldier voted to be counted next month. Mr. Coolidge, Republican, was elected in Massachusetts, Mr. Sproul, Republican, in Pennsylvania, Mr. Cox, Democrat, in Ohio, Mr. Philipp, Republican, in Wisconsin, and Mr. Burnquist, Republican, in Minnesota.

**More Consulates Needed**  
The chairman of the Shipping Board has called the attention of Congress and the people to the need of enlarging our consular service abroad, in view of the fact that our great merchant marine will presently be released for use in foreign trade.

trade. Mr. Hurley tells us that the United States will have 25,000,000 tons of merchant shipping by the end of 1920, and that as fast as these ships can be freed from military work they will enter commerce. The present consulates would be entirely inadequate to handle this enlarged business. There are not enough of them, their staffs are too small, and they are handicapped by inexperience with duties that will be demanded and by antiquated regulations. Even now the burden of work, especially in the way of inquiries to be answered, is overtaxing the undermanned and underpaid force. Mr. Hurley therefore pleads that immediate steps be taken to remedy the situation.

"We need more consuls and larger consular staffs," he tells us. "If we do not provide them today and prepare for the great growth in our merchant marine and trade after the war, I fear that we shall suffer a serious breakdown."

#### Preparation for Reconstruction

The hopeful outlook for an early cessation of war has turned the eyes of publicists toward planning the reconstruction of the elements of peaceful life and industry. Some movement in this direction has been made by Congress; and it is known that an executive bureau, directed by Colonel E. M. House, is busily engaged in compiling and classifying information likely to be of service to the lawmakers in the next Congress. The first of a series of reports has just been issued by the Commerce Bureau of the Department of Commerce, explaining plans for trade already made or under consideration by European governments. Tabulated statistics are given, showing production and consumption of forty kinds of commodities; also summaries of the

The hopeful outlook for an early cessation of war has turned the eyes of publicists toward planning the reconstruction of the elements of peaceful life and industry. Some movement in this direction has been made by Congress; and it is known that an executive bureau, directed by Colonel E. M. House, is busily engaged in compiling and classifying information likely to be of service to the lawmakers in the next Congress. The first of a series of reports has just been issued by the Commerce Bureau of the Department of Commerce, explaining plans for trade already made or under consideration by European governments. Tabulated statistics are given, showing production and consumption of forty kinds of commodities; also summaries of the

conclusions of various national economic conferences, illustrating tendencies of thought among the Allies. That any attempt at present, here or abroad, to lay down a definite economic policy would be a waste of time is the opinion of the chief of the Commerce Bureau; but he cites certain things that exist here as practical preparations for the future:

The Government's greatest preparation for after-war trade is the construction and organization of a large merchant navy, backed by large and efficient shipyards and dry docks. We have, of course, the Webb-Pomerene bill, authorizing our exporters to combine for foreign trade purposes. Our Federal Reserve Board and banking system have wide leeway in foreign trade banking matters and are alive to the needs of our trade, and are meeting them. We have now our Federal Board for Vocational Education working on problems that are at the very base of our reconstruction work. The War Department also has devoted attention to the future of crippled soldiers. The Department of Labor is contributing to numerous aspects of the after-war problems; the valuable services now being rendered to make the labor supply more mobile and correspond to industrial needs will undoubtedly continue during the reconstruction period. In the Department of Agriculture, and very notably in the Bureau of Mines and the Geological Survey in the Department of the Interior, no less than in the Bureau of Standards and the Bureau of Foreign and Domestic Commerce in this department, important steps have been taken in scientific work and research in preparation for the future.

**Vaccination for Pneumonia**  
The announcement of the Surgeon General of the Army that vaccine preventive of pneumonia is now at hand in sufficient quantity for the whole force under military rule means that if all the men in service avail themselves of it pneumonia will virtually vanish from the army, as typhoid fever has done under similar prophylactic measures. This vaccine was prepared by Dr. Rufus Cole and his associates at the Rockefeller Hospital in New York by the inclusion in its culture of the three most important germs concerned in the disease in its various forms.

ENGLAND expects every man to do his duty—and to keep still about it. Thus might be epitomized the situation today in England as far as aviation is concerned. Every other country in the world may have decided that it pays to advertise, but the idea of self-advertisement is as repugnant to English officialdom as it is ridiculous to English schoolboys. It is not done.

Consequently the world does not know that Great Britain is turning out at the steady rate of over a thousand a month pilots who are fully trained to operate any type of aeroplane, who can take to pieces and assemble again any engine and any machine gun, who have passed stringent examinations in navigation, military law, map making, wireless telegraphy and photography. Besides the above mentioned accomplishments the graduate pilot has learned to observe landscapes, to shoot accurately while his aeroplane is in flight, to repair and to replace any defective part of his machine gun or aeroplane. He knows the mechanism of every type of aeroplane bomb, and how to drop them from his aeroplane with the greatest chances of accuracy. I use the word "chances" after deliberation, for the direction and velocity of the wind over any enemy target are at all times variable and "chancy."

While America is doing wonders with her preliminary training of aeroplane pilots, our boys there who have won their wings and are now warming the benches outside the hangars waiting for their aeroplanes of war have no conception of the specialized training in store for them in France before they can be considered war pilots. After four years of anxious experience England has learned the value and importance of specialized training. The lack of it means suicide for the pilot and ridiculous inefficiency for the nation.

With quiet and common sense efficiency England then has set about establishing these schools of specialized training. The number of these aviation camps in England runs literally into the hundreds. Their commanding officers and instructors are aviators from the front who have achieved especial success in a particular line or branch of war aviation and who have been

# WHY NOT LIBERTY MOTORS WITH BRITISH WINGS

BY LAURENCE LA TOURETTE DRIGGS

*Mr. Driggs, who is himself an aviator and a recognized authority on aerial warfare, went overseas some weeks ago as correspondent of The Independent to write particularly of what our Allies are doing in aviation and of the air fighting on the western front. "I have been over the schools and aerodromes of England and thru some of the factories where motors and aeroplanes are built," writes Mr. Driggs in his latest letter. "Of course I have met scores of pilots, many of them old friends, who have told me of their work at the front. Have seen some of the seaplane stations. Many of the details of the training schools and of the new types of aeroplanes are of extraordinary interest, but cannot be published."*

© Underwood & Underwood

A British Royal Air Force Squadron starting for the enemy lines

ordered home to teach their specialty to the thousands of their younger brothers. Incidentally, a sad preponderance of these specialists would be wearing one or two "wound stripes" were not even this recognized decoration scorned by the airman as rather too self-advertising.

Illustrative of this typical self-effacement of the Britisher was the remark made to me by a youthful captain at one of these schools of instruction. This captain wore the Distinguished Service Order on his breast and we found we had a dozen or more aviator friends in common. After two or three days' rather intimate companionship I ventured to ask him to tell me about the exploit which had brought him his highly prized decoration.

"Sorry, but you'll have to get that from the Air Minister, old chap," was his rather brusque reply.

Nor did subsequent allusions draw from him any hint of what his distinguished service to his country had been.

Needless to say there are very few cadets of the Royal Air Force who fail to pass quickly and satisfactorily the tests and examinations which terminate this six months' schooling. Compared with the pilots of 1914, who might now be said to have been almost self-taught, the present-day British pilot is a scientist. Some few drop by the wayside in the course of their several tests, as might be expected. These are utilized as mechanics or helpers in the department of aviation for which they are best fitted. But the fact that all these cadets are volunteers—some from civil life and some from the infantry, cavalry or artillery—and that they have chosen aviation because they love it, makes the work of instruction a pleasure to the officers and a keen delight to

the boys. Instead of being a drudgery each step of the work is a fascinating play.

At one school every type of aeroplane engine is placed upon a stand, where the pupil learns to start it and run it just as tho he were in the aeroplane. He has already become familiar with every part and every function of the engine. He now learns to operate it to its greatest advantage.

His next step is to take his seat in an aeroplane from which the wings have been removed. It cannot fly. It can only taxi over the field. At a very moderate pace the pilot learns to use the rudder

and to regulate his motor. Thus by the time he takes to the air—with an instructor—he knows precisely what the instructor is doing and why. His own fingers are itching to grasp the joystick and throttle. He knows he can fly the machine, for he has already mastered its movements on the ground. His nervousness and fear are not only gone—they have never existed.

So with the improvement in scientific teaching of pilots in England has the crashing of machines and injuries to airmen decreased. Thousands of young pilots are now perfected where hundreds formerly tried and the casualties are fewer today than ever before.

Surpassing the output of her pilots by the quantity of her machines Great Britain has not yet found it advisable to cling to any scheme of standardization in building aeroplanes. In consequence various types of machines of rare and increasing performances are being designed and constructed for the various requirements of air work at the front. The aeroplane brains of England are engaged in keeping abreast of and ahead of the improved designs of the enemy aeroplane experts. Fighting machines, reconnaissance machines, bomb dropping machines and aeroplanes for strafing enemy trenches are being continuously designed, constructed and perfected. Engines of low power for schooling machines and large motors of ever increasing power for speed and weight carrying are being built into the various types of machines for which they are best fitted.

Many Liberty motors from America are already here and are being flown every day over London. It is with considerable satisfaction that I can say the Liberty motor has met with great approval from [Continued on page 282]

Suddenly, off in a village, partly destroyed by shell fire, a cathedral bell began to ring across the lonely fields of France

## UNDER THE EVENING "HATE"

*Dr. Stidger left his pastorate in San José, California, to go to France as a Y. M. C. A. speaker. But when he got to Paris, he found that he wanted harder, more dangerous work than that, and he was given the job of driving a supply truck "down the line" to the front*

BY WILLIAM L. STIDGER

**W**E were going "Down the Line" with some provisions for the furthest Hut. A message had come in, carried by a "runner" sent from the Major's office about supper time. It said "My boys are going into the trenches at midnight and the secretary at — says that he is out of supplies. I hope that it will be possible for you to send some down."

It was a perilous trip. Every man had been working from daylight and no man there cared to take that trip down the line. It meant that whoever went would have to drive over the old shell-pocked road without lights, after darkness fell. It meant that the truck would have to run underneath the regular evening "Hate" of the Boche, for every evening just after sunset while the smoke was curling from the supper fires the German batteries on the hill to the east strafed the American batteries on the hill to the west. Then the American batteries sent back their replies. Under this great, double parabola of shell fire the trucks had to be driven night after night. Sometimes the shells fell short and pocked the road. More often they found their marks four miles beyond, but it was no pleasant sensation to be driving a truck under a great arch of shells going both directions. What if two of them should meet in mid-air and have a collision? Personally I always expected this. I had seen two locomotives do this very thing once and I never did like that memory.

But the work had to be done. This was a desperate call. A major who was interested enough in his boys to send a "runner" to Y. M. C. A. headquarters to ask that an extra truckload of supplies be sent down so that his boys "going in" that night might have their last "Good by and good luck" put into some practical form, was not to be denied. Besides, that was what we were there for.

I'll confess frankly that I for one didn't want to go. I didn't like that barrage of shells in the slightest. I never did get used to it. Norton, the big, husky driver, always said, "Ah, they're up there so high they'll never fall short. Let 'em shoot. Don't pay any attention to them."

But I couldn't help remembering the night that Norton stopt the truck near "Dead Man's Curve" while the Boches were shelling the road to go back, and hunted with a flashlight for a cigar that he had dropt out of his mouth when the truck shot into a shell hole. I couldn't help remembering that he had said that night, "You don't mind if I stop, do you, Doc? That's the first good cigar I've had for three months, and I'll be blamed if I want to lose it!" I did mind, but I didn't say so.

Nor did I, on the night of this story, say anything when he volunteered for both of us to take the load down.

"Doc and I'll go; we don't mind, do we, Doc, ol' boy?"

I did mind, but I hadn't the nerve to admit it in the face of the fact that this big, brave fellow himself had been "down the line" already three times that day; that he had been working since daylight and that he was now willing to make another trip, the hardest trip of the day, down under that canopy of shell fire, on a trip that meant two o'clock in the morning before he could possibly get back. In the face of this kind of sacrifice who was I, just a common helper on a truck, to say "No"? So I volunteered to go along.

And that trip shall stand out forever; not because of the unusually heavy "strafing" that we drove under that night; not because of the fact that we helped to hand the stuff out to the boys as they marched thru our furthest hut down under the camouflaged road into the communication trench, but because of something we saw just as we left Toul that wonderful evening.

A great red "war sun" was sinking into the west. Even Norton was impressed by it. He said, "Some beautiful night, anyway, Doc, even if one of the Boche shells does fall short."

He had a most comforting fashion of starting off like that, with some such expression as "Fine night for an air raid, Doc," or "I'll bet the wind's just right for a gas attack tonight," or "A couple of 'Y' drivers got killed right over there, just before you came, Doc!" But somehow the sunset tonight had touched the deeper things, which I always knew were hidden behind his rough exterior, and before we had gone far in the face of that great red sun he was talking about his wife and his kiddies at home. He showed me their pictures as we rumbled along.

Then we saw a sight that subdued us both and made him stop the machine for a minute in reverence. Suddenly, off in a little village, partly destroyed by shell fire, a cathedral bell began to ring. It was a beautiful sound coming across the lonely fields of France in the face of that "war sunset."

Just in the foreground two old women and a man were walking along, bearing heavy baskets on their shoulders. They had just started to cross a field. When the cathedral bell began to ring they laid their baskets down, and all three of them bowed in prayer and remained so until the "Angelus" ceased.

Norton had already stopped the truck. I looked at him, and much to my astonishment his hat was off and his gray curls played in the breeze. His head, too, was bowed.

"I always respect anybody's religion," he said, by way of explanation.

"Do you pray much?" I asked him, as we started on when the "Angelus" had ceased.

"I pray all the time. I never start out with this old bus 'down the line' that I don't pray. That wife of mine and that kid made me promise. Besides it gives me a sense of security anyhow when those shells are whining overhead and one of 'em is liable to fall short any minute."

We were silent for a mile or two, and then I said to him, "Well, I didn't want to come down again tonight, but that was worth it; not only to see that 'Angelus' in real life, but to hear you say that."

"A man's a fool that doesn't pray; that's all I got to say," was his reply.

ON the night following the great celebration at the Augusteum described in my article of October 26, I took the train from Rome for the Italian front. There I spent three days. My headquarters were an odd-looking inn in the ancient town of Padova, which is the Padua "nursery of the arts" where Petruchio married Katherine in the "Taming of the Shrew." It is the quaintest medieval town imaginable. Its narrow winding streets and ancient overhanging houses made it look exactly like a scene from the opera. I seemed to be moving in another and bygone age.

The chief event of my first day was my audience with His Majesty King Victor Emmanuel, which Signor Gallenga, of the Foreign Office, had arranged for me before I left Rome. An Italian officer came to my inn at 5:30 p. m. in a government car and we proceeded for half an hour out thru the open country toward the front. Our destination was a pretty Italian summer villa which had been loaned the King by a rich wine merchant of one of the neighboring towns. It was situated almost in the shadow of the Alps and was a roomy, substantial, modern house, but not pretentious or in any way imposing. The only evidence of its being the seat of the Government was the couple of sentinels at the gate who challenged us as we came up and two or three guards at the front door. We were ushered at once by two aides into the little parlor at the right of the hall, furnished in modern Italian style, with several small oil paintings on the wall. At 6:30 precisely, the hour of the appointment, the colonel ushered me up three flights of stairs to the top of the house. My previous experience with royalty was limited to the occasion when I had the honor of an audience with Emperor Meiji of Japan in 1911. I had then been very carefully coached in the etiquette to be observed in the Imperial presence. I expected therefore to make three bows to the Italian King on entering, one at the threshold, a second when I had taken a few steps into the room, and a third when arriving before the throne. I also knew it was not in accordance with etiquette to address His Majesty, but simply to answer any questions he might be pleased to ask me, and then when the audience was over to retire backward as I had entered, repeating the three bows. The colonel tapped at the door, then stepped back. I heard a movement inside. The door opened, and I was just preparing to make my first low bow when a little, middle-aged man came forward and, before I could think of bowing, had cordially taken me by the

# A TALK WITH THE KING OF ITALY

BY HAMILTON HOLT

© Press Illustrating

"King Victor Emmanuel (right) wore a plain uniform with no decoration but a single ribbon, showing his years of service." To the left of the picture stands the President of France

hand, led me to a chair, and insisted upon my seating myself. It was the King. In looks he resembled a sort of combination of Colonel House and the late Frank R. Stockton. He was short, but muscular and stocky. His face was seamed and showed the strain of war. He looked older than his pictures. He wore a plain uniform that was scarcely distinguishable from that of a common soldier—no plumes, epaulets, gold braid or medals, nothing but a single ribbon on his breast showing his years of service, such as any soldier might wear.

I found that I was in the King's bedroom. It was a very simple apartment with no luxury about it. His washstand stood against the wall on one side of the room and the bed at the other. A crucifix hung over the bed. A bureau with some toilet articles on it and two or three little straight-back chairs completed the furniture, which was of some light make of wood—maple, I should say.

The King instantly put me at my ease. There was not the slightest hint of court ceremony about our meeting. In five minutes I lost all sense of being in the presence of royalty. He spoke in

perfect English, had a real sense of humor, and enjoyed telling a story as well as listening to one. Before I realized it we were chatting freely, asking and answering questions back and forth, and actually swapping stories in good old Yankee fashion. He told me that he had been at the front for three years except for his two weeks' leave in the summer, which is allowed every soldier. He is the only king that has been with his troops continually since his country entered the war. He did not even have the Queen and his family with him, for he is determined to fare no better than the private soldier, who of course is not permitted to have his wife or children at the front.

The life of King Victor Emmanuel is an inspiring one. He spends every day inspecting and encouraging his troops. He rises early, has a light lunch put up for him, and then goes off in his automobile for the day, stopping at the roadside for luncheon.

He kept me talking with him for three-quarters of an hour, and of course I had nothing to do with the length of the call, as I naturally followed custom to the extent of waiting for him to terminate the interview. The lieutenant who acted as my escort afterward said that the King seldom held such a long interview. Tho the King asked me numerous questions about the political conditions I had observed in Europe, he was specially interested in talking about the United States.

One must not, of course, quote directly a king, but I may say that he continually reverted to the part the United States was playing in the war, and once he said that it would make a profound impression on Germany to have America coming over here in greater and ever greater numbers. Instead of criticizing our early delay in getting into the war, as he might well have done, he professed astonishment that we had come as quickly as we had. He said he suspected Germany had thought that we would not fight, and this was Germany's most colossal mistake. I asked him about the internal conditions in Germany and Austria, but he replied he was in the dark about this, and asked me if I had learned anything on the subject during my travels. He gave me several interesting incidents about his experiences at the front. That very afternoon he had watched his soldiers go forward in a practise barrage charge. This was a very dangerous drill, as a gun might fire short, but he said the Italians preferred to practise it under actual war conditions, as the French and English did not, because when they attempt to follow a barrage in battle they will

then not be afraid. Barrage practise, he said, was much more dangerous than gas practise, because after the mask is on there is no further danger.

He showed me with much glee a large black iron cross painted on canvas that had been cut from a captured German aeroplane. It had been framed for hanging on the wall. He seemed very much pleased with this trophy and said he had some other souvenirs of the kind. He was specially amused by the signs that the various aviators painted on their planes, and remarked on a certain German one that had the design of a Teddy Bear. I told His Majesty of the 75mm. shell I fired at the Germans when I visited the Rainbow Division at the American front. He laughed and said, "That's a good story. Do you think you killed a German?" And when I replied that I hoped so, he said, "You look like a peaceful man." I then told him the story of the American prisoner in Germany who wrote home to his folks in America that he was having a fine time, that everything was going well, and that the only place he could think of where he would rather be was Greenwood Park. The King instantly asked what Greenwood Park was, and when I told him that it was the name of the local cemetery he laughed aloud and said that it reminded him of a similar story. It seems an Italian prisoner in Austria wrote home that the Austrians were treating him finely, they gave him plenty to eat and were as good to him as they were to Baptista. The censor, evidently thinking Baptista was no less a personage than John the Baptist, let the letter pass. The Baptista referred to, however, was the old mangy cur that lived in the outhouse and was kicked about by every one.

The King spoke about the comfortable villa he was living in and said it was much better than some of his previous headquarters. I said I supposed that no one could speak of the place where he lived lest the Austrians should hear of it and shell the spot from their aeroplanes or long-range guns. He responded at once that it was not on his own account that the name of the place must not be mentioned, but that once, when he had invited a distinguished commission to meet him at a certain town, the Austrians learned of his presence there and be-

© Committee on Public Information, Press Illustrating

*"On the sending of troops to Italy, the King expressed surprise that we came so quickly"*

gan bombarding it. He immediately had to withdraw in order to prevent, as he told me, the innocent villagers being slain. What he did not tell me, as I afterward learned, was that he departed from the town openly, for he was much more concerned for the safety of his people than he was over his own fate. This was but one evidence of his devotion to his subjects. The Italians say he seems never to think of his own ease and comfort.

He told me the people had not enough to eat and that the Government especially needed raw materials. He thought the United States could greatly help Italy by sending over food and coal and iron, but he was especially desirous that we dispatch troops to the Italian front, not so much for military reasons as to exhibit the moral alliance between Italy and the United States. The United States was sending its troops in vast quantities to save France from her hereditary enemy, Germany, and it would touch Italy greatly if we would also send our troops to save Italy from her heredi-

tary enemy, Austria. He spoke of the former American Ambassadors to Italy, Messrs. White, Meyers, O'Brien and Griscom, and the present Ambassador, Thomas Nelson Page, whom he said was liked and beloved by every one. I told him of the newly formed Italy-America Society at home and its first president, Mr. Charles E. Hughes, whom he said he knew and admired. He was especially pleased with the American aviators who were training in Italy. But, above all, he rejoiced in the work of the American Red Cross in his kingdom.

He thought the Italian air service was better than the Austrian, for the Austrians seldom ventured over the Italian lines except at night. But the reason why the Italians did not bomb the Austrian cities was because too many Italians lived in them. He expressed great horror at the way the German submarines killed women and children. He said that more submarines had been captured than the world knew about. He was thoroughly conversant with the new [Continued on page 230]

# THE GREAT ADVENTURE

## Letters to the Home Folks from the Battlefront

IT is when he sits down to write a letter home that the American soldier is apt to be most eloquent and to express himself most truly. He talks straight out to the home folks. His letters to them give the best composite picture that can be had of the part our men are taking in the war.

So back in 1917 we began asking the readers of *The Independent* to share with us the less personal extracts from the letters that they were receiving from the front. It is interesting now to see the change in tone from the first collection that we published in November, 1917, to the present one. Then it was a cause for special comment to have been within hearing distance of the guns up front; there were only a few rare cases of Americans who had received the Croix de Guerre. Now most of the men know from their own experience how it feels to be up front; their descriptions have become more objective, their impressions of the war based on a broader view.

But we will let the letters speak for themselves.

Beginning at the top, we have the experiences of our aviators, the men who have done most to exemplify the thrill of adventure in modern war. Here is a sample of it, from an American in France:

I went "hedge hopping" last night. "Hedge hopping" is the fanciful name for flying low. I think it is perhaps the most exhilarating—and dangerous—of all phases of flying, even including acrobatics. It is the splendid sensation of tremendous power and matchless speed. No other sensation is to be compared with it.

The air was lying as level as the Dead Sea. I sat there in the boat and tried to sing, but gave that up when I could not hear my own voice for the motor. Then there flashed across my mind the idea of giving Jacqueline a thrill. Jacqueline, you remember, is the "Rose of France" who lives in the big château on the hill. I climbed until I could see her tower and then, straight as a bee, I made for it. They came out on the terrace and waved as I went by with a rush. I then climbed up to the regulation

*A marine in a dugout up front makes the most of precious candlelight to write home*

1200 meters and pulled my very best bet—a "renerversement." It is not difficult with these machines because they take their time and one can go thru the formula, "Pull—kick—cut and give 'em the gun again," quite deliberately. The old bus pokes her nose up into the air to a stall, the kick on the rudder turns her over on her side, and she slips quite naturally into a straight dive, which is the only terrifying moment, and then comes out of it as smooth and easy as sliding down the banisters.

Then I came down the valley and came back on a level with them. I "gave 'er all the gun" and "zoomed" the château—that is, I almost went up the front of the place. It was too close for comfort, and I don't know what they thought of me, because I probably gave them a fright.

I dipped into the valley, picking up speed all the way. I headed straight for some tall Lombardy poplars and actually I climbed them, or, rather, jumped them. After that I zoomed every lone tree in a field and hopped every hedge, altho, in fact, it was getting so dark it was risky. I went down to speak to every farmhouse, and when the barnyard fowl began to run for cover I would shoot up into the sky again.

It is a hundred thousand times more thrilling than motor-biking. It is smooth like motor-boating and you have the same wave motion and the sensation of rushing

movement. It is really dangerous because, if the motor "poops," it means either sudden extinction or miraculous escape. There is no time to think, and, even if you thought, there is nothing that you could do about it.

Don't worry, I won't do it often—I can't afford to take the chance when I am needed up front.

Another aviator likes flying for its esthetic thrill:

One morning last week I was in the air before daybreak and witnessed the dawn from the air. It was a wonderful morning, cold and sharp on the ground; but, at an altitude of 1500 feet, the south wind was blowing and the air was like satin, warm and balmy. We got away while yellow lamplight still etched windows against the darkness, and headlights of street cars and automobiles threaded the surface. Just the first hint of dawn was showing on the tip edge of a mist bank. We climbed quickly in the cold heavy air, and in a few seconds headed away from the field and into the dawn. Straight into the heart of it we flew, and watched the mist's slate-color change to rose, then to crimson, and gradually to orange and yellow. I wanted to float on forever into that wonderful mystery of morning light, in the sweet, silent sweep of the wind. And then the sun, red in the haze, appeared. Fields and gardens, roads and lanes, took shape beneath us, and we were back from the fairyland of day-birth into the business of preparing men for war.

But there's very little of the artistic in this story of a flight written by an American who was just learning the game:

I had a curious creature for an instructor. He used to sit in front of me and by using his hands direct my movements. Perhaps suddenly he would wave his left arm violently in the air and I would lower the left wing. Up he would jump and at, say, 200 meters altitude turn around and shove his fist at me and yell to turn to the left and not upset the plane. Of course with the roar of the motor I could not hear him, so I would lower the wing still more. With a snap the stick would be jerked out of my hand and down we would go. Then having levelled the machine he would sign me to take the controls again and make a landing and down we would go; the ground rush-

"The Germans were in this part of France for over two years, and when they left they did as much damage as possible"

ing up scared me to death. I forgot to redress and straighten out, when again the stick was suddenly jerked away from me, the plane levelled and we hit the ground smoothly and with no bumping. A friend rushed up. "Fine landing," he yelled. "You flew well." With a shriek the instructor turns around, "Oh, yes, you flew very well," his naturally high voice became a shriek, "Yes, you flew well to keel. When I say go down you go up. When I signed to lower the right wing you depress the left. I tell you to turn to the left and you go down. Oh, yes, you fly very well—very well to keel." He almost wept. "Three women love me, does no one love you? If you want to keel yourself, all right, but don't keel me. If I die, three women will die of grief. If you die everybody be very happy. Oh, yes, you fly very well to keel, but I no want to die. I let you fly alone after this," and he kept his word. It's a great life flying, but if this war ever ends, I am going to buy myself a donkey and a cart and go driving along nice quiet roads where there are no birds. I don't think I will ever want to see the clouds go by or watch the leaves rustle in the wind. Just a quiet life with no reminders.

It is interesting to hear what the men in the trenches think of the men in the air. This letter is from a first lieutenant in the field artillery who used balloons to register his guns:

We got splendid satisfaction from the balloons—much more so than from the aviators. They seem to be too temperamental a lot with too many reasons why they shouldn't fly; all right, I suppose, but our work must go on, rain or shine or wind. However, these balloonists won our immediate confidence. These two youngsters, altho forced to jump in their parachutes twice in one day—a perfectly nerve-racking experience—were around in the evening wanting to know what they could do on the morrow—anything to serve. I saw them come down once. They were in the custom of exchanging greetings with the aviators who flew past them, by waving, etc. So they saw nothing suspicious in five French planes which came winging up within a hundred meters or so. The answer to their waves was a shower of machine gun bullets and the balloon went up in flames. We could see the little dots as they jumped in time and dropt for a sickening period until the parachutes opened up. While they dangled helpless in the air a plane circled back and fired at them floating there, until it was driven off by the anti-aircraft below—a most unsportsmanlike thing to do, but who can expect any sportsmanship from the Boche? They had come over in captured French planes with the insignia still on.

A young infantry private adds his opinion of the Boche:

The Prussian officer when captured acts very haughtily and obstinately. He will tell you that Germany is sure to win the war, and he gets furious when you doubt his word and search his person for articles wanted by the Intelligence Department, but what "gets his goat" worst of all is to be treated along with the privates when he is wounded. We captured a machine gun crew the other day and among them was a young Prussian who looked to be about eighteen years old. This fellow fought from the time we took him until someone shot him. We took him to the dressing station and got his wound dressed and leaving the station he made another pass at the guard and we shot his light out. That just goes to show what a Prussian will do.

An ambulance man gives his testimony:

The Germans were in this part of France for over two years, and when they left they did as much damage as possible. One place brought to my attention was that of an old lady seventy-five years old, who had peacefully quartered several Germans since the outbreak of the war. When the Germans retreated they smashed the table, the windows, the lone stove and even destroyed the dresser drawers, besides taking two grand-daughters. When the women of the "American Fund for French Wounded" found the old lady she was trying to keep warm with a very inadequate shawl thrown over her shoulders and sitting before a makeshift for a fire on a three-legged milking stool the Germans had overlooked.

© Kadel & Herbert

"Oatmeal, bacon, fried potatoes, bread, jam and coffee—not so bad!"

I don't want to fight any more than the worst pacifist, but when such activities that even put barbarism to pale are to be contended with, I'm perfectly willing to sacrifice everything for the absolute overthrow of the source of those activities.

What the private in a field hospital unit who wrote the following letter thinks of the Boche can be easily read between the lines:

We were under shell fire for six hours. There were fourteen hits in the hospital grounds, four directly in the wards. All that time all our boys up and around exposed, carrying wounded to the dugouts. Even the cooks stuck to the job, making hot coffee and serving it to the wounded in the dugout and trenches. Some of the wounded were killed and others were wounded again during this time.

But we haven't space to print all that our men say about Fritz—or Jerry, as he is oftener called now. Their verdict is unanimous.

One letter, from a lieutenant in the artillery, gives us the reverse side of the picture—what the fighting Germans think of us:

I have read several communications taken from captured German intelligence officers, and in each case they lay particular stress upon our spirit, physical aspect, determination, and general fighting abilities. So, if our enemies pay us that tribute, the American people can be doubly proud of their army.

The Germans paid involuntary tribute to the fighting courage of our Ma-

rines when they nicknamed them *Teufelhunde*, Devil Dogs. Here is a letter from a Marine describing probably the beginning of the very fight in which they got the name:

We came into a small bunch of woods, just before dusk one night. Everything seemed quite peaceful there then, so we only dug a small hole for two of us to sleep in, only about a foot deep. We laid down and were about to go to sleep when I heard a thundering noise. In a minute the high explosives were dropping all around us. At times our little dugout seemed to be on fire and the concussion seemed to fairly drive us into the earth. In the evening when we came in the foliage on the trees was so thick that we couldn't see the sky, but when I looked up in the morning, there was nothing but blue sky above. I picked up my rifle, that I had leaned against a tree on the edge of our dugout, and it had three holes in the stock about one inch square, broken by the flying shrapnel. On the other edge my "buddy" had laid his canteen, and it was blown all to pieces. So you see they were bursting pretty close.

Soldiers' letters wax most eloquent when they describe the din of battle. As another Marine puts it:

To lie flat on the ground and endure the sting of the Hun gas, hear the whistle of his bullets, the roar of his machine gun fire and the shriek of his shells while the earth trembles and rocks, heaves and covers you with dirt, makes an ineffaceable impression. Thru it all I came unscathed, tho that seemed impossible and now appears incredible.

An engineer behind the first lines feels differently about it:

The continuous artillery fire has become so monotonous that it has fairly become boresome and while I am only within ear-shot of it all I am at times under fire and appreciate what it means to seek shelter from the "Boche." The rainy season has set in and in a sense of the word it has proven a cloak and a blessing because prior to its coming we were under the beams of the moon which over here lost all of its romance and only spelled tragedy in the wake of the "Hun birdman" who found guidance in its rays. These attacks meant to us sleepless nights spent in the caves, trenches and dugouts.

To a man of the Rainbow Division we will give the honor of quoting a full description of one fight:

When the last big drive started we were somewhere on the line, where, I may tell you some day; 11:15 the telephone rang and we called the captain. The French had captured some prisoners at 11 o'clock who admitted that the drive was coming at midnight. We had fifteen minutes to put on our gas clothes with feverish energy. Exactly at 12 a wave of flame ran along the horizon followed by the roar of the German guns. The gun flashes flickered and flashed in waves and sheets of flame like the Northern lights, and I cannot find a simile for the smooth, steady roar of the guns as they poured a cascade of steel on our front lines. The bombardment jumped the secondary lines and fell again on our artillery, roads, rear lines, and the heavy guns shelled towns and cities twenty kilometers in the rear.

For four hours the guns roared. We just stood and watched. Big shells crashed around in the woods mingled with the ever-present gas shell. A direct hit on our ammunition dump sent up a column of smoke, flame and bursting shells and a bunch of signal rockets. {Continued on page 235}

# A SEQUEL TO "THE BLUE BIRD"

BY MONTROSE J. MOSES

AUTHOR OF "MAURICE MAETERLINCK—A STUDY"

**M**AETERLINCK has defied war weariness by writing a sequel to "The Blue Bird." He

has given us, at a time when it is most needed, a play replete with the spirit of youth, and youth's impulsiveness. Tytyl, his hero, who, it will be remembered, went in search for the Blue Bird of Happiness, is now grown up, and stands on the threshold of life, and the Fairy Bérylune comes after him to go on another journey—this time to find a more personal happiness. Maeterlinck calls his new play "The Betrothal," and in it he has packed a philosophy which is deeper than that in "The Blue Bird," and has unfolded a fantasy which is equally as beautiful. He has exceeded expectations, for the common belief is that a sequel never approaches its original in spontaneity or freshness. If anything "The Betrothal" exceeds "The Blue Bird" in its human application; it is more within the common experience of us all, for Tytyl's search after the one and only sweetheart epitomizes the romance of an entire world.

I can imagine Maeterlinck, a refugee from Belgium, finding consolation in this young romance; acting by contraries, for one knows, who has read his war essays, "The Wrack of the Storm," that his heart is sore over the black trail of the German hordes. Yet in "The Betrothal" his humor has never been so apparent. He plays jocosely with Destiny; Light, so abstract in "The Blue Bird," is human when she witnesses the quandary besetting Tytyl, who, thinking on the problem of his loves, finds himself surrounded by six sweethearts. Maeterlinck closes the gate of enchantment to the warring world outside, and he says, "This drama takes place in every human heart."

The thing we call love is something ruled by forces which lie behind us and in front of us. There are loves that end in disaster; the world is strewn with such. And why did these loves go astray? Because they went contrary to the will of our Ancestors, and ignored the right which belongs to the Children Who Are to Be—to choose their Mother. When Tytyl finds out in "The Betrothal" that he is not the one to select his only love, but that he must visit the Past and the Future for advice, there rises in him a spirit of rebellion. Yet the necessity which confronts him is the best thing for him. He is an inconsequent boy, tinged, as all youth is tinged at seventeen, with conceit and self-assurance. In the scene with his Ancestors, where, as in "The Blue Bird," he finds that the dead live

in Memory, he meets with generation after generation, that in their evolution have contributed to the making of his character. It takes some of the cocksureness out of him, when he discovers skeletons in his ancestral closet. His family way back could boast of a drunkard, a murderer, a rich man—a host of strangely assorted people. Tytyl faces them with his bevy of six sweethearts, and the Great Ancestor looks them over. Is there among these the chosen one? Maeterlinck's satire at this juncture is delicious. He sets in motion a train of thoughts; heredity is put in a whirligig of dramatic action, and Tytyl, who, since his journey after the Blue Bird of Happiness, has forgotten, boylike, that Memory makes life, suddenly is face to face with the fact that the Veiled Figure, whom he least remembers—and who, in consequence, is near to death—is the very center of his romance. The Great Ancestor brushes the six girls aside. These are not for Tytyl. Yet the chosen one is very near. Her presence is felt in the

attractive. Boy-fashion, he likes them all: the Wood-cutter's Daughter, the Butcher's Daughter, the Inn-keeper's Daughter, the Miller's Daughter, the Beggar's Daughter, the Mayor's Daughter—could one have a more varied assortment? But the Children Who Are To Be will have none of them. How will the choice be made? The culminating scene that tugs at the heart-strings is that which takes place between the Veiled Figure and the Smallest of Them All. Here it is as Maeterlinck has written it:

*The only occupant of the stage is the Veiled Figure, whom everybody has overlooked. . . . The stage remains empty for a moment, and then, from the back of the hall, comes a Child even smaller than the youngest of the Five Little Ones. He walks with a resolute step; on reaching the columns in the foreground, he appears to take his bearings, turns his head from right to left, and then, suddenly, goes straight to the Veiled Figure, in front of whom he stops and takes up his stand, contemplating her at length, gravely and silently, with his finger in his mouth. At last he puts out one hand and takes the phantom by the hem of her dress.*

The Smallest of Them All. Is it really you?

The Phantom (*speaking for the first time and struggling to find her voice, which seems to come from far away and to stick in her throat*). Yes.

The Smallest of Them All. I knew it. Come. . . .

The Phantom. Where to?

The Smallest of Them All. Over here. . . . I'm going to tell the others

The Phantom. Not yet. . . . I can't yet.

The Smallest of Them All. (*still dragging her by her dress toward the marble bench which stands between the columns in the foreground*). Come. . . . (*he makes her sit down, settles her on the bench, caresses her and kisses her*). Come. . . . it's you. . . . I knew it. . . . I'm kissing you. . . . Don't you know how to kiss yet? (*The Phantom shakes her head*). No? . . . Like this. . . . I'll teach you. . . . (*He kisses and caresses her slowly and deliberately*). You're no longer cold? The Phantom (*smiling at last*). No.

The Smallest of Them All (*still kissing her*). You see, that's better already. (*Under the Child's kisses and caresses the Statue has gradually taken life: the eyes open, the lips flutter, the face begins to color, the body loses its terrible stiffness the arms become supple and circle round the Child's neck*).

The Smallest of Them All (*nestling against her*). You're better, aren't you? . . . Not sleepy any more? . . . How good it is, being together! . . . They're still looking for you, you know. . . . And it's I who found you! . . . I knew I knew. . . .

The Phantom. So did I, so did I. I was waiting. . . . The Smallest of Them All. It's splendid, isn't it? [*Continued on page 233*]

"Tytyl finds himself in a quandary"—a tableau from Maeterlinck's new play of youth and happiness

circumambient air. Tytyl's effort to remember shakes the Veiled Figure with expectancy. There is nothing left for him to do but to visit again the Kingdom of the Future, where, in "The Blue Bird," fluttered the spirit children waiting to be born. He must ask his children, his grandchildren, and his great-grandchildren to help him choose their Mother. Could there be a more genial, tender situation than this? At a time when the hours are so full of death, when birth is at a premium in the world, when children in the Kingdom of the Future are needed on the earth beneath, is it not right that they should have a voice in the rehabilitation of humanity? In his case, Tytyl finds his children necessary; without them he would not know how to choose; for the six maidens who go with him and Light on the journey are all very at-

# BUILDING AN OFFICE LIBRARY

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

CAN the reading of a book raise the salary of a clerk to \$100 a week and promote him in less than a year to be head of his department? Put this question to an old-fashioned business man—the sort who boasts that he is practical because he never had the intelligence or nerve to try anything new, and he will answer you with a short and emphatic No.

Put this question to a modern, reliable, efficiency engineer and he would answer you in one of two ways. If, because of the breadth of his experience he had the facts in his personal possession, he would answer Yes unqualifiedly; but if, because of lack of experience he did not possess the facts, he would merely beg to defer judgment, awaiting proof. We have in mind the case of a young man who was lifted to such a point of eminence by the power of a book to inform and inspire him. Let us briefly give the story.

James Bell was a confidential clerk in a big mail order company. He had formed a habit, rather unusual but most desirable, of spending a certain amount of time in studying the trade journals and business magazines relating to his work, and answering advertisements that looked favorable or copying addresses for later use in time of need. One day he ran across the announcement of a new book on business letter writing that seemed particularly valuable. His work had to do mostly with the correspondence of the firm and he saw here a chance for a lot of professional education that would sometime come in handy.

He bought the book. He studied it evenings, when other fellows were playing pool or attending cheap shows. He carried the book in his pocket and read a bit now and then during spare moments. He thought over the principles involved and the methods taught. He composed imaginary letters, he criticized real letters. He drove the teachings of that book into his mind and heart from every possible angle and in every possible way.

Then he went after more knowledge—by this time the game was too fascinating to stop. He found over a dozen recent books on the science and art of conducting business correspondence. He bought them all, and in six months had them fairly well mastered, employing a younger brother at home to put questions to him at random from the various books in order to test his knowledge of the same. When he arrived at an examination grade of 90 per cent on the different books, he proceeded forthwith to put his knowledge to work.

Being full of enthusiasm over the possibilities of improving his department in various ways, young Bell decided that caution was immediately and imperatively necessary. A decision like this, made before starting to monkey with the business of the firm, would save many a bright ambitious young fellow the loss of his job.

He never offered an open criticism, but he took home at night once or twice a week the carbon copies from the files of letters that were most vital to the success of the company, and analyzed these letters over night, returning them to the files before office hours the next morning. Soon he had a list of a dozen habitual faults and mistakes in the substance, form, ethics, arrangement, psychology, technical nature or human appeal of the letters of the firm, and he set about to remedy these faults by way of exercise in self-training for a higher opening when it came. Furthermore, he answered the advertisements of a lot of competing concerns, using another address and the borrowed name of a friend, the purpose
